ABSTRACT

This document presents the hearings and appendixes, concerning the civil rights obligations needed for institutional eligibility for federal higher education programs. Letters, statements, and statistical data offered in the testimony of interested individuals and institutional representatives are included. (MJM)

CIVIL RIGHTS OBLIGATIONS OF INSTITUTIONS OF POSTSECONDARY EDUCATION

THURSDAY, AUGUST 8, 1974

House of Representatives,
Special Subcommittee on Education,
of the Committee on Education and Labor,
Washington, D.C.

The subcommittee met at 10 a.m., pursuant to call, in room 2261, Rayburn House Office Building, Hon. James G. O'Hara (chairman of the subcommittee) presiding.

Present: Representatives O'Hara, Dellenback, Kemp, and Biaggi.

Staff present: Jim Harrison, staff director; Webster Buell, counsel; Robert Andringa, minority staff director; and Elnora Teets, clerk.

Mr. O'Hara. The Special Subcommittee on Education will come to order.

Today the special subcommittee is entering a new phase—and what will probably be a very controversial phase—of our preparation for the development and enactment of a new student financial assistance package.

For weeks we have examined assistance programs and discussed the pros and cons of programmatic changes. For 3 days last month we looked at the question of accreditation as a device for determining institutional eligibility for participation in student aid programs.

Today we begin an effort to determine what are the obligations of institutions of postsecondary education under titles VI and VII of the Civil Rights Act, under Executive Orders 11246 and 11375, under title IX of the Education Amendments of 1972, and under rules and regulations made or proposed to be made in accordance with such statutory authority.

Let me reiterate for the record that I am not asking about the application of the civil rights laws to student assistance. Our inquiry is more fundamental than that. When we rewrite the Higher Education Act we are going to have to give considerable thought to what an institution should be and do in order to become an eligible institution for title IV or for other Federal programs.

The new legislation could make compliance with the full range of Federal law and regulation a condition for participation in student aid. Or we may choose to make more specific requirements. Whether we require compliance by reference, leaving the fleshing out of the details to the rulemakers and regulation writers, or whether we exercise our legislative authority in greater detail and put those requirements into the statute itself, this subcommittee needs to know what those obligations currently are, and needs to make some judgments as to what they should be

Judging by the conflicting perceptions among educators, students, administrators, and Federal officials, there is a need for the general public to know just what these obligations are, what is their statutory and constitutional justification and just where the dividing lines are between what the Constitution and the laws mandate and what the agencies suggest and recommend.

I hope we can emerge from these hearings, for example, with a clearer working distinction than any I have seen yet, between "goals" and "quotas," in employment and admissions. I hope we can gain a better understanding than I have yet gained, for example, of whether or not discrimination changes its nature and its culpability depending upon the race, sex, or ethnic background of the person discriminated against.

I would hope that we can get a better idea of the extent and basis for a phenomenon which I find as repugnant as I find the name sometimes given to it. I refer to what some call "reverse discrimination"—the alleged requirement or pressure upon institutions to confer benefits of Federal programs or contract employment to individuals because of their sex or their racial or ethnic background. When that phenomenon results in the selection of a white or a male applicant in preference to a nonwhite or a female applicant, it is properly called "discrimination." And I think we would all agree that is contrary to the spirit and letter of the law.

But when sex or race are taken into account and a nonwhite applicant is selected in preference to a white applicant, or a female applicant in preference to a male applicant, there is substantial argument as to whether or not this is wrong—and even those who think it wrong call it "reverse discrimination," as though it were somehow different in kind than old-fashioned straightforward discrimination.

As chairman of the subcommittee I will try to avoid reaching conclusions as to the facts before they are before us. I do not assert as proven that the kind of discrimination I have described is, in fact, being required or suggested by Federal agencies.

But my proper neutrality as to the allegation does not require the pretense of neutrality as to the principle involved. I will probably not use the phrase "reverse discrimination" very much. I don't care much who gets the benefit of and who bears the burden of discrimination on the basis of race, sex, religion, or ethnic origin. Whoever the victim, whoever the alleged beneficiary, it seems clearly contrary to the concepts of the Constitution. And, if it is not in direct violation of the law, it ought to be.

Mr. Biaggi, did you care to make a statement?

Mr. BIAGGI. Yes, I do, and thank you, Mr. Chairman.

I would like to welcome Chairman Powell and his associates today. Hopefully we can provide some further enlightenment on the issue.

Discrimination poses a serious obstacle for racial minorities and women as they struggle to achieve equality in our society. While truly sympathetic to their plight, I am also sensitive to the excesses to which affirmative action programs have been carried. In particular, I am very concerned that the already thin line between affirmative action programs and hiring quotas may have vanished.

While the official statements of the Equal Employment Opportunity Commission and the Office for Civil Rights have drawn this distinction. I am concerned that the implementation of form EEO-6 will have the practical effect of establishing hiring quotas for selected minorities. Form EEO-6 raises concerns on many levels. University administrators fear that they will be coerced into hiring according to an unconstitutional quota system. I am concerned that in the name of fighting discrimination serious consequences will be overlooked.

I am not convinced that the distinction between goals and quotas is one which is operationally sound. If the practical effect of form EEO-6 is to foster hiring quotas, the effects will stretch far beyond our universities and threaten the merit system for hiring and advancement generally.

The maximum benefits for society at large as well as the individual are achieved only when the employer is given free reign to select the individual most qualified to do the job. And only if individuals are hired and advanced on their merits, can American concepts of freedom and equal protection keep their meaning.

I understand that the development of form EEO-6 was initially an attempt to consolidate reporting procedures for four Government agencies. And since the Equal Employment Opportunity Commission is not the only agency involved, I am reluctant to be critical, but at the same time, I am very sensitive to the problems this new reporting procedure will present for the universities in New York and throughout the country. Not only will EEO-6 impose added burdens on the limited resources of these universities, but I also question whether any final result will justify the expense and effort involved.

The fundamental departure of form EEO-6 from the previous reporting requirement is that detailed salary levels and occupational breakdowns are now required from universities. EEOC also requires extensive maintenance of files on all applications submitted for a job. The impression this has created with many administrators is that the objective is the fulfillment of a quota.

While EEOC might not be mandated to require affirmative action programs, we cannot ignore the fact that the EEOC carries out its functions in this context. And the heavy handed tactics of the Federal Government in the past have justifiably created concerns among administrators that they may be subject to reprisals.

The EEOC has identified recruitment as the critical problem in underrepresentation of minorities in higher education. However, Civil Service-type hiring and promotions do not have application to a university setting where evaluation is frequently based on subjective criteria like quality of publication and commitment to teaching.

The parallels between universities and other large businesses—particularly in the academic departments—are limited. For one, the valuable and coveted concept of academic freedom must operate as a restraint on extensive Government intervention in university activities.

More effective would be Federal efforts to aid universities in recruiting minority groups by performing a job clearinghouse function.

The problem with the EEO-6 program is that rather than focusig in on problems such as recruiting it deals only with statistics which may often obscure the true picture. Rather than adding to the expenses of already burdened universities by requiring more complex procedures, the EEOC should concentrate its efforts on identifying those institutions where discrimination problems exist and following up with administrative and legal action. By placing a presumption of guilt on all universities the program unjustly increases the expenses of universities effectively dealing with the problem on their own.

Further, I question whether or not our former goal of eliminating racial identification on applications is being compromised by now requiring a university to reveal an applicant's race or ethnic origin. And even more objectionable is the use of visual identification to achieve this. Not only is there an ethical shadow over this effort, but its accuracy must be seriously questioned.

Quoting the U.S. court of Appeals in *Pennsylvania* v. *O'Neill*, let me conclude, that. . . .

". . . American progress in its attempt to eradicate racial discrimination is due largely to the generally held belief that individuals regardless of their race, creed, religion, sex, or national origin should be accorded an equal chance to compete for the opportunities society provides—employment, education, and others—on the basis of individual ability. In our democracy, rights are accorded primarily to individuals, as distinguished from groups. Opening doors long shut to minorities is imperative, but in so doing, we must be careful not to close them in the face of others, lest we abandon the basic principle of nondiscrimination that sparked the effort to pry open those doors in the first place."

Thank you, Mr. Chairman.

Mr. O'Hara. The Chair recognizes the gentleman from Oregon.

Mr. Dellenback. Thank you, Mr. Chairman.

I commend the chairman for moving the hearings into this particular phase. I think we are moving into an aspect of student assistance which is properly within the scope of what this subcommittee should be concerned with. I think it is an aspect that some of us have felt very strongly about, namely, that too infrequently does the Congress exercise its function of oversight. All too frequently we create programs, cast them forth, expect them to run, and then at some later stage of the game rise up and run after them because we find some aspect has not measured up to the specifications of our initial dream. This kind of oversight opportunity which we are here engaged in, Mr. Chairman, I am sure we both agree is extremely important, and is a vital part of what this subcommittee and what the Congress ought to be doing.

The earlier comments have made clear the nature of one aspect of the problem. We are into a situation where, if you take a static view of the overall situation, you find what some of us consider inequities. If we then try to deal with the dynamics of what you do to change that static situation to bring about a static equity, you run the risk that the dynamic tool you will use to bring about that change is itself inequitable.

That, too simplistically, it seems to me, sums up what I see as the problem. We have a goal that we want to reach for, and we must be sure that the manner in which we reach for it is itself not contradictory of the goal for which we are reaching. I hope that the higher education organizations which will be testifying before our subcommittee, Mr. Chairman, as well as individuals and representatives of agencies who testify before us, will really look upon these hearings as an opportunity to give us the information we so badly need to go forward to make changes in legislation, if indeed there should be changes made.

I would hope that no one will attack for the sake of attacking or defend for the sake of defending, but rather will help us with the issues and analogies as we try to see where it is we should go.

I close with those few simple comments, Mr. Chairman. I consider these hearings valuable and I approach them with an open mind and I will look forward to the witnesses who are going to speak this morning.

Mr. **Kemp.** Mr. Chairman, I applaud my distinguished colleague from Michigan for the initiative you have taken in holding today's hearings to investigate the enforcement impact of antidiscrimination legislation in the field of higher education. Although Congress has enacted forceful legislation providing for administrative remedies to charges of discrimination, to date the problems facing the Nation in this area have not been successfully dealt with, as borne out by the overwhelming backlog of charges now facing the Equal Employment Opportunity Commission.

As my colleagues are aware, I have long been an advocate of employment standards which are fair and equally applicable to the entire labor force in the country. The laws which Congress promalgates should and must be viable standards of practice for all men and women, irrespective of special interests, and applicable on an industry-wide basis. Truly the potentially discriminatory practices in the area of higher education, including hiring, promotion, discharge and tenure, demand that Congress take note and make every effort to discover and eliminate any ingrained inequities which may exist. As always, I shall fully support any legislation before the Congress which will serve to successfully ameliorate and ultimately eliminate discriminatory practices in employment.

Mr. **O'Hara.** I thank the gentleman from Oregon and the gentlemen from New York for their statements as we prepare for this new round of hearings.

As we have each indicated in our statements, we are concerned about the ways in which the objectives are achieved. I am not prepared to reach a conclusion. I heard a lot of pro and con about the way the goals have actually operated. What we are trying to do to start off with is we are trying to find out just exactly how these laws have been implemented, just what have been the mechanisms, what have been their effects, and we are going to be hearing from administrators of these laws and from the administered, that is, from those who are subjected to the laws and we are going to be taking a cross-section of testimony of just how these programs have operated and then we will arrive at our conclusions about whether or not the ways in which they have operated are proper to achieve the goals that we all seek.

We are very pleased to have as our first witness for this set of hearings the Chairman of the Equal Employment Opportunity Commission, Mr. John H. Powell, Jr., who is accompanied by Mr. Edgar Morgan, Director of the Congressional Affairs, and Mr. Jack Gould, who is concerned with compliance, Mr. George S[illegible]e, Special Assistant to the General Counsel, Mr. Alvin Golub, who is Executive Deputy Director of the Commission, and Mr. George La Nove.

Mr. Powell, could you favor us with your testimony?

STATEMENT OF JOHN H. POWELL, JR., CHAIRMAN, EQUAL EMPLOYMENT OPPORTUNITY COMMISSION, ACCOMPANIED BY EDGAR MORGAN, DIRECTOR, CONGRESSIONAL AFFAIRS; JACK L. GOULD, COMPLIANCE SECTION; GEORGE SAPE, SPECIAL ASSISTANT TO THE GENERAL COUNSEL; ALVIN GOLUB, EXECUTIVE DEPUTY DIRECTOR; AND GEORGE LaNOUE

Mr. POWELL. Thank you.

Mr. Chairman, at the outset I want to express my deep thanks for the privilege and opportunity of being the first witness to appear in this very important area.

Mr. Chairman, I have a prepared statement and would be glad to read that statement. However, I am at your pleasure, I am more than glad to submit the statement and enter into a dialog with the members of this committee, since, as I read your letter to me and as I hear your statement and the statements of your colleagues, there seems to be some concerns not expressed in that letter and, fortunately, since I am involved in the enforcement of a statute which raises many of the questions mentioned here, I will be glad to share with you my views on these important subjects.

Mr. O'HARA. Why don't we do both? Why don't you give us your statement and then add whatever you wish and then we can discuss it.

Mr. POWELL. Thank you.

Mr. Chairman and members of the subcommittee, I appreciate this opportunity to appear before you to outline the Equal Employment Opportunity Commission's role in eliminating discrimination in postsecondary education. I might indicate that our jurisdiction, of course, includes all private educational institutions, we have investigative authority over public educational institutions, and the Department of Justice, under the 1972 amendment, as you know, exercising court enforcement in that area.

We believe that the Commission's role is significant now and is likely to grow more important in the next few years. Let me state, briefly, the essentials of the Commission's jurisdiction, its workload and summarize a few of the most recent decisions relating to higher education institutions.

The responsibility of the U.S. Equal Employment Opportunity Commission is to enforce title VII of the Civil Rights Act of 1964, as amended. Title VII makes it an unlawful employment practice to discriminate on the basis of race, color, religion, sex or national origin.

From its earliest days the Commission was given jurisdiction over discrimination against nonprofessional employees in private postsecondary educational institutions. This narrow authority, limited to nonprofessional employees and not covering teachers, however, made it more difficult for the Commission to attack all types of discrimination against minorities and women in higher education.

Consequently, in 1972 the Congress gave the Commission new enforcement powers and widened its jurisdiction to cover all employees (academic and nonacademic) in all postsecondary institutions (public and private), except to the extent of the court's enforcement relating to public institutions. The only exceptions are institutions of less than 15 employees and religious educational institutions which are permitted to utilize religious preference in hiring personnel directly related to its activities. (Sec. 702)

EEOC's ultimate sanction is litigation. However, due to the magnitude of the subject and number of cases involved, the Commission, in my opinion, must employ these court enforcement authorities so as to encourage voluntary compliance. The resolution of many of the questions addressed by you, Mr. Chairman, and the other members of this committee, will certainly help in achieving that voluntary compliance.

The Commission does not issue certificates of compliance. It does not grant funds to educational institutions and it does not have the power to suspend or terminate grants or contracts. While insisting on equal employment opportunity which in many situations will require affirmative action, title VII makes no abstract requirement of affirmative action similar to that required by Executive Order 11246, as amended.

ENFORCEMENT PROCESS

The enforcement of title VII proceeds as follows:

The Commission's district offices receive written charges of discrimination against public and private employers. I might say that while we ultimately have a written charge, the charges are often phoned in and mailed in. The charges that we treat cover virtually the waterfront, virtually 63 million employees are covered under title V, 75 percent of thework force. We do not have, you know, jurisdiction over Federal employees.

As a member of the Equal Employment Coordinating Council, I do have some coordinating recommending responsibilities in that area. The Commission's jurisdiction covers labor organizations, joint labor-management apprenticeship programs, and public and private employment agencies. Members of the Commission also may initiate charges alleging that a violation of title VII has occurred. Before investigation, a charge must be deferred for 60 days to a State fair employment practice agency where an enforceable fair employment practice law is in effect. After an investigation, if there is reasonable cause to believe the charge is true, and the determination was that the reasonable cause takes place by what is known as a determination, that authority is implicit in the Commission and certain cases where there is precedent it has been delegated to the district director, and the district office then attempts to remedy the alleged unlawful practices through the informal methods of conciliation, conference and persuasion.

Unless an acceptable conciliation agreement has been secured, the Commission may, after 30 days from the date the charge was filed, bring suit in an appropriate Federal district court. The Attorney General brings suit when a State government, governmental agency or a political subdivision is involved.

If the Commission or the Attorney General does not proceed in this manner, at the conclusion of the administrative procedures, or earlier at the request of the charging party, a notice of right to sue may be issued which allows the charging party to proceed within 90 days in a Federal district court.

In private sector cases, the Commission may intervene in such civil action if the case is of general public interest, and will advance significantly the enforcement of title VII. The investigation and conciliation of charges having an industrywide or national impact are coordinated or conducted by the national Office of Compliance.

Under the provisions of section 706(f)(2), as amended by section 5 of the Equal Employment Opportunity Act of 1972, if the Commission, or the Attorney General in a case involving a State government, governmental agency or political subdivision, after a preliminary investigation concludes that prompt judicial action is necessary to carry out the purposes of the act, may bring an action for appropriate temporary or preliminary relief pending final disposition of a charge.

In addition, EEOC has had an active research program on academic discrimination and the Office of Voluntary Programs has aided scores of institutions in complying with title VII.

THE EDUCATION INSTITUTION AS AN EMPLOYER

The concept that institutions of higher education are above or at least not in the same relationship to the rest of society is shared by a large segment of the population, and by most institutions of higher education as well. This view is frequently held, notwithstanding glaring realities to the contrary. In fact, particularly as such institutions tend to grow in size, they assume more of the structural and organizational attributes of any business organization. As one such element of its operation, the institution must maintain a certain number of employees; it must recruit such employees from available labor pools; and it must determine the levels and classifications of its employees.

The institution must also set wages for its employees according to rank and length of service and must develop a system of incentives and benefits to retain those employees it has recruited. In other words, the institution, in fulfilling its role as the forum of organized learning, functions also as an employer in the same way that most businesses maintain their respective roles. It is this role of employer which places institutions of higher education within the purview of the Federal Government and its avowed interest to protect the national commitment to equal employment opportunity.

More specifically, it is this role as employer which has placed all educational institutions within the jurisdiction of title VII of the Civil Rights Act of 1964, as administered by the Equal Employment Opportunity Commission.

DISCRIMINATION IN HIGHER EDUCATION INSTITUTIONS

The magnitude of discrimination in higher education has been well documented in several studies. Among the best are the collection of testimony and reports in the hearings on H.R. 16098 before this subcommittee in 1970 and the statistical analysis by Bayer and Astin (1972) for the American Council on Education.

At the Commission we know that behind each statistic are real people who believe they have been discriminated against by academic institutions. Currently more than 1,600 individuals have filed such charges with the Commission.

In 1973 approximately 1 out of every 40 charges coming to the Commission was against a higher educational institution. Of these, 79 percent were against public institutions, 21 percent against private; 44 percent were filed on the basis of sex discrimination, 39 percent on racial or ethnic discrimination, 4 percent on religious discrimination, 13 percent are other or mixed.

The issues raised in these charges were almost evenly divided among discrimination related to hiring, discharge, promotion, wages, and terms and conditions of employment. In short, discrimination is likely to be found at any point in the university personnel process.

When title VII was amended to give the Commission wider authority over discrimination in higher education, Congress applied the same title VII principles and procedures to academic institutions as previously applied to industries or other commercial establishments.

Some of the issues found in higher education may be illustrated in the Commission's recent decision. One of the most frequent problems, for instance, is undervaluing the contributions of women teachers by men who dominate the ranks of tenured faculty and administrators.

In one such case we found that reasonable cause existed to believe that a university denied a charging party reappointment and tenure because of her sex. We held that a system of awarding tenure that relies on subjective nonreviewable judgments of the tenure candidate by the candidate's colleagues is a system that lends itself to abuse, where most of the colleagues are of a different race or sex from the candidate.

We also found in a case before the Commission for decision that female assistant professors in the music department were paid less and received smaller yearly increases than male assistant professors performing similar duties.

While discrimination in faculty appointments often has a devastating effect on individual academic careers, discrimination against whole classes of nonacademic employees is also found in universities. EEOC discovered that one major university classified its female maintenance workers as maids and paid them less than males which it called janitors, though they both performed essentially the same tasks. The conciliation agreement EEOC negotiated ended the salary inequity and included a settlement for backpay.

Occasionally an institution will misinterpret its affirmative action goals. This was evidenced in a recent case where a college, due to decreased student enrollment, had to lay off some of its instructors. A white male professor, although ranked first in his department among the five nontenured instructors according to objective criteria, was nevertheless selected for discharge by higher ranking college officials primarily on the grounds that the needs of its black students placed "top priority" for the need for black instructors. The fifth-ranked black female was retained.

The EEOC rejected the college's "assumption" that only black teachers could meet the needs of black students. However, the Commission did recognize that in some limited circumstances an employer utilizing "objective criteria" could "consider an individual's ability to relate and communicate to a particular racial or ethnic or sex group where such abilities are required as essential ingredients for successful performance of the particular job in question."

As a result of the 1972 action by Congress EEOC now plays a role in insuring equal employment opportunity in educational institutions, including postsecondary educational institutions, which is the focus of this committee. There are currently charges against most large universities in the country, and that should not be surprising, I might say, Mr. Chairman, because one only needs to take a look at the employment patterns extant throughout this country to recognize that the mission which EEOC was created to perform, we still have a long way to go and since educational institutions are part of the society and have not at least in this respect differed, it is not at all surprising with these statistics.

When discrimination occurs in a college or university, equal educational as well as equal employment opportunities suffer. Our Nation is committed to provide and protect both kinds of opportunity and the EEOC intends to see that its responsibility under the Civil Rights Act is fully implemented and faithfully pursued.

I would be glad to answer any questions, Mr. Chairman. I would like, however, in light of the comments made, to address myself to some of the concerns I have heard expressed here.

Mr. O'Hara. Please feel free to do so, Mr. Powell.

Mr. Powell. I would like to comment, if I may, upon the remarks of Congressman Biaggi and then comment on the remarks of the chairman.

One of the several things that Congress requires the Equal Employment Opportunity Commission to do is to collect information. The purpose of collecting information is to identify the fact of discrimination.

Now, the EEO-1 form is the form we have had for many, many years. The EEO-6 form, to which the Congressman refers, results from the amendments to the law. If there are changes from EEO-6, or if EEO-6 is different from EEO-1, I would suggest that the difference represents the experience, the result of the experience of this agency in recognizing the kind of information that it must have in order to carry out the mandate that Congress has imposed upon us.

Let's understand that all that we are doing, when we put out these forms, is to ask the respondent to give us the information which is in its custody. Now, as an administrator, it would raise questions in my mind if the respondent were not willing to give information in such an important area, particularly when the respondent is a respondent which has virtually no black professors or female professors and when the reason for the requested information is to achieve equal employment opportunities.

Let's understand that the Federal Trade Commission also requires business enterprise to provide information; that the Securities and Exchange Commission requires that the corporate entities in offering securities or bonds must provide full disclosure.

Now, we have had substantial experience, since the early thirties, with other areas, areas of economic concern. I might suggest that title VII, unlike other statutes which represent an option of Congress chosen from several constitutionally permissible approaches is constitutionally required. There would be a need for action such as that taken under title VII even if there were no 1964 Civil Rights Act.

I would suggest that the authority of an agency empowered to enforce the 13th and 14th amendments ought to be at least as great as the authority of other agencies which regulate commerce.

Mr. Chairman, you have made the suggestion that there is some question as to whether Federal agencies are involved in two standards, one for blacks and women and another for white males. I would suggest to you that nothing could be further from the truth.

If we look at the development of the tools for eliminating discrimination and we look at the opinion brought forth in the *Swann* case, the court said there that:

> Where we have patterns produced by policies of the state, where color consciousness was the explicit method used to achieve segregation, we must have color conscious remedies in order to eliminate the present effects of past discrimination.

Mr. Chairman, blacks were slaves in this country a little over a hundred years ago and the 13th amendment, as you know, was not implemented in the area of employment or education for many years. When the 1964 Act was passed, it was already late in the day.

Many of the States had already seen the need for this kind of legislation and when a Federal law was finally enacted in 1964 the agency was not then empowered to implement the remedies that must be implemented if there is to be fundamental change in the historic pattern of exclusion of minorities and women from so many areas of employment.

Mr. Chairman, this Nation put a man on the moon in less than 10 years. I would suggest while that effort was terribly important, nothing is more important, in my opinion, than for the Government to give the resources to those agencies whose job it is to see to it that the promise of the 14th amendment is honored.

Mr. Chairman, I agree with your opening statement that reverse discrimination is an anomalous term. If you have 20 jobs and 100 applicants, and 100 applicants are white males and the employer selects 20 of those people and we assume that all of the 100 are qualified, I would say that the employer has discriminated against 80 of the people who were qualified. I would also suggest that that discrimination is not illegal.

If we change that hypothetical and we hypothesize an employer who has historically discriminated against blacks and women, and that employer has been advised by counsel that unless he takes steps to change his work pattern, he will be subjected, if he is a Federal contractor, to action under 11246, or, if he has more than 15 employees, to action by this agency. If such an employer, for example, has 20 vacancies and 100 applications and he has, as he should do, taken steps to see to it that women and blacks apply, and he succeeds in getting qualified blacks and qualified women to apply. And if he then selects from among the 100 qualified people, some of whom are blacks and some of whom are women, he selects qualified blacks and qualified women, some people then yell reverse discrimination.

Now, I am not unmindful of the legitimate concern that many people have that all of a sudden they are not going to be considered on their merits. And as I indicated in my prepared text, we will respond, because people must recognize that the jurisdiction of this agency extends to the rights of everyone. The jurisdiction of the Equal

Employment Opportunities Commission, as I think is your concern, is to see to it that everyone not be discriminated against on so irrelevant a factor as race, creed or color. But I do not intend to be intimidated and I trust this committee will not be intimidated simply because there are those who are unrealistic in their fears.

We must look beyond the rhetoric, Mr. Chairman, and look at the facts. Any sort of preliminary analysis of the facts will show that blacks are not displacing white males, that women are not displacing males, and I think that it is terribly important in this area, an area subject to so much misunderstanding, for us to tell it like it is and not necessarily to respond to the rhetoric, even though that rhetoric might be the rhetoric of a majority, because the rights of the majority are no greater than the rights which are respected of members of the minority.

I am ready to answer any questions.

Mr. O'Hara. Mr. Powell, if I could start off the questioning. I am somewhat concerned by several of the aspects of your presentation. For instance, your reference in your statement, if we can sort of take them up in order, when you speak of the white male instructor who is passed over, and I believe you indicated your Commission provided a remedy for that white male instructor?

Mr. Powell. That is correct.

Mr. O'Hara. You then went on to say at the conclusion of that paragraph, "However, the Commission did recognize that in some limited circumstances an employer utilizing objective criteria——."

Mr. Powell. That is put in quotes because it is emphasized. It should be objective criteria because it is the only guide we have to the use of subjective criteria, which is invidious.

Mr. O'Hara [continuing]. Yes. "Could consider an individual's ability to relate" and so forth "where such abilities are required as essential ingredients for successful performance of the particular job in question."

Now let me say something about that. As I grow older, I am inclined to reminisce a little bit, more than I used to, and I can remember the debate very well on the provision of title VI that permitted any kind of consideration——

Mr. Powell. I am old enough to remember that debate also.

Mr. O'Hara. There you are. It is subsection i and it is now United States Code 2000 (e) of the 1964 act. "Racial Imbalance." It says: "Notwithstanding any other provision of this subchapter, it shall not be an unlawful employment practice for an employer to hire and employ employees" and so forth "on the basis of his religion, sex, or national origin"——

Mr. Powell. That is a bona fide occupational qualification.

Mr. O'Hara [continuing]. "Where it is a bona fide occupational qualification."

Well, I can very well remember this because it was an effort to water down title VII. I opposed it.

Mr. Powell. I see.

Mr. O'Hara. And the effort was to water it down further by saying: In some circumstances race could be a bona fide occupational qualification.

Mr. Powell. No, that is not what I remember.

Mr. O'Hara. I remember that debate on the floor of the House when we had this situation—well, finally, those of us who opposed this thing in its entirety were not able to prevail, but we were able to prevail in at least knocking "race" out of it, so that under no circumstances could race be considered a bona fide occupational qualification.

Mr. Powell. There are few instances, Mr. Chairman, where that provision is operative. I cannot say that there are no provisions. Perhaps if the job is to provide a sperm bank, it might well be that only males can perform that function. We have not yet gotten to the point where we can provide synthesized sperm, but the BFOQ exceptions are very limited in any case.

The language, Mr. Chairman, is adressed to the phenomenon, and I might say here we should consider the admonition made by Mr. Justice Holmes when he said that "In examining many problems, a page of history is better than two volumes of logic."

Mr. O'Hara. I think Holmes only gave one volume of logic.

Mr. Powell. Yes, whatever it was, but I think his remarks in that context are particularly applicable to the problem of accommodating the public interests in selecting people of merit. Mr. Chairman, when I got out of law school less than 20 years ago, my qualifications as a lawyer I can tell you were irrelevant and the qualifications of many other blacks and Spanish-surnamed people and the encouragement of women to go into law and other fields was irrelevant because of the attitude of society.

Now, what have these patterns of discrimination which persisted for so many years resulted in? It has resulted, Mr. Chairman, for example, in such developments as is being seen in our cities, which, in the last 25 or 30 years has seen the movement of the affluent, largely white families to the suburbs. This movement was taking place while discrimination was rampant, while the Federal Government was involved itself in the perpetuation of discrimination. The President of the United States, has conceded this in a statement he made in June of 1972, and what it results in is that the police departments of the major cities and educational institutions of the major cities consist of particular kinds of people ethnically and racially in leadership positions where the clientele, if you will, are poor people, are black people, are Spanish-speaking people, and are Mexican-American.

The statement of the President Mr. Chairman, was a recognition of the fact that if policemen are going to do an effective job in our ghettoes, it is important and there is a public interest in the employment of some qualified black policemen, there is a public interest in the employment of black teachers, there is a public interest in there being some black sanitation workers, and I would think that people who look at that problem and are aware of all of the explosions we have had in the sixties will agree, that is what that statement is meant to affirm.

Mr. O'Hara. Mr. Powell, I am going to get off of that in a minute, but let me say you should have been a member of Congress. Those are very effective arguments, and they were made at that time when the law was under debate.

Mr. Powell. Sometimes it takes many years for effective arguments to be accepted.

Mr. O'Hara. And many times the Congress decided against it. As a matter of fact, the arguments are being made.

Mr. Powell. You are familiar with the *Carter v. Gallagher* case.

Mr. O'Hara. Well, let me finish my statement. Many people who don't take your view then argued that race was sometimes a bona fide occupational qualification.

Mr. Powell. Mr. Chairman, I do not want to be characterized as saying that. My remarks, if you understand me to say that, are being misunderstood.

Mr. O'Hara. Well, in any event one of my points is that I think whatever powers your Commission has, they are derived from the law, the law that created your Commission described its powers. I don't really think that you are at liberty to determine that the Congress, in prescribing the powers of the Commission, and in limiting the powers of the Commission, made a mistake and, therefore, it is your responsibility to correct the mistake.

Mr. Powell. What is it that you are referring to?

Mr. O'Hara. I think you told me in your statement that you felt that in some circumstances race was a bona fide occupational qualification and that is on page 9.

Mr. Powell. I don't know.

Mr. O'Hara. You said you thought the institution should be able to consider an individual's ability to relate and communicate.

Mr. Powell. That is not a racial matter. A white person could relate in that regard and a woman could relate, Mr. Chairman, in that regard. You are reading more into the statement than is there, Mr. Chairman.

Mr. Biaggi. Will you yield?

Mr. O'Hara. I will in just a moment, but let me just button this up. May I just ask then if under any of your regulations would an institution of higher education be permitted to consider race as a bona fide occupational qualification?

Mr. Powell. No. Title VII does not contemplate that and I, of course, have an obligation to see that the laws are faithfully executed and I am very, very mindful of the requirement.

Mr. O'Hara. You would not consider an institution to consider race a bona fide occupational requirement?

Mr. Powell. Certainly not.

Mr. O'Hara. I am sorry I misunderstood that.

Mr. Powell. That is quite all right.

Mr. O'Hara. Mr. Chairman, what we are after really is the system you used and before we get into that I would like you to take us, lead us through your system. You have received a complaint and you led us through in general terms in your statement. You attempt a reconciliation.

I would like to know just how that attempt for reconciliation usually operates in the case where the complaint is one that involves alleged systematic discrimination on the basis of race or sex. But before we get into that, I am going to yield to the gentleman from New York and the gentleman from Oregon later if he wishes to make any comments.

Mr. BIAGGI. Just in the colloquy you just had a bit ago, Mr. Powell stated that in yesteryear at least, in connection with the police departments——

Mr. POWELL. And even today——

Mr. BIAGGI. OK. Well, that is not my understanding, but it is perfectly all right. I think it applies——

Mr. POWELL. Oh, yes; we still have a long way to go.

Mr. BIAGGI. You don't in the area I am addressing myself to.

You said something about the police, sanitation people, and the like. You said, or you implied at least, that it would be ineffective or at least a diminution of efficiency if we didn't have police officers whose backgrounds related to the community in a general way. You spoke directly to blacks and Spanish surnamed.

Mr. POWELL. Any ethnic group, any sector.

Mr. BIAGGI. I am glad you said that; I am glad you included that.

Mr. POWELL. There is no question about it.

Mr. BIAGGI. Fine. I am glad you said that. Let me give you my history. To begin with, I was a police officer for 23 years, but before that I lived in the ghetto; I was born in a ghetto and raised in a ghetto, the ghetto the like of which thankfully does not exist any more in this country. I am of Italian origin and we didn't have policemen of Italian origin for several reasons: One, our parents were immigrants and we had language difficulties. We would have been grateful if we had the bilingual programs then, but we did not.

Be that as it may, that was a universal condition.

Two, there was a psychology that had developed in our community at least and I think it ran across the country and as far as the immigrants were concerned, it was a police impression and it was the Government and they took that European psychology with them and there was a status position that they felt they were automatically cast into.

And, three, the educational process had not taken full hold yet. But the fact of the matter is police efficiency went on. I will tell you what offended us and today the same principle applies, whether it be of Italian extraction, whether it be black, whatever, the discrimination we all abhor, it is a question of how you deal with it and how it is to be corrected and we fought that fight all of our life.

In those days, in many areas we were denied the opportunity. It is the denial that is the offence.

Mr. POWELL. I agree.

Mr. BIAGGI. Not the fact that a people chose to go into one profession or another.

Mr. POWELL. I agree with you most assuredly in that regard.

Mr. BIAGGI. I am sure you do.

Mr. POWELL. I do.

Mr. BIAGGI. But that is why it becomes very difficult to deal with the problem on a general basis.

Mr. POWELL. I agree, I agree.

Mr. BIAGGI. I will point up another illustration. In the sanitation department for a while they thought it was the complete province of those of Italian ancestry for whatever derogatory reasons were advanced. Today it is somewhat different. It is a well-paying job and the benefits are good.

Mr. Powell. $17,000 in one city I read in the papers the other day.

Mr. Biaggi. That is without overtime. Again, it was denial of opportunity. So some people oriented in different areas, I am aware of that. That is an important consideration in making your evaluation?

Mr. Powell. I agree, no question.

Mr. Biaggi. That is why again general impressions or general approaches to problems are difficult and ofttimes put you in a position where you arrive at a conclusion that works hardships.

Mr. Powell. I agree. Might I say that with respect to your reference to statistics, the law is that the statistics raise a rebuttable inference and evidence could be directed to show, one, there is no denial of the opportunity; two, there are efforts to recruit; and, three, for their own reasons a particular ethnic group, racial group or sexual group, chose not to enter into this.

I might say I have been in the minority as regards an aspect of the "conventional wisdom" about integration. The purpose of integration, the purpose of the thrust of integration was to provide mobility and an opportunity for people to choose where they wanted to live. And I have some very strong views about the appropriateness of someone dictating that there should be a particular number.

The number should be the result of the free unfettered choice of people, irrespective of their color or other such irrelevant factors. I do believe that the policymakers ought to take a look at the equal protection laws in terms of services, whether those services be educational services, garbage removal services or police protection services. There are many people in the black community who feel that the concern about narcotics did not become pronounced until narcotics were a problem in the suburbs because the problems of narcotics, as you know, coming out of the ghetto, has always been a problem in the ghetto.

Equal protection like law and order is a nice sounding word, but it does not mean anything unless there is some implementation. Police protection is a concern of the black community because there are blacks who own businesses in the black community and they perceive police protection to be one thing in the ghetto and another thing in the suburbs. They would see it a little differently if there were blacks——

Mr. Biaggi. I don't know if I agree with you on that one. All I can say is that concern, despite some popular misconception, is as great if not greater than outside the ghettoes.

Mr. Powell. I can see the problem myself as a public administrator to speak the truth even though it be unpopular, even though it may seem to be a minority point of view, because I have faith in the ultimate sense of fairness of the people of this country. It is the obligation of those who would be leaders to speak the truth and the truth is a commodity of which there is really not enough.

Mr. Biaggi. I would like to conclude, arrive at a conclusion as to my initial premise, which we both agree on. The policemen, even though not of Italian origin in my area, did a good job. The teacher, even though not of Italian origin, did a pretty good job. The fact that she was not of Italian origin didn't mean she could not teach. It wasn't an essential that she be of Italian origin to be able to teach.

That is the point I am making in a broader application. If you tell me she couldn't be one of Italian origin because she was of Italian origin, then you make your point.

Mr. Powell. I don't quarrel with that, but I must tell you if you have been in any large city like New York, in the context of there being concern about there being no independent review of police action, you recognize that there are many people who are not black, who are not Italian, who conduct themselves in such a way that reasonable people would perceive that they are antiblack, anti-Italian. I have been a witness to that.

Mr. Biaggi. You are not alone. You are not alone.

Mr. O'Hara. The Chair will yield to the gentleman from Oregon, whom we understand is at this very moment supposed to be in a markup session of the Committee on Interior.

Mr. Dellenback. Thank you, Mr. Chairman, very much.

First, let me ask you a few mechanical questions. It is my understanding that the entire operation of your Commission is, at the present time, being looked at. Also, oversight is being conducted in another one of our subcommittees.

Mr. Powell. No, that is prospective. Well, in the sense we are providing information to that subcommittee, yes, that is true.

Mr. Dellenback. I don't mean to get into the broad reach of this issue, but rather to focus our thinking principally on the educational field. Is the Commission mechanically equipped in terms of number of employees, dollar budget, facilities and the like to really handle the workload, as far as postsecondary education is concerned?

Mr. Powell. Postsecondary education, I wished I had the statistics, I do not. I will be glad to provide you with more full statistics in that regard. Looking at the jurisdiction that the agency has, postsecondary education, while important and while there are many views as suggested in my statement about it, in terms of the scope of the area, I do not conceive it to be an unmanageable one.

That is not to say that—let me put it in the affirmative. I do feel that given the mandate of the Commission, that the Congress, in its wisdom may see fit, I hope, I trust, to provide us with considerably more resources than we now have.

Mr. Dellenback. Do you think you do not have adequate facilities now to do these things?

Mr. Powell. I think our resources are adequate when you recognize that the agency was, in effect, reconstituted in 1972 and we are now integrating these new tools that we have.

Mr. Dellenback. You indicated on page 6 of your testimony that there have been apparently some 1,600 charges?

Mr. Powell. Yes.

Mr. O'Hara. Charges of discrimination filed against academic institutions?

Mr. Powell. Right.

Mr. Dellenback. That was the total filed against academic institutions in 1972?

Mr. Powell. Not enducational institutions, but postsecondary institutions in 1972, since 1972.

Mr. Dellenback. You say in your testimony "Academic institutions", and you are now refining it to mean postsecondary institutions. I am not quibbling, but would you clarify what you are telling me.

Mr. Powell. In reading the statement last night I noticed we focused on postsecondary institutions and I see that statement may be misleading because it might suggest to the committee we do not have jurisdiction over educational institutions as such. That was changed then in my remarks, however, these statistics relate only to postsecondary institutions and they represent that number of charges brought only since 1972.

Mr. **Dellenback.** How many of those charges have you dealt with so far?

Mr. **Powell.** Well, the charges are in the administrative process, all of them are in administrative process. Do you mean "disposed of"?

Mr. **Dellenback.** Yes.

Mr. **Powell.** I don't have the information at my fingertips, but would be glad to provide it to the committee.

Mr. **Dellenback.** I will be glad to get it. In the meantime, can you tell me approximately is it 90 percent, 50 percent, 20 percent or 1 percent insofar as how many of those 1,600 charges have reached resolution one way or another?

Mr. **Powell.** We will provide you with that information.

Mr. **Dellenback.** Do you have any approximation?

Mr. **Powell.** It is very few.

Mr. **Dellenback.** Very few?

Mr. **Powell.** Very few. I think, if I may, this is a new area of jurisdiction. It is an area in which sister agencies have exercised some authority. There have been discussions between the staff at EEOC and the staff at HEW in this context of EOC and the Treasury Department in another context. This is a new area of jurisdiction and we have, I think, geared up and you can expect that we will be more prompt in the disposition of these cases.

One of my concerns, generally speaking, is that the charges in administration in a much more prompt and effective fashion than in the past.

Mr. **Dellenback.** Is it my understanding that the Commission has a backlog, at the present time, that reaches far beyond postsecondary institutions?

Mr. **Powell.** I think that is a matter of public knowledge and the subject of much discussion.

Mr. **Dellenback.** And the backlog is approximately 100,000 cases?

Mr. **Powell.** The 100,000 charge is not the number that we are saying. The number is somewhere between 80,000 and 90,000. That, of course, is far too high. That has to be understood with historical reasons, we were not constituted to do this.

Mr. **Dellenback.** I am not arguing with you or blaming you for this thing. Since you erudite lawyers have referred to your favorite phraseology, let me refer to a quote of Justice Cardozo: "Justice delayed is justice denied." If it takes 3 or 4 years before you get a resolution, it is no answer to the claimant.

Mr. **Powell.** Justice Cardozo is my favorite, too. It may be we might need another tool to see to it that we do adhere to the admonition of Mr. Justice Cardozo.

Mr. **Dellenback.** Whatever we write into the law insofar as a substantive measure is concerned, is important, but perhaps only academically interesting, if with a substantial number of the cases, there is a delay of such magnitude that we don't really get prompt resolution.

Now, the 1972 amendments are not that old yet, but it is my understanding that of the 1,600 charges of discrimination that have been filed in connection with postsecondary academic institutions—regardless of how many are in process, so to speak—there is a very low number of them that have been removed. The statistics that have been seen by my staff indicate it is less than 1 percent at this time.

I am not again saying this in quarrel with you, but saying it is my understanding we don't have many of them settled.

Mr. Powell. Let's say that in the use of terms we both say the same thing. If you say "resolved," you mean "disposed of," and I agree, but if you say "resolved," whether there has been a determination, as to whether or not discrimination is present, then I would not agree.

Mr. Dellenback. I would agree with your second definition.

Mr. Powell. I would accept the definition of "disposed of." It was only, let me just say that in 1972 in March, that is, 1972, when the 1972 amendment was finally passed, there were less than 40 lawyers in the Office of the General Counsel.

I mention that only by way of illustration. I can mention many other examples. We now have 286 lawyers in five litigation centers and headquarters. Now it took time to staff, provide the staffing. I would say it took virtually a year just to gear up, to implement that statute. We are now at the point where we can make the most expeditious use of the tools which Congress made available to us in 1972 and which it took some time to get into the mainstream.

Mr. Dellenback. I read you reluctantly, then, as telling me that you now have adequate personnel, adequate facilities and adequate budget so that you are going to be able to keep any further backlog from developing while proceeding to catch up on this backlog so we have currency in the handling of these cases.

Mr. Powell. I didn't say that.

Mr. Dellenback. That is why I said I read you reluctantly. May I just say, Mr. Powell, I get a little bit of the feeling that when I ask a question, you take my question as contentious and you become contentious.

Mr. Powell. Certainly not.

Mr. Dellenback. The best answer you might give us is: "Congressman, we don't have nearly enough people to handle the cases; we need more money, staff personnel, and more lawyers. If you expect us to handle the load of discrimination cases that are being dumped on us, you have to give us more help."

If that is your answer, put it in the record.

Mr. Powell. There is no question, in my opinion, we will need more money and more resources. I thought I had said that, but if there is some doubt about it, let me say we need more money and more resources to do the kind of job that I think should be done. I am also saying, however, that we have been given more resources, we do have more money than we did in fiscal 1973.

There is the need to integrate those matters and put in procedures which we can make effective.

Mr. Dellenback. I am worried about the backlog, and worried about the fact that although the 1972 amendments are less than 2 years old, we run the risk that the backlog will continue to grow. It is possible we could get a 3- and 4-year delay, which is present in some other cases.

Mr. Powell. I want to be as responsive as possible, but let me take 1 minute to tell you where we are. When the Equal Employment Commission opened its doors in July 1965, there was a backlog of 8,500 charges before we opened. Every year the number of charges filed with the agency has increased. During fiscal year 1972 I don't know what the number was, but the number that came before us in fiscal year ending 1974, June 30, 1974, was 55,000 charges, which was an increase of some 20,000 charges over what we ever had before in the current fiscal year.

If our forecasts are accurate this year, we will receive something like 75,000 charges, so that when we, or the fact that we are getting better, as we are getting better, the fact we are processing more charges is not enough, but what we have to do is to reach up to that point which is consistent with the increasing knowledge of people about their rights.

Now, the goal that I have set for my agency for this year is that we will process as many, or at least as many charges that come in. If we do that, we will process more than twice as many charges than we ever processed before. If I can come close to that, I will be in a position to come back to you or your colleagues and suggest we need more resources and more tools in order to do a better job.

I must demonstrate, in my opinion, we are making the best possible use of the resources you have given us.

Mr. Dellenback. I am not attacking you, but I want you to understand whatever we write substantively in the law will be implemented. It may take other tools.

Mr. Powell. We do, in my opinion, need cease-and-desist authority in some areas, I am forced to say.

Mr. Dellenback. Let me put in the record one mechanical item: The fiscal 1974 budget request for the agency was $44 million and Congress approved $43 million. In 1975, the President requested $56 million and the House appropriated $52 million, so that the budgetary requests are not being substantially eroded in the appropriations process.

If at any later time you come to us to say you are not able to keep up with the backlog, and even beyond that you are not able to make any real headway in catching up on it, it may be there is not enough being requested in the budgetary process. It may be you will have to be making recommendations regarding mechanical changes, say, cease-and-desist orders, et cetera.

Let me ask one more substantive question, Mr. Chairman, and then I will leave. I am concerned whether or not you feel—this is back to my opening statement—that employers should attempt to do anything special in achieving compliance. Let's suppose by something special I might mean something which viewed by itself would be considered discrimination according to current standards. Should employers attempt any so-defined special procedures in order to bring about an accelerated change in the composition of the total employment picture.

Mr. Powell. Well, we are getting at semantics. No, I don't think employers need do anything special. I think employers need to do that which they should have always been doing, that is to say, that since the average employer is an employer who either has no females or blacks or, if he has females or blacks, they are concentrated into what has been termed "black jobs," which are typically the hot, dirty, heavy jobs, or female jobs, which all too often are clerical jobs, then he should take those steps which will convey to these groups that there are now opportunities for them to get jobs commensurate with their abilities and aspirations.

If you want to call that "special," then it is special.

Mr. Dellenback. What you have described is especially important, and those steps are proper and urgently needed; but it is not what I was really referring to. I am leading to this particular point: Suppose, in a given year, an educational institution is going to hire 100 new people, and it has 1,000 employees on the books. If you look at the 1,000, you would find a very low percentage of females and a very low percentage of minority groups—not reflective of society and perhaps the result of past discrimination. Now, given the fact that the institution is going to hire 100 new employees this year, should it attempt to differentiate or discriminate in any way in setting up whom it hires in that 100 new employees?

Mr. Powell. No.

Mr. Dellenback. In an attempt to bring about a revised situation?

Mr. Powell. No.

Mr. Dellenback. You feel very strongly that should not be the case?

Mr. Powell. I think it is not necessary. It would be unwise.

Mr. Dellenback. Let me ask you this: Whether or not required by law or regulation—and you indicated your opposition to it—in your opinion has the process of implementation actually tended to make the administrators of educational institutions feel that they must give some clear preference to minority or female candidates in order not to run into trouble with the Government?

Mr. Powell. Well, I do have an opinion, but I must say the opinion is based not upon any great analysis of the situation. I have read very much about this area and it has been an area very close to my heart. I do believe that if there be any instances in which administrators have seen fit to discriminate in the way you have suggested, they are the exception and they are not the rule.

Mr. Dellenback. You don't think there is a widespread feeling among educational administrators that unless they do that, they will be put under some sort of pressure?

Mr. Powell. I want to be responsive, Mr. Dellenback. May I just say, preliminarily, that probably the most important task that administrators of law such as this have to achieve is public acceptance, public acceptance, particularly those segments of the public who have particular responsibilities.

Now, if they get public acceptance, the kind of rhetoric coming forth would be more supportive of the legislation.

Now, we must recognize that the kind of public acceptance that is necessary for there to be a change in the pattern of employment which our statistics tell us has not yet arrived and we must also recognize that this business concern about so-called reverse discrimination, reflects not quite so much the facts as it does an attitude of resistance.

Now, I have seen, in talking with corporate executives, a discernible change. I am happy to report that corporations, which when this agency was founded expended little or no resources to be advised as to what they had to do to comply with title VII, but that has changed.

Now, in the area of education, I think you have to understand that there is still a lot of resistance. When we look beyond the rhetoric and we look to the actual situation which prevails in a particular college, those statements must be considered in that context.

Now, that is not to say that in particular instances particular people may not feel this way, but that is also a reflection of the fact that they have never really sat back and said, "What is it we are really required to do?"

What they do is, they pick the most horrible kind of things and say, "This is what we are required to do and this is horrible" and I would agree if that is what they are required to do. The fact is they are not required to discriminate.

The object of 11246 is to eliminate discrimination and you don't achieve it by discriminating against white males, particularly when white males in general are in the majority and white males are the people who run things.

Mr. DELLENBACK. Thank you very much, Mr. Powell. The area with which you are charged with responsibility is an area which we agree is of extreme importance and we appreciate your remarks.

Thank you very much, Mr. Chairman.

Mr. O'HARA. Thank you.

I wonder if I could at this point get Mr. Powell to lead us through a description of how they handle their conciliation procedures in a case in which an institution of higher education has been charged with a pattern of discrimination.

Mr. POWELL. Let me be frank with you, Mr. Chairman, and say even though I am Chairman of this Agency, I am probably not the best witness to give you the kind of minutia you may want.

I will be more than glad to share with you the knowledge I acquired in the 7 months I have been Chairman and in the many years I have been a lawyer concerned with matters of civil rights.

I have visited some 11 or 12 of my district offices and talked with district directors and the staff and talked certainly with my executive director and my General Counsel, but my responsibilities are such I do not get into the level, into the process and it would be inconsistent with my responsibilities in the Commission. Be that as it may, I am more than glad to discuss with you that which I am competent to discuss.

Mr. O'HARA. Well, you have your staff with you and they can interject.

Mr. POWELL. Fine.

Mr. O'HARA. Let us suppose then a hypothetical institution of higher education in which it has been charged there is faculty discrimination and an investigation determines that the number of women and blacks employed as members of the faculty is very, very small and completely out of any relationship with the numbers among faculty generally throughout the county.

What sort of conciliation would you attempt with such an institution? How would you go about that in trying to arrive at a voluntary compliance with the law?

Mr. POWELL. I think, first and foremost, we would attempt to rectify the problem of the particular person or persons who brought the charge. If the question is one of failure to hire, then we would try, in the first instance, at least, or as a part of the package that would become a part of the conciliation agreement, to get that person hired, or if it is a question of failure to promote or failure to get tenure, we would attempt to get that rectified.

Another thing, we would attempt to get the institution to undertake those initiatives, sometimes referred to as affirmative action, and sometimes in affirmative action programs or plans which would be designed to achieve the elimination of the barriers. Sometimes those barriers result from word-of-mouth recruiting where the faculty as indicated in which the communications regarding the opportunities for employyour hypothetical, is all male and all white. Sometimes those initiatives would relate to the kind of advertisement and the kind of places to ment would be sent.

Am I answering your question?

Mr. O'Hara. Yes, you are. Would you, as a matter of course, suggest to such an institution that it set for itself goals in terms of hiring of women and minorities?

Mr. Powell. Let me, well, I think the answer to that is "Yes," but let me back up a moment and say how we get there.

What an employer's obligations are in terms of equal employment opportunities turns on many variables. One of the variables on which it turns is the work force from which it draws its employees. Is that work force in the local area? Is it the metropolitan area? Is it downtown? Are the levels of skills of that employer such that that employer can recruit regionally? Are they such that that employer can recruit nationally?

Now, let's assume that the employer's work force is such and its pay levels are such that he can recruit nationally. Then we would take a look at what skills are within the groups which have been excluded. Let's say that there are 13 percent women who are presumably, who could be called upon to be professors of chemistry or law, and 6 percent blacks or what have you. We would then suggest that a reasonable goal would be commensurate with the number of qualified minorities or women in the work force, which is the work force from which that person recruits.

We would further suggest he or she or it should take those steps calculated to get the word to those people.

Mr. O'Hara. All right, but your goal would set, the goals that you would hope that the institution would set for itself would involve not just maintaining a representative proportion of women and minorities in its new hires, but wouldn't the goal involve, within a certain length of time, reaching those goals in terms of the entire faculty?

Mr. Powell. May I anticipate where I think you are going?

Mr. O'Hara. Please.

Mr. Powell. It is commonly thought that the goal of the Equal Employment Opportunity Commission and other agencies that are concerned with elimination of barriers is to see to it there be a specific number of women, a specific number of minorities in jobs, and Mr. Biaggi I think most eloquently objected to that and I don't have any quarrel with that.

The goal, the objective is to eliminate barriers to equal employment opportunity, a convenient benchmark is the number of women who are qualified and I am sure that, since I do not share the concern that I think has been expressed in some quarters about ability of large employers to bring themselves into sufficient knowledge as to what they have to do and what they do not have to do, I am sure that the Harvard Universities, the Yale Universities, the Stanfords, and General Motors and General Electrics are aware that they don't have to hire *x* number of women, *x* number of blacks or *x* number of Spanish-surnamed people.

There is no necessity to do it and we would be wasting funds if we insisted on doing it. Statistics must be seen as a guidepost. The objective is to see to it that a qualified person, whether he be white or black or female or male, is accorded that degree of consideration commensurate with the needs of the employer and commensurate with his or her qualifications.

Mr. O'HARA. I am sure that is the goal of the law and I trust the goal of the Commission.

Mr. POWELL. Nothing about what we have done would suggest otherwise. If you look at the kind of things we have been doing——

Mr. O'HARA. But in terms of mechanics, of how you get there, if you have found at the time you were investigating a specific complaint that this institution is one in which the faculty, for instance, is all white men.

Mr. POWELL. Unfortunately, that is not too uncommon.

Mr. O'HARA. All right. Suppose it happened in this case and you then attempt to conciliate the complaint and you suggest to the institution that it adopt an affirmative action program and it does adopt an affirmative action program and you would anticipate, I suppose—and I think your answer to an earlier question indicates this—that the affirmative action program includes some goals that an institution has set for itself.

Mr. POWELL. Yes.

Mr. O'HARA. That is in terms of faculty hiring.

Mr. POWELL. I don't have any objection to that. What we do is enter into what is termed conciliation agreements if we are able to effect relief at the conclusion of the administrative process. A conciliation agreement often encompasses what popularly is referred to as an affirmative action program.

Mr. O'HARA. Yes, and the affirmative action program usually would encompass some goals in terms of hiring.

Mr. POWELL. Right.

Mr. O'HARA. And those goals would be expressed, not in terms of numbers or percentages of new hires, but in terms of numbers or percentages of entire faculty employment within a certain timespan?

Mr. POWELL. It would be, no, Mr. Chiarman, I beg to differ.

Mr. O'HARA. Please explain it.

Mr. POWELL. The fact is that both of those things that are often mentioned—or typically what we are focusing on are the new "hires" and over a certain timespan, whether the ultimate goal that you suggest within a period of 5 years is reached or not, it is conceivable that the employer might find himself or herself or itself in compliance.

I think the important thing is the goals which are set in terms of the new hires. It may also be necessary, because of the incumbent employees, to set some goals for opportunities for promotion, as was done in the A.T. & T. settlement, which I will be glad to share with you the particulars of that or as was done in the steel settlement.

I think that both elements are focused upon. I think that, as between the two, Mr. Chairman, the first is the terribly important one. Once you get some females into the workforce or blacks into the workforce, I think it is far more likely that you are going to have blacks and women and Spanish-surnamed people and Indians and Asian-Americans applying.

Mr. BIAGGI. Mr. Chairman, just for 1 minute.

Mr. O'HARA. Yes; I yield to you.

Mr. BIAGGI. I keep hearing Mr. Powell saying Spanish surnamed. The thought that comes to my mind is why Spanish surnames and not Italian surnames?

Mr. KEMP. Polish surnames. What ethnic groups are included in this heterogeneous society?

Mr. POWELL. Am I to answer your question or Mr. Kemp's or Mr. Biaggi?

Mr. BIAGGI. Both. They are in point.

Mr. POWELL. I must apologize to both of you if I am being interpreted as suggesting, if my remarks have been interpreted in such a way as to suggest there were only Spanish-surnamed people who were entitled to this. The fact is, our experience is, and, of course, we are more than glad to address ourselves to the problems of all groups, that in the main the complaints that we have are complaints from people of Spanish-surnamed background in the national origin context.

In the racial context we don't have many complaints of white people who are claiming discrimination because they are white, so that is why I used those terms. But I will be more than glad to state for the record now if an Italian-surnamed is discriminated against because of being Italian, my agency is ready, willing, and able to address that.

Mr. BIAGGI. I am sure of that. I understand your philosophy, but under the law form EEO-6 it requires the administrator to break down statistics and it goes down to "(a) black, (b) white, including Pakistanians and East Indians," and you come to (c) Spanish-surnamed, and why was that distinction made?

Mr. POWELL. When I was General Counsel of the Commission. Sorry, I thought you finished.

Mr. BIAGGI. All right.

Mr. POWELL. When I was General Counsel of the Commission on Civil Rights, we had occasion to address this question. I think that under Executive Order 11246 the question of what a minority person is for purposes of getting relief is addressed and, in effect, what we say is that any group who, because of that group's nationality, race, or color, is treated in a disparate way, in a context of employment, if that be the concern, or education, if that be the concern, Government programs if that be the concern, is a minority in terms of relief.

Now the statement on EEO-6 forms reflect the experience that the agency has had with what, from among that vast assemblage of people who would be entitled to relief, if they were being accorded disparate treatment, have, in fact, in the most number of cases almost universally been the group that has been discriminated against. It has been a reflection of that experience.

Mr. Biaggi. I tell you that it is a reflection of Government. I tell you what. Government is at fault here, the Government itself. I am not talking about the agency, but Government itself, because it has communicated to the world, the United States and its occupants that they are concerned with the deprivation of "A(1) blacks; (2) whites, including Pakistanians and East Indians, and (3) Spanish-surnamed," and the focus very frankly has been on blacks and Spanish-surnamed. So the average citizen sits back and says, "Well, they are concerned about them. They are not interested in us."

Mr. Powell. That is unfortunate. Spanish-surnamed people tell me it is only the blacks and women tell me it is blacks and the blacks tell me it is only women.

Mr. Biaggi. The result is that the rest of the community sits back. If the Government were to put the same emphasis on ethnic origins, the same emphasis, and communicate it to them, I am sure you would get more response from them because there is no question in my mind that the offense is committed in other areas and I am sure you agree with that score and the moment you popularize the notion, there is a place they can obtain redress, you know they will return in boards.

Mr. O'Hara. If I can interrupt for a minute, Mr. Kemp has been sitting patiently all of this time. I am going to allow him to go ahead.

Mr. Powell. May I respond first?

Mr. O'Hara. All right, respond and then we will go to Mr. Kemp.

Mr. Powell. Mr. Biaggi, I will be more than glad to have the staff talk with you with an eye toward seeing to it that the agency is as responsive to any group which has been discriminated against in a particular context. I assure you that I do not conceive the agency as being this type of agency.

Mr. Biaggi. I understand your philosophy, but the question is how do you, as an agency or on the part of Government, take an aggressive attitude and let the people know how you feel?

Mr. O'Hara. Mr. Kemp.

Mr. Kemp. Thank you and let me say I want to congratulate you on holding these hearings on this important issue.

In this free society, uppermost in our mind should be the rights of an individual to a free and unfettered choice. My question, I think, goes back or underscores one of the concerns that Congressman Biaggi has, that is, when talking about affirmative actions, special steps or goals, or however we want to put it as to terminology, what type of special goals are there for the type of ethnic background people that Congressman Biaggi was talking about?

Are there special goals for those people in terms of the criteria by which you judge institutions having not practiced the discrimination requirements?

Mr. Powell. May I comment? We already discussed what "special" means. I don't conceive that these are special unless we are going to say that what has been accorded white males up until and including 1960 as special. I don't think they are special, but the rights of people are very special.

Wait a minute. May I answer your question?

Mr. Kemp. Yes; but any white male?

Mr. Powell. Let me answer your question. The rights of people are very special. And if any person, whatever that person's national origin, sex, race, is discriminated against because of those qualities and if that discrimination results in that group's exclusion, and statistics show it, our rules require that steps be taken and if you want to characterize them as "special," that is all right with me. But if you are suggesting that there is one rule for blacks and women and another rule for the Irish or Polish or Italians, that is not the fact.

What is the fact is that there are special problems, Mr. Kemp, for blacks. There are special problems for women that Polish people, in most contexts do not confront, although in some contexts undoubtedly face. That is what I mean by "special." That is why history has to be understood.

Now, if a black person applied to a public or private employer in the fifties and the application were for jobs which were not traditionally held by a black person, that type of person would be treated one way and the Polish person and Irish person and Italian person would be treated another, that is history.

S[illegible]r rules are reflective of the facts which result from that history.

Mr. **Kemp.** And the criteria by which you make the judgment, as I understand it, is based on numbers and qualifications?

Mr. **Powell.** No, the number is not a static thing, Mr. Kemp. The number reflects what has happened in the months and in the many occasions where people of various ethnic and racial groups have applied. The number reflects that. The number tells a story of what has happened. It tells a story of what has happened when people have applied and it tells a story of who has applied and it tells a story of why they have applied and why those who have not applied have not applied. That is what statistics are.

Mr. **Kemp.** Well, just to define it a little more because I think this is of particular interest to both of us—and I appreciate your responsiveness and I am sure you take the questions in the spirit they are given because I don't want to put you on the defensive, take any institution, what are the criteria by which you make a judgment as to whether or not that institution is, in fact, complying with the mandate that Congress has given to your Commission?

Mr. **Powell.** We look at a number of criteria. We might even examine the applications at a given time of people and as Mr. Biaggi has suggested, it is unfortunate that we look at the question of race and what-not, but I, being familiar with the problem, must say that there is a legitimate Government purpose: I testified that such a purpose exists in a related area about a jury bill where the question was whether race should be considered, where there were people of black origin excluded and I answered affirmatively. The analogous situation is employment, we would want to know who had been applying.

Have blacks been applying? If they have, where have they been hired when their skills were the same as whites who were hired into higher grade levels and the blacks were not hired? If they have not been applying, why have they not applied? After we have a conciliation agreement, who is applying?

An effective conciliation agreement would result in blacks applying for jobs they have not applied for before, and Italians and Irish and Poles, if that be the case. An effective agreement would result in people being hired for jobs irrespective of sex, race, or national origin.

Mr. BIAGGI. You said, "I suggested unfortunately he directed his question to the question of race" and I did not say that and let me get this on the record because I think I have been misquoted because I never said that and it was not my intention. What I said was it is unfortunate we didn't give the same special emphasis to popularizing the notions for those others involved in this law.

Mr. POWELL. I beg your pardon, Mr. Biaggi.

Mr. BIAGGI. What I was really suggesting, forgive me, was affirmative action.

Mr. KEMP. Mr. Powell, what type of research programs are going on in terms of discrimination in the academic institutions?

Mr. POWELL. You mean in general or by the Equal Employment Opportunities Commission?

Mr. KEMP. By your Commission.

Mr. POWELL. I don't have that information at my fingertips. I would suspect that not really enough. One of the areas about which I have been concerned is the extent to which the agency uses the area of research and it is an area where we are going to do a better job than before. We have to improve in that area.

The Federal Reserve Board has issued research reports which I think are very, very—at least one Governor of that Board has issued such a report and we should do more of that. There is a committee I have asked to be appointed to stress that question and I will be glad to share with you some of the things we would like to do.

I can also tell you what we have done.

Mr. KEMP. At this time?

Mr. POWELL. No; I don't have that information now.

Mr. KEMP. I yield back my time, Mr. Chairman.

Mr. O'HARA. Thank you, Mr. Kemp.

Mr. Powell, in your statement you indicate there are charges against most large universities in the country. Could you supply us with the basis for that statement?

Mr. POWELL. I will be glad to. We do have confidentiality problems and I am sure the problems of confidentiality can be resolved. I will let my staff and your staff work that out, Mr. Chairman.

Mr. O'HARA. Well, let's just talk about numbers then without talking about the specific identity of institutions, although it seems to me that the Freedom of Information Act might be applicable here.

Mr. POWELL. I don't think so, Mr. Chairman. The Congress of the United States has charged us with not revealing the names of the people or the respondent in the investigative conciliation stage and I don't know of anything in the act which exempts us from that requirement which Congress has imposed.

There are many people who feel that requirement should not be there, but while it is there, I am bound to adhere to it.

Mr. O'HARA. Well, we spoke a while ago of the number of charges that have been made against institutions of postsecondary education and perhaps you can tell us the number of institutions about whom complaints have been made and then—you say there are 1,600 charges that have been filed against institutions of higher education and then you indicate on the same page that 1 out of every 40 charges in 1973 was against a higher educational institution. You have all of those figures apparently.

Now, how many institutions are there against whom complaints have been filed and what are their sizes?

Can you tell us that?

Mr. Powell. I can't give you specific numbers, but the ball park figure would be 400 institutions, I am told, but we can give you a specific number. We will give you that.

Mr. O'Hara. All right, we would like to receive that.

Mr. Powell, I don't recall the provision of law and maybe you can refresh my memory on this, that indicates that the identity of persons complained against may not be revealed. Would you proceed on that?

Mr. Powell. One of my staff is going to do that for me.

Well, on 706, and I understand there are others, but it is a misdemeanor, I might say, to violate this provision, Mr. Chairman. Quoting from section 706(b) of the 1964 act as amended, in the section which talks about the function of the agency, reading from the statute, "Nothing said or done during and as apart of such informal endeavors may be made public by the Commission, its officers or employees or used as evidence in a subsequent proceeding without the written consent of the persons concerned. Any person who makes public such information in violation of this subsection shall be fined not more than $1,000 or imprisoned for not more than 1 year, or both."

Mr. O'Hara. Well, this is the way I would interpret that.

Mr. Powell. There are cases on this and we will be glad to share that with you also.

Mr. O'Hara. Well, my interpretation of that is that in an effort to promote free discussion and reconciliation the Congress has provided that matters disclosed in the reconciliation process or statements made in the reconciliation process should not be revealed or used in further proceedings.

Mr. Powell. The staff has given me this and I think it is more pertinent, 709(e). That is of the 1964 Civil Rights Act as amended, title VI. "It shall be unlawful for any officer or employee of the Commission to make public in any manner whatever any information obtained by the Commission pursuant to its authority under this section prior to the institution of any proceeding under this title involving such information."

Now, when I was General Counsel of the Commission on Civil Rights, I had occasion to accompany the staff director of that agency to the Office of the Chairman of the Equal Employment Opportunities Commission. The occasion for my coming was that the Commission on Civil Rights had obtained information, EEO-1 information from the Equal Employment Opportunities Commission, and it got into the hands of others who did in fact publish it.

We were admonished by the then-Chairman of the agency that unless we took steps to see to it that that did not happen again, we would not be favored with that information and it was his opinion, as I recall, that the people who published that information had committed a criminal act.

Mr. Gould. Mr. Chairman, our regulations provide that under certain circumstances we can release the information if it will further the purposes of the act and perhaps we can work out some kind of arrangement where we would provide you with this information under confidential circumstances where it would not be released to the general public.

Mr. Powell. We, as a matter of course, Mr. Chairman, provide Congressmen with this kind of information. I recall a discussion I had with my General Counsel when I first became Chairman and it was indicated to me that when a Congressman wants this kind of information, we do provide it to him, or, of course, to a member of the U.S. Senate.

But the information, or the statute indicates, and the cases hold, that the information is not to be released to the public-at-large. Many newsmen have discussed it with me and feel it is not a wise policy. They do not understand that the agency or do not accept the proposition that the agency is bound not to release this information.

Of course, the information does become public at such time as we file a complaint in the Federal court, information as entered into that proceeding, that is.

Mr. O'Hara. Mr. Powell, I think that in the Congress that Congress has the responsibility, very clear responsibility, to conduct oversight review of the operation of the laws of the United States to the extent that it is necessary for the Congress to determine the way in which its laws operate, and that it ought to be able to obtain such information.

I think the Congress, of course, has to operate under certain restraints itself in that regard and use its judgment so that it would not be hampering the enforcement of the laws by any premature or unwise disclosure of such information, but I think the Congress has to be able to obtain the information.

What we would like to do, if we could, is put the staff of this committee in touch with your staff and I am going to ask the staff of the committee to review with your staff a sufficient sample of cases involving higher education institutions so as to be able to determine the manner in which the law has been applied. We will, as a matter of restraint, not make specific information with respect to any particular complaint public in any way.

Mr. Powell. May I make an observation, Mr. Chairman?

Mr. O'Hara. Yes.

Mr. Powell. There is no question in my mind that the committee certainly has that authority. We, of course, as you know, are about to be involved in oversight hearings by a sister subcommittee of the Committee on Education and Labor. For what it is worth, my view is this, that educational institutions perform a very important job and everything should be done to support and enhance that effort.

Not only in my opinion should educational institutions not be exempt from the requirements imposed upon them by the authorities at large, they, like public institutions, whether those educational institutions be public institutions or private, should stand as an example in terms of the people involved in that process.

Mr. O'Hara. Well, Mr. Powell, not only do I agree with that, but I was one of those who voted against the limited exemption contained in title VII of the Civil Rights Act that was offered with respect to religious qualifications at institutions, or educational institutions that were run by a religious society.

It is my feeling that educational institutions ought to be covered even to the extent of having imposed that exemption where the matter was before the courts. I want to tell you this though. I think that I agree completely that educational institutions ought to be subject to all of the provisions of the law. I noticed in your opening statement your reference to the fact that some people didn't think that educational institutions ought to be covered by the activities of your Commission.

I think they should be covered. You also referred to the fact that in the early days you were given jurisdiction over only nonprofessional employees of such institutions and I don't think your jurisdiction should be limited in that way or ever should have been.

Mr. Powell. I agree.

Mr. O'Hara. And my only concern is, I want to see just how you are applying these laws to these institutions because certainly I know you have to agree with me that there has been a good deal written and said about the application of the requirements of equal opportunity at institutions of higher education.

Mr. Powell. That arose in the HEW context mainly.

Mr. O'Hara. Primarily. Another one of the problems that has arisen and about which there have been numerous complaints made to me has to do with the overlapping of requirements of the Office of Contract Compliance for those institutions that have Federal contracts of some kind, the Office of Civil Rights in the Department of Health, Education, and Welfare, and your own Commission. Some institutions feel that it has been an unnecessary burden to be required to attempt to justify their activities to all three of these agencies.

Mr. Powell. I agree and we attempted to coordinate the EEO–6 form, and the EEO–6 form is a form which resulted from discussion between EEOC and HEW and the information we gathered is information intended to meet the requirements not only of EOC, but also of the Office of Civil Rights of the HEW.

Speaking as one Commissioner and at the risk of seeming or without departing from the seriousness of this, if I had to choose between all of the paper that is filed by all of the educational institutions and all of the other employers on compliance, which is the name of the game, then I certainly would want compliance.

There are a number of people who feel that affirmative action plans, that there has developed among the corporate community, and I suppose among the educational community, a new technology, a new technique of filling out forms and forms are filed and approved and dissemination remains rampant.

Mr. O'Hara. I think that may well be the case with him and unfortunately there has not been a technique of affirmative action of compliance grow up that does not really meet civil rights.

Mr. Powell. As General Counsel on Civil Rights, we were involved in the process of looking at what or how effective the enforcement apparatus of the compliance agencies are or have been. Any preliminary look at that mechanism would show that what is needed in the implementation of that law and what is needed, the implementation of civil rights law at large is a commitment to implement the law.

The authority of the Office of Federal Contract Compliance and the authority of the 29 compliance agencies is such that if it were used prudently, judiciously, but used, we would have a much better situation in terms of employment. The fact is, Mr. Chairman, as I am sure you know, that that authority has not been used.

To say that it has been used sparingly would be overly optimistic. It has virtually never been used. It has been used so sparingly that as a practical matter it is, in effect, nonexistent.

The use of the cutoff is a matter which should be used and if it were used, I have no doubt that we would have much greater compliance in equal employment opportunities than we now have.

Mr. O'HARA. I am sure of that. As one of those who designed the cutoff mechanism, I regret that it has not been used. There is great reluctance on the part of administrators to use that. Instead, they have developed, or administratively developed as alternatives to the use of the cutoff compliance, mechanisms that I deemed less efficacious and more offensive than the cutoff mechanism.

I think that is a serious mistake. I hope, through these hearings, in cooperation with yourself and others who are concerned with the administration of the law and with members of the committee and the House, that we can develop improved systems of requiring institutions of higher education to fully observe the rights of all. That is our objective.

I assure you of that. We are going to be hearing a lot of testimony and I hope that you will be able to keep on top of what we are doing, because I am sure we are going to be in touch with you further. I imagine there are some questions that will arise during the remainder of these hearings that you may wish to come back before the committee and make some further response to and I hope you will keep in touch with us.

Without objection the members of the committee, the committee members rather, will reserve the right to send in further written questions for inclusion in the record and without objection the witness, the Chairman of the Equal Employment Opportunity Commission, and the Commission, are granted permission to provide materials for insertion in the record of this hearing that are relevant to the question. I will be asking the staff of this subcommittee to be in touch with your office in an effort to work out some mechanism whereby we can get an overview of the procedures used by your agency in the education field so that we will have a better understanding of it. I assure you we will do it in a way that will not compromise the objectives of the Commission under the law or damage the reputation of any institution or any person so we will be very careful of that and we would like to work with you and will be in touch with you.

FAILURE TO REAPPOINT FEMALE INSTRUCTOR AND PAY DIFFERENTIAL WERE SEX BIASED; DENIAL OF COMMENDATION WAS RETALIATION

Decision of Equal Employment Opportunity Commission, Decision No. 74-15, **August 7, 1973.**

TITLE VII—CIVIL RIGHTS ACT OF 1964

Sex Discrimination—Female Music Instructor—Denial of Reappointment—Resultant Denial of Tenure—Instructor's Qualifications.—There was reasonable cause to believe that a university music department discriminated against a female instructor on the basis of sex where it denied her reappointment even though she was a demonstrably qualified and valuable faculty member. Reasons given for the denial of reappointment, and resultant denial of tenure, were pretextual in nature and not a defense to the sex bias claim. Claims that the instructor was "abrasive" were discounted as a true basis for the departmental action. 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1050.

Sex Discrimination—Salary Differential—Female Assistant Professors—Lower Average Salary.—There was reasonable cause to believe that a university discriminated against female assistant professors of music on the basis of sex where they received a lower average salary and a lower average annual pay increase than their male counterparts. Since both male and female assistant professors performed similar duties and had similar qualifications, it was a reasonable inference that the pay differential was improperly based, at least in part, on sex. 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1548.

Sex Discrimination—Filing of Charge—Employer Retaliation—Withholding of Customary Letter of Commendation.—There was reasonable cause to believe that a university unlawfully retaliated against a female employee who filed a sex discrimination claim where a department head failed to supply her with a customary written commendation for a musical recital. Since the refusal to issue the letter was based, at least in part, on the fact that the letter might be used against the university in the sex bias claim, the refusal amounted to retaliation for the bias claim. 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1350.

Full Text of EEOC Decision

Summary of Charge

Charging Party, a female, alleges that respondent Employer has engaged and is engaging in unlawful employment practices in violation of Title VII of the Civil Rights Act of 1964, as amended, by denying her a timely promotion from Instructor to Assistant Professor; by discriminating against her with respect to compensation; and by failing to reappoint her, all because of her sex. Charging Party further alleges that Respondent has retaliated against her because she filed a charge with the Commission, in violation of Section 704(a) of Title VII, as amended.

Jurisdiction

Respondent is a part of the University System providing educational services and employing in excess of 25 persons.[1] The Commission received a charge from Charging Party on May 23, 1972, and deferred it to the appropriate State agency on May 30, 1972. The State agency terminated its proceedings on July 11, 1972. The charge was filed with the Commission on July 17, 1972, within the time limitations prescribed by the Act. On November 27, 1972 the Commission received a second charge from Charging Party alleging retaliation, which charge was also timely filed. Charging Party's initial allegation concerning her promotion from Instructor to Assistant Professor relates solely to events occurring prior to September 1, 1967. Because those events occurred prior to the passage of the March 24, 1972 amendments to the Act, see footnote 2, *supra*, the Commission is without jurisdiction to decide the merits of that portion of Charging Party's allegations. Accordingly, that portion of the charge is hereby dismissed.[2]

---

[1] Title VII was amended effective March 24, 1972. The amendments extended the coverage of the Act to include the employment practices of educational institutions in their educational capacity and, in addition, those of States or political subdivisions thereof.

[2] We note that jurisdiction may have vested were Charging Party still seeking the promotion from Instructor to Assistant Professor or if there existed a continuing adverse effect from the alleged discriminatory denial of that promotion.

Summary of Investigation

We are called upon to decide whether the decision of the University, Department of Music, to refuse to renew Charging Party's contract as an Assistant Professor of Music for the period September 1973 to June 1976 (and thereby grant Charging Party tenure)[3] was influenced to any extent by her sex.[4] The resolution of that question necessarily involves a detailed analysis of Charging Party' qualifications and abilities as a professor at that institution of higher learning.

The record reflects that in 1956 Charging Party entered the University of Pittsburgh where she majored in Music, after having graduated from high school sixth out of a class of 432. At the University of Pittsburgh Charging Party received an Honor Award for Scholarship and was elected to membership in the Special Fellowships Program for persons showing exceptional promise as future college teachers. After attending the University of Pittsburgh from 1956 to 1960, Charging Party transferred to the Juilliard School of Music for the Performing Arts where she earned her B. S. and, M. S. degrees in 1962 and 1963, respectively, as a scholarship student.

During her undergraduate years at the University of Pittsburgh Charging Party made numerous recital appearances in the Pittsburgh area and was a winner in the Pittsburgh Society Auditions, held annually to discover the most promising artists in the Pittsburgh area. While in attendance at Juilliard, Charging Party appeared on local radio stations in New York City and performed for chuches, clubs, and at hospitals. Upon graduating from Juilliard in 1963, Charging Party received an appointment as an Assistant Professor at Huntington College in Montgomery, Alabama, where, along with piano, she taught keyboard harmony, organ, and music education. Charging Party first began teaching piano when she was 17 years old. She continued to teach piano lessons through her undergraduate and graduate studies.

Charging Party remained an Assistant Professor at Huntington College until 1965 when she came to Respondent university as an Instructor for the academic year September 1965 to June 1966. Respondent reappointed Charging Party as an Instructor in 1966. In May 1967 Respondent awarded Charging Party an appointment and promotion to Assistant Professor. In January 1970 Charging Party received reappointment as an Assistant Professor for the period September 1970 to June 1973. When Respondent's Music Personnel Advisory Committee (tenure committee) met on April 6, 1972 to consider Charging Party's reappointment for the period September 1973 to June 1976, it decided by majority vote to deny Charging Party reappointment.

Charging Party alleges that she was denied reappointment because of her sex. Respondent denies the charge. We recognize that employment standards in academia, as in other fields, are somewhat *sui generis* and that a certain measure of subjectivity is inevitable in reaching the decision of whether to retain a faculty member and grant him or her tenure.[5] The situation is made more difficult by the fact that in making or reviewing such a decision one is not dealing with the relative qualifications of competing individuals, but rather with the qualifications of a person relative to some nebulous norm.[6] The standard of proof in discrimination cases of this type[7] was recently articulated by the United States Supreme Court in *McDonnell-Douglas Corp v. Green,—U. S.—*(1973), 5 EPD ¶ 8607, where the Court said:

---

[3] It is unclear in the record the exact rights, privileges, or benefits gained by an award of tenure. For a discussion of the importance of reappointment to a faculty position and the granting of tenure generally, see *Johnson v. University of Pittsburgh,* — F. Supp. — (W. D. Pa. 1973), 5 EPD ¶ 8660.

[4] An employment action based in part upon an unlawful consideration is not saved by the fact that other, non-discriminatory, considerations may have also been present. *Gates v. Georgia-Pacific Corporation,* [2 EPD ¶ 10.305] 326 F. Supp. 397 (D. Oreg. 1970); Cf. *King v. Laborers, Internat. U. of No. America, UL. No. 818,* [3 EDP ¶ 8198] 443 F. 2d 273 (6th Cir. 1971).

[5] To the extent that Respondent has any formal procedures to be followed in making such determinations, they are found at Appendix D, Sections 1.8–1.9 inclusive, of Respondent's *Faculty Handbook: Information for the Academic Staff of University,* September, 1971, a copy of which is a part of the instant record.

[6] A male employee of the Department was denied reappointment at or about the same time as was Charging Party. The reasons for this denial are materially different from any considerations concerning Charging Party's reappointment. Thus we are not faced in this case with a situation where one successful applicant is picked from among a group of applicants.

[7] In our view, for purposes of proof, a failure-to-hire situation is equivalent to one in which an employer fails to reappoint an individual. Moreover, in a Policy Statement on Faculty Rewards, labelled *"For Review Purposes Only"* and dated April 4, 1972, Respondent states "Generally, decisions of reappointment, promotion and tenure are based on the same considerations as are used for hiring."

"The complainant in a Title VII trial must carry the initial burden under the statute of establishing a *prima facie* case of racial discrimination. This may be done by showing (i) that he belongs to a racial minority; (ii) that he applied and was qualified for a job for which the employer was seeking applicants (iii) that, despite his qualifications, he was rejected; and (iv) that after his rejection, the position remained open and the employer continued to seek applicants from persons of complainant's qualifications." At p. 7787.

The Court went on to conclude that:

"The burden then must shift to the employer to articulate some legitimate, nondiscriminatory reason for respondent's rejection." At p. 7787.

With respect to this rebuttal evidence:

"Petitioner's [the company's] reason for rejection thus suffices to meet the *prima facie* case, but the inquiry must not end here. While Title VII does not, without more, compel rehiring of respondent [complainant], *neither does it permit petitioner to use respondent's conduct as a pretext for the* sort of discrimination prohibited by § 703(a)(1)." At p. 7787. (Emphasis supplied).

Based on the extensive qualifications and promotions exhibited in Charging Party's personnel file, summarized *supra*, we can only conclude that she was a qualified and valuable member of the faculty and an accomplished musician. We thus reach the question of whether Respondent's asserted defenses of its decision to fail to renew Charging Party's contract are, as the Supreme Court said in *McDonnell-Douglas, supra*, "pretextual."

Respondent's position is that the tenure committee (composed of six males and one female, tenured members of the Music Department) declined to reappoint Charging Party because of alleged shortcomings in her relationships with her colleagues, students, and the public. There is no claim that Charging Party did not adequately and faithfully fulfill her actual teaching duties. Indeed, Respondent admits that Charging Party's ability as a teacher was not criticized, discussed, or otherwise weighed as a factor when the tenure committee decided to deny Charging Party reappointment and tenure at its April 6, 1972 meeting.[8] While we find this lack of analysis of Charging Party's abilities in what is clearly the major function of her employment suspect, because these abilities do not appear to be in dispute we shall move ahead to what the record evidence demonstrates concerning Charging Party's "relationship" with colleagues, students, and the public.

With respect to this inquiry, the Commission representative interviewed numerous colleagues and students of Charging Party. Their statements, signed and sworn to under oath, are a part of the instant record. We think the following are particularly illustrative:

A former student of Charging Party testified:

"Piano lessons under [Charging Party] were very satisfying. She was the first piano teacher I had who showed me the importance of a daily technical study program to build technique. Through this I developed a very good hand position and learned a lot about using the 'impulse.' Her approach to memorization was very helpful to me. . . . *The general altitude toward [Charging Party] was positive. Few students disliked her although I did hear a few remarks about her personal appearance. Although not at all a lenient teacher, she seemed to get along very well with students.*" (Emphasis supplied)

A Music student and Department Secretary testified:

I have studied with [CP] for 3 years in piano. Her teaching was excellent; I've learned more from her than from any other teacher; I've been studying for 16 (sixteen) years. [CP] is a capable teacher who gets along well with her students except for a few which is normal. She is always ready to tell you your good points then she helps you strengthen your weak points. Once I took over her class when she was ill and the students were doing well and had favorable things to say about her. When the students got wind that she was not returning they were concerned for her."

An Associate Professor of Music (who is the member of the tenure committee quoted at footnote 8, *supra*) testified:

"I think her teaching is competent. The tenure committee met once; they discussed her; They all had complaints about her—it was mainly personal problems that they related. I have never had problems with her. [CP] is a go-getter, outspoken, ambitious, and energetic."

---

[8] The female member of the tenure Committee testified to the Commission representative that at the meeting "[T]hey discussed her. . . . [I]t was mainly personal problems that they related. . . . *They didn't seem to say anything about her teaching.*" (Emphasis supplied).

An Assistant Professor of Music testified:

"I've heard [Charging Party] [is] a good teacher from her students and from judging her students at exam time I think they're good. I don't agree 100% with any faculty member including [CP] but I think she has been treated unfairly in not being reappointed . . . I don't agree with the tenure committee because [Charging Party] is a good teacher and has good rapport with students . . . Her personality may cause problems among faculty and students but to me it's not a great problem . . ."

Another former student of Charging Party testified:

"During my four and one-half years at Respondent I studied with [CP] for five semesters. [CP] had more patience and took more time to work with me on techniques (than did one tenured male professor). She also offered me endless encouragement."

This witness went on to state that the tenured male professor (who it seems was instrumental in denying Charging Party reappointment) was "surprised at my progress" after the witness's five semesters under Charging Party's tutelage.[9]

The Commission representative also interviewed and received statements from male faculty members who were members of the tenure committee. The Chairman and Head of the Music Department testified extensively regarding Charging Party's working relationships with students and faculty. The common thread of his testimony is that Charging Party has an "abrasive personality." This witness stated that some students, admittedly a small number, complained about Charging Party's teaching. However, the only specific negative situation concerning Charging Party that the witness could recall involving Charging Party's teaching related to Charging Party's tardiness, not her working relationship with her students. He also cited two examples of poor "public relations", one involving harsh criticism of a student and the other an alleged disagreement between Charging Party and a prospective donor of a harpsichord. Another witness, a full professor of music, discussed his extensive differences with Charging Party, most of which related to differences over course content and certain university policies—matters on which we think it clear that reasonable persons may differ. There is no claim by Respondent that Charging Party's alleged solicitation of the students of this witness, who is a member of the tenure committee, was ever substantiated or discussed with Charging Party. Nor does it appear that this allegation was an operative factor in the decision not to renew Charging Party's contract. Other testimony elicited from members of the tenure committee amounts to no more than a general denial of the charge of discrimination.

In sum, we cannot conclude that the "personality conflicts" cited by Respondent's witnesses could reasonably have been found to outweigh the positive contributions made by Charging Party to the University during her period of employment. Nor do we find such contentions persuasive in light of Respondent's admitted failure to consider evidence favorable to Charging Party with respect to her teaching abilities. We further note that several members of the faculty, including some members of the tenure committee, admitted that the normal course of their professional life brought them into only limited contact with Charging Party and other faculty members.

Courts have often observed that proof of discrimination is seldom direct. See, e.g., *United States v. Jacksonville Terminal Company*, [3 EPD ¶ 8324] 451 F. 2d 418 (5th Cir. 1971); *Marquez v. Ford Motor Company*, [3 EPD ¶ 8156] 440 F. 2d 1157 (8th Cir. 1971). Often an inference of discrimination must be drawn from the totality of the circumstances, and while one factor standing alone might not warrant an inference of discrimination, a coalescence of factors may suffice to so demonstrate. See *Lowry v. Whitaker Cable Corp.*, 472 F. 2d 1210 (8th Cir. 1972); 5 EPD ¶ 8440, affirming — F. Supp. — (W. D. Mo. 1972), 5 EPD ¶ 8439. A major circumstance in this case is the fact that the entire process of determining who shall or shall not be reappointed is accomplished in a highly subjective, essentially nonreviewable, manner. As indicated above, the guidellines for such determinations are at best nebulous. It is clear from the testimony of various faculty members that highly subjective considerations, often not communicated to the unsuccessful applicant, may operate to disqualify an otherwise well qualified person. As pointed out in a similar context in *Rowe v. General Motors Corporation*, [4 EPD ¶ 7689] 457 F. 2d 348 (5th Cir. 1972):

---

[9] As stated *supra*, the complete text of these statements is a part of the instant record. While not making specific comparisons, we note that the general evaluation of Charging Party's rapport with students and faculty alike was that she had at least as good rapport with these persons as did tenured members of the faculty.

"[Such] methods for promotion . . . would enable an individual foreman, if he were so inclined, to exercise racial discrimination in his selection of candidates for promotion . . . . All we do today is recognize that promotion . . . procedures which depend almost entirely upon the subjective evaluation and favorable recommendation of the immediate foreman are a ready mechanism for discrimination against Blacks much of which can be covertly concealed and, for that matter, not really known to management. We and others have expressed a skepticism that Black persons dependent directly on decisive recommendations from Whites can expect non-discriminatory action." (Footnote and citations omitted). At 359.

We believe that the treatment that females can expect from males under similar circumsances can be viewed with equal skepticism. Further, it is significant that only male faculty members considered Charging Party's personality too aggressive. Charging Party's female colleagues voiced no such complaints. Moreover, numerous witnesses testified that the head of the Keyboard Area of the Music Department, a male, frequently expressed strong opinions on University policy matters. While certain female witnesses characterized this individual as abrasive and overly aggressive, no male witnesses so characterized him. This division of opinion along male-female lines alone, especially with the negative reaction to Charging Party emanating strictly from the males, leads us to believe that Charging Party's sex was a factor in the way her male colleagues perceived her. It is well known that in our society aggressiveness in males is generally looked upon with approval, while the opposite is true with regard to females.

We conclude that in the totality of circumstances presented in this case, i.e., that Charging Party was a competent aggressive female instructor denied reappointment by virtue of subjective evaluations made by a predominantly male group; that the male members of the tenure committee were influenced in large part by personal conflict and animus; and that the reasons for Charging Party's non-reappointment are belied by record evidence both testimonial and documentary, that it is reasonable to conclude that Respondent's asserted defenses fail to withstand scrutiny and are indeed pretextual. See *McDonnell-Douglas v. Green, supra*. We accordingly conclude that there is reasonable cause to believe that Charging Party's sex was a factor in that decision.[10]

Charging Party further alleges that she is paid less than male Assistant Professors because of her sex. Respondent's personnel records indicate that four of eight Assistant Professors in the Music Department at the time of the filing of the charge were female; that male and female Assistant Professors within the Department perform basically the same duties; that the average period of employment with Respondent was four years for Assistant Professors of both sexes; and that without significant exception the female Assistant Professors possess teaching and recital experience and education comparable to that of their male counterparts.[11]

Respondent's records further show that female Assistant Professors in the Music Department receive average annual salary increases of $419 while male Assistant Professors receive average increases of $510 annually. Additionally, the records indicate that the salary for each female Assistant Professor is within the range of $8,350 to $9,450 for a ten-month period while the salary of each male Assistant Professor is within the range of $9,150 to $12,000 for the same period of time.

Given the similar qualifications and duties of the male and female Assistant Professors, we find it reasonable to infer that the disparity in compensation is based, at least in part, on sex. See *McDonnell-Douglas v. Green, supra; Gates v. Georgia-Pacific Corporation, supra*.

Charging Party further alleges that Respondent, in the person of the Chairman and Head of the Music Department, retaliated against her in violation of Section 704(a) of Title VII, as amended, by refusing to grant her a customary letter of commendation following a recital because she filed charges of discrimination with the Commission.[12] With respect to this allegation, in a signed statement, the Department Head stated that:

---

[10] Our findings concerning Respondent's generally discriminating compensation policy affecting female employees in the Music Department, made *infra*, further support this conclusion of individual discrimination. *McDonnell-Douglas v. Green, supra*.

[11] The only Assistant Professor who holds more than a Master's Degree is a male with a PH.D. He however, unlike certain of the females, possesses no recital or other professional performance experience.

"Her charge has no validity. I did not intend to penalize her. Even though faculty recitals are not required, it is almost always my practice, when faculty members play a recital, to write a short note thanking them for preparing and playing the recital. I have probably done this for [CP] after each of her recitals. Because I knew that [CP] had many letters of commendation from me for past recitals, I felt it would be enough this time to go back stage after her recital and compliment her verbally, which I did. Two or three days later she asked my secretary if I intended to write a letter of commendation. I replied, through the secretary, that I didn't intend to write one. I had called the University Legal Counsel office and asked about writing the letter. I was advised that I should not make any written communication that could be used against the University at a later time as the University, from a legal standpoint, had been placed in a defensive position."

Thus it is clear that the decision not to issue the commendation was based, at least in part, on the fact that Charging Party had a charge of discrimination pending against Respondent. The refusal, therefore, constituted a violation of Section 704(a).

Decision

There is reasonable cause to believe that Respondent engaged in unlawful employment practices in violation of Title VII of the Civil Rights Act of 1964, as amended, by failing to reappoint Charging Party because of her sex and thereby denying Charging Party tenure; by discriminating against Charging Party and females as a class in the Music Department by denying them equal compensation because of their sex; and by retaliating against Charging Party because she filed a charge of discrimination with the Commission.

MEDICAL SCHOOL FACULTY TENURE PROCEDURES WERE SEX BIASED; MINORITIES AND FEMALES IMPROPERLY EXCLUDED FROM NON-FACULTY JOBS; SEX-DESIGNATED JOB CLASSIFICATION WAS BIAS; HIGH SCHOOL REQUIREMENT WAS BIASED AGAINST NEGROES

Decision of the Equal Employment Opportunity Commission, Decision No. 74-53, November 12, 1973.

TITLE VII—CIVIL RIGHTS ACT OF 1964

Sex Discrimination—Medical School Faculty—Promotions—Tenure Procedure—Statistical Evidence.—There was reasonable cause to believe that a medical school's promotion and tenure procedures were biased against females where statistical evidence showed a wide disparity between the number of male and female faculty members. Use of highly subjective criteria when applied almost exclusively by males discriminated against female faculty members on the basis of sex. Denying a female faculty member promotion and tenure, with resultant discharge, was sex discrimination where it was based on more stringent requirements than had been applied to similarly situated males in the past. Refusal of a research grant to the female faculty member because of her pending wrongful discharge was also sex bias, 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1325.

Sex discrimination—Medical School Faculty—Wage Differential—Lack of Justifying Evidence.—Payment of a significantly lower average wage to female medical school faculty members than was paid to similarly situated males was improper sex discrimination absent the existence of evidence justifying the wage differential. 42 U. S. C. Sec. 2000e.

---

[12] Section 704(a) states in relevant part that:

"It shall be an unlawful employment practice for an employer to discriminate against any of his employees . . . because he has made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this title."

Because of the reliance on citizen-initiated complaints in Title VII proceedings, the Commission and the courts have broadly construed the scope of protection afforded by this section of the Title. See, e.g., Commission Decision 72-0975, CCH EMPLOYMENT PRACTICES GUIDE ¶ 6358, citing *Pettway v. American Cast Iron Pipe Co.*, [2 EPD ¶ 10,011] 411 F. 2d 998 (5th Cir. 1969). See also *Barela v. United Nuclear Corporation*, [4 EPD ¶ 7857] 462 F. 2d 149 (10th Cir. 1972).

Back reference.—¶ 1548.

Sex Discrimination—Medical School Faculty—Hiring—Statistical Evidence.—Statistical evidence failed to support a claim of sex discrimination in a medical school's faculty hiring practices where the percentage of females on the faculty compared favorably with the national percentage of those holding representative degrees. Whether the degree requirement would indicate sex bias as not a valid basis for job performance is open to further study. 42 U. S. C. Sec. 2000e.

Back reference.—¶ 1166.

Sex Discrimination—Medical School Faculty—Reprisals for Employee's Objections to Discrimination—Denial of Lecture Assignments.—Denial of lecture assignments to a female medical school faculty member after she filed a sex bias claim was improper retaliation for the employee's objection to discrimination. 42 U. S. C. Sec. 2000e.

Back reference.—¶ 1350.

Race and Sex Discrimination—Statistical Evidence—Medical School—Non-faculty Positions—Hiring and Job Classifications.—Statistical evidence indicated race and sex bias in a medical school's non-faculty hiring and job classifications where employment figures showed significant underrepresentation of minorities and females in most job categories when compared to the percentage minority persons and women held to the local population. 42 U. S. C. Sec. 2000e.

Back reference.—¶ 2575.57.

Sex Discrimination—Medical School Janitorial Positions—Job Classifications—Maintenance of separate janitoral job classifications by a medical school was improper sex discrimination where sex was not shown to be a bona fide occupational qualification. Division of the janitorial work into a "heavy" classification for males and a lower paid "light" classification for females was dscriminatory assignment of jobs on the basis of sex. 42 U. S. C. Sec. 2000e.

Back reference.—¶ 1007.

Racial Discrimination—Medical School—Non-faculty Positions—High School Education Requirement—Absence of Business Necessity.—A medical school's requirement that applicants for certain non-faculty jobs have a high school education improperly discriminated against Negro job applicants, absent a showing of justifying business necessity. Though the high school education requirement was neutral on its face, it had a discriminatory impact on minorities who were statistically less likely to meet the qualification. 42 U. S. C. Sec. 2000e.

Back reference.—¶ 1433.

FULL TEXT OF EEOC DECISION

Summary of Change

Charging Parties allege that Respondent University has engaged in and continues to engage in unlawful employment practices in violation of Title VII of the Civil Rights Act of 1964, as amended, by denying females promotions to tenured positions in Respondent's Medical School faculty because of their sex. Charging Party alleges that she was denied a promotion to such a tenured position because of her sex, and that she was retaliated against for opposing such discriminatory practices.

Charging Parties further allege that Respondent continues to engage in unlawful employment practices in violation of Title VII of the Civil Rights Act of 1964, as amended, by discriminating against women as a class in hiring, promotions, wages, job classifications and in general terms and conditions of employment, and by taking reprisals against those opposing such practices.

Jurisdiction

Respondent University is a private educational Institution which receives support from the state. It employed approximately 9,000 persons during the 1972 calendar year and is an "employer" within the meaning of Section 701(b) of the Act.

The original charge herein was received March 17, 1972 and was subsequently amended, pursuant to EEOC Procedural Regulations, 29 CFR 1601.11. The original charge was deferred to the State Human Relations Commission on April 5, 1972, and we assumed jurisdiction on June 23, 1972, pursuant to EEOC Procedural Regulations, 29 CFR 1601.12(b)(v), within the time limitations prescribed by Section 706(b) and (d) of Title VII.

Summary of Investigation

I. *Promotions—Medical School Faculty.*—Charging Parties allege that female employees as a class have been denied promotions to tenured positions in respondent's School of Medicine on the basis of sex.

Academic tenure is a system where faculty appointments in an institution of higher education are continued generally until retirement. At Respondent University, Associate Professors and Professors are normally tenured, while Assistant Professors and others below this rank are not tenured. If a faculty member fails to achieve tenure within seven years after his appointment, his services in the tenure system are terminated.

Under the tenure procedures in Respondent's Medical School, the head of a candidate's department makes a recommendation to the Dean of the School concerning the granting or denial of tenure to an eligible candidate. If the recommendation is favorable, the Dean appoints a committee of tenured faculty members to consider the candidate's qualifications. The committee issues a report and recommendation. For a candidate to be granted tenure, this recommendation must be concurred in by the Executive Committee of the Faculty, the Vice Chancellor for Health Professions, and the Office of the Provost. An unfavorable determination at any stage can result in denial of tenure.

Respondent's records reveal that a greatly disproportionate number of those involved in the decision of whether to grant tenure under the above procedures, are male. The department heads listed for Respondent of Medical School are male. The faculty committee, which is composed of tenured faculty members, often may consist entirely of males due to the small number of tenured females on the Medical School faculty. Respondent's records show the following numbers of tenured full time faculty members, by sex, as of January 1972:

	Number	Tenured	Tenured males/females total/faculty (percent)	Tenured males/females total tenured faculty (percent)
Males	351	115	29.4	95.8
Females	42	5	1.3	4.2
Total	393	120		

Broken down another way, Respondent's statistics show that 32.4 percent of all males are tenured while only 11.9 percent of all females are tenured.

In deciding whether to grant or deny tenure to a candidate, highly subjective criteria often are used. For example, the criteria set forth in Respondent's Faculty Handbook for an Associate Professor are as follows:

An Associate Professor should have completed all formal academic preparation for a teaching career and should have had substantial experience in teaching, research, advanced study, or applicable non-academic professional experience. He should have demonstrated a capacity and will to maintain teaching effectiveness and should have a capacity for continuing growth, as a teacher, as a scholar, and as a member of his profession. He should have made substantial progress in attaining eminence in a scholarly or professional field.

He should have the capacity for consistently mature performance in course and curriculum planning, in the guidance and counseling of students and of younger staff members, and in participation in the activities of the university.

The criteria for a Full Professor are similarly amorphous:

The rank of professor recognizes the attainment of authoritative knowledge and reputation in a recognized field of learning, and demonstrated achievement in maintaining a teaching effectiveness of a high order. The professor should have achieved distinctly superior stature in his field through research, writing, professional practice, leadership in professional and learned organizations, or in administrative service.

Statistics reveal that, under this system, recent promotions in the Medical School have been disproportionately granted to males. For the years 1966–71, the record reveals the following promotion statistics for Assistant Professors in the School of Medicine:

Year	Number of assistant professors			Percent females	Number of assistant professors promoted		
	Male	Female	Total		Male	Female	Total
1966-67	84	11	95	11.5	8	0	8
1967-68	97	19	116	16.3	8	1	9
1968-69	105	27	132	20.4	10	2	12
1969-70	118	23	141	16.3	5	1	6

[In percent]

Year	Assistant professors promoted		All	Promotions by sex	
	Male	Female		Male	Female
1966-67	9.5	0	8.4	100	0
1967-68	8.2	5.2	7.7	88.8	11.1
1968-69	9.5	7.4	9.1	83.3	16.6
1969-70	4.2	4.3	4.2	83.3	.6

The above statistics indicate that of 35 promotions from 1966 to 1971, 31 or 88.5 percent were granted to men while 4 or 11.4 percent were granted to women. During this period, women constituted a minimum of 11.5 percent and a maximum of 20.4 percent of Respondent's Assistant Professors. In three of the four years, the percentage of women promoted was significantly less than the percentage of female Assistant Professors.

Broken down by departments within the School of Medicine, Respondent's tenure records show the following:

	Total tenured faculty	Tenure females
Anatomy	7	0
Biochemistry	6	0
Anesthesiology	6	0
Pharmacology	3	1
Microbiology	4	0
Pathology	16	0
Medicine	18	0
Surgery	8	0
Pediatrics	10	1
Radiology	6	0
Community medicine	1	0
Otolaryngology	4	0
Obstetrics and gynecology	3	0
Orthopedic surgery	1	0
Physiology	7	0
Neurology	3	0
Neurological surgery	1	0
Psychiatry	15	3

Courts often have observed that proof of discrimination is seldom direct. See, e.g., *United States v. Jacksonville Terminal Co.*, [3 EPD ¶8324] 451 F. 2d 418 (5th Cir. 1971); *Marquez v. Ford Motor Co.*, [3 EPD ¶8156] 440 F. 2d 1157 (8th Cir. 1971). Often an inference of discrimination must be drawn from the totality of the circumstances. See *Lowry v. Whitaker Cable Corp.* [5 EPD ¶8440] 472 F. 2d 1210 (8th Cir. 1972). In this case, tenure decisions are made by a group consisting almost entirely of males. The standards used are highly subjective. Statistics reveal that significantly fewer females than males are granted tenure, relative to their proportion on the Medical School faculty. As pointed out in a similar context in *Rowe v. General Motors Corporation*, [4 EPD ¶7689] 457 F. 2d 348, 359 (5th Cir. 1972):

> Such methods for promotion . . . would enable an individual foreman, if he were so inclined, to exercise racial discrimination in his selection of candidates for promotion . . . All we do today is recognize that promotion . . . procedures which depend almost entirely upon the subjective evaluation and favorable recommendation of the immediate foreman are a ready mechanism for discrimination against Blacks much of which can be covertly concealed and, for that matter, not really known to management. We and others have expressed skepticism that Black persons dependent directly on decisive recommendations can expect nondiscriminatory action. (Footnote and citations omitted.)

We believe, and Respondent's tenure statistics indicate, that the treatment which females can expect from males under similar circumstances should be viewed with equal skepticism. Accordingly, we find reasonable cause to believe that the tenure procedures now utilized in Respondent's Medical School, consisting of highly subjective criteria applied almost exclusively by males, discriminate against female faculty members on the basis of sex, in violation of Title VII of the Civil Rights Act of 1964, as amended.

II. *Compensation.*—Charging Parties allege that female faculty members receive lower compensation than males in Respondent's Medical School. The evidence shows the following average salaries for males and females in the School of Medicine:

	Male		Female	
	Number	Average salary	Number	Average salary
Professor	47	$39, 481	1	$42, 000
Associate professor	49	32, 387	5	26, 496
Assistant professor	117	26, 795	20	21, 982
Instructor	25	23, 607	4	21, 895

With the exception of one female professor, the average salary for females is significantly lower than the average salary for males at all job levels and among males and females having substantially the same responsibilities. Evidence also shows that males are granted higher salary increases than females. Title VII prohibits discrimination with respect to compensation. Under Title VII, insubstantial differences in job duties do not justify different wages rates. See *Krumback v. John Oster Mfg.* 313 F. Supp. 257 (D.C. Wisc. 1970); Comm. Dec. No. 71-1103, CCH EEOC Decisions (1973) ¶6203 (1971). Based upon the above evidence, and in the absence of evidence justifying the wage differential, we find reasonable cause to believe that Respondent discriminates against females in its School of Medicine in payment of wages.

III. *Hiring—Faculty.*—Charging Parties allege that Respondent treats females disparately in hiring for faculty positions, both in the Medical School and in the University as a whole.

(A) *Medcal School Hiring.* Respondent's records show the following faculty composition by sex for the Medical School:

	Male		Female	
	Number	Percent-	Number	Percen
1970-71	303	86. 8	46	13. 2
1971-72	331	88. 7	42	11. 3
1972-73	340	88. 5	44	11. 5

Our investigation indicates that Respondent recruits nationally for Medical School faculty positions. In order to determine whether Respondent has discriminated against the males on a statistical basis in hiring for these positions, it is thus necessary to examine Respondent's employment practices in light of national statistics showing the relative number of females qualified for such faculty positions.

Direct statistics indicating the proportion of females qualified for Medical School faculty positions are not available. Statistics showing the ratio of females receiving the degrees which are considered necessary by Respondent for a teaching position in Respondent's Medical School are available however, and serve as an indication of the relative number of qualified females.[1] Respondent's applicant statistics are unavailable.

Of Respondent's Medical School faculty, some 75 percent have M.D. degrees and some 23 percent have Ph.D. degrees, primarily in the biological sciences. The following tables indicate the percentage of females nationally having these qualifications:[2]

	Male	Female	Percent female
M.D. degrees earned, by sex, United States:			
1949-50	5,028	584	10.4
1954-55	6,683	331	4.7
1959-60	6,645	387	5.5
1964-65	6,832	472	6.4
1969-70	7,615	699	8.40
1970-71	8,110	809	9.07
Ph. D. degrees earned, by sex, in fields related to medicine, United States, 1970-71:			
Pathology	62	6	8.8
Pharmacology	141	20	12.4
Physiology	204	41	16.7
Microbiology	264	59	18.3
Anatomy	126	23	15.4
Biochemistry	436	81	15.7
Bacteriology	34	8	5.2

From 1960 through 1969, females received 15.8 percent of the doctorate degrees awarded nationally in the biological sciences and 3.4 percent of the doctorate degrees awarded in the physical sciences.

These statistics indicate that the proportion of females in Respondent's Medical School faculty does not compare unfavorably with the proportion of females receiving M.D. and Ph.D. degrees nationally. While Title VII permits the use of statistics to establish a pattern of discrimination[3] based upon the above statistical information, we find no reasonable cause to believe that Respondent has discriminated against females in hiring for medical school faculty positions, as alleged.

(B) *University-wide hiring.* Respondent's records show the following faculty composition by sex for the University as a whole:

	Male		Female	
	Number	Percent	Number	Percent
1970-71	1,585	80.5	383	19.5
1971-72	1,628	79.1	431	20.9
1972-73	1,649	77.4	482	22.6

As in the medical school, our investigation indicates that Respondent recruits nationally for its university-wide faculty positions. Statistics show the following percentages of women on college and university faculties, nationally.[4]

[In percent]

	Universities	Colleges and universities
1968-69	14.8	19.1
1972-73	16.5	20.0

---

[1] We do not speak to the question of whether such degree requirements in themselves unlawfully discriminate against classes protected by Title VII. This is a question of first impression and we reserve judgment thereon pending further study.

[2] Source: Digest of Educational Statistics, U.S. Dept. of Health Education and Welfare, 1972.

[3] See *Parham v. Southwestern Bell* [3 EPD ¶ 8021] 433 F. 2d 421 (5th Cir. 1970), *U.S. v. Dillon Supply* [2 EPD ¶ 10,256] 429 F. 2d 800 (4th Cir. 1970).

[4] Source: American Council on Education.

A comparison of Respondent's employment statistics with the above figures reveals that Respondent employs a greater proportion of female faculty members than are employed nationally. Such a comparison does not, of course, account for possible discrimination against females at colleges and universities in general. According to Respondent's records some 25 percent of its faculty members have attained an M.A. degree as their highest degree and some 50 percent have attained Ph. D. degrees.[5] National statistics show the following percentages of females that have attained these degrees:[6]

M.A. Degrees Awarded—All Fields—United States 1970–71

Men	138, 146
Women	92, 363
Total	230, 509
Percent women	40. 6

Ph. D. Degrees Awarded—All Fields—United States 1970–71

Men	27, 530
Women	4, 577
Total	32, 107
Percent women	14. 7

Between 1960 and 1969, 11.6 percent of the recipients of doctoral degrees were female. While possession of such degrees may not always be a valid prerequisite to teaching, these statistics are one of the best indications of the percentage of females qualified, by Respondent's criteria, to teach at Respondent University.

The above statistics, comparing the proportion of females in Respondent's faculty with the proportion of females in other college and university faculties and with the proportion of females receiving M.A. and Ph. D. degrees, show no disparities sufficient to make a *prima facie* case of discrimination.

On the basis of these statistics, and lacking other evidence of sex discrimination in faculty hiring, we find no reasonable cause to believe that Respondent has violated Title VII by treating women disparately in its overall hiring practices.

IV. *Terms and Conditions.*—There is insufficient evidence to support Charging Parties' allegation concerning discrimination against women as a class in other terms and conditions of employment. Accordingly, we reserve decision thereon.

V. *Individual Denial of Promotion.*—With regard to Charging Party's allegation that she was denied a promotion and discharged because of her sex, the following facts are undisputed. Charging Party was hired by Respondent in June, 1967, as an Assistant Professor in the Biochemistry Department. On October 27, 1971, the tenured faculty members of the Biochemistry Department, consisting of five males, met and unanimously decided that Charging Party should not be recommended for promotion to a tenured position. According to the minutes of the meeting:

> All other things being satisfactory, her [Charging Party's] production of scientific publications probably would have been adequate quantitatively to support her promotion, although their scientific interest and relevance to biological systems seem remote. However, because of the marked deficiencies in [Charging Party's] performance, particularly in teaching, and in a more general way, her performance as a communicative and interacting colleague led to the conclusion that she could not perform as a faculty member in this Department in a manner consistent with the standards that have been established.

Respondent informed Charging Party by letter on March 8, 1972, that her appointment would be terminated. In response to Charging Party's request for a statement explaining her termination, Respondent replied that Charging Party had not satisfactorily met the criteria for promotion to Associate Professor stated in the Faculty Handbook, as previously quoted. Subsequently, Respondent notified Charging Party that it would not accept a grant which Charging Party had been awarded by the National Institute of Health to finance research by Charging Party. The reason for refusing the grant was Charging Party's impending termination.

---

[5] See footnote 1, *supra.*

[6] Source: Digest of Educational Statistics, *supra.*

In support of its position, Respondent alleges that Charging Party was unable to organize lecture material and present it in a coherent fashion, lacked rapport with students, and generally was inadequate as a lecturer. Respondent claims that Charging Party's teaching inadequacies were evidenced by an evaluation of Medical School faculty conducted by first year medical students, in which Charging Party received the worst rating in overall ability, lecture presentation, and effectiveness.

The record shows that Charging Party received her Ph.D. from the Massachusetts Institute of Technology in 1959. She was affiliated with six honorary and professional societies. Her employment experience included a fellowship with the Mellon Institute and Associate Professorship at Vassar College, and a position as senior chemist with Westinghouse Laboratories. She had published sixteen experimental papers and had several manuscripts in preparation. She had been recommended enthusiastically to the University by a number of professors familiar with her work. After being hired by the University in 1967, her contract was renewed in 1970. Until 1971, when the question of her tenure arose, the record reveals no negative comments on Charging Party's five year performance record.

Our investigation indicates that the Chairman of Respondent's Biochemistry Department when Charging Party was hired had written Charging Party of the criteria for promotion to a tenured position. These criteria consisted of election to the American Society of Biological Chemists and the publication of scholarly research. At the time she was denied tenure, Charging Party had met these criteria and was not advised by the new Department Chairman, who took over in June, 1971, that they would be changed.

As noted, Respondent cites Charging Party's alleged teaching deficiencies as a primary reason for denying her tenure. To substantiate this position, Respondent relies primarily on only four lectures given by Charging Party during her five years of employment. The record further discloses that the student evaluations of Charging Party's teaching ability, which Respondent cites, were comparable to those of a male faculty member who was promoted to a tenured position in July, 1971. For the 1969–1970 year, Charging Party and the male faculty member received the following ratings:

	Honors	Pass	Fail	Do not remember
Charging party	13	70	12	
Male colleague	6	75	7	1

Again, for the 1971–72 year, Charging Party and the male colleague received similar ratings.

The record further shows that Charging Party's qualifications were, in many respects, arguably superior to those of males who were granted tenure. One male who was promoted was not elected to membership in the American Society of Biological Chemists. Both he and another male who was [were] promoted had significantly fewer publications than Charging Party. While Charging Party had previous teaching experience, as an Associate Professor at Vassar, both males had only been post doctoral fellows.

Finally, our investigation reveals that Charging Party was given no advance notice of her alleged deficiencies. A male colleague whose performance had been considered deficient was given notice and an opportunity to improve. Subsequently, he was granted tenure.

The above evidence establishes that:

(1) The decision to deny Charging Party tenure which led to her being terminated and the refusal of her research grant was made entirely by male faculty members;

(2) Charging Party had met the standards for promotion set forth when she was hired;

(3) Charging Party's record reveals no significant deficiencies prior to the time she was denied tenure and, in fact, shows that Charging Party's contract had been renewed by Respondent;

(4) Respondent's negative evaluation of Charging Party's teaching ability was based primarily upon four lectures given by Charging Party in her five years at the University;

(5) Charging Party's teaching ability appears comparable to that of a male faculty member who was promoted;

(6) Charging Party's qualifications in other areas were in many ways superior to those of male faculty members who were promoted; and

(7) Charging Party was given no advance notice of her deficiencies, although a male faculty member was given such notice.

Based upon the evidence, and particularly in view of our finding that Respondent has followed a general pattern of discriminating against females in granting tenure, we conclude that Respondent has applied its standards differently to Charging Party than to similarly situated male faculty members. Where similarly situated persons of different sexes receive dissimilar treatment, it is reasonable to assume, in the absence of evidence to the contrary, that sex was a factor in the dissimilar treatment. See *King v. Laborers Local 818*, [3 EPD ¶ 8198] 433 F. 2d 273 (6th Cir. 1971). An employment action based in part upon an unlawful consideration is not saved by the fact that other non-discriminatory considerations may also have been present. *King v. Laborers Local 818, supra.* Consequently, we find reasonable cause to believe that Respondent engaged in an unlawful employment practice in violation of Title VII by failing to promote and discharging Charging Party and by refusing her research grant.

VI. *Harassment and Retaliation.*—Charging Party alleges that Respondent harassed her and retaliated against her because of Charging Party's opposition to Respondent's employment policies. Charging Party alleges that such retaliation included:

(1) failure to be advised of faculty meetings; (2) not being introduced to guest speakers; (3) being denied secretarial assistance; (4) having her charges of sex discrimination referred to in a joking manner before faculty and students; and (5) being denied teaching assignments.

Respondent denies these allegations, asserting that Charging Party was informed of meetings in the same manner as every other faculty member in the Department; that she was not intentionally disregarded in terms of guest speakers scheduled to visit the Department; that she was not denied secretarial assistance, but that assistance was delayed due to the shortage of secretarial help and the arduous nature of the service desired; and that her interpretation of remarks made by a male Associate Professor in the Bio-Chemistry Department during a lecture, referring to sex discrimination, was subjective and had no reference to the EEOC discrimination charge.

Record evidence is insufficient to support the first four allegations made by Charging Party. With that regard to Charging Party's allegation that she was denied teaching assignments because of her opposition to unlawful employment practices, the record reveals the following. From the 1968–69 school year through the 1971–72 school year, Charging Party delivered three to six yearly lectures in graduate biochemistry. Charging Party's charge was originally received by the Commission March 1972. The record indicates that Charging Party's opposition to Respondent's employment practices was well known. In 1972–73, the first school year after Charging Party filed her charge, Charging Party received no lecture assignments. Charging Party also was notified subsequently that she would receive no such assignments for the 1973–74 school year. Further, Charging Party's name was omitted from a faculty directory published by Respondent for the 1972–73 school year although it had been included in previous directories.

Under Section 704(a) of Title VII, it is an unlawful employment practice for an employer to discriminate against any of his employees because of opposition to any practice made unlawful under Title VII. The protection afforded a complaining party under Section 704(a) has been broadly construed by Courts because of the reliance on citizen initiated complaints in Title VII proceedings. See Commission Decision 72-0975, CCH EEOC Decisions (1973) ¶ 6358, citing *Pettway v. American Cast Iron Pipe Co.*, [2 EPD ¶ 10,011] 411 F. 2d 998 (5th Cir. 1969). See also *Barela v. United Nuclear Corporation*, [EPD ¶ 7857] 462 F. 2d 149 (10th Cir. 1972). It appears from the record that Respondent's differential treatment of Charging Party before and after 1971–72 school year was based at least in part upon the fact that Charging Party has filed a charge of employment discrimination against Respondent during that time and had otherwise openly opposed Respondent's employment practices. Consequently, we find reasonable cause to believe that Respondent engaged in a violation of Section 704(a) of Title VII by denying Charging Party lecture assignments beginning with the 1972–73 school year.

VII. *Non-Faculty Hiring and Job Classification.*—Charging Parties allege that Respondent discriminates against female in hiring and job classifications for non-faculty positions. Respondent University is located in an area with a 20.7 percent minority population, a 20.1 percent Negro population, and a 52 percent female population. Respondent's records show the following breakdown, by race [7] and sex, of non-faculty employees at the time of our investigation:

Classification	Caucasian		Negro		Total minorities	
	Number	Percent	Number	Percent	Number	Percent
Officials and managers	221	99.04	11	4.68	14	5.96
Professionals	4,900	93.42	93	3.68	345	6.58
Technicians	328	88.65	42	11.35	42	11.35
Sales workers	41	100	0	0	0	0
Office and clerical	1,837	99.35	11	.60	12	.65
Craftsmen	149	90.30	14	8.49	16	9.70
Operatives	123	89.13	15	10.87	15	10.87
Laborers	42	93.33	3	6.67	3	6.67
Service workers	686	74.73	183	19.93	232	25.27
Total	8,327	93	472	5.2	627	7

	Male	Female	Both	Percent female
Officials and managers	208	27	235	11.49
Professionals	3,692	1,553	5,245	29.61
Technicians	199	171	370	46.22
Sales workers	10	31	41	75.61
Office and clerical	113	1,736	1,849	93.89
Craftsmen	163	2	165	1.21
Operatives	108	30	138	21.74
Laborers	42	3	45	6.67
Service workers	605	313	918	34.10
Total	5,140	3,866	9,006	42.93

These statistics indicate that minorities are significantly underrepresented in all categories except service workers, and particularly in the office and clerical and sales workers categories. Females are significantly underrepresented in all categories except sales workers and office and clerical. Title VII permits the use of statistical probability to infer the existence of a pattern of discrimination *Parham v. Southwestern Bell, supra; U.S. v. Dillon Supply, supra.* Based upon the above statistical evidence, we find reasonable cause to believe, that Respondent has discriminated against minority and female non-faculty employees, by excluding them from certain job classifications on the basis of race and sex respectively.

VIII. *Sex Designations—Job Classifications.*—At the time of our investigation the record shows that Respondent maintained job classifications containing sex designations for janitorial positions.[8] The "janitor (heavy cleaning)" classification was primarily male while the "janitress (light cleaning)" classification was primarily female. Wages for the janitor classification were some 15 percent higher than for the janitress classification. Title VII prohibits job assignments based upon sex absent a showing that sex is a bona fide occupational qualification. Respondent has made no such showing. Thus, we find reasonable cause to believe that Respondent's maintenance of separate janitorial classifications for males and females is in violation of Title VII.

IX. *High School Requirement.*—The Commission's investigation disclosed that Respondent requires a high school education or an equivalent, as a prerequisite to employment in the Senior Secretary, Senior Clerk, Gardener Foreman, Area Foreman, Area Supervisor, Zone Supervisor, Elevator Dispatcher, Groundsman, Elevator Starter, Elevator Operator, Janitor and Janitress jobs.[9]

According to 1970 census Bureaus statistics, of the total persons age 25 and over in the SMSA who have completed high school only 4.7 percent are Negro. An employment practice which, though neutral on its face, has a disparate impact upon minority employees is a violation of Title VII absent a showing by Respondent of business necessity. See *Griggs v. Duke Power Co.*, [3 EPD ¶ 8137]

---

[7] This issue, while not specifically alleged by the charge, arose in the course of our investigation and is so like or related to the charge as to be appropriate for decision herein. See *Sanchez v. Standard Brands*, [2 EPD ¶ 10,252] 431 F. 2d 455 (5th Cir. 1970).

[8] See footnote 7, *supra*.

[9] See footnote 7, *supra*.

401 U.S. 424 (1971). Respondent has made no such showing of business necessity. Accordingly, we find reasonable cause to believe that Respondent's high school requirement discriminates against Negro job applicants in violation of Title VII.

CONCLUSION

There is reasonable cause to believe that Respondent has engaged in unlawful employment practices in violation of Title VII of the Civil Rights Act of 1964 as amended, by using tenure procedures in its Medical School which discriminate against female faculty members, and by paying lower wages to females than to male Medical School faculty members.

There is reasonable cause to believe that Respondent has engaged in unlawful employment practices in violation of Title VII by discriminating against Charging Party because of her sex in denying her promotion to a tenured position, attempting to terminate her employment, and refusing to accept her research grant, and by retaliating against Charging Party because of her opposition to such practices.

There is reasonable cause to believe that Respondent has violated Title VII by discriminating against minority and female non-faculty employees by excluding them from certain job classifications on the basis of race and sex respectively.

There is reasonable cause to believe that Respondent has violated Title VII by maintaining sex designated job classifications for janitorial positions and by maintaining a high school education requirement which discriminates against Negroes.

There is not reasonable cause to believe the allegations concerning hiring for the Medical School and the University faculties.

LAYOFF OF PREGNANT WORKER WITHOUT PREFERRED RECALL WAS SEX BIAS

Decision of Equal Employment Opportunity Commission, Decision No. 71-2309, May 28, 1971.

Title VII—Civil Rights Act of 1964

Sex Discrimination—Pregnant Employee—Request for Maternity Leave—Discharge.—The discharge of an employee requiring maternity leave, because the employer could not make reasonable accommodation to give her the leave and guarantee her return to work amounted to sex discrimination where the employee was not given preference in recall. The employer did not have to guarantee her return to the job, but it should have given the employee a recall preference. 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1310.50.

FULL TEXT OF EEOC DECISION

SUMMARY OF CHARGE

Charging Party alleges that Respondent engaged in an unlawful employment practice in violation of Title VII of the Civil Rights Act of 1964, by denying her a leave of absence and discharging her because of her sex (female).

JURISDICTION

Respondent, the owner and operator of residential and business properties throughout the United States, employed over 25 persons at the time the instant charge was filed.

The charge was filed on December 3, 1968, within the jurisdictional time limitations prescribed by Section 706(d) of Title VII.

SUMMARY OF INVESTIGATION

Charging Party was hired by Respondent as a bookkeeper on March 1, 1968.

It is undisputed that in June, 1968, Charging Party requested maternity leave of two months. The request was denied and on September 30, 1968, she was discharged.

Charging Party asserts that initially her supervisor granted her request for leave, but later reversed his decision, stating that the Company had no pregnancy leave policy for small branch offices.

Respondent denies the charge and contends that it has no leave policy in its small offices.[1]

---

[1] **Four persons are employed in the office of the facility.**

Evidence of record demonstrates that Respondent has granted one leave since 1961. This leave was granted to an office receptionist only after she secured a temporary replacement satisfactory to Respondent.

The bookkeeping position requires expertise and familiarity with Respondent's method of bookkeeping. Respondent has an eight-week training program for its bookkeepers.

Evidence of record reveals that Charging Party voluntarily began working part-time on September 17, 1968. Respondent informed Charging Party that she was needed full-time. Evidence of record demonstrates that the services of a full-time bookkeeper are required. Charging Party continued to work part-time until she was discharged on September 30, 1968.

Respondent's personnel records indicate that leaves of absence for illness had been granted only where the employee had accrued sick leave.

At the time of her discharge, Charging Party had accrued approximately seven days sick leave.

The policy of the Commission with regard to maternity leave generally is stated in its decision in Case No. LA 68–4–538E, issued June 16, 1969. CCH EEOC Decisions "1973" ¶ 6125. In that decision, we noted that the employer's Personnel Practice Code which provided for granting of maternity leave of absence without pay together with reinstatement following such leave comported "generally" with the Commission's policy. We did not address the issue presented in this case, i.e. whether an employer who cannot reasonably be expected temporarily to replace an employee during pregnancy leave is under any obligation to afford that employee preference in recall following the leave.

We take this occasion to indicate that such an obligation is, in the circumstances presented herein, imposed upon the employer. To determine otherwise would result in unlawful as well as unnecessary discrimination against female employees whose pregnancy requires extended absence from a position in which temporary replacement is barred by business necessity.

In the instant case, although Respondent was willing to give Charging Party (a relatively new employee) some leave, it asserts with considerable proof that its operation cannot function efficiently unless a full-time bookkeeper is available.

In these circumstances, we conclude that Respondent's business is such that employees, of either sex, who request extended leave can be afforded only limited accommodation. The reasonable requirements of Respondent's business preclude a guarantee of reinstatement, but do not preclude the maintenance of a preferred recall "list." Charging Party's discharge makes recall impossible and rehire speculative. Accordingly, we conclude that Respondent's discharge of Charging Party—as opposed to an extension of leave with preferred recall—violated the Act by discriminating against her because of her sex-related necessity to absent herself from her employment.

DECISION

Reasonable cause exists to believe that Respondent has violated Title VII of the Civil Rights Act of 1964, as alleged.

MATERNITY LEAVE FOR PREGNANT WORKER WAS NOT SEX BIAS

Decision of Equal Employment Opportunity Commission, Decision No. 72–0372, August 24, 1971.

Title VII—Civil Rights Act of 1964

Sex Discrimination—Pregnant Employee——Maternity Leave Requirement—No Sex Bias.—Requiring a pregnant employee to go on maternity leave at the seventh month of pregnancy was not sex bias where the job required bending, lifting and climbing and where the company doctor had individually evaluated her condition. Individual treatment is required in order not to be discriminatory. 42 U.S.C. Sec. 2000e.

Back reference—¶ 1310.

Full Text of EEOC Decision

The Commission has considered the Field Director's Findings of Fact issued June 16, 1971, and has examined the entire record. Charging Party has not filed exceptions. Exceptions filed by Respondent do not raise material issues. The

Commission adopts the Field Director's Findings of Fact to the extent that they are consistent with the following.

As noted in the Findings of Fact, Charging Party was required to take maternity leave upon completion of her seventh month of pregnancy despite her physician's recommendation that she be permitted to work through her eighth month of pregnancy. It is undisputed that Charging Party's job requires a substantial amount of bending, lifting, and climbing. Based on the content of Charging Party's job, together with Charging Party's physical condition, Respondent's physician determined that Charging Party should not work beyond the completion of her seventh month of pregnancy. The record indicates that Respondent has permitted other females in other jobs to work beyond the seventh month of pregnancy.

In determining the time for commencement of an employee's maternity leave, the principle of non-discrimination requires that individuals be considered on the basis of their individual capacities and not on the basis of any characteristics attributed to the group. 29 CFR 1604.1(a). We find the facts, summarized above, sufficient to indicate that Respondent's treatment of Charging Party is both reasonable and substantially in accordance with the guidelines of this Commission. Cf. *Schattman v. Texas Employment Commission*,—F. Supp. —(D.C. Tex. 1971), 3 EPD ¶ 8146.

There is not reasonable cause to believe Respondent violated Title VII of the Civil Rights Act of 1964, as alleged.

NON-REAPPOINTMENT AND SALARY LEVEL OF FEMALE FACULTY MEMBER WERE NOT BASED ON SEX

Decision of Equal Employment Opportunity Commission, Decision No. 74-87, February 12, 1974.

Title VII—Civil Rights Act of 1964

Sex Discrimination Claim—Female Assistant Professor—Non-reappointment—Salary—Evidence of Bias.—Non-reappointment of a female faculty member was not improperly based on her sex where evidence showed faculty and student complaints about her job performance, indicated duplication of specialization between her and more extensively qualified faculty members, and showed declining enrollment in the female faculty members' classes. A claim of sex-biased salary differential was also unsupported by evidence. 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1068.

Full Text of EEOC Decision

SUMMARY OF CHARGE

Charging Party,[1] a female, alleges [in charge filed on April 20, 1972] that Respondent Employer has engaged in unlawful employment practices in violation of Title VII of the Civil Rights Act of 1964, as amended by the Equal Employment Opportunity Act of 1972, by failing to reappoint her [on June 30, 1973[2]], by paying her a salary lower than that received by male faculty members of the Foreign Language Department, and by discriminating against her with respect to terms and conditions of employment, all because of her sex.

JURISDICTION

Respondent is a state supported institution of higher learning employing approximately 8,000 persons, nearly forty-five percent of whom are females. The Commission received the charge on April 20, 1972 and it was filed the same day, within the time limitations prescribed by the Act.[3]

---

[1] The aggrieved person having died during the pendency of her charge, her executrix has been substituted as the Charging Party in her stead. *Krause v. Sacramento Inn*, 479 F. 2d 988, 5 EPD ¶ 8608 (9th Cir. 1973).

[2] The paradox of a filing date which antedates the date of the allegedly discriminatory non-reappointment is explained by the fact that when Respondent notified Charging Party of her non-reappointment Charging Party was entitled to take action thereon, notwithstanding that no alleged violation had yet occurred. See *Meredith v. City of Winter Haven*, 134 F. 2d 202, 206 (5th Cir. 1943), rev. on other grounds 320 U.S. 228 (1943). Accord, *Henderson v. Eastern Freight Ways, Inc.*, [4 EPD ¶ 7810] 460 F. 2d 258 (4th Cir. 1972).

[3] Charging Party mailed her charge in error, although apparently in good faith, to the Wage-Hour Division of the Department of Labor. The Labor Department received her charge on April 18, 1972. The 180 day period of limitations within which a charge must be filed was tolled as of that date. *Culpepper v. Reynolds Metal Co.*, [2 EPD ¶ 10,138] 421 F. 2d 888 (5th Cir. 1971); *Bo[illegible] v. Baton Rouge Marine Contracting Co.*, [3 EPD ¶ 8107] 437 F. 2d 1011, n. 16 ([illegible] Cir. [illegible]), and Charging Party's charge was filed with the Commission upon its receipt from t[illegible]bor Department on April 20, 1972.

SUMMARY OF INVESTIGATION

From September 1, 1968 to June 30, 1969, Charging Party was employed as an Instructor of French in Respondent's Department of Foreign Languages. After a year on leave without pay to engage in graduate studies in France, Charging Party returned to Respondent University and was appointed as an Assistant Professor for the period September 1, 1970 to June 30, 1973. On February 29, 1972, prior to the expiration of her appointment and in accordance with Respondent University's policy governing appointments, promotions, retirements, and related matters.[4] Charging Party was notified that her contract would not be renewed upon its expiration on June 30, 1973.

Charging Party alleges that she was non-reappointed because of her sex (female). Respondent denies the charge and contends that Charging Party was non-reappointed because of uncooperativeness with her colleagues, student complaints, duplication of specialization, and a declining French enrollment.

Testimonial evidence of record from male and female members of the Foreign Language Department indicates that Charging Party was uncooperative in determining departmental business and made it difficult for other faculty members to maintain an effective working relationship with her. Testimonial evidence from colleagues of both sexes further indicates that individual faculty members of the Foreign Language Department received numerous unsolicited complaints from Charging Party's students about her teaching methods, expectations, and classroom behavior.

Documentary evidence of record demonstrates that there was duplication of specialization between Charging Party and several male members of the French language faculty who possessed more extensive educational backgrounds in French and greater seniority than the Charging Party. Documentary and testimonial evidence also show that as of the date Charging Party received notice of non-reappointment, student enrollment in Respondent's French classes had declined to the lowest point in three years. Accordingly, we find Charging Party's allegation of non-reappointment because of sex unsupported by evidence of record.

With regard to Charging Party's allegation of salary discrimination, credible testimonial evidence of record indicates that the salary offered to a prospective member of Respondent's Foreign Language Department is determined by the availability of funds, supply and demand, comparison of salaries of incumbent faculty members, and degrees and experience. Documentray evidence of record shows that the salary of $9,000 per academic year which Charging Party received as an Assistant Professor of French with a B. A. degree in her area of instruction was greater than the salary received by male members of the Foreign Language Department with comparable educational qualifications and similar lengths of employment. Additionally, the evidence reveals that Charging Party was the only Assistant Professor on the French Language faculty who possessed less than a Masters or Doctorate degree in French.[5] Accordingly, we conclude that evidence of record does not support Charging Party's allegation of salary discrimination.

Finally, with regard to the allegation of discrimination in terms and conditions of employment, the allegation is uncorroborated by evidence of record. Credible testimonial evidence from female colleagues of Charging Party indicates that female members of the Foreign Language Department were included in committee meetings and were not discriminatorily denied their choice of classes or class times. Accordingly, we do not credit Charging Party's allegation.

DECISION

Reasonable cause does not exist to believe that Respondent violated Title VII of the Civil Rights Act of 1964, as amended, as alleged.

DENIAL OF PROMOTION AND DISCHARGE WAS RACE BIAS—LIBEL SUIT WAS IMPROPER RETALIATION

Decision of Equal Employment Opportunity Commission, Decision No. 74-77, January 18, 1974.

---

[4] Faculty Handbook app. D, at 47 (1971).

[5] We do not speak to the question of whether such degree requirements in themselves unlawfully discriminate against classes protected by Title VII. This is a question of first impression and we reserve judgment thereon pending further study.

Title VII—Civil Rights Act of 1964

Racial Discrimination—Denial of Promotion—Ecidence of Bias.—Denial of promotion to a Negro employee was improper race bias where the employee was qualified, reasons given for the denial were pretextual, Negro professional employees were virtually absent from the employer's operation in the state, and where the employee's supervisor had exhibited racial animosities. 42 U. S. C. Sec. 2000e.

Back reference.—¶ 1325.

Racial Discrimination—Discharge of Negro Employee—Pretextual Basis.—Discharge of a Negro employee was improper race bias where evidence showed that purported justification based on employee fraternization bans was pretextual in nature and that other reasons advanced for the discharge were fabricated. 42 U. S. C. Sec. 2000e.

Back reference.—¶ 1065.

Racial Discrimination—Retaliation for Filing Charge—Libel Suit.—An employer's libel suit against an employee was improper retaliation for his objections to discrimination where the libel action was based on racial discrimination charges filed with the EEOC by the employee. The board privilege carried with the filing of an EEOC charge barred libel actions against the bias claimant where there was no publication of the alleged libelous statements to persons other than EEOC officials and employees. 42 U. S. C. Sec. 2000e.

Back reference.—¶ 1350.

UNIVERSITY'S DISCHARGE OF FEMALE, DENIAL OF TENURE, AND LOWER PAY RATES WERE SEX BIAS

Decision of Equal Employment Opportunity Commission. Decision No. 74-93, March 7, 1974.

Title VII—Civil Rights Act of 1964

Sex Discrimination—University—Discharge of Female Faculty Member—Retaliation—Harassment.—A female faculty member was subjected to improper sex bias and retaliation for her objections to bias where she was harassed by her chairman, treated differently than similarly situated males, and discharged despite her outstanding qualifications. Failure of the female faculty member to obtain her Ph. D. was an invalid pretext for the discharge where she had almost completed her dissertation and where males were granted reappointment despite failure to complete degree requirements. 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1068.

Sex Discrimination—University—Female Faculty Member—Denial of Tenure—Harassment. A female faculty member was improperly denied tenure on the basis of her sex where her department chairman, whom evidence showed had a negative attitude towards female faculty members, solicited negative evaluations of the candidate and disregarded or underemphasized positive recommendations. 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1325.

Sex Discrimination—University—Female Faculty Members—Rates of Pay.—A university discriminated against female faculty members where statistical evidence showed that they received lower rates of pay than their male counterparts and where the university failed to show the existence of objective standards justifying the disparity. 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1576.

Full Text of EEOC Decision

SUMMARY OF CHARGE

Charging Party A, a female, alleges that Respondent has engaged and is engaging in unlawful employment practices in violation of Title VII of the Civil Rights Act of 1964, as amended, by discharging her in retaliation for her opposition to employment practices made unlawful by Title VII. She further alleges that Respondent is in violation of the Act by discriminating against her and females as a class with respect to compensation and terms and conditions of employment, and by discriminating against females as a class with respect to hiring, job classification, tenure maternity leave, and intimidation all because of her/their sex.

Charging Party B, a female, alleges that Respondent has engaged and is engaging in unlawful employment practices in violation of Title VII of the Civil Rights Act of 1964, as amended, by denying her maternity leave, by denying her tenure, and with respect to her terms and conditions of employment and compensation, all because of her sex.

JURISDICTION

Respondent is a private institution providing educational services and employing in excess of 25 persons. The Commission received the charges on August 28, 1972 (A) and January 17, 1973 (B), and deferred them to the appropriate state agency on September 5, 1972 (A) and January 29, 1973 (B). The charges were filed with the Commission on November 6, 1972 (A) and March 31, 1973 (B) within the time limitations prescribed by the Act.[1]

Initially, Respondent asserts that the Commission is without jurisdiction to consider the allegation raised by Charging Party B with respect to tenure, since the decision to deny her tenure was made in January 1972, when Respondent was specifically excluded from coverage of the Act. We find that, although the preliminary decision was made in January 1972, the Charging Party was not formally notified of the decision until August 1972 and Charging Party's contract did not terminate until the end of the 1972–1973 academic year. In a similar situation, the court in *Johnson v. University of Pittsburgh*—F. Supp. —, 5 EPD ¶ 8660 (D.C. Pa., 1973) stated that:

"... the 1972 amendments cannot be rendered nugatory by making a decision before March 24, 1972, to become effective thereafter as a discriminatory discharge and refusal to grant tenure thereafter is as much a violation of the Act as any other sexual discrimination."

Since the effective date of the decision was considerably after the effective date of the 1972 amendments, we find no merit in Respondent's jurisdictional argument.

SUMMARY OF INVESTIGATION

I. Discharge—Charging Party A

Charging Party was hired by Respondent in September 1967 as a part-time lecturer in the School of Arts and Sciences, Fine Arts Department. She attained the position of Assistant Professor in 1969 and began her full-time teaching career. In a letter dated August 21, 1972, Charging Party was informed by Respondent that she would not be reappointed following the 1972–1973 academic year. Charging Party alleges that Respondent refused to reappoint her because she protested certain of Respondent's employment practices which she believes were made unlawful by Title VII of the Civil Rights Act of 1964, as amended. Respondent alleges that the primary reason for not renewing Charging Party's contract was that she had not attained her Ph.D.

The record indicates that Charging Party had the following qualifications. She received her B.A. Degree from Radcliffe College, with honors; she was the recipient of a Fulbright Fellowship; she received her M.A. from Radcliffe-Harvard in Fine Arts; and she received her Ph.D. from Harvard in the spring following the decision not to reappoint her.

She has written or translated several publications and has others in progress. Her student evaluations are outstanding. Subsequent to the decision not to renew her contract, approximately forty letters were spontaneously sent to the school administrators by concerned alumnae, students, and others, each of which praised in highest terms the Charging Party's teaching ability, scholarship, and personal concern for and dedication to her students. Respondent has never denied that Charging Party is an outstanding professor.

Evidence of record also shows that Respondent has awarded tenure to persons who have not received their Ph.D. Degrees and that a male assistant professor who taught in the department with Charging Party was not dismissed until he had taught for seven years without receiving his Ph.D. (One year of full-time teaching outside of Respondent University was not counted toward his probationary period.) The Provost at Respondent University recommended that this man's probationary period be extended for another year. Although this recommendation was not followed, he was offered a "less than full-time appointment" for the following year since that "would be a year in which (his) work on (his) dissertation should be approaching the climax and . . . the extra time would be useful." This was done in spite of the fact that the Provost considered him to be a "troublesome man." Another male on the faculty was allowed to hold a part-time teaching position and a part-time administrative position at Respondent University, when he had failed to obtain his Ph.D. after six years of teaching.

---

[1] Although the charges were received and filed separately, we deemed them appropriate for consolidation in this decision, due to the similarity of the allegation against the same Respondent.

Charging Party was in her fourth year of full-time teaching at Respondent University and had taught full time at another university for one year. No offer of part-time employment was made to Charging Party. Respondent's Dean of the Faculty of Arts and Sciences stated that it was he who had made the decision that Charging Party should not be reappointed. He further stated that "I have no idea how close (Charging Party's) dissertation is to being done. I made no inquiries of her advisor at Harvard." As noted, Charging Party was awarded her Ph.D. in the spring following the decision not to appoint her. Based upon the preceding evidence, we conclude that Respondent's allegation that Charging Party was terminated because of her failure to obtain a Ph.D. is, at the least, pretextual. Further, there is sufficient evidence that Charging Party was treated differently than similarly situated males to infer that her sex was a factor in her termination. See *King v. Laborers Local 818*, [3 EPD ¶ 8198] 433 F. 2d 273 (6th Cir. 1971).

In addition to evidence that Charging Party was treated differently than similarly situated males, there is further evidence that Charging Party's opposition to harassment in her department, based upon her sex, was an additional factor in her termination. Evidence of record indicates that Charging Party was well accepted by members of her department and university personnel as a whole until the school year beginning in 1972. A new Chairman was hired for the Fine Arts Department beginning in the 1970-1971 school year. In the words of one of Respondent's faculty members, he had an attitude of "condescension toward women." Two female students state that they were told by the Chairman that they should not go to graduate school but leave the places for men. Another female student states that she was told by the Chairman that she should marry and produce bright children, rather than going to graduate school. Other students objected to his stereotyping of men and women during his classroom lectures. One of the conditions which the Chairman set for taking the Chairmanship was "Commitment of a minimum of $10,000 for the salary of a new male department member." The Charging Party alleges that she was subjected to numerous incidents of harassment by her department chairman, both isolated and of a continuing nature, all of which are supported by copious witness testimony and documentation, and all of which she believes occurred because of her sex. For example, among other things, the Charging Party was required by the Chairman to direct a number of these, while a male faculty member who had recently been hired was not required to direct any; the Chairman assigned two difficult and time-consuming non-teaching jobs to Charging Party, while assigning only one substantive job to the male faculty member; and Charging Party's request for graders for her larger classes was denied by the Chairman, who had graders himself.

When her communications with the Chairman did not serve to stop the harassment, Charging Party complained directly to the Dean of Faculty and Dean of Liberal Arts and finally in the spring of 1972, brought charges against the Chairman to the Committee on Faculty Personnel, alleging harassment because of her sex.

The Dean of Faculty stated that he believed that the Charging Party did receive treatment which could be classified as "harassment" from the Chairman. In June 1972 the Committee on Faculty Personnel reported to the President of the University that "the administration should address itself without delay to the question of "administrative competence" on the part of Charging Party's Department Chairman. Althought the Chairman subsequently resigned his position, Charging Party was informed in August 1972 that her contract would not be renewed. After the student body of the University learned of this decision, approximately 800 students signed a petition and submitted it to the university administration. The petition stated, "We the undersigned believe that Assistant Professor (Charging Party A) has been unfairly treated, largely due to sex discrimination, by this University and call for a renewal of her contract in June 1973."

CONCLUSIONS AS TO CHARGING PARTY A

We conclude that Charging Party's protests to the Deans and to the Committee on Faculty Personnel constituted opposition to a practice made unlawful by Title VII, within the meaning of Section 704(a) of the Act. We already have determined that Respondent's primary reason for discharging Charging Party fails to withstand scrutiny. In the absence of a reasonable alternative explanation for the decision not to reappoint Charging Party, which followed so closely after her formal protest, we find reasonable cause to believe that Respondent's refusal to reappoint Charging Party was partially a result of Charging Party's opposition and was an unlawful employment practice within the meaning of Section 704(a). See *Pettway v. American Cast Iron Pipe Co.*, [2 EPD ¶ 10,011] 411 F. 2d 998 (5th Cir 1969).

We find Respondent's argument that the University is not responsible for the acts of a Department Chairman to be without merit. It is clear in this case that Respondent failed to maintain an atmosphere free of intimidation and insult based on employees' Title VII status,[2] and that Respondent University ratified, if it did not initiate, Charging Party's discharge.[3]

II. Denial of Tenure—Charging Party B

Under Respondent's rules for obtaining tenure, faculty members must apply for tenure review and promotion during their sixth year of teaching, if they want to continue in Respondent's employ beyond their seventh year of teaching. Accordingly, Charging Party B filed an application for tenure review during the 1971–1972 academic year, her sixth year in Respondent's employ. Respondent decided not to award tenure to Charging Party. Charging Party alleges that this decision was made because of her sex (female). Respondent denies the allegation and says that the decision was based on Charging Party's shortcomings as a teacher.

Charging Party received her B.A. Degree from Smith College and her M.A. and Ph.D. Degrees from Columbia University. She began her full-time teaching career at Respondent University in 1966. She has had numerous publications, some in one of the most prestigious art history journals in the country. One of her publications is the only statistical survey of the status of women faculty in college-level art departments. She has a book in progress which has tentatively been accepted for publication. She is the associate producer of a documentary film for television. She presented a paper at the College Art Association's Annual Convention, and she has taught a wide variety of courses. Student evaluation of Charging Party's teaching ability is mixed, although what adverse criticism there is seems directed at her manner of presentation, rather than any more substantive issue such as knowledge of her material, scholastic ability, preparation, or dedication to her students. Prior to the appointment of her Department Chairman, beginning in the 1970–1971 academic school year, Charging Party was apparently well respected by her peers. She had, in fact, received three Faculty Research Fund Awards from Respondent, as well as a National Endowment for Humanities Fellowship and a Kress Foundation Grant.

Charging Party was one of two female faculty members of the Fine Arts Department (See Section I of this decision for the treatment received by the other female faculty member and for the attitude of her Department Chairman toward women, in general). Like the other female professor, Charging Party was subjected to harassment by the Department Chairman. The testimony of several witnesses including both male and female faculty members reveals that she was made the subject of ridicule and verbal abuse by the Chairman on a continuing basis, while males on the faculty were not treated in such a manner. It is clear from the evidence of record that both the Dean of the Faculty of Arts and Sciences and the Dean of Liberal Arts were aware of the Chairman's harassment of Charging Party through complaints made both by the Charging Party and by others.

---

[2] See *Anderson v. Methodist Evangelical Hospital*, — F. Supp. — (W. D. Ky. 1971) [3 EPD ¶ 8282] aff'd [4 EPD ¶ 7901] 464 F. 2d 723 (6th Cir. 1972).

[3] Respondent's citation to a decision of the National Labor Relations Board holding that department heads are not supervisors within the meaning of the National Labor Relations Act is inapposite. The term "supervisor" is given a specific technical definition in the N. L. R. A., in accord with the purposes of that Act. Title VII contains no such limitation. Further, it is clear that an employer has an obligation under Title VII to take reasonable steps to prevent harassment of any employee by any employee, where that harassment is based upon race, color, religion, sex or national origin. See *Anderson v. Methodist Evangelical Hospital*, supra.

Charging Party's application for tenure came up for review in January 1972. In August 1971 the Dean of Liberal Arts sent a memorandum to the Dean of the Faculty of Arts and Sciences in which he stated:

"I just spoke for some time to (the Department Chairman). The major thing on his mind is that he will not recommend B for tenure."

The record indicates that two other members of the Department, one of whom was newly hired and did not know Charging Party, and at least one student were approached by the Chairman and specifically told to write negative recommendations to Charging Party's tenure committee. None of them did so. Prior to the tenure review, Charging Party requested that the Dean of the Faculty of Arts and Sciences remove the Department Chairman from her tenure committee, on the grounds that her tenure review would be prejudiced by his discriminatory attitude toward her as a woman, and because she considered a candidate's department chairman to be the most important and influential person sitting on a tenure committee. Her request was denied by the Dean, who told her that she should "trust the system."

It is clear from the report of the tenure committee, in which it is recommended that Charging Party be denied tenure, that primary emphasis was placed on the subjective negative comments contained in four letters which were solicited by Charging Party's Department Chairman, while the favorable comments in these letters were ignored. There were nine other letters presented to the Committee, all of which acclaimed Charging Party's scholarship and ability, several of which were written by particularly eminent scholars. Only one of these was mentioned in the Committee report, and it was dismissed as having been written by "her mentor". He is considered to be a prominent authority in Charging Party's field. One favorable letter, which was written by the other female member of the department, was not even submitted to the Committee. The one female committee member testified to sexist remarks which were made by male members of the committee during the consideration and stated that she wrote a letter protesting the majority opinion.

Subsequent to her Department Chairman's resignation (See Section I of this decision for the circumstances), Charging Party applied for reconsideration of the decision of the Tenure Committee under the then Acting Department Chairman. Her request was denied.

Based upon all of the circumstances described above, we conclude that Charging Party's sex was at least a factor in Respondent's decision to deny her tenure. See *Lowry v. Whitaker Cable*, — F. Supp. — (W. D. Mo., 1972), aff'd — F. 2d — (8th Cir. 1973). *Bradington v. I. B. M.*, 360 F. Supp. 845 (DC Md., 1973). It is well settled that an employment action prompted in part by an unlawful consideration is not saved by the fact that other non-discriminatory considerations may also have been involved. See *King v. Laborers Local 818*, 433 F. 2d 273 (6th Cir. 1971).

III. Maternity Leave—Individual and Class

Charging Party B alleges discrimination in Respondent's disposition of her request for maternity leave and further alleges that Respondent's maternity leave policy discriminates against females as a class. The record indicates that Respondent follows no formal policy on maternity leave. There is insufficient evidence concerning how Respondent has administered its informal policy to reach a finding on these issues. Accordingly, we withhold decision on these issues.

IV. Class Hiring, Job Classification, Intimidation and Compensation

The faculty of the College of Arts and Sciences consists of persons holding the titles (in descending order of rank) of Professor, Associate Professor, Instructor and Lecturer. A large percentage of persons in the first two categories and many in the third hold Ph.D. degrees. In attempting to resolve Charging Parties' class allegation of discrimination in hiring, job classification, intimidation and compensation, questionnaires were sent out to all Department heads in the University.[4] As nearly as can be determined, the response to these questionnaires was both candid and detailed. Statistical data cited herein is based upon submissions by Respondent and responses to the Commission's questionnaires, and represents the most accurate evidence which could be obtained concerning Respondent's employment practices. Any minor discrepancies in such data result from the fact that information was compiled on different dates, and thus reflects intervening employment decisions.

---

[4] The professional situations surrounding faculty selection and compensation in Respondent's professional schools differ markedly from those in the School of Arts and Sciences. Accordingly, we concentrate our analysis on the School of Arts and Sciences, where both individual Charging Parties were employed.

3. Hiring and Job Classifications

According to a 1972 study of "Women at (Respondent) University," done by Respondent, females constitute the following numbers and percentages of the full-time faculty in the School of Arts and Sciences, by rank:

	Total	Male	Female	Female percent
Professor	63	54	9	14
Associate professor	74	70	4	5
Assistant professor	103	87	16	15
Instructor	22	14	8	36
Lecturer	7	6	1	17

Of Respondent's overall faculty, approximately 75 percent have Ph.D. degrees, and most of the remaining 25 percent have M.A. or equivalent degrees. The record does not specify what proportion of those with Ph.D. degrees attained those degrees after being hired. Our investigation indicates that Respondent hires nationally for faculty positions.

Direct statistics concerning the percentages of females, nationally, who are qualified to teach on Respondent's faculty are not available. The best available statistical evidence for comparative purposes concerns the number of females who teach nationally in similar positions, and the number of females who have attained the degrees which Respondent considers necessary for most faculty positions:[5]

PERCENT OF FEMALES TEACHING, NATIONALLY

	Universities	College and universities
1968-69	14.8	19.1
1972-73	16.5	20.0

DEGREES AWARDED, ALL FIELDS, UNITED STATES

Degree	Year(s)	Total	Male	Female	Percent female
M.A.	1970-71	230,509	138,146	92,363	40.6
Ph.D.	1970-71	32,107	27,530	4,577	14.7
Ph.D.	1960-69	154,111	136,182	17,929	11.6

It often has been stated, both by the Courts and the Commission, that an inference of discrimination can be drawn from significant statistical disparities, such as disparities between the proportion of a protected class in an employer's workforce and the proportion of protected class members in the area where the employer does his hiring, who would be qualified to work for that employer.[6] While a comparison of Respondent's employment statistics with the best available statistics concerning qualified females in Respondent's national hiring area reveals possible disparities at the M.A. level and within individual departments, there are no disparities sufficient in themselves to establish overall a *prima facie* violation of Title VII.

With regard to job classifications, the 1972 study of "Women at (Respondent) university" found that "women are 14 percent of the Arts and Sciences faculty including 8 percent of the tenured faculty." It is apparent from the statistics that women are disproportionately concentrated in lower level, nontenured positions in the School of Arts and Sciences. It is not clear, however, whether this is a result of any unlawful employment practices by Respondent. Evidence submitted by Respondent indicates that, while tenure decisions involve many subjective criteria and are made predominantly by males, there are a significant number of females on tenure committees and females are granted tenure in approximately the same proportion as they are considered for tenure. Based upon the available evidence, then, we are unable to conclude that Respondent has unlawfully discriminated against females in the area of job classification. Similarly, aside from the treatment of the individual Charging Parties, we are unable to conclude that Respondent has followed a practice of intimidating females as a class. Consequently, we withhold decision on the issues of hiring, job classification, and intimidation.

---

[5] We do not speak to the question of whether such degree requirements, in themselves, unlawfully discriminate against classes protected by Title VII.

[6] See, for example, *Parham v. Southwestern Bell Telephone Co.*, [3 EPD ¶ 8021] 433 F. 2d 421 (8th Cir. 1970) *U.S. v. Hayes International* Corp., [2 EPD ¶ 10,061] 415 F. 2d 1038 (5th Cir. 1969), Commission Decision No. 72-0066, CCH EEOC Decisions (1973) ¶ 6296.

B. *Compensation.* The average salaries for full time faculty members in Respondent's School of Arts and Sciences, Engineering, College, and the Graduate School, according to statistics supplied by Respondent, are as follows:

	Male	Female
Professor	$21, 530	$17, 777
Associate professor	16, 001	13, [illegible]
Associate professor	12, 550	11, 807

Respondent's records further indicate that, with one exception, where salaries for female and male Professors and Associate Professors can be compared in a given Department in the School of Arts and Sciences, females are paid at the lowest level in the Department:

Department salaries (descending order)

Professors:	
Biology:	
Male	$25, 000
Do	18, 600
Female	16, 800
Psychology:	
Male	25, 200
Do	19, 500
Female	18, 500
Do	17, 300
Romance languages:	
Male	21, 700
Do	20, 500
Female	18, 500
Do	16, 100
Associate professors:	
Classics:	
Male	21, 500
Female	13, 500
Education:	
Male	13, 800
Do	7, 000
Female	7, 000
German:	
Male	13, 000
Do	12, 600
Female	12, 400
History:	
Male	15, 800
Female	15, 000
Male	14, 900
Do	12, 600
Do	12, 600

We recognize that there may be factors besides sex which could explain the lower salaries received by females in this case. In the context of an educational institution, prior experience, length of experience, highest degree, area of specialization, institutions attended, number of publications, and several other factors could enter into salary determinations. Which of these factors are considered by Respondent and how much weight is given to each are subjects which would be uniquely within the knowledge of Respondent, however. Respondent has been given ample opportunity in the instant case, but has failed to come forward with a consistent, non-discriminatory explanation of how it determines salary levels or why females are concentrated in the lowest salary levels of the Professor and Associate Professor job classifications. Respondent, in fact, has made only unsubstantiated general statements that it does not discriminate and has cited only vague criteria which may be taken into account in making salary determinations, and which apparently leave a great deal of latitude for subjective judgment.[7] The Commission has recognized that such subjective criteria are a ready vehicle for discrimination.[8] The statistics which have been cited concerning salaries paid to female Professors and Associate Professors, coupled with Respondent's failure to show any alternative explanation, lead us to conclude that Respondent's subjective criteria have been applied so as to achieve a discriminatory result, and that sex is the only identifiable factor explaining the salary disparities for these positions in the School of Arts and Sciences. Consequently, we find reasonable cause to believe that Respondent has discriminated against female faculty members as a class in the School of Arts and Sciences by paying them lower wages for substantially similar work, because of their sex.

[*Conclusion*]

There is reasonable cause to believe that Respondent has engaged in an unlawful employment practice, in violation of Title VII of the Civil Rights Act of 1964, as amended, by discharging Charging Party A because of her sex, and because of her opposition to unlawful employment practices.

There is reasonable cause to believe that Respondent has engaged in an unlawful employment practice in violation of Title VII by denying tenure to Charging Party B, because of her sex.

There is reasonable cause to believe that Respondent has engaged in an unlawful employment practice in violation of Title VII by discriminating against female faculty members in the School of Arts and Sciences in payment of compensation, because of their sex.

We withhold decision on the issues of maternity leave, hiring, job classification and intimidation.

TERMINATION OF WHITE MUSIC TEACHER WAS RACE BIAS

Decision of Equal Employment Opportunity Commission, Decision No. 74-106, April 2, 1974.

Title VII—Civil Rights Act of 1964

Racial Discrimination—White Music Teachers—Failure to Rehire—Qualifications—"Needs of Black Students"—Affirmative Action.—Non-rehire of an otherwise qualified white music teacher for failure to meet the "needs of black students" was impermissible race bias where no analysis, other than a subjective evaluation based mainly on the teacher's race, was used in the disqualification of the teacher. The unsupported assumption that the white teacher could not meet the needs of black students did not justify the race-related dimissal. A claim that the termination of the teacher was justified by an affirmative action plan requiring recruitment of minorities and females was rejected since such plans did not authorize preferential treatment based solely on race. Race bias claims of a second white music teacher were rejected for lack of supporting evidence. 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1065.

---

[7] For example, Respondent has cited "levels of credentials," "qualifications" and "experience" as possible considerations, without defining the meaning of these amorphous terms or stating the weight given to each.

Full Text of EEOC Decision

SUMMARY OF CHARGE

Charging Parties all[illegible]at Respondent Employer engaged in an unlawful employment practice in [illegible]n of Title VII of the Civil Rights Act of 1964, as amended, by failing to reh[illegible]hem as Music Instructors because of their race (Caucasian) and by retaining in their place two less qualified black instructors.

JURISDICTION

Respondent Employer is a public educational institution providing educational services, and is an "employer" within the meaning of Section 701(b) of the Act, as amended. The charges were filed within the time limitations prescribed by Section 706(e).

SUMMARY OF INVESTIGATION

Charging Parties A and B were both employed as "annual contract" Music Instructors in Respondent's Music Department.[1]

It is undisputed in the instant record that Respondent was faced with a drop in student enrollment for the Fall of 1973,[2] and consequently was required to reduce its number of faculty positions.[3]

In order to implement its staff reduction program, Respondent determined that individual decisions concerning termination would be made in accordance with a policy adopted November 1, 1972 by the District Board of Trustees (a series of criteria to be used in establishing individual qualification). The implementation of this policy as it affected the Charging Partes is the focal point of this case.

Specifically, the gravamen of Charging Parties' charges is that they were dismissed not on the basis of individual qualifications but for the asserted unlawful reason that Respondent was maintaining a quota or fixed ratio of black teachers to black students and that as a consequence their race made them expendable. The outcome of this case depends upon a thorough analysis of a somewhat unique set of facts which the Commission recognizes involves a sensitive area of the law (cases dealing with the question are only now just arising).

CHARGING PARTY A

We initially address ourselves to the circumstances surrounding the objection of Charging Party A. A was hired on an annual contract basis in September 1970 and was rehired for the 1971–72 and 1972–73 academic years. Respondent raises no dispute as to A's academic qualifications (B.A. in Music from the University of Miami, and at the time of the instant charge, 10 credits completed towards achieving a Doctoral of Musical Arts). Nor has Respondent offered any criticism as to A's work as a professional musician or as to his performance as an instructor in the Music department.

When Respondent became aware that staff reductions would be necessary for the 1973–74 academic year it informed its college personnel in a memorandum dated November 2, 1972, that staff cut-backs would be made according to guidelines entitled "Criteria for staff reduction."

In mid-November at a faculty meeting, respondent's President discussed the guidelines and assured the staff that reductions would not be based upon the race of the individual,[4] and that department chairmen would be responsible as to who would be released.

---

[1] Annual contract teachers are hired at the college on a year to year basis for the first three years of employment. Thereafter, if a teacher is hired for a fourth year tenure status attaches.

[2] An approximate 8% decrease in student enrollment for the 1973–74 academic year was projected.

[3] Respondent's projections for reduction of its professional staff was 33 persons. [Memo dated December 19, 1973 concerning staff reductions.]

[4] The record indicates that both black and white faculty were disturbed about the effect of the staff reductions. Blacks expressed a time-tested concern that since they had been hired in meaningful numbers only since 1970 they would be "first fired." This concern has not gone unrecognized by the Federal Courts. See e.g. *Watkins v. Steel Workers, Local 2369*, — F. Supp. — (E. D. La. 1974) 7 EPD ¶ 9130 and *Rowe v. General Motors*, [4 EPD ¶ 7689] 475 F. 2d 348 (5th Cir. 1972). Whites, on the other hand, were concerned that Respondent's Affirmative Action Program could become a subterfuge resulting in unlawful "preferential treatment" in contravention of Section 703(j) of Title VII, a rather commonly expressed concern these days. See *Commonwealth of Pennsylvania v. O'Neill*, — F. 2d — (3rd Cir. 1972), 5 EPD ¶ 7974. Cf. *DeFunis v. Odegaard*, 82 Wash. 2d 11 507 P. 2d 1169 (1973), cert. granted — U. S. L. W. — (U.S. Nov. 19, 1973).

With the Music department scheduled for a cut back of two instructors, Respondent was required by its November 1972, "Criteria for staff reductions" to evaluate its annual contract instructors for purposes of discharge or retention.[5] Respondent's criteria provided for the termination of annual contract personnel before those on continuing contract (tenured staff). An instructor is evaluated and ranked by the department chairman in each of five categories (with accompanying written comments) on a ranking sheet[6]; given a numerical score in each category; and finally given an overall average score which determines final ranking within the department. F, the Music Department Chairman rated each of the five instructors on annual contract in early November, 1972. His results in order (highest to lowest rank) were as follows: (1) Charging Party A, (2) C, (3) D, (4) Charging Party B, (5) E.[7] Thus, according to F's evaluation, concurred in by Director of the Humanities Division, the two instructors selected for dismissal were B (white) and E (black).

The next chronological date of relevance is December 13, 1972, when, according to Charging Party A, F personally informed him that he would be dismissed that it was not his (F's) original recommendation; and that he had been overruled by higher administration officials for reasons associated with the college's Affirmative Action program. F corroborated these averments in a statement made to the EEOC representative.

On December 18, 1972, Charging Party A received his formal discharge notice. It read as follows:

"Due to the decrease in student enrollment experienced this academic year, it is necessary to reduce the staff of the college. A careful review of all positions and all personnel has been made in accordance with the guidelines recommended by a faculty administration committee, approved by the Board of trustees, and in accordance with State Board of Education Regulation 6A-8.33 (5).

This is to officially advise you that you will not be recommended for appointment for the 1973-74 contract year."[8]

Respondent's Executive Vice President, in response to a number of written questions submitted by the EEOC representative, stated that the reason Charging Party A's contract was not renewed was because, "Student enrollment is directly related to the basic requirement that the college be responsive to the changing needs of the community." Testimonial evidence of record helps clarify G's cryptic statement. Apparently Respondent's higher officials did not believe Charging Party A should be retained because he did not meet the requirements of item E of the November 1972 memo, "Capacity to meet the needs of the community."[9]

H, Respondent's Vice President viewed item E as a broad category, primarily referring to the ability to relate to and meet the needs of the students. Also included in item E, according to H, is the instructors ability to contribute to the cultural needs of the community, and by taking part in community activity.

In a hand written, undated and signed notation on F's original "ranking sheet," H reevaluated Charging Party's ability to meet the item E criteria, and concluded as follows:

"E. Capacity to meet needs of community. Needs of the campus and department to better meet the needs of black students places top priority for need for black instructors. The fact of need change Div. recommendation for ranking." (sic).

---

[5] These criteria are derived from State Board Regulation 6A-8.33(5) subtitled, Issuance of Continuing Contracts. Section (5) provides the following: "Should the Board have to choose from among its personnel who are on continuing contracts as to which should be retained, among the criteria to be considered shall be educational qualifications, efficiency, compatibility, character, and capacity to meet the educational needs of the community." The same criteria apply to those on annual contract, according to Respondent.

[6] The five "ranking sheet" categories are: (A). Educational Qualification or Equivalent, (B) Efficiency in Performance, (C). Compatibility, (D). Character and, (E). Capacity to Meet the Needs of the Community.

[7] D and E are the two black instructors referred to by Charging Parties in their charge.

[8] Charging Party A was also provided with an undated document drafted by F and identified as "Annual Contract Pool." The text of the letter is instructive and reads in relevant part as follows:

"A is completely compatible with the community college philosophy and works at it. He is respectable and well mannered in relationships in the college and community. A has aided in the instruction of the woodwind ensemble which has presented 10 on and off campus performances in the past year. A is a very conscientious instructor and is respected by his peers for his professional playing ability. . . . Due to the projected campus staff reduction plan and considering the departmental needs, I regretfully place A in the surplus pool (even though our department is presently understaffed)."

[9] The November 1, 1972 Memo provides that "Capacity to meet needs of the community" is determined by (1) shifts in enrollment, (2) changes in program, (3) evidence of service to community, and (4) technological advancement in education.

Thus, as a result of this "evaluation" Charging Party A, the most senior Music Department instructor (along with C) was removed from first ranking and placed fourth. E, originally recommended for layoff along with B, and the most junior instructor, was elevated to a second place ranking and retained.[10]

On the basis of the foregoing it is clear that Charging Party A was not retained on the faculty primarily because of his race.[11] Our inquiry, however, does not stop here, for at this point we must consider whether Respondent's apparent defenses (the need for black instructors in order to meet the needs of black students and implementation of its affirmative action program) justifies its race-related employment decision. See *McDonnell Douglas v. Green*, — U.S. —, 93 S. Ct. 1817 (1973), 5 EPD ¶ 8607.

CAPACITY TO MEET THE NEEDS OF BLACK STUDENTS

Charging Party A's Contributions to the Music Department

With respect to this aspect of Respondent's defense the evidence of record demonstrates that Charging Party was indeed a great asset to Respondent's Music Department and the student body. For example, only A and C were qualified to teach all five required courses.[12] D was capable of teaching all but Music History. Neither B nor E were qualified to teach Musical Organization or Music History.

Regarding the teaching of individual instruments, three of the five annual contract teachers (D, E, and B) taught piano.[13] D also taught percussion. C taught brass and A taught woodwinds, with a specialty in double reed (Oboe and Bassoon). According to testimonial evidence of record no other tenured or annual contract teachers were capable of teaching double reed. Respondent does not challenge this fact.

Based upon Charging Party A's qualifications summarized above and other evidence of record, we can only conclude that he was an accomplished musician and a qualified and valuable member of the Music department. This conclusion is further buttressed by evidence that approximately 150 students protested his dismissal. In an article appearing in the January 31, 1973, edition of the campus newspaper, a reporter investigated the cause of the protest. He reported that the reason for the student unrest was that A was the only double-reed woodwind instructor at Respondent, and that his dismissal jeopardized the educational objectives of many music department students. The students, according to the article, felt their needs could better be served by releasing keyboard teachers since in the words of one student, "we have so many they're coming out of our ears."

The EEOC representative interviewed several students involved in the protest and obtained a copy of the petition. The facts show that of the approximately 150 signatories to the petition 15 were of Spanish speaking ancestry and at least five were black.[14] The language of the petition is probative. It reads as follows:

"We the undersigned, vehemently object to the dismissal of A, instructor of Music at

As serious students of music we fully appreciate the high caliber of musical knowledge and guidance that A displays not only as a musician but as a fine human being.

---

[10] A Professor in the Humanities Department averred in a sworn statement that in a meeting he initiated with F concerning the circumstances surrounding Charging Party A's termination, F told him that his (F's) original recommendations, concurred in by Division Director, were overruled by higher officials and that "higher administration informed the division director and the department chairman that no black was to be dismissed in the music department."

[11] The fact that Respondent's decision not to retain Charging Party A may have also been predicated upon other lawful considerations relates only to remedy and does not affect our conclusion herein on the merits. *King v. Laborers, Local 818*, [3 EPD ¶ 8198] 433 F. 2d 273 (6th Cir. 1971); *Bradington v. IBM*, [6 EPD ¶ 8695] 360 F. Supp. 845 (D. C. Md. 1973); Commission Decision No. 70-925, CCH EEOC Decisions (1973) ¶ 6158. See also *U.S. v. Hayes International Corp.*, (N. D. Ala. 1973) 7 EPD ¶ 9164.

[12] These are: Theory of Music, Sightsinging, Humanities 201, Musical Organization, and Music History.

[13] The evidence of record indicates that there was a surfeit of piano teachers in the department.

[14] The record further demonstrates that 33 of these students (including four black music students) presented the petitions to H for his consideration. According to the newspaper article, *supra*, H accepted the petition and commented that formal student evaluation of faculty and peer evaluations could aid the division and department chairmen in the future, reinforcing or contradicting what they recommended.

In times such as ours, where emphasis is placed on quality education we cannot permit the loss of such a qualified teacher."

The Commission, finds this evidence of the protest worthy of consideration. At the very least, it casts doubt on H's assertions that A was not contributing to the needs of the department or campus.

Additional evidence of record, in the form of F's undated letter identified as "Annual Contract Pool," also indicates that Charging Party A was active in service to the community, to wit; his "10 on and off campus performances in the past year." In our judgment, this constitutes an integral part of Respondent's "Criteria to meet the needs of the community." Furthermore, Respondent makes no specific claim and adduces no evidence that either shifts in enrollment or changes in program within the Music department resulted in the diminution of A's value to the department.

The Subjective Nature of Respondent's Evaluation Process

The bald assertion by H, concurred in by I that Charging Party A was incapable of meeting the "[N]eeds of the campus and department to better meet the needs of Black students . . ." is further rendered specious where, as here, no careful analysis was performed by H and I as to whether Charging Party A could or could not "meet the needs of Black students" or whether E was any more qualified to do so. It is the Commission's position that merit and fitness which bear on job performance should be measured by objective standards insofar as practicable.[15] The Commission and the Courts have frequently recognized the hazards involved in making employment decisions based upon "subjective criteria." Such subjective considerations may often operate to disqualify an otherwise well qualified person. In the instant circumstances, F's original recommendations were based upon an evaluation of an individual's performance in five categories—a structured attempt at objectivity. We note that the recommendations of F (a white male) reflect no pattern of racial discrimination—the two lowest ranked instructors were a black female and a white male, while a black male and two whites were recommended for retention. On the other hand, F's superiors (H and I), reversed him without detailed evaluation of each instructor's ability to satisfy item E of the November 1972 Memo. Such a practice can be a ". . . ready mechanism for discrimination . . . much of which can be covertly concealed . . . ." *Rowe v. General Motors Corp.*, [4 EPD § 7689] 457 F. 2d 348 (5th Cir. 1972). Although *Rowe* involved subjective selection criteria exercised by whites to the disadvantage of blacks, it has been the Commission's experience that regardless of the race or sex of the evaluator, subjective criteria are suspect and provide a convenient tool for the discriminator. See e.g., Commission Decision Nos. 73-0479 and 74-15, EPG ¶ 6381 and 6394, respectively. There is no claim or evidence in the instant case that such an evaluation is impossible.

The Commission and the Courts must be careful not to give credence to the misconception or "stereotype" indicated by H's written remarks.

It is the Commission's judgment that Respondent's refusal to rehire Charging Party A because of its misbegotten assumption that only black teachers could meet the needs of black students is no different from a similar argument (but with the races reversed) made by an all-white Board of Education in a 1966 school desegregation case.[16] In *Smith*, the school board argued that race was a rational and permissible criteria as a basis for the employment of teachers. The board argued that black teachers would be unable to communicate with white students, that "rapport between teacher and pupil . . . may be unattainable where they are of different races . . . ." The Court emphatically rejected this race per se argument as a basis for judging either an applicants qualifications or the district's needs, stating that,

". . . this applies equally to considerations described as environmental or ability to communicate or speech patterns or capacity to establish rapport with pupils when these descriptions amount only to euphemistic references to actual or presumed racial distinctions."

---

[15] In *Jackson v. Poston*, — App. Div. 2d — (N. Y. Supp. Ct., No. 18296, September 14, 1972) 5 EPD ¶ 8025, (a non-Title VII case) the appellate court affirmed the lower court's holding that Respondent Civil Service Commission had violated its statutory authority when it gave a preference for appointment to individuals who "have a recognizable identification with Black or Spanish-speaking minority communities," based upon subjective evaluations. The court held that experience with race, or ethnic problems could be considered in evaluating an individual for a particular job or promotion, but only where objective standards are used to measure that such experience is reasonably related to job performance ability and only where the Respondent had delineated what positions required as an essential qualification the ability to identify with the particular racial or ethnic community.

[16] *Smith v. Board of Education*, — F. 2d — (8th Cir. 1966), 1 EPD ¶ 9753.

We view the Eighth Circuit Court of Appeals logic and reasoning as consistent with Title VII principles. However, by so agreeing, we do not suggest that an employer can never consider an individuals ability to relate and communicate to a particular racial or ethnic or sex group based upon that individuals total life experience (cultural, educational, and otherwise), where such abilities are required as essential ingredients for successful performance of the particular job in question. *See Commonwealth of Pa. v. Glickman*, —F. Supp.—(W. D. Pa. 1974), 7 EPD ¶ 9125.[17]

The caveat, of course, is that objective, specific and reviewable criteria be utilized Cf., Commission Decision 74–15, EPG ¶ 6394, and *Jackson v. Poston, supra* at fn. *15*.

Accordingly, we find that Respondent's defense that Charging Party A was not capable of meeting the needs of the department and black student body is without merit and does not justify Respondent's race-related dismissal.

Respondent's Affirmative Action Defense

With respect to Respondent's affirmative action defense it is axiomatic that Affirmative Action Programs must be administered in a manner legally consistent with the non-discriminatory principles of Title VII and other anti-discriminatory statutes and orders. See *Glickman supra*. Furthermore, a basic premise of Title VII is that employment opportunities are accorded primarily to individuals as distinguished from groups. Thus when Respondent began its Affirmative Action Program in early 1970 as required by the Department of Health, Education and Welfare it was presented with a situation delimited by narrow parameters. On the one hand, Respondent was required to initiate and implement in good faith an Affirmative Action Program for the recruitment and hiring of qualified females and minorities. Numerical goals aimed at increasing female and minority employment over a number of years are the cornerstone of such a plan.[18] On the other hand, Respondent may not violate Section 703(j) [19] of Title VII which proscribes "preferential treatment." See *Glickman, supra*.

---

[17] In a case arising under the Civil Rights Act of 1871, 42 U. S. C. 1983, and the Equal Protection clause of the Fourteenth Amendment, the Third Circuit Court of Appeals in *Porcelli v. Titus*, [2 EPD ¶ 10,310] 431 F. 2d 1254 (1970), affirmed the lower court opinion that the Newark School Board did not violate the petitioner's rights when it appointed a number of blacks to various administrative positions. The Newark School System employed only 10% black administrators, while the school population was 72% black. The Board argued that it had an affirmative duty to appoint qualified black administrators because the Board had, in the past, practiced racial discrimination by excluding blacks from these positions. The Appellate Court strongly endorsed the "carefully considered" opinion of the trial court, and quoted the following language from Chief Judge Augelli's Findings:

"A fair evaluation of the record supports the conclusion that the promotional lists were suspended and the examination system abolished, not simply to appoint Negroes to promotional positions, *but to obtain for these positions qualified persons, white or black, whose qualifications were based on an awareness of, and sensitivity to, the problems of educating the Newark school population.*

"The Court is satisfied that in abolishing the examination procedure, there was no intention on the part of the Board to discriminate against white persons or exclude them from consideration for promotional positions. No inference of any such intention can be gleaned from the record. The testimony of several of the witnesses * * * shows that, despite a desire to provide an avenue for the appointment of more Negro administrators, the ultimate objective of the Board was to promote those persons most qualified to suit the needs of the Newark school system. *There is nothing in the record to indicate that the Board was attempting to appoint Negroes in numbers proportionate to the school population.*" (emphasis supplied) 302 F. Supp. at 732–733.

[18] As to whether employment goals are required by federal court order as part of a remedy to overcome the vestiges of past discrimination [See, e.g., *Glickman supra*, *Carter v. Gallagher*, [3 EPD ¶ 8335] 452 F. 2d 315 (8th Cir. 1972), cert. denied, [4 EPD ¶ 7818] 412 U.S. 939 (1972); *Castro v. Beecher*, [4 EPD ¶ 7783] 459 F. 2d 725 (1st Cir. 1972); *N. A. A. C. P. v. Allen*, [4 EPD ¶ 7669] 340 F. Supp. 703 (M.D. Ala. 1972); *U.S. v. IBEW Local Union, 212*, [5 EPD ¶ 8411] 472 F. 2d 634 (6th Cir. 1973), or are required under Executive Order 11246. Chief Justice Burger's admonishment in *Griggs v. Duke Power Co.*, (infra, at page 15) remains the guiding principle.

[19] Section 703(j) Nothing contained in this title shall be interpreted to require any employer, employment agency, labor organization, or joint labor management committee subject to this title to grant preferential treatment to any individual or to any group because of the race, color, religion, sex, or national origin of such individual or group on account of an imbalance which may exist with respect to the total number or percentage of persons of any race, color, religion, sex or national origin employed by any employer, referred or classified for employment by any employment agency or labor organization, admitted to membership or classified by any labor organization, or admitted to, or employed in, any apprenticeship or other training program, in comparison with the total number or percentage of persons of such race, color, religion, sex, or national origin in any community, State, section, or other area, or in the available work force in any community, State, section, or other area.

It is this latter requirement that often proves troublesome. Both the Commission and the Courts, however, require strict adherence to the following principle enunciated in *Griggs v. Duke Power Co.*, [3 EPD ¶ 8137] 401 U.S. 424 (1971):

"Congress did not intend by Title VII, however, to guarantee a job to every person regardless of qualifications. In short, the Act does not command that any person be hired simply because he was formerly the subject of discrimination, or because he is a member of a minority group. Discriminatory preference for any group, minority or majority, is precisely and only what Congress has proscribed." The importance of this requirement is reflected in the cautionary words of the Third Circuit Court of Appeals in *Commonwealth of Pennsylvania v. O'Neil*—F. 2d —, (3rd Cir. 1972), 5 EPD ¶ 7974:

"Opening the doors long shut to minorities is imperative, but in so doing we must be careful not to close them in the face of others, lest we abandon the basic principle of non-discrimination that sparked the effort to pry open these doors in the first place."

In light of the foregoing principles, and based upon the following analysis of evidence of record, we must find that Respondent's affirmative action defense does not justify its decision not to rehire Charging Party A.

The instant record contains testimonial and documentary evidence that Respondent, in setting up its Affirmative Action Program, proclaimed as its 1974-75 objective a faculty employment profile containing a percentage of black teachers equaling the percentage of black students.[20]

In implementing its Affirmative Action program, Respondent's higher level officials were especially pressed when faced with a faculty reduction requirement in 1973-74. In a letter dated November 3, 1972, Executive Vice-President reported to the Office of Civil Rights at H. E. W. that in meeting its Affirmative Action Program, "It will be a difficult task but we have set the objective of holding the minority group percentages through this staff reduction program."

G. was quoted as saying that staff reductions will continue to follow the college's Affirmative Action Program, and that the percentage of blacks and minority group employees would not be reduced. "At the end of the reduction period," stated G. "we will have an equal or greater percentage of minority group people." [21]

We are thus presented with numerous conflicting statements by Respondent's officials concerning the college's Affirmative Action Program in the context of a lay-off situation (Compare Respondent's statement to the faculty in November 1972, supra at page 3, with G's November 3, 1972, letter to H. E. W., Office of Civil Rights, supra at page 17).

Such evidence must be viewed in light of the other data available in this case, for as courts have often observed, proof of Title VII discrimination is seldom direct. See *Marquez v. Ford Motor Co.*, [3 EPD ¶8156] 440 F. 2d 1157 (8th Cir. 1971) and *U.S. v. Jacksonville Terminal Co.*, [3 EPD ¶8324] 451 F. 2d 418 (5th Cir. 1971). Often an inference of discrimination must be drawn from the totality of the circumstances and while one factor standing alone might not warrant an inference of discrimination, a coalescense of factors may suffice to so demonstrate. See *Lowry v. Whitaker Cable Corp.*, 472 F. 2d 1210 1210 (8th Cir. 1972), affirming— F. Supp.— (W. D. Mo. 1972) 5 EPD ¶8439.

According we likewise find that Respondent's affirmative action defense does not justify Respondent's actions herein and conclude that Charging Party A was not retained because of his race in violation of Section 703(a) of Title VII.

---

[20] At this time, we make no final determination as to the Title VII legality of this asserted "fixed" quota or ratio, since the evidence of record is not conclusive that such a ratio is, in fact, Respondent's H. E. W. mandated policy. However, we must express our concern as to the serious abuses that may result with such a ratio. Not only does it border perilously close to the proscribed "employee preference or prejudice" doctrine, see EEOC Guidelines on Discrimination Because of Sex 29 C. F. R. 1604.2, but it also tends to run counter to the Section 703(j) prohibitions of Title VII. Moreover, maintaining a "fixed" ratio or percentage of black faculty equaling the percentage of black students applies with similar logic to ratios for other racial, ethnic, religious and sex groups. Furthermore, such a practice tends to result in a maximum percentage regarding the number of each group employed, as well as offering an employer an excuse to limit the number of minority students. *Glickman, supra*. It also creates the unwanted (and unsubstantiated) view that only blacks can teach and relate to blacks and only whites can teach and relate to whites, etc., a concept that was hopefully removed from debate when this nation recently moved from segregated to unitary school systems at the elementary and secondary levels. Our comments here do not in any sense depart from the standards which this Commission has consistently applied in arriving at a showing of prima facie discrimination based upon statistical evidence. *Glickman, supra*.

[21] Respondent's records indicate that an approximately equal percentage of black and white faculty were discharged (4½%), thus meeting G's prediction.

Charging Party B

With respect to Charging Party B's allegation that his termination was a race-based decision by Respondent, we are unable to so agree. B was originally recommended for discharge based upon Department Chairman F's evaluation of the five selection criteria set forth in the November 2, 1972, Memorandum. There is no evidence of record that this evaluation or recommendation was influenced by racial considerations. Accordingly, in light of the evidence of record we conclude that Charging Party B's discharge was not predicated upon race.

Decision

There is reasonable cause to believe that Respondent has engaged in a violation of Title VII of the Civil Rights Act of 1964, as amended, by failing to rehire Charging Party A because of his race, as alleged.

There is not reasonable cause to believe that Respondent has engaged in a violation of Title VII of the Civil Rights Act of 1964, as amended, by failing to rehire Charging Party B because of his race, as alleged.

RACIALLY BIASED NONREAPPOINTMENT OF WHITE FACULTY MEMBER

Decision of Equal Employment Opportunity Commission, Decision No. 74-95, March 6, 1974.

TITLE VII—CIVIL RIGHTS ACT OF 1964

Racial Discrimination—White Faculty Member—Termination—Pretextual Basis—Evidence.—Reasonable cause existed to believe that a white faculty member was terminated from his job at a predominantly Negro college because of his race where non-renewal of his contract was based on spurious reasons and on criteria not applied to similarly-situated Negro faculty members. Insufficient evidence existed to make a finding concerning the alleged racially biased discharge of other white faculty members. 42 U.S.C. Sec. 2000e.

Back reference.—* 1065.

Full Text of EEOC Decision

SUMMARY OF CHARGE

Charging Party alleges that Respondent discharged him because of his race (Caucasian) in violation of the Civil Rights Act of 1964, as amended. He further alleges that Respondent has discharged seven other Caucasian employees because of their race.

JURISDICTION

Respondent, a state university, is an employer within the meaning of section 701(b) of the Act, as amended. It employed more than 150 employees during the calendar year of the alleged violation. The charge was timely filed.

SUMMARY OF INVESTIGATION

Charging Party, an Associate Professor of English at a predominantly Black state university, alleged that he was discharged from his teaching position without the benefit of any official explanation because of his race (Caucasian).[1]

Respondent contends that although it does not provide explanations for discharges, there were valid reasons for failing to renew Charging Party's contract, and that his race was not among these reasons.

More specifically, Respondent listed the following four factors it considered before reaching its decision to discharge Charging Party: (1) there was a decrease in the number of English majors, and therefore, less faculty was needed; (2) there were an excessive number of student withdrawals from Charging Party's classes; (3) Charging Party failed on one occasion to turn in a course outline to his department chairman; (4) Charging Party had received a poor professional evaluation that year (1972) from his department Chairman and the Dean of College of Arts and Sciences.

---

[1] Charging Party was initially employed by Respondent in September of 1971. Respondent by means of a letter dated December 15, 1972, notified Charging Party that he would not be reappointed to the faculty at the expiration of his then current contract.

With respect to the merits of each of these reasons the evidence of record demonstrates the following:

(1) *Decline In English Majors.*—Enrollment records of three other departments in the College of Arts and Sciences (History, Mathematics and Elementary Education) showed an even greater decline in majors; yet, no faculty members from these departments were discharged. Moreover, despite Respondent's alleged concern over declining enrollment in the English Department it is significant, we think, that Respondent hired two new faculty members in the English department for the academic year following Charging Party's departure.

(2) *Excessive Student Withdrawals.*—In the academic year 1971-2, the English department was comprised of eleven faculty members, six Black and five White. During that year, the six Black teachers had the same or higher withdrawal rates as Charging Party but were not discharged. During the next school year, three English teachers who also had higher withdrawal rates than Charging Party were not discharged.

(3) *Course Outline.*—The Chairman of the English department (Black) stated to the Commission representative that the use of course outlines depends on the type of course taught, and whether or not it had ever been taught before. In Charging Party's case, failure to submit an outline was not, in his opinion, considered a serious matter.

(4) *Professional Evaluation.*—In March 1972, selected performance evaluations were made of 18 faculty members [12 Black and 6 White] in the School of Arts and Sciences by the Chairman (Black) of the Humanities Division.[2] Charging Party, whose performance was rated at this time, received a score of 80 out of 100. Of seven Black faculty members who received the same or lower scores none were discharged. Charging Party's department chairman stated that although he considered Charging Party's score marginal, he considered Charging Party's overall performance satisfactory and recommended that he be retained on the faculty.

On the basis of the foregoing evidence, we find that Respondent's reasons for discharging Charging Party do not withstand scrutiny. Commission Decisions No. 72-0777 and 74-15, CCH EEOC Decisions (1973) ¶ 6331 and 6394. It is obvious that reasons (1) and (3) are spurious, and that the second and fourth justifications for discharge were applied only to Charging Party, and not to similarly situated Black faculty members.

Courts have often observed that proof of discrimination is seldom direct. See, e.g., *United States v. Jacksonville Terminal Company*, [3 EPD ¶ 8324] 451 F. 2d 418 (5th Cir. 1971); *Marquez v. Ford Motor Company*, [3 EPD ¶ 8156] 440 F. 2d 1157 (8th Cir. 1971). Often an inference of discrimination must be drawn from the totality of the circumstances, and while one factor standing alone might not warrant an inference of discrimination, a coalescence of factors may suffice to so demonstrate. See *Lowry v. Whitaker Cable Corporation*, [5 EPD ¶ 8440] 472 F. 2d 1210 (8th Cir. 1973), affirming—F. Supp.—(W.D. Mo. 1972), EPD ¶ 8439. In this case, one major circumstance to consider is the fact that the entire process of determining who shall or shall not be reappointed is apparently accomplished in a highly subjective, essentially non-reviewable, manner. It is clear from the evidence presented above with respect to Respondent's reasons for not reappointing Charging Party, that any guidelines which Respondent does maintain are at best nebulous and have indeed been applied in a highly subjective, unequal manner without the benefit of notice.[3] Any employment policy maintained in this way can operate to disqualify an otherwise qualified person. This is so particularly where, as here, those who make the employment decisions are members of a racial group different from that of the person adversely affected. As pointed out in a similar context in *Rowe v. General Motors Corp.*, [14 EPD ¶ 7689] 457 F. 2d 348 (5th Cir. 1972):

"[Such] methods for promotion . . . would enable an individual foreman, if he were so inclined, to exercise racial discrimination in his selection of candidates for promotion. . . . All we do today is recognize that promotion . . . procedures which depend almost entirely upon the subjective evaluation and favorable recommendation of the immediate foreman are a ready mechanism for discrimination against Blacks much of which can be covertly concealed and, for that matter, not really known to management. We and others have expressed a skepticism that Black persons dependent directly on decisive recommendations from Whites can expect nondiscriminatory action." (Footnote and citations omitted). At 359.

---

[2] The Commission has been unable to determine, either why only a few evaluations were made, or why these 18 were selected from the total faculty.

[3] It is undisputed that Charging Party was not given any specific reason for his discharge.

The Commission has come to the same conclusion in cases where the Charging Party was a female and the employment decision was made by males without the benefit of formal written, reviewable and objective guidelines. Commission Decisions No. 74–53 and 74–15, CCH EEOC Decisions (1973) ¶ 6410, and 6394. Although *Rowe, supra* involved subjective selection criteria exercised by Whites to the disadvantage of Blacks, and Commission Decisions No. 74–53 and 74–15 involved the use of such criteria by males to the disadvantage of females, we cannot close our eyes to such methods simply because of the race or sex of the evaluator(s). It has been our experience that, notwithstanding the race or sex of the evaluator(s) the use of subjective criteria in circumstances where discriminatory treatment has been demonstrated provides a convenient tool for further unlawful treatment.[3]

CONCLUSION

We conclude that in the totality of the circumstances presented in this case it is reasonable to believe that Respondent's asserted defenses for failing to reappoint Charging Party fail to withstand scrutiny and are pretexual. See *McDonnell-Douglas v. Green*, — U.S. — (1973), 5 EPD ¶ 8607. Accordingly we conclude that there is reasonable cause to believe that Respondent improperly considered Charging Party's race when it made the decision not to retain him on the faculty.

Charging Party also alleges that seven of his White colleagues were discharged because of their race. Respondent contends that they were all dismissed for substandard performance, and that their race was not considered.

There is insufficient evidence of record to allow us to determine at this time whether Respondent's performance defense as to Charging Party's colleagues has any merit. Numerical performance evaluations were not made on any of these faculty members and the record contains no other performance criteria or standards concerning these individuals.

The absence of such performance evaluations and criteria is further compounded by the fact that the employment circumstances surrounding each of these faculty members varies considerably. For example, they are employed in three different schools of the university and their individual backgrounds, ranks and teaching assignments are not similar. Moreover, the circumstances surrounding each individual's discharge do not, either by themselves or collectively evidence racial discrimination; nor do we gain any support for Charging Party's class allegation from the overall employment situation as reflected in the evidence of record. Although it is undisputed that over a three year period (1971–4) only White faculty members were discharged it is also undisputed that at the time the charge herein was filed, Respondent's faculty was at least one-third White and that during the academic year following Charging Party's discharge (1973–4) Respondent hired 21 new faculty members, of whom ⅓ were White. Accordingly, we are unable, in the absence of other evidence, to make a finding at this time on Charging Party's class allegation.

DECISION

There is reasonable cause to believe that Charging Party was discharged because of his race in violation of Title VII of the Civil Rights Act of 1964, as amended.

We make no finding concerning the discharge of seven other White faculty members.

Mr. O'Hara. Tomorrow this committee will meet in this room at 10 o'clock in the morning. There is a quorum call now in the House, so I will at this time adjourn the meeting with my thanks to the witnesses for their appearances.

Mr. Powell. Thank you very much, Mr. Chairman, and I certainly want to be of any assistance that either myself or the agency can be, in your efforts here.

Mr. O'Hara. Thank you.

[Whereupon, at 12:20 p.m. the subcommittee recessed, to reconvene at 10 a.m. of the following day, Friday, August 9, 1974.]

---

[3] We must always remember that discriminatory preference for any group, minority or majority is precisely and only what Congress has proscribed. *Griggs v. Duke Power*, 3 EPD ¶ 8137; 401 U.S. 424 (1971).

CIVIL RIGHTS OBLIGATIONS OF INSTITUTIONS OF POSTSECONDARY EDUCATION

FRIDAY, AUGUST 9, 1974

House of Representatives,
Special Subcommittee on Education
of the Committee on Education and Labor,
Washington, D.C.

The subcommittee met at 9:45 a.m., pursuant to recess, in room 2261, Rayburn House Office Building, Hon. James G. O'Hara [chairman of the subcommittee] presiding.

Present: Representatives O'Hara, Erlenborn, Dellenback, and Benitez.

Staff present: Jim Harrison, staff director; Webster Buell, counsel, Elnora Teets, clerk; and Robert Andringa, minority staff director.

Mr. O'Hara. The Special Subcommittee on Education will come to order.

Yesterday we began that phase of our hearings which is intended to deal with the question of what a postsecondary education institution ought to do and ought to be to qualify for participation in Federal education programs, including, but not limited to student financial aid programs.

Yesterday we heard from Chairman John Powell of the Equal Employment Opportunity Commission, and we spent 2 hours discussing the perception rightly or wrongly held throughout the postsecondary education community—that some Federal agencies under color of statute, Executive order, rule, regulation or guideline, are suggesting, encouraging, urging, pressuring or requiring postsecondary institutions to afford preferential treatment to some individuals on the grounds of the race, sex or ethnic origin of those individuals.

I emphasized at the beginning of yesterday's hearing that I would not assume as proven the existence of this kind of preferential treatment until all the facts were in. But I also emphasized that I will not pretend to neutrality as to whether or not preferential treatment on the grounds of race, sex, religion or ethnic origin is constitutionally proper or legally justifiable.

There is, I suggested, as far as I am concerned, no such thing as reverse discrimination. Whenever an individual's race, sex, or ethnic background is utilized as a reason for giving that individual something which is denied to another individual, that is simple discrimination, without qualifying adjectives or justification. If it exists, we ought to find it out and stamp it out—whoever the alleged beneficiary, whoever the proposed victim, whatever the alleged motive.

Our witness list today will be headed by Mr. Peter Holmes, Director of the Office for Civil Rights, Department of Health, Education, and Welfare. Mr. Holmes is accompanied by Mr. St. John Barrett, Deputy General Counsel; Mr. Charles Cooke, Jr., Deputy Assistant Secretary for Legislation (Education); and Dr. Mary Lepper, Director, Higher Education Division, Office for Civil Rights.

We would like very much to hear from you, Mr. Holmes.

STATEMENT OF PETER E. HOLMES, DIRECTOR, OFFICE FOR CIVIL RIGHTS, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, ACCOMPANIED BY ST. JOHN BARRETT, DEPUTY GENERAL COUNSEL; CHARLES M. COOKE, JR., DEPUTY ASSISTANT SECRETARY FOR LEGISLATION (EDUCATION); MARY M. LEPPER, DIRECTOR, HIGHER EDUCATION DIVISION, OFFICE FOR CIVIL RIGHTS; AND TONY MILES, ASSISTANT GENERAL COUNSEL, CIVIL RIGHTS

Mr. HOLMES. Thank you, Mr. Chairman.

Let me just for the record, if I may, introduce an additional person with me today and that is Mr. Tony Miles, Assistant General Counsel, Civil Rights, in the Department of Health, Education, and Welfare. I have a statement, Mr. Chairman, that I will proceed to give. I understand the time constraints on the subcommittee, and of course we will be glad to come back if you or the subcommittee deem this desirable.

Mr. O'HARA. Thank you very much.

Mr. HOLMES. On behalf of the Office for Civil Rights I appreciate the opportunity to discuss with you the variety of compliance responsibilities in the area of higher education assigned to our Office in the Department of Health, Education, and Welfare. There are no less than five civil rights authorities administered by OCR with which the vast majority of our Nation's colleges and universities must assure compliance. With your indulgence, I would like to present a brief overview of the various authorities under our jurisdiction, as well as an explanation of the steps an institution must take to insure compliance with them.

In 1964 the Congress enacted the Civil Rights Act, title VI of which was addressed to nondiscrimination in federally assisted programs. Pursuant to section 602 of the act, the Department was authorized and directed to secure the compliance of all recipients of Federal financial assistance with the requirements of section 601.

One of the major groups of such recipients consists of approximately 2,700 institutions of higher education. Commencing in 1965, all colleges and universities which applied for financial assistance from the Federal Government were required to sign an assurance of compliance stating that they would adhere to the provisions of title VI; that is, admit applicants and treat students without regard to their race, color, or national origin.

The overwhelming majority of institutions signed and filed this assurance and, commencing in 1967, we asked each to furnish us with compliance reports indicating student enrollment by racial/ethnic group: for example, Negro, American Indian, Oriental, and Spanish-surnamed Americans, as well as other information to assist us in evalnating the institution's compliance status. These reports continue to be required on a biennial schedule.

On the basis of this data, complaints filed with the Office and other information available to us, we have, since 1968, conducted a series of onsite compliance reviews, which have given us an opportunity to review the current practices of several institutions of higher education, with respect to recruitment and admission, scholarships and financial aid, student services and facilities.

Further, we have required State college systems that previously maintained racially segregated institutions to take steps to eliminate the vestiges of the formerly dual systems. In evaluating a college's compliance status we would, for example, be interested in both current and past efforts to recruit minority students and faculty. If a college recruits students, it must conduct its recruitment activities so as to include contacts with potential minority group applicants in a comparable manner. In the area of financial aid, we seek to insure that minority group students participate on an equitable basis in the various financial assistance programs operated by a college or university.

A number of financial aid programs are available to students through the Office of Education. The educational opportunity grant, college work-study, and direct student loan programs enable many economically disadvantaged students to pursue their educations. Office of Education statistics show that about 25 percent of such program beneficiaries are minority students.

Other areas subject to review include: Counseling and tutoring, to assure that minority students receive these services in like manner to all other students; student activities, to assure that minority group students are free to participate in all college-supported activities; and student housing, to assure that students are assigned to or are free to select college dormitories and other institution-supported housing in a nondiscriminatory manner.

In instances where discriminatory practices have been identified, either during an onsite review or a complaint investigation, title VI regulations call for institutions to take corrective action to eliminate any current discriminatory practices and overcome the effects of past discrimination and, further, they permit the implementation of affirmative efforts where conditions have resulted in limiting participation by persons of a particular race, color, or national origin.

If an institution subject to title VI fails to take corrective action to eliminate identified discriminatory practices, OCR exhausts all efforts to achieve voluntary compliance before resorting to administrative enforcement proceedings to terminate Federal assistance.

If the Government prevails in an administrative hearing, Federal moneys can be terminated. Any institution that has its funds terminated may participate once again in Federal programs by eliminating discriminatory practices. To date, successful voluntary negotiation has rendered it unnecessary (with one exception) to impose fund sanctions against an institution of higher education. We have recently concluded negotiations with eight States cited in the decision of the U.S. District Court for the District of Columbia in the case of *Adams v. Richardson.*

The Department, as directed by the court, requested comprehensive plans designed to insure equal educational opportunity and achieve desegregation of their formerly racially dual systems of higher education. Eight States—Arkansas, Florida, Georgia, Maryland, North Carolina, Oklahoma, Pennsylvania, and Virginia—submitted acceptable plans and their implementation will be closely monitored by the Office for Civil Rights.

Louisiana, which refused to submit such a plan, has been sued in U.S. District Court by the Department of Justice for an order that it comply with the provisions of title VI. A plan submitted by Mississippi has been adjudged inadequate, and the Department has requested the Attorney General to take appropriate enforcement action to secure compliance as quickly as possible through the judicial process. In carrying out our compliance determination responsibility, we have been, in many instances, asked also to advise institutions seeking to expand previous efforts at reaching minority group students.

Contract compliance responsibilities pursuant to Executive Order 11246, as amended, have been delegated to the Secretary of Health, Education, and Welfare, who in turn has delegated such responsibilities to OCR. The Executive order prohibits Federal contractors, including colleges and universities, from discriminating in employment on the basis of race, color, sex, religion, or national origin, and requires contractors to take "affirmative action" to insure that applicants for employment and employees are treated without regard to such factors. This covers all conditions of employment, including recruitment, promotion, transfer, termination, salary and benefits, and training.

Affirmative action regulations, known as Revised Order No. 4, and issued by the Labor Department, are designed to broaden employment opportunities for minorities and women and to eliminate policies and practices which, by intent or effect, have excluded or limited female and minority group employment.

There are some 900 institutions of higher education which come within the jurisdiction of the Executive order by virtue of their status as Federal contractors. Such institutions maintain their eligibility for Federal contract funds by insuring that their employment policies and practices relate to all persons in an equitable fashion.

Further, they must develop plans for affirmative action, which are expected to (1) contain an analysis of their work force to identify underutilization of women and minorities and a commitment to steps with goals and timetables for overcoming such underutilization, and (2) identify those policies and practices which have an adverse impact on female and minority employees and commit the institution to specific corrective action which will be taken to eliminate such adverse impact.

The Office for Civil Rights comes into contact with contractor institutions by conducting complaint investigations, general periodic compliance reviews of a contractor's employment posture, and preaward compliance reviews. This procedure regularly follows from a request by a Federal contracting agency for a determination of eligibility of an institution with whom it is about to negotiate a contract. All contracts of $1 million or more must receive a civil rights clearance, and such a clearance is granted if the proposed contractor is able to demonstrate compliance with the Executive order.

When deficiencies in employment procedures are identified, a contractor is required to undertake corrective action. If voluntary compliance cannot be achieved, an administrative hearing must be initiated. If such a hearing supports a finding of noncompliance, existing contracts are terminated, and the contractor is barred from future contract awards. Eligibility for Federal contracts can eventually be restored if the institution takes the necessary measures to come into compliance.

Title IX of the Education Amendments of 1972 runs parallel to Title VI of the 1964 Civil Rights Act, though its reach is confined to educational institutions which discriminate on the basis of sex. OCR recently published a proposed regulation for the enforcement of title IX, which provides that no person shall be discriminated against because of sex in any education program or activity that receives Federal financial assistance. This provision applies, with certain selected exceptions, to all educational institutions, including those in higher education.

By law, these institutions must offer all their benefits and services (including employment) without regard to sex to receive Federal assistance. We expect title IX to serve as a major compliance tool in insuring equality of opportunity in education. Complaint investigations, compliance reviews, and enforcement activities will be undertaken in a fashion similar to that under title VI of the 1964 Civil Rights Act.

The Executive order, title VI, and title IX require recipients of Federal financial assistance to insure nondiscrimination. There are two primary differences between these authorities. First, while titles VI and IX reach virtually all of the Nation's higher education institutions (over 2,700), the Executive order reaches only those institutions which are Federal contractors (approximately 900).

Second, "affirmative action" in employment is required under the Executive order, in the absence of a finding of specific discrimination by the institution. Thus, while this Department is responsible for insuring the compliance of virtually all colleges and universities with a broad nondiscrimination mandate, no more than a third of these same institutions is currently required to develop, implement, and maintain an acceptable affirmative action plan.

Voluntary action (as distinguished from that required by the Executive order) is permitted under both title VI and title IX in areas such as student admissions and employment. For example, the great number of colleges and universities developing affirmative action programs are, for the most part, responding to the specific requirement of the Executive order that they do so. On the other hand, the great increase in minority enrollment in institutions of higher education that has been witnessed in recent years derives, in great part, from affirmative admissions and assistance programs undertaken for minority students on a voluntary basis.

Finally, OCR administers two other congressional mandates prohibiting discrimination in federally assisted prgrams. The Public Health Service Act contains provisions that bar sex discrimination in the admission of individuals to health training programs benefiting from certain types of Federal financial assistance. The provisions—sections 799A and 845—apply to any school of nursing, medicine, osteopathy, dentistry, veterinary medicine, optometry, pharmacy, podiatry or public health or any training center for allied health personnel.

Before Federal assistance under title VII or title VIII of the act can be awarded, such institutions must submit assurances that they will admit men and women on a nondiscriminatory basis. Further, institutions must operate their programs so that no individual is treated or participates differently from any other on the basis of physical or mental handicap. We anticipate publication of a regulation for this statute by the end of the present fiscal year. This is the first program designed to prohibit discrimination against handicapped persons, and we are presently developing compliance techniques and an enforcement strategy to make this program a reality with respect to virtually all federally assisted facilities, including colleges and universities.

The Department also anticipates that the Department of Labor will delegate responsibility for the enforcement of section 503 of the Rehabilitation Act as that section affects institutions of higher education. Section 503 establishes an affirmative action responsibility on Federal contractors (similar to the current Executive order program) with regard to the employment of physically or mentally handicapped persons.

To summarize, OCR is currently responsible under a variety of statutes for (1) insuring nondiscrimination on the basis of race, color, national origin, sex, and physical or mental handicap by all Federally-assisted higher education institutions in the admission and treatment of students and in employment, (2) insuring nondiscrimination on the basis of religion by such institutions with respect to employment, and (3) insuring the development and implementation of affirmative action programs by higher education institutions receiving Federal contracts.

I trust that this general description of the various programs we administer is of assistance to you in understanding the mission of the Office for Civil Rights. I would be happy to address questions that you may have concerning particular aspects of those programs.

Mr. O'Hara. Thank you very much, Mr. Holmes. I want to begin by congratulating you on your response to the subcommittee's request for information. You have provided us with exactly the kind of information we are seeking to form the basis for these hearings. We want you to know just what your legal authorities are, how you implement those authorities, and what you are doing there. That is the first requirement, I think, to conducting a sensible set of hearings.

I would appreciate it, and I don't know if you are prepared to do this and perhaps you are not, and, if so, you can tell us or perhaps one of your associates might be able to do it. As you know, one of the areas about which you receive the greatest complaint has to do with the so-called affirmative action programs. You have regulations under which the affirmative action programs are devised.

I have before me Revised Order No. 4, which you spoke of in your testimony. That has to do, I guess, really with the Office of Federal Contract Compliance, those institutions that are also contractors with the Federal Government.

Mr. Holmes. Yes, Revised Order No. 4 was issued by the Office of Federal Contract Compliance and is applicable to all agencies in which responsibility for Executive Order 11246, as amended, was delegated by the Secretary of Labor. Thus, it is applicable to industrial contractors as well as higher education contractors—any Federal contractor.

Mr. O'HARA. I wonder if it would be possible for you to lead us through Revised Order No. 4, as you apply it to institutions of higher education who are Federal contractors.

Mr. HOLMES. Yes. I would be glad to.

Mr. O'HARA. Do you have a copy of Revised Order 4 before you? I have some copies here myself.

Mr. HOLMES. It is in this document. I would prefer, if you don't mind, to give you a general nature of our program and then ask Dr. Lepper as well as Mr. Miles and others to interject. I might note, too, Mr. Chairman, that the Office for Civil Rights, in October 1972, in order to further explain and clarify the provisions of Revised Order No. 4 for higher education institutions issued the Higher Education Guidelines under Executive Order 11246, a copy of which I would be glad to provide the committee if you don't already have it.

Mr. O'HARA. We would appreciate it.

Mr. HOLMES. As a general matter, higher education institutions that participate as Federal contractors must have an affirmative action program. The Executive order requires written affirmative action plans for institutions with 50 or more employees and a contract of $50,000 or more within 120 days from the commencement of a contract.

It is our responsibility to review those affirmative action programs that have been developed by the higher education institutions to determine whether they meet the requirements of Revised Order No. 4. Basically, the components of an affirmative action plan are as follows:

A number of specific analyses regarding recruitment process, selection process, salary levels. There are other specific analyses.

Dr. LEPPER. Utilization analysis.

Mr. HOLMES. The primary analysis is the utilization analysis. This is, in effect, a work force profile. An institution determines the number of women and minorities in its current workforce. Then it makes a determination as to the availability of women and minorities in relation to its normal recruit pool.

Mr. O'HARA. For instance, if talking about Ph. D. faculty members, you would be looking at what?

Mr. HOLMES. If you are talking about a political science department, you are talking about a nationwide pool of Ph. D.'s in political science.

Mr. O'HARA. You have in your office somewhere the numbers of minorities and women in each of those pools?

Mr. HOLMES. Let me ask Dr. Lepper to respond.

Dr. LEPPER. We can respond quite accurately to that in terms of women, because the Office of Education requires all institutions to submit a yearly report on earned degrees. We do not have that information as it applies to minorities in the same format. We are proposing to attempt to collect that data because institutions are having to use a number of informal sources in determining the availability of minorities. In the Office of Education report they are not required to collect the data on the basis of race, but only on the basis of sex as far as earned degrees.

Mr. O'Hara. But, in any event, you make the best estimate you can from the best source you can get of what the available pool contains in terms of minorities and women?

Dr. Lepper. Yes. In addition to that, there have been a number of studies which the institutions themselves have done and have shared with us where they have gone to the top 30 Ph. D-producing institutions in the Nation and asked them, not only for the people that are in process of getting Ph. D.'s, but dividing them down below just an earned degree in political science and going to a degree in political science with a specialty in public administration and international relations.

Mr. O'Hara. And that is the basis under a utilization study then?

Dr. Lepper. For academic employees. We use census data, standard metropolitan area, for nonacademic employees and for staff support personnel.

For professional employees for the staff we use the census data, standard metropolitan area for nonacademic staff employees, for the support people.

Mr. Holmes. But that basic workforce profile and availability information forms the basis for the utilization analysis.

Mr. O'Hara. Thank you.

Mr. Holmes. More often than not, one would determine underutilization.

Mr. O'Hara. I would expect so.

Mr. Holmes. That is underutilization of women and minorities compared to their availability.

Mr. Dellenback. May I ask a peripheral question? In our discussions, it has been determined the Executive order deals with minorities in terms of race, sex, or national origin. Is there anything done on a comparable basis with religion and national origin?

Mr. Holmes. With national origin most definitiely and we include national origin minorities and description of minorities.

Mr. Dellenback. When you say "minorities," you are lumping race, color, and national origin?

Mr. Dellenback. What about religion?

Mr. Holmes. We have not focused on this from the standpoint of the affirmative action requirements principally because the Department of Labor has not issued any specific guidance to the various agencies delegated the responsibility for enforcing the Executive order with regard to the subject. This is not to say, though, we have not dealt with it, because we have considered individual complaints of religious discrimination in employment.

But as far as doing a utilization analysis, we have not focused on religion absent guidelines.

Mr. O'Hara. Now we have completed our underutilization analysis. What do you do then?

Mr. Holmes. Well, on the basis of the degree of underutilization we ask the institution to develop a program including goals and timetables, for trying to correct underutilization. Most programs, I think, are 3 to 4 years in length. Thus the institution will, on either a department-by-department basis or organizational unit-by-organizational unit basis, set for itself some goals and timetables designed to focus efforts in recruitment and what-have-you on trying to narrow the gap between what is available in the labor market and what is actually employed in the workforce.

Mr. O'Hara. Let me ask you this question in terms of the goals and timetable. In giving guidance to the institutions in terms of setting of goals and timetables, if you find underutilization, do you suggest that the goal and timetables be the achievement of utilization by the end of the 3- or 5-year period or coming as close to that as you can, or is your goal and timetable more in terms of the new hires as it were, or the new promotions?

Dr. Lepper. It is that we ask, first, before it sets goal and timetables, that the university try to identify where its problems are—whether it is insufficient in the recruitment or selection, or retention processes. We ask the university to look at all of these processes.

It may be that, in fact, the university does not need goals and time tables for new hires; rather, other employment practices may be serving to create underutilization.

Mr. O'Hara. Pay and so forth?

Mr. Holmes. Right. We ask the university to identify its problems and to propose solutions and the written plan gives us an opportunity to monitor progress in overcoming problems.

Mr. O'Hara. But you have to accept a plan. I mean if the contractor comes up with a plan, let's suppose you found underutilization and you suggest to the proposed contractor he come up with a plan.

Mr. Holmes. May I correct something, Mr. Chairman?

We don't find it. They find it.

Mr. O'Hara. They find it, all right.

Mr. Holmes. Through their utilization analysis and then they submit the information to us along with their proposed corrective action.

Mr. O'Hara. Have you ever found a submitted plan to be unsatisfactory?

Mr. Holmes. Yes.

Mr. O'Hara. All right, what are the criteria you use for judging the satisfactory performance or acceptability?

Mr. Holmes. I don't think we have, and please correct me if I am wrong, Mary. I don't think we have found a submitted plan unsatisfactory because of the level of goals, for example, that they have established for themselves. I may stand corrected on this. Most of the submitted plans are unsatisfactory simply because they have not done the basic data analyses that are required by Revised Order No. 4, the basic utilization analysis.

It is a rather substantial undertaking for a very large institution. We have had some difficulties, quite candidly, with many institutions in their developing the required statistical information, in connection with their work force profiles and overall utilization analysis. This has been the primary problem we have had insofar as unacceptable plans are concerned.

Mr. O'Hara. Let me ask. Let's suppose and let's take a hypothetical institution, and you find they have an all-white, male faculty completely. So when you do your utilization study you say, "Well, I see some disparities here between your faculty and what the available pools are and it would probably be a good idea for you if you want a

Federal contract to come up with some affirmative action proposal that would seek to remedy that."

They then turn in a proposal that says: "During the next 5 years we will attempt to have our new hires, we will, by changing our recruitment practices, completely abandon the old buddy system, we will have it so that our new hires reflect the composition of the pool."

Would that be considered an adequate response in that hypothetical case?

Mr. HOLMES. Yes.

Dr. LEPPER. I was going to say I think you hit on the key point, which was not so much the goals, but that they review their recruitment and selection practices and submit to us, not just goals and timetables for numbers of new hires, but how they are changing those recruitment and selection processes in order to reach a goal. There are some psychological factors involved here that might prevent the university, despite any kind of efforts it might make, from being able to reach a stated goal. For example, external perceptions of the university from minorities that the university is not interested in their employment and, therefore, insufficient number applied; or certain women believing it futile to apply to certain departments in the university. So we would be far more interested in looking at the process by which they were going to overcome it than the actual setting of numbers.

Mr. DELLENBACK. May I ask a question at this point? Is your objective to make certain that the affirmative action plan be a plan where the procedures followed in any given year are nondiscriminatory, as you consider the practices to be nondiscriminatory? Or, is your goal to make certain that the resultant statistic situation reflects nondiscriminatory treatment? Do you see the difference?

I see great difficulty in doing both of these particular things and I am interested in where your emphasis really is.

Mr. HOLMES. The emphasis has to be on the process and a nondiscriminatory process, one would reasonably conclude, is going to yield results. We are asking contractors to predict what a reasonable result might be given the establishment of a nondiscriminatory process.

It will yield results. If you look at the plan, Congressman, and 5 years later it has shown no results it raises a substantial question, in any reasonable person's mind, as to whether the processes that were operative in the preceding 5 years were, in fact, neutral on this subject of race.

I don't think it is conclusive evidence in and of itself that the process was so.

Mr. DELLENBACK. You express this statement down at the bottom of page 3.

> In instances where discriminatory practices have been identified, either during an on-site review or a complaint investigation, Title VI regulations call for institutions to take corrective action to eliminate any current discriminatory practices and overcome the effects of past discrimination.

Now, again using the example that has been given, let's assume you had 1,000 white males in a given situation, and also assume there is a 20-year turnover so that in any given year 50 new employees would be added. Of these 50 new employees, let's assume that 10 of these would be minority and 20 would be female and the balance would be white males.

In the first year of practice, would you expect to get approximately that breakdown? If so, at the end of 5 years you are not going to have thrown the 1,000 into any kind of numerical situation that is reflective of the total availability. It may take until all the initial 1,000 employees are gone before you get to it—if the law of averages works out and they follow the above practice.

The thing I am not clear about is which you are pushing for?

Would you insist the next year and next year and next year they go beyond that number of minority hirings—they go beyond that in females they take in—so that the resultant mass would overcome the effects of past discrimination?

Mr. HOLMES. Let me try to respond, and this is the question the chairman, I think, was striving at and we have not specifically responded. The OFCC regulations, in effect, suggest that in the life of the plan, or the end of the life of the plan, the 5 years, that goals aim toward parity. If the work force is 20 percent female, Ph. D., political science, one would expect that the composition of the faculty in X political science department at X University would be 20 percent female. That is not a quota.

We can get into that next, but let me try to respond here. As a practical matter, let me just note several things. The analyses that Dr. Lepper referred to, the recruitment analysis, selection analysis, salary equity analysis, promotion analysis, are, in our estimation much more important to correcting discriminatory factors in the employment process of an institution. We, quite candidly, do not attempt to make an issue of parity at the end of a 5-year period.

One of the most important factors, of course, in establishment of goals and timetables after a utilization analysis is turnover rate. You will find, particularly now in higher education employment, that the turnover rate is not that great, or employment opportunity has tightened. We ask the contractor to set reasonable goals, which would lead toward a reflection of availability over a 5-year period.

Inasmuch as this is a relatively young program the focus of our attention in the program thus far has been on the development of plans and not on the monitoring of plans. So we have not, Congressman Dellenback, been going back into each institution on an annual basis.

We do ask institutions from which we have accepted affirmative action plans to submit annual reports to us, but the emphasis right now has been on the development of plans.

Mr. DELLENBACK. Let me ask one more question so I am clear as to what you have been saying. What if a given institution looked at hiring and promotions and all sorts of internal practices, and they came to you with an affirmative action plan which showed very clearly that in solicitation, in hiring, and everything else that follows thereafter, they really were on target in following the nondiscriminatory practice. If they did these things, but said nothing about what they would have in composition 5 years hence, would that be acceptable?

Mr. HOLMES. No.

Mr. DELLENBACK. All right, let's return to the example we were talking about—deleting the mathematics and assuming a 20-year term because you also realize that is very important—would it be sufficient if what they said they would have in 5 years was reflective of the following policies for a 5 year period. That would mean, of course, that three-quarters of the mass, on average, would not have changed at all; however, one-quarter of the mass would have changed. Would that be sufficient?

Mr. Holmes. I indicated to you we would not take exception to that type of establishment of a goal.

We would urge the institution, as the regulations propose, that the goal be parity, but we will not, and we have not gotten hung up with an institution over that issue, if we think that the actions it is proposing to take are with regard to salary equity and broadening the recruitment process.

The goal, I think, everybody must keep in mind is a flexible thing. We are not talking about a quota. We have not talked about a quota in this program. It has been confused in the public's mind. I think that has been overcome. There is an understanding of the distribution between goals and quotas, that we are looking for them to try to reasonably estimate what the effect of their now neutral nondiscriminatory affirmative action program will produce in terms of results.

Mr. Dellenback. How can you expect them to reach parity in totality unless they discriminate in their current practices?

Mr. Holmes. You mean unless they discriminate in future practices?

Mr. Dellenback. Yes. How can you take a situation which is determined this way?

Mr. Holmes. It can be done without any discrimination in reaching parity. That is simply by considering on the merits, like they had not done previously, females or minorities on the same basis as males.

Mr. Dellenback. However, wouldn't averages say to you that you will not reach it in 5 years if you have any sort of long-range turnover?

Mr. Holmes. I think so.

Mr. Dellenback. Therefore, if you insist or push toward parity within a shorter period than 5 years in an institution that has anything substantially beyond that in turnover, you can't possibly achieve that parity, except in a bizarre unique accidental situation, unless, during those 5 years, you follow the thing which, for a catch phrase, has been called "reverse discrimination."

Mr. Holmes. Yes.

Dr. Lepper. We have accepted some plans that have established goals that do not reflect parity and we have accepted those plans in contrast to the strict, I guess, interpretation of order 4. This has occurred when an institution has been able to demonstrate in its in-depth analysis that, for instance, employment applications may be running 4 to 1 male-to-female. Since we urged institutions to select on the basis of merit as you indicated there would be a chance that parity could not be reached, so these institutions have been working out a weighted formula based upon kinds of applications they are getting and again we must go back to availability because availability varies greatly in institutions of higher education by discipline.

Certain disciplines, education, the social sciences, may be able to predict a higher new hires rates and retention rate for women and minorities than other disciplines where the availability is less. That is why we would not insist that goals reflect the parity of nationwide or international availability.

We recognize that certain institutions are going to have a better opportunity to recruit the people that are available in certain fields and there are lesser known institutions that will not have the same opportunity. Even if the national availability of women in biochemistry is 1 percent the University of Iowa, for example might not have the same opportunity to hire these women as Harvard University or MIT.

Mr. DELLENBACK. It is just as well there is no one on the committee from Iowa. If you hit Michigan, Oregon, New York, or California, you might have been in trouble—but not Iowa.

I don't mean to beat this horse to death. Personally, I very much want to proceed to parity in the resultant mass as well as in the current practices. However, I must confess that the way I read you, you are saying you will urge an institution to exercise practices on a current and immediate future basis which, viewed in and of themselves, would not reflect parity. You would urge this in order that the change in the mass would occur more rapidly than normal turnover would bring about.

Now, if you say to me, "No; what we are really concentrating on is the increment added each year. We are focusing solely on that increment and don't want institutions to go one jot or tittle beyond parity in what they do with that increment." Then, I have great difficulty in seeing how the mass is going to be brought to parity more rapidly than the normal turnover would bring it.

Dr. LEPPER. I would like to give you an example of a university I won't name that this year in their recruitment—and this one I know about because it was in the department of political science—changed both their recruitment practices and the composition of their selection committee, and after getting some 200 applications, they ranked the applications without regard to race or sex because there was still some uneasiness in this predominantly white male faculty.

Three women were the top three candidates for the jobs. Using nondiscriminatory measures, the three women still came up on top. They had to explain this phenomenon to their president to insure that they, in fact, did not use sex as a determining factor.

I would suggest to you that to remove the discrimination that has historically existed, we could have a reasonably good chance at meeting, for most universities, a better reflection of women and minorities based on their merit.

Mr. DELLENBACK. I assume that the merits of those who have been discriminated against—given a free flow—would still come to the top, which would bring about a change in plans. Just making a purely hypothetical case, if I were a young white male interested in going to law school and I applied for admission to a law school and was not able to get in and later found out that there were others who were admitted to the law school who had poorer qualifications than I because the law school was interested in trying to build up the mass and was discriminating within the current input, there might be a chance that that case would go somewhere.

Mr. O'HARA. No; because of the time involved in pursuing it, it would take too long.

Mr. DELLENBACK. Surely, justice would never grind that slowly.

Thank you. That is what is troubling us, and I am sure it troubles you, too. How do we write a law that will bring about a reaching of these goals: namely, equity for the current interim and equity with regard to the total picture. Then, how do you administer the laws that we write? At present, I am troubled as to how we are doing both.

I appreciate what you have given us in testimony this morning. You have been helpful, and I thank you.

Mr. Chairman, may I speak out of order in connection with yesterday's hearing? Mr. Kemp wanted a brief introductory statement put in yesterday's hearing record and might I ask unanimous consent that it be inserted following my opening statement at the start of the hearing yesterday?

Mr. O'HARA. Yes; without objection.

Mr. HOLMES. Congressman Dellenback, Dr. Lepper gave me a note I would like to pass on to you. I appreciate your remarks in the employment area, that one of the ways these goals may be met is by increasing availability which is a different aspect of the whole issue, of course, than getting into the admissions aspects and what have you, which I know you want to discuss, too, Congressman, but with regard to minorities in the labor market for higher education and academic employment, the primary problem right now is availability of the minorities going through the education system and graduate programs, thus then joining the labor pool, if you will, for consideration for employment.

We feel, although those are higher, but still as to access to employment by women, there are signs or patterns of limited participation.

Mr. O'HARA. Let me say, in response to that, I picked a hard example for you deliberately, because I can find it in new hires and I gave an example where you had an all-white male faculty and you were talking about achieving parity and I picked it because I thought it would help us get some clarity in what we are doing. I recognize there are other kinds of situations and there are situations in which there have been patent disparities between men and women particiularly and in which there have been promotional discrimination between men and women and status and tenure disparities and so forth between men and women on faculties and I think those kinds of situations lend themselves a little better, some of them at least to the affirmative action kind of thing than do the new hires situation.

Mr. HOLMES. But, if you focus, Mr. Chairman, exclusively on that to the exclusion of the recruitment process the answer in effect is no higher educational employment.

Mr. O'HARA. I am not suggesting you focus on one or the other, but explaining I recognize that I presented perhaps one of the most difficult problems. Clearly, I have no quarrel whatsoever with the notion that you ought to and indeed must require institutions to recruit faculty in a manner that gives fair opportunity to all, to all qualified persons who apply for and want to obtain employment and to attain promotion and so forth and so on. I think there is no question about that.

What concerns me is that some institutions have been permitted to believe, or led to believe perhaps, but at least permitted to believe, that what is required of them is contained right here in revised order No. 4, whatever it is, and that what they must do, if they are going to avoid difficulty with the Office for Civil Rights compliance, is to file a program that achieves parity in their entire work force within a certain period of time. Perhaps you will accept goals that do less than that, but you certainly don't publicize that fact, I don't think, because at least many institutions are under the impression that the plan they submit has to be one that proposes achievement of parity within a certain time frame, unless it is clearly impossible, you know.

Mr. Holmes. Well, I am troubled. I am troubled now, Mr. Chairman, because we get into the goals with quota issue "reverse discrimination," a term that you do not accept, and I can appreciate that. In the employment decision or selection process, an institution, department, or what have you, will not in the guise of affirmative action requirements sacrifice the qualifications for the position, even minimum qualifications, if you will, for the position because of some, you know, requpirement that it may perceive that it must meet that quota at the end of 5 years.

They understand it as a goal.

Mr. O'Hara. I am not sure they do. You see, I know how people act, although I have not had any experience administering an institution of higher education. I have seen this in other fields including my own field. In my experience in politics where you set "goals, not quotas," and I mean that, goals, no mandatory quotas. Very quickly the one who is apt to be challenged and lose some tangible benefit perceives that the way to avoid being challenged and the way to avoid difficulty and loss of benefit is to achieve that goal even if he has to discriminate to do it.

So you have not "required" them to do it. No, no, they did that on their own, you know. But that was the practical effect in too many cases. And don't you think that it works that way sometimes with instituptions of higher education?

Mr. Holmes. I don't doubt that in some of the reverse discrimination complaints we have received in the last year or so, that you find examples of that happening. It is interesting that in a lot of the cases the employer will go on to defend the qualifications of the individual, the minority or the female that they employ, when they are faced with a complaint of discrimination.

Mr. O'Hara. He is in the position of "damned if you do and damned if you don't." He has two positions he feels he must maintain and one of them is that he didn't discriminate and, second, he did achieve his goal. So he has to argue those ways, I am sure.

Mr. Holmes. If he does not achieve the goal, he can demonstrate to us the good faith efforts made to meet the goal and we will be satisfied. As I said to Congressman Dellenback, this is a relatively young program and quite frankly the focus of our efforts has been at negotiation of plans and we have not reached the point to any significant degree where we are judging what good faith efforts were over a period of 5 or 10 years.

Mr. O'Hara. Let me ask because we are going to be in session shortly. Mr. Benitez has not had an opportunity to ask questions, so let me ask one question and then I will ask Mr. Benitez to direct whatever questions he might have to you.

Have you ever suggested to an institution of higher education that did its own profile and proposed its own affirmative action program and set its own goals, have you ever said to one of them, "Don't you think these goals are unrealistically high and don't you think you ought to reduce them because they are unrealistically high and will in all probability require you to discriminate in order to reach them? Have you ever told one of them that?

Mr. Holmes. I don't know of a specific case. Mary, maybe you do.

But I think we have and I do know we have told institutions that they have discriminated on the basis of race or sex, particularly in their advertising, when a statement that goes out in one of the journals says, "Minorities and women only are encouraged to apply."

They have got problems with us. Mary, do you have anything to add?

Dr. Lepper. I know of only two in which we suggested to them that perhaps their availability figures might be inflated and that they should look at this and submit revised goals as appropriate at the next year's go-round. We have not necessarily said to them your goals are too high.

But we have asked them to look at both the availability figures and the patterns of student enrollment, that there simply might not be there the opportunity to reach those goals.

Mr. O'Hara. You see, I don't imagine you get many complaints—and I suspect it is far less than the actual number who could make complaints—from those who feel they have been discriminated against by an institution's efforts to achieve its goals, because they don't really feel, and we are talking about a relatively well-informed segment of society, they have not really been led to feel that they have any legal rights in that respect, enforceable legal rights.

I think they refrain, at least some of them.

I am going to ask Mr. Benitez to address some questions.

Mr. Benitez. Thank you, Mr. Chairman. I have been puzzled by the variety of factors which you have to contend with. As I understand it, you are trying to achieve a nondiscrimination situation both faculty-wise, employee-wise and student-wise insofar as sex, race and also to minority persons.

Now, do you deal in the same way with these three types of disadvantaged groupings and do you assume that they are on an equal basis of efficiency as far as opportunities are concerned?

Mr. Holmes. Well, let's take sex and minorities, title IX and title VI, and your basic legislation, nondiscrimination legislation is the same. The regulations are somewhat different, but I think you will find, as a general matter, and maybe Mr. Barrett or Mr. Miles would like to respond to this also, that our approach in many of the problems we find are similar, whether it is a case of sex discrimination or racial or national origin discrimination.

Mr. Benitez. The reason I raised the question, for instance, is that the pattern of discrimination or of disadvantage operates sexwise not only among whites, but among blacks and among minorities, so you find that there is a built-in pattern of discrimination in these same categories where you are trying to avoid discrimination.

I was just interested in whether you felt, for instance, that you could take a female for the price of two or for the price of three. I can think of a Puerto Rican black girl who could be accepted because she complied in three different categories. How do you count them?

Mr. Holmes. Well, we are talking about the individual and discrimination is to an individual. That individual could be suffering from discrimination which would be prohibited under statutory authorities in a variety of ways, one, her language and language discrimination, speaks Spanish, but does not have an opportunity for bilingual education or instruction in the English language in the U.S. school system; and, second, because she is black; and, three, because she is a female.

Mr. Benitez. That is right.

Mr. Holmes. And, of course, all three situations could be dealt with.

Tony, do you have something to add?

Mr. Miles. I think there are a couple of things we could point out. One is, in terms of remedies, the procedures that an institution must follow in identifying qualified people and the like, that much of the techniques for trying to correct the situation will be very similar, whichever one of these groups you are talking about. I think we have discouraged people trying to get a double count, so to speak, for this, because they establish a requirement based on their level of utilization by each of these categories and they are hiring some people, you know, counting them then three or four different ways, which is not really addressing this issue.

Mr. Benitez. Well, I know that in the case of the Puerto Rican student we are faced many times with the problem that if they include these three presumed stigmas, they find it easier to get in than if they don't—say if they have only two or one. I was wondering if there was a conscious counting of this criteria?

Mr. Miles. It may be difficult to actually tell how much you are getting of this. I think in the utilization analyses that each institution is supposed to do in employment, they are supposed to report it in such a way that you can tell somebody is in this situation.

Mr. Benitez. Or in the case of black females?

Mr. Miles. Yes.

Mr. Benitez. I think that there is an unscientific basis, the increment in compensatory black female teachers, I think, is greater than black men.

Mr. Miles. I think we are asking for data which would show that. But I think what we have also shows that minority females have been the most discriminated against of all of the groups we are talking about.

Mr. Benitez. Now, the only other thing I would like to point out in reference to the question that Mr. Dellenback raised is what can be done to counteract or to accelerate the equalization objective? It would seem that pro and con debate will facilitate, so long as you have admission for only 10 persons and you have 50 applicants, in that situation I believe you have a discrimination in any case, if they are all qualified, so it would seem to me that in the resolution of the problem of civil rights, the question of overall opportunities and consequentially overall resources is crucial to any eventual answer to this question rather than splitting hairs oftentimes when you have just two or three available places.

Thank you, Mr. Chairman.

Mr. O'Hara. Thank you, Mr. Benitez.

Let me ask this, because our hypothetical dealt with a faculty problem and much of our discussions have been in terms of faculty and your responses to my questions have been really in terms of faculty to the extent they have been specific.

Let's talk about a large institution in a metropolitan center that employs a significant number of clerical personnel, of custodial personnel, or blue-collar workers of different kinds and machinists and what-have-you, do you go through the same sort of procedures?

Do you have any kind of different way of evaluating the goals in those sorts of situations?

Mr. Holmes. Generally, they are the same procedures. Of course, the availability information, as Dr. Lepper mentioned, would be your census data for your SMSA.

Mary, do you have anything?

Dr. Lepper. There we have asked universities to look at their job requirements to insure that; in fact, they are requirements that are job related.

Mr. O'Hara. Would you be just as willing to accept a proposed set of goals that did not achieve overall parity within the appropriate time frame or would you be less willing in nonprofessional employment.

Dr. Lepper. I don't think we can make a general answer to it because we would have to look at the reasons why they did not achieve it, the degree to which the university, in other words, had exercised good faith efforts and the degree to which factors that were beyond the control of the university's process prevented it.

Mr. O'Hara. For instance, you don't try to make a separate determination, you don't try to create a pool in most of those cases like you would, maybe in the legal department. Do you try ever to make a determination of the number or the composition of, for instance, secretaries those, say, possessing stenographic skills?

I imagine that is overwhelmingly female because of the patterns that prevail in that particular occupation. On the other hand, if you were looking at machinists, I think you would find the number of available machinists would be mainly male. Then you might find that even some race patterns within that, if you were looking, say, for plumbers and maybe among the pool of journeymen plumbers there might not be as many minority people as in the work force you have in the metropolitan area generally. Would you permit them to use separate skill pools or would you just apply to the metropolitan area charts?

Dr. Lepper. They do use the skill pool by the census data, that is, they are broken down by job categories in the availability of the people in the area by a specific skill.

Mr. O'Hara. The census data does take it that way then?

Dr. Lepper. Yes. We have relatively good data down through almost—well, they have run fourth-generation data that gets us down to the craftsmen level.

Mr. O'Hara. Any questions?

Mr. ERLENBORN. No questions.

Mr. O'HARA. Well, in light of the fact that the House is going into session, let me conclude our hearing. But first let me say to you I really again wish to compliment you on your appearance here today. You have been very helpful to the committee.

You answered the questions in an extremely straightforward and candid manner and you have been a fountain of information to us, of factual material, and we sometimes have a hard time getting factual material in an area that is so emotionally charged as this one. I want to compliment all of you and say to you that we will look forward to hearing from you again, as I am sure we will before these sets of hearings are concluded.

Mr. HOLMES. Thank you, Mr. Chairman.

Mr. O'HARA. Thank you very much. The Special Committee on Education will now stand in adjournment until Monday at 9:30 a.m.

[Whereupon, at 11:05 a.m. the subcommittee recessed, to reconvene at 9:30 a.m., Monday, August 12, 1974.]

CIVIL RIGHTS OBLIGATIONS OF INSTITUTIONS OF POSTSECONDARY EDUCATION

MONDAY, AUGUST 12, 1974

House of Representatives,
Special Subcommittee on Education
of the Committee on Education and Labor,
Washington, D.C.

The subcommittee met at 9:30 a.m., pursuant to recess, in room 2261, Rayburn House Office Building, Hon. James G. O'Hara [chairman of the subcommittee] presiding.

Present: Representatives O'Hara, Dellenback, Esch, Kemp, and Huber.

Staff members present: Jim Harrison, staff, director; Webster Buell, counsel; Elnora Teets, clerk; and Robert Andringa, minority staff director.

Mr. O'Hara. The Special Subcommittee on Education will come to order.

Our hearings on what postsecondary education institutions must be and what they must do in the field of equal opportunities in order to qualify for participation in Federal programs will be continuing for some time.

This morning we will take testimony from four outstanding presidents of institutions of higher education, who will talk to us about the basic attitude of American colleges and universities toward the issues involved in equality of educational opportunity and employment opportunity and the experience they have had at their respective institutions in this particular area of concern.

As we have done on several occasions in the past, we would like to have each of the witnesses make such statements as the witness chooses and withhold questions until all four witnesses have presented their statements. We will then question the entire panel all at once.

The witnesses this morning include Dr. Robben Fleming, president of the University of Michigan; Dr. Robert Randolph, president of Westfield State College in Massachusetts; Dr. James M. Hester, president of New York University; and Dr. George Roche, president of Hillsdale College, also in Michigan.

Dr. Fleming is scheduled to begin the testimony, and I wonder if my colleague Mr. Esch has any statement he would like to make. I understand, first, Dr. Fleming has the good fortune of being your constituent.

Mr. Esch. I have the good fortune of having him as my constituent. I would like to welcome Dr. Fleming to the panel. I think he needs no introduction.

Suffice to say the University of Michigan has been on the cutting edge of this issue, Mr. Chairman, and in a position, if I might say, of leadership. I think it is significant to what we are about here because the university communities have a responsibility perhaps in this field because they are more visual than many other institutions and, as a result, the changes that are being brought about in our society tend to focus on those institutions which have that degree of visibility, and the University of Michigan community, that I am pleased to represent, has generally been a community that has been quite visual but also has shown a great deal of leadership in this field.

The trials and tribulations that go with the problems of change and progress in areas of social change all have impacted upon the Ann Arbor campus; but, with the leadership of President Fleming and those in the academic area, I am pleased to say that I think they have shown some direction in which it might proceed. This is not to say it has not been without problems and trials, but I am pleased to present to the panel our president from Ann Arbor.

Mr. O'Hara. Dr. Fleming, we would like to welcome you.

STATEMENT OF ROBBEN W. FLEMING, PRESIDENT, UNIVERSITY OF MICHIGAN

Mr. Fleming. Thank you, Mr. Esch. Mr. Chairman and members of the committee, as you indicated, I am president of the University of Michigan. I happen also to be president of the Association of American Universities during the current year, but I speak primarily from my experience as an institutional administrator.

Your committee has held comprehensive hearings on student aid and other related items in recent weeks, and those of us in the university world are very grateful to you. Our problems are difficult, they are important, and they do need attention.

My comments are somewhat tangential to the main thrust of your inquiry. I should like to deal with the issue of eligibility conditions the Federal Government imposes on the receipt of Federal funds by an institution and the policies and procedures used in enforcing those conditions. That question is controversial, sensitive, and characterized by a good deal more heat than light.

Let me be specific in stating both the issue and the problems which accompany current efforts at resolution of these problems.

Though there are some people who will deny it, most observers will concede that both race and sex discrimination have occurred in colleges and universities. This being so, it is not surprising that Federal laws were passed which outlawed discrimination. These laws covered a wide range of activities, including student admissions, financial aid, employment and pay practices, sports activities, and so forth. Penalties for noncompliance included loss of eligibility for Federal funds, affirmative action for remedial purposes, back pay for past infractions, and so forth.

Effective law enforcement is, in large measure, a function of the acceptability of the law in question. Since laws which attempt to change deeply rooted social views cannot help but be controversial, any Federal agency which is faced with the enforcement problem has an unenviable task. Thus, those of us who are critical have an obligation to state our views in a constructive manner. I am critical; therefore, I shall try also to be constructive.

My starting point is one of agreement with the social objectives of legislation which tries to wipe out discrimination based upon race, sex, and ethnic origin. My criticism of Government programs designed to accomplish this objective is threefold:

In the first place, the programs tend to be overly bureaucratic and therefore burdened with administrative procedures which are nearly impossible to successfully administer.

Second, multiple and overlapping lines of jurisdiction among the courts, Federal and State agencies, and attempted private grievance systems confuse those who believe they have been wronged and harass university administrators.

Third, enforcement agencies tend to treat colleges and universities as though they were industrial plants or, at the very least, identical within their own ranks, both of which are far from the truth.

The first criticism—that Government agencies are overly bureaucratic—is illustrated by what the universities perceive to be an excessive demand for the production of documentary materials plus due-process deficiencies in allowing an appropriate hearing or appeal on the university's side of the case. In many cases the documents which are required are not in existence, particularly with respect to past practice.

It is enormously costly to manually prepare such materials, although if the demand were prospective rather than retroactive, much of it could be put on computers and be made more readily available. The relevance of some of the material is not evident; the cost of compiling the information would, I think, astonish the members of this committee; and I need not remind you of the precarious financial position of most colleges and universities today.

On the due-process front, universities are particularly disturbed by the way in which these matters are handled. Agency procedures and actions are inconsistent from one geographical area to another; attempts are made to withhold contracts before a fair hearing is accorded the institution; there are problems relating to the appeal process from regional offices; unreasonable time limits for response to agency interrogatories occur; and there are dubious standards of proof in establishing the existence of discrimination.

It appears to many of us that steps could be taken to remedy these deficiencies if the agencies were to provide better training for their field and regional staffs, if there were manuals providing for uniform standards and activities in the regional offices, if there were a policy of giving early notice to institutions of the status of their affirmative action plans and of impending compliance reviews, if there were written procedures guaranteeing institutions full and fair hearings before contracts are withheld, and if there were the right, not just a privilege granted at agency discretion, to appeal actions by regional offices.

The cost and administrative burden of compiling information naturally evokes little sympathy from those who feel that they have been discriminated against. Indeed, the cost and effort might be justified if it could be demonstrated that it is productive. On the contrary, it is evident that enforcement agencies are not staffed to examine and analyze the mountains of material which they are accumulating. Unless the whole procedure is a form of punishment which is designed to produce better conduct in the future, it is hard to see what really useful purpose it is serving.

Meanwhile, it is imposing an enormous burden on universities. Surely a far simpler system could be devised which would be at least as effective, and I am confident that the academic associations would join in a cooperative effort to devise such a system.

A second and, in some ways, even more aggravating problem is the multiple jurisdiction monstrosity which has been created. This confusing hodgepodge gives a wide variety of agencies power to move into the same or similar areas. The Department of Health, Education, and Welfare, the Labor Department, the Equal Opportunity Commission, the courts, and a series of State agencies all fish in the same general pond. Nevertheless, published figures show enormous case backlogs which cannot reasonably be expected to be handled.

Out of a long personal experience in private arbitration in the labor-management field, I would argue that there is a relatively easy way to cope with this problem. In the labor area, courts, and administrative agencies honor arbitration pacts which operate fairly and within the framework of the law.

If this rule prevailed in the area of discrimination, as it presently does not, there would be an incentive to universities to establish such private tribunals on an impartial basis. There would be a similar incentive to the grievant to utilize the system because it could be made quick and effective.

As things now stand, the grievant naturally wishes to have his cake and eat it, too, by having multiple forums and there is no incentive to a university to provide an impartial system at some cost to itself when there is no assurance that its ruling will be final.

We have done some experimenting with a similar, though not identical, tribunal system at the University of Michigan. Overall it has worked reasonably well, but it is now falling apart because impartial tribunal members do not want to waste their time serving on a body which has no capacity to make a binding decision and because grievants who appear before it do not wish to forego their further opportunities before other agencies.

Should the idea of private, impartial, binding tribunals appeal to this committee and should it be willing to consider requiring administrative agencies and courts to respect such decisions, providing they were fairly conducted and within the law, I am confident that an effective system could be devised with some speed.

Finally, Government agencies which have gained their principal experience with discrimination on the industrial scene tend to treat colleges and universities as though they were factories or, at the very least, identical within their own ranks. This is understandable since this is where most enforcement personnel seem to have had their experience and because their task is so overwhelming that they see no way of coping with it except in the most simplistic terms. The members of this committee are, of course, aware of how diverse is the academic community and how much it differs from an industrial operation.

From the university standpoint, the most sensitive aspect of this last problem is in the hiring of faculty. It is clearly in the best interests of the country to have universities hire as faculty members the most competent people they can find. Insofar as they have failed to do so in the past for reasons of discrimination, such practices should be abolished. The danger, however, is that the absence of discrimination will be judged solely on the basis of the statistical representation of individuals by sex, race, and ethnic origin.

It would not, in my view, be unfair to impose upon universities the burden of demonstrating, when challenged, that their choice of faculty members is based on a fair search for candidates and on the absence of any kind of discrimination.

To impose a statistical measure of success or failure is, I think, both unworkable and counterproductive. Unfortunately, it is not clear where the Federal agencies or the courts are headed in this respect.

Though I do not purport to speak for anyone but myself, I believe that my criticisms are widely shared by other presidents of universities. Certainly they are the criticisms which I hear in the course of our meetings.

I am critical of the system employed, not the individuals who seek to make it operate. The system imposes undue data collection responsibilities on the universities; and the data, when submitted, give rise to analytical problems which are beyond the time and energy capability of the agency. The web of interrelated enforcement responsibilities is confusing to all, enormously overburdened, incapable of coping with its backlog of cases, and susceptible of replacement by a far more efficient and expeditious system.

The practice of treating colleges and universities as though they were business firms ignores longstanding differences and practices which have contributed to the growth and development of a strong system of higher education in this country.

It would appear that the enforcement program on conditions of university eligibility for Federal funds is based upon a principal of punishment. I would argue that it would be more effective if it were based on a system of incentives. I do not see the university world fighting to preserve discrimination. Few if any segment of society are more likely to be favorable to a change in social practice. It is possible for the Government and the universities to work together in this respect. An indication from the Congress that it would welcome a new and more effective way of insuring compliance with its eligibility principles would, I am sure, be welcomed in the university community.

I appreciate this opportunity to appear before you, and I shall be glad to try to answer any questions which you may have later.

Mr. O'Hara. Thank you very much, Dr. Fleming. We would appreciate it if you could stay with us while we hear from the other members of the panel.

The next witness will be Mr. Robert Randolph, who is president of Westfield State College, Massachusetts.

STATEMENT OF ROBERT RANDOLPH, PRESIDENT, WESTFIELD STATE COLLEGE, MASSACHUSETTS

Mr. Randolph. Thank you, Mr. Chairman. I do not have a prepared statement but I would like to make a few comments on the issue.

Mr. O'HARA. Please do.

Mr. RANDOLPH. One of the major problems, it seems to me, which Dr. Fleming alluded to is the lack of understanding of the nature of an institution of higher education by those who purport to carry out the enforcement powers and lack of interest, as I have observed, of even finding out the nature of a particular institution, and they differ widely over the country.

This is terribly important. I would like to give a few illustrations of this for your edification. The appropriate methods of staff recruitment and selection, as published in the various guidelines of the Federal Government, oftentimes seem in conflict. For instance, in one section of the latest, I think, HEW guidelines, it says: "No institution should practice discrimination against any person." I think we would all agree with that on the basis of race, creed, color, sex, and religion.

In the very next paragraph, where an affirmative action program is described, it says: "An institution must show, in due time, appropriate representation of minorities," and so forth.

If you are in a period of no growth, as a majority of higher education is today, I think you can clearly see the problem. How are you ever if you are in a period of no growth? I need not get into such practices as tenure and matters of this kind.

Another aspect that we are required, to be eligible insofar as under Federal contracts, is in how we manage our business affairs—that is, purchase of goods and services from business firms and how we built our buildings, what contractors we use, and so forth.

Many of us are regional institutions. Many of us take pride, as we do at my institution in Massachusetts, in relating to our local communities in how we practice our business affairs.

You can see quickly one can run into conflicts if you are to maintain your close relationships with the local community and that local community does not have within it representative minority business organizations. To break these relations, let us say, to go 100 miles away to get a relationship with a minority contractor just so you can look like you are in compliance, it seems to me, is asking us for quite a bit.

I think most institutions want to expand the opportunity for relationships with contractors of all races and practices, full equal opportunity in that area.

Another illustration could be given in terms of admissions. Many institutions, in my judgment, have tried very, very hard to increase their representation of minorities and women in their enrollment. I think many mistakes have been made in this area, in my judgment.

But here, again, if you are a particular institution, regionally based, perhaps regionally funded, and expect to—perhaps not in law but in tradition—to give first choice to those within your area, yet on the other hand regulatory agencies are saying that you are not showing yourself in compliance, you must go to New York or go to Baltimore or go outside of your area—and many institutions have almost done this—and literally force minorities into your institution—I deplore this practice. I would almost call it racist. It gives many institutions all kinds of problems.

The matter of the faculty, including minorities in their selection, could be spoken of at length. Not enough is known about this. Many published articles speak of misrepresentation of minorities and women in terms of particular disciplines but, as I observed enforcement officials, not enough attention is placed on this.

For instance, my training happens to be in the field of economics, but there are fewer than 75 blacks in this country with Ph. D.'s in economics. Many are in graduate school, but they are not qualified yet. To expect each institution in the country to have a representative member of the black community on the economics staff is unthinkable. It is impossible literally. The same thing could be said for many other disciplines.

One could give many illustrations of this lack of recognition, but I would sincerely hope that the committee's deliberation and consideration be given to, as President Fleming said, the need for training of many staff members in the regional offices of these enforcement agencies. Thank you very much.

Mr. O'HARA. Thank you very much. You will also remain so we can question you?

Mr. RANDOLPH. Yes. Thank you.

Mr. O'HARA. Our next witness is president of New York University, James M. Hester, and, President Hester, we would like to hear from you.

STATEMENT OF JAMES M. HESTER, PRESIDENT, NEW YORK UNIVERSITY

Mr. HESTER. Chairman O'Hara and gentlemen of the subcommittee, I am pleased to be present today with Presidents Fleming and Randolph to discuss the impact of the civil rights statutes and Executive orders and regulations upon institutions of postsecondary education. Since I have been president of New York University for the past 12 years, my statement will reflect the experience of that institution.

As many of you know, New York University is a large, private, comprehensive institution with some 37,000 full- and part-time students, a full- and part-time faculty of 3,200, and a nonacademic staff of some 2,500 persons. Beyond this, we operate one of the Nation's major medical centers, with 4,500 nonacademic employees and 2,000 full- and part-time faculty members who teach, do research, and undertake patient care in our university hospital, Bellevue, and allied hospitals.

New York University has a long tradition of concern for educational and employment opportunities for women and members of minority groups. Moreover, we expend almost $40 million per year in Federal funds for research, training, and student assistance. Thus, our need to undertake an appropriate affirmative action program in accordance with Federal laws and regulations is clear.

The University's affirmative action planning to date: I would like first to describe our experience in seeking to comply with the affirmative action laws and regulations. Following the issuance of Executive Order 11246 and a request by the Office of Civil Rights, DHEW, for a statement of our intentions in this regard, we submitted a plan in December 1969 to that office setting forth our program for the establishing of affirmative action goals.

Over the next 2 years, as part of that program, we initiated a major effort to develop and assemble data to meet affirmative action requirements as we understood them. An officer was appointed to be responsible for developing training programs for minority nonacademic staff.

Shortly thereafter we organized faculty and other staff to participate in this movement to alert the total university community to the needs and sensitivities of affirmative action responsibilities. More than 70 meetings were held during the spring of 1972 involving several hundred people from all walks of university life to acquaint them with these requirements and to invite all interested persons to participate in developing our policies, programs, and procedures.

By June 1972 our basic organization evolved and the Affirmative Action Advisory Council was organized. The chairperson of this council is the director of the affirmative action program.

The council identified five areas of primary concern and established committees to explore each in depth:

Analysis and monitoring of status and goals.
Benefits review.
Grievance and complaint procedures.
Promotion, upgrading, and training programs.
Recruitment and public relations.

These committees, consisting of both council and noncouncil members, worked throughout the summer of 1972 and the 1972–73 academic year. Their reports and recommendations to the Affirmative Action Council are, and will be, the basis for the university's affirmative action plan.

Our achievements: The total program has unquestionably been beneficial in many respects. Through the university's office for affirmative action and its advisory council, we have developed a mechanism for communications that reaches throughout the university.

As a result of these continuing deliberations, the university has evolved procedures that are forcing us to become more self-analytical with regard to policies and practices. For example:

1. We have expanded our sources of recruitment far beyond those traditionally used for this activity. Our search network includes advertising as well as a university committee organized to bring to the attention of academic departments and administrators broader knowledge of qualified minorities and women professionals from both within and outside the university.

2. We have undertaken as well a more objective evaluation of existing faculty and staff, of applicants, and of salary and fringe benefits for the various categories of employees. Well-documented procedures have been established within the several faculties for recruitment, promotion, and salary increases.

3. We have developed a program for improving the status of women and minority employees of the nonacademic staff. A career counselor has been appointed to oversee this activity and to make recommendations to improve training.

4. For the past year, all nominations for faculty have been reviewed for compliance with affirmative action regulations.

5. Relatively little information had been collected up through March 1972 on our faculty and nonacademic staff population. The affirmative action program was a stimulus to develop more complete data and to analyze these data.

In short, the positive impact of these affirmative action efforts has been substantial for the university community. However, these significant achievements have to be balanced against other considerations.

Some problems resulting from affirmative action implementation:

1. The setting of numerical goals has been especially difficult for New York University because the affirmative action program came at a critical time in our history. We were beleaguered by a series of unusual problems that demanded the almost total effort of the central administration to insure the university's survival. Our financial outlook was bleak because of these factors.

Only through the undivided attention of the university administrators, deans, and large numbers of faculty were we able to emerge from under this cloud—at a great loss, to be sure. We sold off a campus, transferred our school of engineering and science to another institution, diminished our faculty by some 300.

As a result, it has been virtually impossible to develop realistic numerical affirmative action goals for the long term. However, we shall be attempting to establish such goals early this coming year.

2. At this point, I should like to indicate a major concern. In encouraging our department chairmen and deans to make specific numerical projections of their goals for hiring women and minority faculty members, we hope that we are establishing goals toward which good-faith efforts will be evaluated in a realistic fashion.

Undoubtedly many of the aspirations experienced in numerical terms will be impossible to fulfill. Nevertheless, unless ambitious goals are set forth, the thrust of the affirmative action effort is likely to be less vigorous than if more conservative goals are chosen.

No one seems to know how these goals will be treated in subsequent evaluations of compliance. This is one of the most delicate issues facing American colleges and universities at this moment. The Federal philosophy with regard to evaluating good-faith efforts to meet numerical goals needs to be spelled out clearly and quickly. There is considerable apprehension in the minds of many educators over this question.

3. New York University has been affected in a negative way by the implementation of recruitment goals for black and other minority faculty at many other institutions. Historically we had been in the forefront of the predominantly white institutions that welcomed minority faculty members. Since 1968, however, we have experienced a diminution in the number of such professionals because of extremely attractive financial offers made by these other institutions.

4. Increasing demands for data by the Federal agencies have become a costly and time-consuming burden throughout the university. And many times these data are to be supplied on exceptionally short notice. Also, we are asked to detail certain types of data such as a racial-ethnic census of students every 2 years without knowing whether previous reports have been evaluated in any manner or without clear indication of their usage.

Periodically, investigators from the Department of Labor will appear, as they have for more than a year now, to ask far-ranging questions on wages and hours pertaining to possible sex discrimination without indicating whether specific charges have been made against us.

5. The university has borne a significant additional burden from lawsuits under the civil rights legislation and related regulations. Since 1968, we have been involved in at least 43 complaints before the City of New York Commission on Human Rights, the New York State Division of Human Rights, the U.S. district court, and the Equal Employment Opportunity Commission. Every one of the 34 completed cases has either been dismissed, withdrawn, or resulted in a decision in favor of the university; nine cases are still pending.

It would seem that "affirmative action" is being used as an excuse for initiating many unfounded cases, at great expense to the university. We wonder whether the estimated cost of $350,000 per year we have experienced thus far to gather data, respond to legal actions prompted by Federal and other legislation, and to establish our affirmative action program should be the sole responsibility of the university.

In conclusion, we concur with the need for affirmative action programs and with the fundamental concept that discrimination must be overcome wherever it may exist. We pledge our best efforts to make the Federal agency higher education system for compliance a workable one.

Mr. O'Hara. Thank you very much, Dr. Hester.

Our final witness before we begin directing questions to the panel will be the president of Hillsdale College in the State of Michigan, Dr. George Roche. President Roche, would you give us some of your views, thoughts, and experience with affirmative action programs at Hillsdale?

STATEMENT OF GEORGE C. ROCHE III, PRESIDENT, HILLSDALE COLLEGE, MICHIGAN

Mr. Roche. Thank you very much. At the risk of either repeating or contradicting something that has already been said, I think perhaps I could begin by suggesting that one of the goals which most Americans have shared, one of the cornerstones of the American self-assumption, has been that each person should be judged as an individual, on the basis of his own merits.

Thus, at first glance, a program such as affirmative action is potentially attractive to many people since it promises action in eliminating discrimination. Most Americans agree that discrimination is wrong when it treats people as members of a group rather than as individuals.

However, the question which needs to be raised concerning affirmative action is: Who is discriminating? Is affirmative action the next step in achieving the American dream—or is it a new and particularly vicious form of discrimination?

At the heart of this matter lies a fundamental question concerning group rights versus individual rights. The HEW directives which now attempt enforcement of group proportional rights are pushing toward a major change in this Nation's traditional conception of equality and opportunity.

Affirmative action, which evolved from an attempt to end discriminatory practices, has now been elevated to the level of an ideology in its own right. The means has become the end. The bureaucracy which pressed affirmative action upon the academic community does so in the apparent assurance that discrimination is the means to achieve true equality. Individual merit is to be set aside in favor of a new, collective goal for the social order.

Nowhere have the results of affirmative action been more disappointing and damaging than in the field of higher education. In the earlier stages of affirmative action, it was not yet clear to many people within the academy what the program involved or how far reaching its effects would be. Many professors, secure in their own position by reputation or tenure, have only recently begun to appreciate the hiring difficulties of many schools and qualified scholars.

Most of those same professors have long recognized that blacks, members of other minority groups, and women have been denied various opportunities without proper regard to their qualifications. Those professors greeted with approval the Federal Civil Rights Acts of the midsixties and the Executive order banning further discrimination. They looked forward to the day when all individuals would be judged on the basis of their abilities, not on the basis of their sex, race, or group membership.

By the early seventies, many of these professors were facing a painful disappointment. The news was beginning to circulate that the programs presumably devised to fight the old discriminations were introducing new discriminations of their own, wholesale. In the name of public policy designed to remove discrimination from the academic community, the thrust of HEW affirmative action programs seemed to be demanding the deliberate introduction of discriminatory quotas.

Affirmative action, through a mixture of idealism, excess zeal, and political authority, seemed to be destroying precisely those values which it had been brought into existence to protect. Equality of opportunity had been increasingly set aside in favor of equality of result, thus denying the whole basis of professional qualification or individual achievement.

The new programs were treating people as members of groups rather than as individuals, and the reaction within the academic community began to be increasingly critical. Columbia University Philosophy Professor Charles Frankel fumed: "We haven't had this kind of intervention since the days of Joe McCarthy."

John Bunzel, president of California State College at San Jose, agreed:

> I've heard cases of people hiring someone just to avoid a hassle with the Federal Government. I know of people who have gotten letters saying, "Your qualifications are excellent but we are looking for a black or a woman this year."

Reverse discrimination has been the direct and inevitable result. A quota, goal, guideline, or whatever which enforces hiring preferences according to sex or race can do so only by denying otherwise qualified candidates proper consideration for the same position. Affirmative action quotas are, by nature, inflexible. Such quotas can achieve their announced end only by enforcing the very discrimination they once set out to stop.

Meanwhile, what effect does affirmative action have upon the minorities we are trying to help? Here the story is saddest of all.

One of the casualties of affirmataive action has been the black college and university. Competition has become so intense for qualified black professors that the black schools are losing their most qualified faculty members to those large, prosperous, predominantly white institutions that can afford to pay substantially higher salaries.

Meanwhile, qualified minority members are also penalized by affirmative action. What quotas and special privileges are saying all too clearly is that the minority member just doesn't have what it takes and, as the result, must be given what he is unqualified to earn.

Even the minority member who earns his competence will surely be undermined as the result. The suspicion will be present in his mind and everyone else's that his success may be due to special privilege, not talent and hard work. No one resents this aspect of affirmative action more bitterly than the qualified minority member himself.

One of those highly qualified blacks is Prof. Thomas Sowell of the University of California of Los Angeles, now on leave at the Urban Institute in Washington, D.C. In response to what has become known as an affirmative action letter, Sowell stated his case plainly.

SEPTEMBER 18, 1972.

PROF. FRANK C. PIERSON,
Chairman, Department of Economics,
Swarthmore College,
Swarthmore, Pa.

DEAR PROFESSOR PIERSON: This morning I was pleased to receive a letter from Swarthmore College, an institution for which I have long had respect, and reports from which have added to my admiration.

Then I opened the letter and learned that "Swarthmore College is actively looking for a black economist . . ." and the phrase that came immediately to mind was one from a bygone era, when a very different kind of emotionalism was abroad, and a counsel facing Senator Joseph McCarthy said, "Sir, have you no shame?"

What purpose is to be served by this sort of thing? Surely a labor economist of your reputation must know that unemployment among black Ph.D's is one of the least of our social problems, and has been for years—long before "affirmative action." In general, even, the salary is no higher at a top college than at less prestigious institutions for a given individual. So you are doing very little for black faculty members with broadcast recruiting campaigns like this (I note the letter is mimeographed). Maybe you think you are doing something for race relations. If you are going to find a Swarthmore-quality black faculty member, that is one thing. But Swarthmore-quality faculty members are found through Swarthmore-quality channels and not through mimeographed letters of this sort. Many a self-respecting black scholar would never accept an offer like this, even if he might otherwise enjoy teaching at Swarthmore. When Bill Allen was department chairman at UCLA he violently refused to hire anyone on the basis of ethnic representation—and thereby made it possible for me to come there a year later with my head held up. Your approach tends to make the job unattractive to anyone who regards himself as a scholar or a man, and thereby throws it open to opportunists.

Despite all the brave talk in academia about "affirmative action" without lower quality standards, you and I both know that it takes many years to create a qualified faculty member of any color, and no increased demand is going to increase the supply immediately unless you lower quality. Now what good is going to come from lower standards that will make "black" equivalent to "substandard" in the eyes of black and white students alike? Can you imagine that this is going to reduce racism? On the contrary, more and more thoughtful people are beginning to worry that the next generation will see an increasing amount of bigotry among those whites educated at some of the most liberal institutions, where this is the picture that is presented to them, however noble the rhetoric that accompanies it.

You and I both know that many of these "special" recruiting efforts are not aimed at helping black faculty members or black or white students, but rather at hanging onto the school's federal money. Now, I have nothing against money. I have not been so familiar with it as to have contempt for it. But there are limits to what should be done to get it, and particularly so for an institution with a proud tradition, at a time when the government itself is wavering and having second thoughts about this policy, and when just a little courage from a few men in "responsible" positions might make a difference.

Yours sincerely,

(Signed) THOMAS SOWELL.

Professor Sowell has ample reason for his anger. A young black woman with an IQ of 142 and comparable grades and recommendations was told by a national organization that she should be eligible to receive financial aid for legal studies if her scores were low enough. The scores were too high; the aid was denied.

Another young black applied for a well-publicized doctoral fellowship specifically for black students. The fellowship was denied to this student, despite his brilliant academic record, because his social and political views were insufficiently militant.

The current thrust toward "helping" the minority member in pursuit of his education seems determined to penalize real achievement wherever it appears.

Meanwhile, the unqualified minority member is also cheated in the education which affirmative action promises. In the early 1960's, a great drive was underway to bring minority students to predominantly white schools. Between 1964 and 1970, the number of blacks on previously white campuses jumped 173 percent, from 114,000 to 310,000.

The promise held out to a generation of young blacks was a lifetime of material success within "the system," a promise which higher education could not hope to deliver, especially since many of these minority students attracted to the campus were unprepared for the life and work which was thrust upon them.

Just as many of these students are ill-prepared to participate in higher education, so are many of their professors ill-prepared to offer a quality experience to their students. Affirmative action has greatly aggravated this tendency. The attempt to achieve a statistically adequate representation of women and ethnic groups on college faculties has tended to produce a rush to discover sufficient numbers of well-qualified professors with minority credentials.

In actual practice, the numbers demanded of such minority types far exceed the qualified people available. Thus a strange new word has entered the affirmative action dialog. Today we talk about the appointment of persons who are not qualified but who are "qualifiable." In point of fact, the guidelines state: "Neither minority nor female employees should be required to possess higher qualifications than those of the lowest qualified incumbent."

Has merit come to mean only equality on the lowest level of performance? Not only does this do an injustice to the institution and the students coming in contact with faculty members unqualified to hold their positions but also it excludes from consideration large numbers of an entire generation of young scholars, quite well qualified to hold a position, yet often rendered ineligible by virtue of their nonmembership in an HEW-approved minority group.

Unfair discrimination and the lowering of standards go far beyond reverse discrimination. Today even well-qualified blacks are passed over for consideration because they are not from the ghetto. The search is not merely for blacks but for "authentic ghetto types."

Not only have the bad results of this program been visited upon those minorities which the program was intended to help but the institutions through which these minorities seek to obtain an education have also been damaged.

The briefest examination of a completed affirmative action plan should make it abundantly clear how high the costs are in preparation of the original material. It has been estimated by the business manager of a large Midwestern university that $1 million would be necessary to make the transition to the new set of records and procedures demanded by affirmative action on his campus. This figure does not include the continuing costs involved in the maintenance and monitoring of an affirmative action program.

One academic investigator deeply involved in studying the impact of affirmative action programs on a number of campuses conservatively estimates that an ongoing affirmative action program, operated within HEW guidelines, would consume 50 percent of the total administrative budget of a typical school.

At a time when resources for higher education promise to be in increasingly short supply in the years ahead, such administrative costs are likely to have a great impact, probably further increasing dependence upon political funding.

Another problem arising within the academy as the direct result of affirmative action is the application of improper measurement standards, standards unsuitable to higher education. The language and practices developed by the Labor Department for application of affirmative action programs in industry have been imitated by HEW and applied to higher education.

There should be recognizable difference between a plumbers' union and a faculty. There is also the vital difference that the university is a highly decentralized institution which HEW now proposes to administer, not only as though each school was a tightly knit unit but also as though all schools were nothing more than interchangeable units of "the education industry." Such standards cannot be applied without doing lasting harm.

Lowered standards in admissions and faculty hiring, induced by HEW standards and such bizarre notions as the "qualifiable" candidate, will also inevitably have an effect throughout all segments of higher education. It should be obvious that the hiring of a faculty member on any other basis than the particular merit of that individual faculty member must, in the long run, be prejudicial to the quality of the institutional faculty so affected.

The responsibility of each faculty and administration in this country is to find the most qualified person available for a particular post regardless of race, sex, religion, or national origin. Any other basis for selection is not only discriminatory but must necessarily be a downward step in the quality of the institution.

The same situations apply for admissions policies in academic institutions. Those institutions which have experimented with lowering their admissions standards to achieve racial balance have then found that the students admitted under the lower standards can be retained in school only if the institution is willing to lower its classroom standards as well. As in the case of discriminatory hiring, discriminatory admissions practices work directly contrary to the ideal of quality education.

Perhaps one of the most saddening aspects of the entire affairs is the special damage which affirmative action inflicts upon the very people for whose benefit the program presumably operates. The hiring of professors or the admission of students on any other basis than ability works a particular hardship on the "favored" groups.

The qualified, achieving students and teachers can never be sure of where they stand. How can one build an academic standing when neither he nor his colleagues will ever know for sure whether he is there because of ability or because he was part of some racial or sexual quota?

The unqualified student or professor fares even worse. Such a person can be retained only by lowering standards and thus cheating those involved of the education they have been promised.

The U.S. Office of Education has recently announced that it is engaged in developing new standards to apply to those organizations which accredit colleges and universities. Accreditation is a major factor in higher education. Without it, a school cannot hire qualified faculty, cannot guarantee students that scholastic work will be recognized on a transfer basis by other institutions, and indeed probably cannot long survive in the present academic climate.

And now it is proposed by the U.S. Office of Education that this life and death power of accreditation be made subject to a single national pattern. One of the suggested items in this new pattern would be that accrediting agencies have "ethical standards for institutions and programs in such areas as discrimination in admissions and hiring * * *."

Such total Federal control for all schools, whether or not they receive Federal funds, is not far down the road. The National Institute of Education has already received an initial grant of $92 million to facilitate research and central planning for the new national programs.

These principles are coming to faculties now in the affirmative action assumption that racial and sexual faculty proportions should be identical to the racial and sexual proportions of society, as a whole. Attaining such racial and sexual proportions is a practical impossibility.

For example, there simply are not enough academically trained women to staff 50 percent of America's institutions of higher learning, though this fact does not deter the attempt.

Nor does any concern over finding academically qualified persons in such larger numbers seem to dismay the ideologies. Sacramento State College has sent out letters announcing:

> Sacramento State College is currently engaged in an Affirmative Action Program, the goal of which is to recruit, hire and promote ethnic and women candidates until they comprise the same proportion of the faculty as they do of the general population.

The practical reality is: The enforcement of minority quotas on faculties is lowering professional and academic standards. The further affirmative action inflicts its ideology of statistics on the universities, the less they will be able to call themselves institutes of higher education.

As in the case of minority quotas, serious confusions and potential injustices are involved in academic quotas for women. How does a school determine that women are "underutilized"? The current recommended bureaucratic method is to measure the percentage of degrees granted nationally to women in a particular discipline against the percentage of total teaching positions held by women in that same discipline on a particular campus. Never mind whether those women available nationally wish to teach at your school; never mind whether you have positions available to offer those women; above all, never mind whether or not those women candidates interviewed for a job are the best qualified for the particular job in the opinion of faculty and administration. No; the only deciding factor is to be the quota.

And the quota for hiring women is in process of upward revision. Those zealots who think in quantities rather than personalities have decided that an insufficient number of women are entering academic life. Why not have as many women as men completing terminal degrees and assuming teaching positions? Why not indeed, unless women, for whatever reason peculiar to their individual taste and judgment, would prefer to do something else.

In an effort to force upward revision of the academic quotas for women, title IX of the 1972 Higher Education Act contains provisions prohibiting sex discrimination in all federally assisted educational programs. Under special scrutiny are institutions of professional and graduate education. HEW has yet to formulate complete guidelines for the project, but it seems clear that graduate schools will soon be required to establish sex quotas for admissions and for numbers of graduates. One such program already contemplated by a western university has been described in the following terms:

> The university would be charged with the responsibility of conducting an analysis of its students to determine where women are underrepresented, setting reasonable goals and timetables for correcting underrepresentation and designing a program through which it would achieve these goals. Appropriate steps to take under this procedure would include: A review of admission procedures; the selection of admission committee members on the basis of their ability to be impartial with regard to the admission of women; a review of financial aid distribution; the development of affirmative recruiting techniques; and the integration of courses concerning women into the curriculum.

Even after we have decided whom to reward and whom to punish, we are still faced with a problem: How do we gather information to measure quotas for various minorities?

There are a number of State and local laws specifically forbidding the requirement of racial, sexual, religious, or ethnic information as a condition of employment. Presumably, all this is now set aside. Questions and answers for higher education guidelines states:

> Under the principle of Federal supremacy, requirements for information under the executive order supresede any conflicting State or local law. An individual, however, is not legally bound to report such information about himself.

The real problem lies in the fact that the institutions involved are required to provide that information under affirmative action, whether or not the individual employees are willing to cooperate. Columbia University conducted its inquiry into such matters in a way which would give the necessary A.A. information and still not involve individual faculty. "Census reporters" were appointed in each division of the school. These reporters were to make ethnic identifications "based upon the reporter's general knowledge and observation of the employee." Applicants for new positions, HEW requires that all applicants be classified, whether or not subsequently employed, were to be checked out by "visual survey." All of this was to take place without the knowledge of the individuals being "surveyed."

This is ridiculous. It is hard enough, in some cases, to tell an individual's sex at a glance, much less ancestry or oppressed status. A few short years ago, had a novel described such a system of ethnic measurement at some fictitious university, it would have been received as a farce or a fantasy. Today such antics are undertaken as a serious enterprise.

Those institutions more open in their measurement techniques have also had their problems. A sociologist at Syracuse University, attempting to gather information on the status of black professors in predominantly white schools, quickly discovered the reason: Many of those contacted in his national survey simply refused to cooperate. A number of the faculty members labeled black by the sociologist's informants returned their questionnaires with "white" indicated as their racial preference. Other professors wrote, asking for more information:

> I would request you kindly to define more precisely what you mean by the term "black"? Am I right in supposing that you are seeking information regarding American faculty of African descent? Or do you wish West Indian and African faculty members to be included—or dark skinned faculty from other countries?

Michigan State University has also had its problems in computing minorities. Robert Perrin, vice president for university relations, has described what he calls "the numbers game," a game involving collection of vast amounts of statistical data concerning the employees and students of a school. He bemoans the lack of cooperation among those persons being counted. For example, some 150 MSU students categorized themselves as American Indians, 15 times the actual number on campus. Others returned cards with additional categories marked: "Super Jew," "Texan," "50th generation Hun," or "female," as Perrin describes the result, "One determined iconoclast not only mutilated and spindled his computer card, he stapled it as well."

If the President of the United States has the power to command colleges and universities to establish faculty quotas on the basis of race and sex, why not faculty quotas on the basis of ideology or party membership? Unless we answer definitely the questions concerning which portions of society are public and which are private, our inevitable tendency will be toward the totally politicized state.

Today Federal power within the academy has already grown to life and death proportions. Federal funding already provides great leverage. The situation seems well on the way, through a variety of channels, to applying the same pressures to all colleges and universities, whether or not they receive Federal money. This seems to be the assumption of much Federal policy.

Elliot Richardson, former Secretary of HEW, defended affirmation action by claiming it was the Federal Government's vital interest to assure "the largest possible pool of qualified manpower for its projects." As Prof. Paul Seabury immediately asked, "Does HEW now regard universities as Federal projects? If so, how far down the road of government control have we come?" In view of all the pressures discussed in these pages, pressures involving funding, accreditation, admissions, faculty hiring and nearly every other aspect of campus life, to be administered by a variety of Federal agencies, parallel State agencies, and the courts, it seems clear that we have come a long way indeed.

Not only is the power of self-determination passing from the academy, but in many cases the rise of affirmation action is destroying quality and standards as well. Higher education must have no priority ahead of the search for truth and the perfection of learning standards. When "social justice" supplants these goals within the academy, the result is likely to be a misdirection of attention and scarce resources from the primary goal of education.

One effect of that misdirection has been the extremely expensive administrative costs which accompany affirmative action. One small college president announced: "To tell you the truth, my little college simply does not have the personnel to go through all our records and do the necessary homework." The Office of Civil Rights investigator replied: "Too bad. You will just have to dig somebody up to do it."

Another highly disturbing aspect of the present rush toward affirmative action has been the cavalier attitude adopted toward traditional legal guarantees. The OCR tendency has been to dismiss those abuses of legal rights which have arisen in AA programs on many campuses as mere "excesses of zeal" on the part of local officials.

In June 1972, Stanley Pottinger publicly declared:

> I am convinced that the specter of lost autonomy and diminished quality among faculties is one which obscures the real objective of the law against discrimination.

As one commentator has observed, Pottinger seems to be implying that a law's consequences should not be allowed to obscure the intentions of its maker. For the zealot, good intentions are always enough. Presumably we may then overlook the harmful consequences of such laws.

And harmful consequences there are in abundance with affirmative action. For example, one of the root assumptions of Anglo-American jurisprudence has been that the accused is innocent until proven guilty. Not so with affirmative action, which assumes the educational institution guilty of discrimination until the school proves its innocence. Personnel records, previously considered confidential, are now regarded as fair game in affirmative action investigations, with no interests whatsoever displayed by the bureaucracy in securing permission from the persons whose personal files are thus converted into public property.

What we all want, and what some members of society presently lack, is acceptance as an individual by others. It is that acceptance which constitutes genuine equality. Each of us wants to be a person in his own right. Such acceptance can hardly be produced by governmental compulsion. Compulsion smothers any creative response to a problem.

Quotas undercut acceptance for the individual. No matter how many legal guarantees enforce the quota, the primary effect is a stoppage of the acceptance and the opportunities for individual development which we seek. If a person lacks qualification for a position, it is a disservice to that person and to society as a whole to enforce a quota and compel legal acceptance.

Quotas limit rather than enhance opportunity. They degrade rather than dignify. As one pastor of a Harlem church put it, speaking for all quotas-entrapped groups, "If we are going to be judged without discrimination then we will also be judged without pity." The only equality with real meaning is that based upon an absence of prejudgment. The quota is itself a prejudgment, institutionalized with the force of law, standing as a permanent obstacle to true equality.

Perhaps the route toward alleviation of our present discontents lies through a restatement and redefinition of the equality we seek. A vast majority of us want genuine equality of opportunity for all citizens. Discrimination on the grounds of race, sex, religion, or any other group oriented basis is simply unacceptable. But the course we now pursue is calculated to enforce a peculiarly American version of apartheid, and apartheid which not only sets race apart, but adds sex as another category of public regulation.

By every standard of simple equity, by the standards of the American dream at its best, in the interest of all individuals, especially in the interest of the "disadvantaged," and finally in the interest of society as a whole, we must understand that the egalitarian dream now pursued by affirmative action programing on the campuses of America's colleges and universities is undercutting the very structure of the open society. The commendable quest for equality of opportunity must not be confused with the shoddy, politicized quotas of affirmative action.

Despite our problems, one of the central facts of American history has been the achievement of a high degree of individual equality for most citizens. Perhaps the nation somehow sensed that human beings achieve their fulfillment in what they become. Certainly we are most fully ourselves as we aspire to further development, and enjoy the freedom to pursue it.

It is in connection with our aspiration that we seek equality for each person. Surely race or sex is an inadequate basis for such equality. We do not aspire to be black, white, or yellow, male or female. These categories are facts of existence, but the achievement which we seek in life must lie elsewhere, and it is elsewhere that the definition of true equality must also be located.

For this reason affirmative action, it seems to me, is unacceptable. I for one am delighted that Congress is now examining the fact of A.A. programing. Surely, neither Congress, and certainly not the voters will tolerate bureaucratic abuse of higher education and individual dignity now being perpetrated in the name of affirmative action.

Thank you.

Mr. O'HARA. Thank you very much, President Roche.

Thanks to all of you for your statements.

You properly directed your testimony today toward the problems of the institutions of higher education and the peculiar problems they face, but I would like to take some exception to what has become, I think, a fashionable method of analysis among educators; that is, that affirmative action involving goals or quotas or whatever it might be is OK for everybody else but not for institutions of higher education.

I think, if you believe that, you have not been talking to employees of industry much recently. I think you will find that if there are two men in the tool room, and one has been working there longer than the other and has achieved a higher level of competence and it comes time to promote one of them and the other is promoted, you will find a very unhappy fellow, and he would not agree with you that that is OK. He might take some exception to its application in that industrial kind of work.

Dr. Fleming.

Mr. Fleming. May I respond for a minute to that, because I think it is a legitimate criticism. At least, speaking for myself, I don't mean to suggest that it is all right for everybody else, and it is not all right for us. I, for instance, think there is a difference between goals and quotas.

I am not opposed to a goal situation, and we do attempt goals at the University of Michigan. I have spent a lot of time publicly, trying to explain to people I think there is a difference between goals and quotas. The difference is essentially this: I was explaining it in terms, for instance, of our minority enrollment. We agreed some years ago to try to reach a goal of 10 percent of minorities and, particularly, in this case, blacks.

We have not yet achieved it, and the date has passed by which we expected to achieve it. The reason we have not achieved it is that we insisted in our program upon a minimum threshold of admittance standards, that we have turned down, therefore, all applicants who fell below that level.

Now, we could have reached 10 percent, and had there been a goal, we would have reached it, or rather had there been a quota, we would have reached it. Because it is a goal. Because it is a goal, we said:

> No; we will try to do that, but we will not do it if doing it means taking people who basically are unqualified to come to this University.

In any event, I was not referring to that particular aspect of the difference between an industry and a university. One of the biggest differences I find is something President Roche touched upon; that is, universities and colleges tend to be quite decentralized operations. It is very difficult to tell who is management in a university, because a great many decisions are made at departmental levels, at college levels and so forth, and it is not like in industry, where decisions tend to be made, particularly policy decisions, on a much more centralized basis than they do in colleges and universities. That, I find, is a particular difference between industry and universities.

Mr. O'Hara. Well, the temptation is great to wander off into that example you gave, and I don't know if I am going to yield to it or not.

Well, just for a moment—the university has not met its quota or its goal, which is not a quota, because it does set a certain minimum threshold for admission, right? You are talking about students, and that is not really the subject of our discussion.

Mr. Fleming. That is right.

Mr. O'Hara. But, on the other hand, you don't, do you, exact the same requirements of minority students for admission that you do of other students? In your school of literature, arts and sciences for this coming entering class in September, more have applied than will be admitted, isn't that the case?

Mr. Fleming. That is true.

Mr. O'Hara. And in selecting those who will be admitted, you had reliance upon high school performance, for entering freshmen, that is, and you had reliance upon recommendations of school counselors and upon scores achieved by students in SAT tests and ACT tests?

Mr. Fleming. Yes.

Mr. O'Hara. And I think you also require applicants to take the substantive test administered by the College Testing Service? So, you use all of that. Then you say: "All right, we are going to have a cutoff around here somewhere, and it generally gets out to a SAT of around 1,200 and certain other persons, and then, in addition in an effort to meet your goal, you admit certain minority students who do not measure up to that standard, isn't that correct?

Mr. Fleming. No doubt about it, we never denied this. We said this very candidly, publicly any number of times, and we justify it—justify doing it really on this basis; when we are dealing with all students like, say, "all other students," admission standards are based essentially on high school grades and test scores. There was a day when the university was much smaller when we also dealt a good deal in recommendations of their high school people. We have not done it much in recent years, since the University has become so large.

We rely on all other students essentially on the basis of grades and test scores. Where concerned with minority students, we have in addition added the dimension of what their high school counselors say about them—is this a student that can make it at the university? If the answer to that is "yes" and if the test score and high school grades meet what we consider a threshold which does mean that, that student can do the work required, because we don't want two standards at the university, then we have admitted them.

We have done it on the theory that in order to bring in any significant number of minorities, which we believe is good for the rest of the university, we will do it on that basis. Otherwise, we recognize we will not get more than a very small number at this point in time.

We hope that that situation will change over a period of time, but we do do it and we have always said very candidly exactly what we are doing. And we do get criticism of it, but it is interesting that by and large, we get very considerable acceptance that we are doing that.

Mr. O'Hara. I don't know, you know, that is a value judgment. You see, it seems to me, it is only a difference of degree between saying: "Well, we don't admit anyone who is not—who does not possess the minimum qualifications," on the one hand, or saying, "Well, we require everybody to have the minimum qualifications, but we require majority applicants to have greater qualifications than minority applicants." I think that is a difference in degree.

In fact, now, I am reading this back into some of our discussions, in fact, it is very much the same sort of thing, Dr. Fleming, to which you objected when an effort was made to impose that standard on your faculty appointments.

Mr. Fleming. I would argue there, Congressman, it is quite different as a matter of fact. When you bring in students, you are bringing in temporary people, who will be there for a relatively short period of time. You can bring them in, if they do the work, as indeed we judge they are capable of it, then they will come out with a degree and move into society and so forth.

When you hire faculty people, you are hiring people whom you hope will be with you for a long time, therefore, you want the very best people you can find. Those are the people who are going to have an impact on generations of students, not just a single group as they come in. They are going to have an impact over a long period of years. That, I think, is different from the other objective.

Mr. O'Hara. In a situation where you are dealing in terms of the individual injustice involved, where you are dealing with a limited resource in the one case of faculty employment and the other case admission or places in the University of Michigan's School of Literature, Arts and Sciences and you ration those scarce resources on a basis that takes into account a person's race, it seems to me that is discrimination.

Mr. Fleming. There is an inequity, I don't think there is any question but what there is an inequity about it, but the question is, is it a legitimate inequity which you carry on hopefully for a limited period of time in recognition of an even greater inequity which has occurred over a long period of years in making it possible for those students to come into the mainstream of universities. You can argue that.

Mr. O'Hara. I don't recognize any legitimate inequities. I am sort of old fashioned.

Mr. Fleming. I would argue there have been.

Mr. O'Hara. I know my colleagues are anxious to get into this—and before I give up my prerogative of my chairmanship, I think President Hester was trying to get a word in edgewise—did you wish to say something?

Mr. Hester. I wanted to comment on one aspect of the subject you raised with Dr. Fleming. Part of the reason that we have applied a somewhat different standard to the admission of minority students is, that we recognize that the measures that we use are not perfect. The high school averages and SAT scores and all of the other measures are not perfect measures of a person's capability.

In the case of the majority students, we have no choice, we have to use this. We are, as part of our affirmative action philosophy, attempting to increase opportunities for members of minority groups to prove themselves in society, to take advantage of higher education to get into the stream that will lead them to professional positions. So, by taking a few more risks, there, we do enable people who might be excluded by rigid application of our scores from trying out in college and having the chance to do it, and that has proved to be correct—that, sometimes, because of poor previous schooling, high school environment in which there was not enough stimulation or adequate instruction, these difficulties have been overcome in college. And students who would not have been admissible under the general standards have been able to go forward, go to graduate school and become part of the pool of people qualifying for professorships.

Mr. O'Hara. I don't object to your doing it on some nonracial basis—you say you are going to give special incentives to people coming out of poverty, to children of migrant workers of whatever color, if you were going to do that——

Mr. Hester. Excuse me, we do do that. We don't limit it to black or Puerto Rican.

Mr. O'Hara. If that was all you did—searched out people who you felt were qualified for admission because they had overcome handicaps, physical, social, economic, and what-have-you, and they were demonstrating strength of character and determination that you felt weighed heavily in their favor, and did it on a nonracial and nonsex and non-ethnic basis, I would have no complaint about that. That seems to me to be a sensible way of doing it.

Mr. Hester. No; we are doing it on that basis.

Mr. O'Hara. You are also doing it other—for instance, if a black Congressman's son and mine were both to apply, you would consider the application of my colleague's son in a different scale than you would my son, wouldn't you?

Mr. Hester. I doubt that very much.

Mr. O'Hara. Well, I think you would see from the pictures that they submitted that one of them was a minority group member and the other was not.

Mr. Hester. An advantaged minority group member has the same difficulty getting in as an advantaged majority group member.

Mr. O'Hara. Is that true in your system?

Mr. Fleming. Yes.

Mr. Hester. In any case of programs for the advantaged at our institutions and many others, they apply to all disadvantaged groups, not just blacks. It so happens, in a big city like New York, a substantial number of those that come in under the program come from—the black or Puerto Rican communities, but also, white students that come in under the same category.

Mr. O'Hara. You are in the situation that Clarence Mitchell described to us a while back, where some law school admitted a student—they couldn't require pictures—so they admitted some student who was a graduate of a black college, and when he showed up at the door they discovered he was not black, they turned him away.

Now, that, you know, that worries me. Did you want to say something, Dr. Randolph?

Mr. Randolph. Yes; I have just two comments on the latter point. I think it would be well to keep in mind that what we are talking about is nothing unique in higher education. I find it always rather amusing when people begin to take a rather hard line about this. Students have been admitted to colleges on inequitable standards for decades and special admission requirements for athletes, pretty girls, members of particular sororities. So, really, what we are talking about isn't something new, not at all.

Secondly, as a result of the passage of this legislation, and not simply because of the legislation we are talking about in Executive orders, but due to good faith efforts on the part of leaders in higher education, the vast majority of minority students are accepted on the same basis as whites. What we are talking about is not, you know, the majority, the minority, and what we are talking about are practices that have been going on in other places for decades, and we all know it.

Mr. O'Hara. And in which a number of us, in and out of the college community, and the Congress, have been opposing for decades.

Mr. Roche. As to the point—it has been going on for decades in a variety of programs, and deciding who you want to have in school and who you don't, that is fine. The question at issue is, whether or not they should be institutionalized and required by Federal law. That is a different matter as to the decisions being made in that fashion.

As to this matter of black or white, we are a little down on advantaged people and preferring the disadvantaged. I would have to say, it does not speak for us. We take our people even in terms of their income strictly on the basis of their arriving there one at a time, and it goes for blacks as well. I say that without apology.

We have a great deal of scholarship money available, which goes to people on the basis of their ability, again, blacks or whites, and our youngsters, to give the institutional plug and to brag for just a moment—but at Hillsdale, we found that simply because our blacks or whoever comes to us as individuals, the tendency of separation, the tendency to become a class apart, has not been the case there. This, I think, contrasts very favorably to the situation at Cornell a few years ago, when there had been a big push for black admissions and when some of the professors began to adopt an attitude "I give them all A's and B's, and the hell with them."

That, I think, is a significantly unproductive attitude which finally has resulted in some shotguns and total breakdown of the system there.

My belief is, simply to treat people on the basis of one at a time, and then bring them in under any basis you want to so long as it is not institutionalized. But everything has to be in lock step, and this is what society wants. But perhaps it ought to be what the individual professor or admission counselor should be doing—the best he knows in the context of his particular situation, to take people one at a time.

Mr. O'Hara. Mr. Esch, any questions?

Mr. Esch. Thank you, Mr. Chairman.

I must say, this has been a rather refreshing Monday morning after a rather hectic and historic week.

Mr. O'Hara. We can't let events in the sister branch divert us from our business.

Mr. Dellenback. That has been steadily our attitude all the way through, if I may say, Mr. Chairman.

Mr. Esch. Before I take my time, I am reminded, President Randolph, at a recent University of Michigan gathering, one of yours, one of our now fine economists, Bill Haver, introduced Paul McCracken in the audience and described how a personnel officer in a major manufacturing concern came into the chief executive officer, the president of the company, and demanded that he find a one-armed economist. So, he was a rather authoritarian president of a corporation, so the personnel officer went out and hunted high and low for a one-armed economist, and after a 6-month search, he came back in with apologies to the president of the corporation and said he couldn't find the one-armed economist. And he just wondered why, if he didn't mind his asking, why he wanted a one-armed economist, to which the president said:

> I am very sick and tired of all my economic advisers telling me, "No; on the one hand, this can happen and on the other hand, this will happen."

Subsequent to that speech—I might say parenthetically, but it appears—Paul McCracken proceeded in the next 20 minutes to use, "on the one hand and on the other hand." I jotted down 12 times during the course of his statement.

I am reminded, also, however, of some days in the late sixties when the colleges were in a crisis stage on the campus, where we had campus riots and demonstrations. I am reminded, Mr. Chairman, this subcommittee came within a vote or two—because the Congressman for Wisconsin and I were twin votes—of requiring that each college would submit a plan to HEW indicating how they were going to handle the discipline on the campus.

We reached the point, at that time, that decided that would be one step removed from HEW approving the plans of how you handle discipline on the campus.

Finally, that legislation was rejected. Apparently, now we have that instruction through Executive order rather than through either legislation or regulation.

I think, as I think our chairman does, that a major, underlying issue in the attitude of the American people is a strong negative reaction to the continual intrusion of the Federal Government on individuals' lives, and what we are discussing today, perhaps, is that attitude beginning to permeate the faculties at our various institutions.

Before I get into one or two specific details, I sense, and most of you on the panel, have alluded to the difference between the industrial and academic communities. But I sense that the full basis of a university structure is to establish an environment in which the given discipline controls.

After all, the discipline is inherent within that word, but its philosophy, chemistry, or be it pure society or physical sciences or social sciences, that the discipline itself should be the determinant, and so, I understand that, in most college campuses, correct me if I am wrong, that most of the promotions and the hiring and all is not at the administrative level whatsoever. But you develop a structure to allow those given disciplines to be paramount within the university structure. Am I correct that, that really is the way?

Mr. FLEMING. I think, it varies some with the size of universities, and I am not sure at President Roche's institution, for instance, being smaller, they may be able at a more centralized level to play a part. Certainly, at a big university that is the way that it operates.

We recognize, and this goes back also to the point of the difference from industry, we pay a considerable premium in universities for individuality. Those of us in the administrative structure sometimes think that the price of that is sort of organized chaos.

We do permit wide individual decisionmaking and consultation, and that, in many ways, is the essence of what maintains this individuality which we think is a great asset to institutions.

The price you pay for it is a highly decentralized structure, at least in big universities.

Mr. ESCH. Would you want to comment on that?

Mr. ROCHE. I think he is probably correct; that, the smaller the institution, the great likelihood that we can know our people directly and personally, faculty or students or whatever.

Of course, that makes it all the more essential that we treat our applicants for a particular position one at a time rather than according to any outside abstract standard. However, you are still quite right when you suggest in an institution as small as ours there is room, necessity, in fact, to insure that the individual faculty member and the people connected with the same discipline, have a major hand in the selection process, and it is a small enough institution that I also have a major hand. But I don't feel this should be done without a proper consultation and involvement. So, yes, it is a highly personalized and often discipline oriented process, even in a small institution.

Mr. ESCH. I would like to ask one or two specific questions, and one is with reference to Dr. Fleming's comment about the failure to have hearings, which you alluded to within your prepared texts. It is my understanding in the material furnished me by counsel, that there, under provision of the EOA Act, it provided both for full hearing and adjudication under provisions of title V, United States Code, and more specifically, in a supplement for Federal regulation in employment practices in the manual for field officers, prior to the imposition of any requirements, reasonable efforts, within a reasonable time must be made to have compliance, and so forth. And when these efforts fail to produce corrective action adequate to overcome and so forth, appropriate administrative procedures will be required.

The first process will be a letter giving contractors 10 days for requesting a hearing before an impartial hearing officer. I am not sure that time factor is suitable. So, it is my understanding that both the regulations and then the supplemental materials suggesting the funcions under the regulations to explicitly indicate provision for hearing, and it has been your experience there has not been opportunity for hearing?

Mr. FLEMING. If I may respond. That particular section was what I said was specifically furnished to me by the person who is our Affirmative Action Director.

You will notice that it is particularly directed at the opportunity to appeal from the regional offices.

Mr. ESCH. Prior to that time, you wouldn't have had this?

Mr. FLEMING. Yes; a major decision from which apparently she feels at least there is no adequate way of appeal at this point.

Mr. ESCH. What you are suggesting is, we might immediately look at the hearing process beyond the regional level?

Mr. FLEMING. Yes.

Mr. ESCH. I think, Mr. Chairman, that is a point well taken. The other factor you suggest is a good one, I think, and you suggested something constructive, Dr. Fleming, in that you are suggesting we have comparable to what we have in labor negotiations, even though there are not other similarities, we might allow local determinations to prevail unless it is overturned by another process. So, what you are suggesting, or, in effect, what we have in EOA is nothing comparable to what we have in the labor negotiations' field?

Mr. FLEMING. Yes; and I would like to speak to it because it is an important point. I have had a great deal of experience in the labor arbitration field, and in that field if there were an arbitration proceeding binding on a particular company and particular union, even though the grievance covered an area which would be subject to the National Labor Relations Board, or to the courts, and even though both of those agencies would retain jurisdiction over that case, they both take the position that they will not move in and rehear a case which had been heard by a private arbitration machinery, provided the procedure is fair and the law is properly applied.

Therefore, if an individual gets the case heard before a private arbitration tribunal, then goes to an agency or to the courts, they would simply look and say, "Well, our policy is not to rehear the case." There are too many of these things. There is too great a backlog. There ought to be a better way of getting rid of these.

Therefore, our first question is, did this hearing meet those criteria?

If it did, we will, as a matter of discretion, not law, but as a matter of discretion, we will not hear the case. That is the end of it.

The problem at this moment is that if the individual loses the decision before an internal tribunal, the individual can simply say, "Well, I have three or four more chances before other agencies, and I am going to go right on to every one of those."

When an individual does that it requires us to come in with full counsel in every case and spend thousands of dollars defending a case, which was already lost on its merits before the internal tribunal.

Now, that causes our people internally to say, "Why should we do this? Why not throw the whole thing out and just let them go to the agencies." If you let them go to the agencies, they face this tremendous backlog.

We believe we could provide a fair, objective, impartial tribunal internally that would hear those cases. We think, as a practical matter, it would cost us less than these multiplicity of cases that we have to go into before all kinds of agencies, and we think we could work out a procedure that would get the cases decided quickly and fairly. But it cannot be done in the present state of the law.

The Congress would have to take some action which required the administrative agencies and the courts, to respect private tribunals, where established in accordance with certain criteria.

Mr. ESCH. I sense two factors. One is—and this was alluded to earlier in other testimony. One is that, any time we are in a period of change and of great interest and concern and pressure by various interest groups, as at this time, so many are using the process as a forum, and without reference to the validity or lack of validity in a given case, but the process is being used as a forum, you are well aware of that?

Mr. FLEMING. Yes.

Mr. ESCH. I am also concerned about the fact that your institutions, and collectively, your institutions, have some real difficulties with AAUP and other groups in terms of major backlog, and I am not so certain that you, apart from Government action, have shown much initiative to follow through and develop processes and to try to develop in a nongovernmental way.

I think you have been spending time in the last 2 years reacting to Government, which, I guess, is acceptable.

Mr. FLEMING. But, excuse me, we did, in our case, set up what was known as a complaint and appeal procedure and had a tripartite board, and that board probably heard 30 cases or so. It has made decisions in a number of cases. We had, in fact, leaned over backward to accept those. We have, and it worked pretty well. But now we are running into two things.

One is our people who serve on those, who are by and large faculty people, because what happened, a grievant picks one person and the unit picks a second person, and the two of them pick a third, and they hear the case.

What happens, lately, our impartial people don't want to serve anymore because they say, "We hear these cases and make our recommendations and so forth, but then, if a grievant does not like it all they do is go to some other agency.

Mr. Esch. My reference was not to the University of Michigan, but rather to the national situation.

One final question; to what degree is the Association of American Universities developing programs to impact upon this particular problem?

Mr. Fleming. I can't tell for sure, but I know that a number are thinking about it. But they all run into the same problem. That is, "Is it worthwhile doing, when you can't make it binding."

Mr. Esch. Thank you very much.

Mr. O'Hara. Mr. Kemp.

Mr. Kemp. Thank you, Mr. Chairman.

Mr. Fleming, you were talking about that minimum threshold of qualifications for the disadvantaged or minority student applications; what, in practice, in trying to meet your goals of 10-percent minority representation, what has been the actual practice? What has happened in terms of achievement of whatever percent it was being admitted?

Mr. Fleming. It has in fact, worked out quite well. The rate of attrition for minority students is higher than with all students, but not significantly higher.

We normally have a very low rate of attrition for academic reasons. That is because we have high admission standards and, therefore, don't lose many people for academic reasons.

We have studied our attrition records. They are considerably lower for minority students than they are in most public universities for all students. We have found that a third of those we are losing among minority students we are not losing for academic reasons. They are leaving for other reasons of finance, health, desire to transfer somewhere, and so forth.

When I read a story in the New York Times recently about law schools around the country, which indicated so many students were not passing the bar examination, I knew that because our law school had reached a figure of the goal we were after of 10 percent, I suddenly realized I had never asked our law school what the record of success was on the bar. I asked them, and I was told it has been remarkably good. They have only lost, I think, it is two students in a period of 3 years, something like that, from minority groups on the Michigan Bar Examination.

So, in general, our experience has been good.

Mr. Kemp. Doctor, do you have numerical goals for recruitment?

Mr. Fleming. We set about 3 years ago at the request of the Chicago Office of HEW, we set numerical goals. Now, those goals, we hope, were realistic.

In certain departments, those goals were zero. The reason they were zero was because we knew, as President Randolph said, in that particular area, there simply were not any qualified minority people. We knew what the national record was. That did not happen frequently.

I can think of only one place where we said that. But we gave numerical goals, and, incidentally, we have never known, 3 years later, whether our plan has been accepted or rejected. We have never heard.

Mr. Kemp. You still have not heard?

Mr. Fleming. The last I knew, nobody in the Chicago area has ever heard.

Mr. Kemp. President Roche, in view of your very thoughtful and interesting testimony, how do you personally feel the academic community can expand opportunity for more people based less on these artificial criteria and based more on known ability?

Mr. Roche. It strikes me that one of the most unfortunate parts of the whole affirmative action idea of government moving in and enforcing standards in this regard is not only the damage it does to the individuals involved, but the institutional damage it does to the very attempts to correct previous discrimination.

If there has been an area in the past 20 or 25 years in the United States, which has done more than any other in the active recruitment and encouragement of the qualified minority members, whether as a faculty member or as a student, it surely would be in the area of higher education. There has been a terrific push in that direction. That is what I alluded to when I suggested there was an earlier stage in the affirmative action in the sixties, that many people felt, in the academic community, now we are going to do more helping those people, meaning that many people felt it had been extended. And now they found the process is unhelpful to the people they were trying to help.

Now, there seems to be a revulsion on the part of many professors and students against the whole idea. The point is, I don't have a precise formulation as to a nine point program. The great difficulty with the private sector is, it is difficult to summarize it because the way that Hillsdale and Michigan and New York University do it quite properly should be three different ways.

I would like to think there are a couple of thousand other ways in the institutions of higher learning in this country whereby those institutions and the individuals within them in their own way would set about a recognition of the fact that people need opportunity on the basis and judgment of their individual personalities and abilities. I think that had already been proceeding quite well, and my principal complaint against the whole idea as to affirmative action as a program is, it seems to have interfered with that process.

Mr. Randolph. I would like to make a comment on that. I am as much concerned as any of my distinguished colleagues about the administrative problems in dealing with the jurisdictional problems, especially the interpretive problems that we are all having with the guidelines and our own cost problems in terms of collection of data. However, I don't—even though I am part of the picture, as president of a college, and I am concerned about it—privately, I am not all that concerned.

It is the same kind of cost problem I remember in the 1963, 1964, 1965 period, when business began to get the same kind of rules and procedures. They brought up the same concerns. I happen to know about that because I was National Director of Compliance at the EOC at the time and sitting with all of these corporations, and we are in the same thing.

These same things get worked out, and you gradually learn how to get your administrative organization in hand.

I am just not convinced from my own experience—assuming the new legislation or amendment to legislation—we can straighten out some of these administrative problems, that from my experience, higher education, no more than business or government, will carry out its responsibilities to treat fairly people regardless of race, creed or color, and sex.

I would say, it has not previously, which is an awfully blunt statement, and statements were made the Ph. D.'s never had trouble getting a job, but, of course, that is simply incorrect.

I myself have a Ph. D. in economics, and I couldn't even get an interview. So, to say that higher education, on its own, without proper prodding, has some sort of—you know, it is just going to do what is right without someone saying "You must," I just don't agree with. I don't think it has in the past, and I don't think it really had begun to get itself together until the Federal Government, however disorganized it might be in terms of administration, would prod.

Mr. KEMP. You do see my point as to the Government doing this?

Mr. RANDOLPH. Of course.

Mr. KEMP. I represent the suburbs of Buffalo, N.Y. I had a call from the superintendent of schools the other day. He is very thoughtful, constructive, and liberal in making an attempt to provide better opportunities for minority children in the city of Buffalo, and he was anguished over a statement by HEW that he had several months in which to come up with a plan for a hypothetical quota of white students in an all-black school, lest HEW close it down. And the bottom line of it was, "It was closed down against the wishes of the parents, teachers, and the black superintendent and the black principal," and they were vigorously protesting.

It is this sort of heavyhandedness, I think, some of us are concerned about in trying to strike a balance. Mr. Roche was, it seems to me, attempting to point out there is also some good faith effort by the Government to rely on creativity of local institutions in the private sector. It is not all that bad in some instances. Do you agree or disagree, that the impetus has to come from the Federal Government?

Mr. RANDOLPH. That is difficult to answer. It has to come from both, of course. I would say there are many institutions that do not need any prodding, but I would say there are no more than in any other sector of society, be it business, church or what have you.

I am just not convinced that without the Federal Government's saying that, "We are going to have some say," you know, use certain amounts of public money, that institutions are going to follow through. I am not convinced, in fact, that the members are any better than any other group in terms of the race, sex, or what have you.

Mr. KEMP. Is the result, though, of those actions something that you would like to see implemented? I don't know what your experience is in your own college. Is the result of this activity at the Federal Government level something you would like to see implemented wherever you can?

Mr. RANDOLPH. I think it is being implemented, even with all of the problems we are having, because there have been dramatic results. Even with all of these problems, there have been dramatic results in furthering of opportunities to minority groups, disadvantaged youths and in the faculty and in business relations.

Mr. KEMP. And you ascribe all of this to the program?

Mr. RANDOLPH. Not all of it. Much of it.

Mr. Kemp. How much for the faculty? Do you agree with Dr. Fleming about the differences between hiring for faculty and recruiting?

Mr. Randolph. I am in full agreement with Dr. Fleming. I am firmly opposed to lowering of standards when it comes to the faculty. I think that is the highest form of racism.

Mr. Kemp. I am troubled.

Mr. Randolph. Do you understand what I am saying?

Mr. Kemp. Yes; I understand, but I am troubled a little bit about the result of lowering the standards, for students. What happens as they go out of the classroom and into the real world?

Mr. Randolph. I think Dr. Hester's remarks—I would go along with. Of course, we all use various tests, and we all use various methods and we also know vast differences between secondary schools and vast differences between family and environmental matters, and none of us are convinced that any of the measures we use are all that perfect, you see.

Let's face it, we are giving an opportunity. You are not guaranteeing a degree. A young person has the opportunity to pursue an education. When you are hiring a faculty member, the controlled agent in that classroom, you know, the students are totally dependent upon him, and I am firmly opposed to lowering of standards.

I have seen that, and it is terrible.

Mr. Kemp. Let me carry it one step further and say this. If the student is told that there is going to be, an affirmative action program and increasing the opportunities for students, and the student in that heterogeneous atmosphere sees there is a homogeneity among the faculty, wouldn't it be kind of a double standard? Wouldn't there be some type of problem?

Mr. Randolph. I think students are a bit more sophisticated than you are saying. I think they do resent themselves, I know black students do, being given second-class instruction simply because a person is a member of a minority group. That day is past, and there was a cry, I remember, in the sixties, "You have to get so many faculty members among black organized student groups." They want the best instruction you can get.

Mr. Kemp. President Roche.

Mr. Roche. Just a reaction to a couple of things back down the road a moment or two ago. One is, while I agree the result of affirmative action programs have been dramatic, I would question whether or not they have always been beneficial, especially, to the very class that we are trying to help.

Then, as to the question of whether or not the academic community or the business community is capable of putting its own house in order, I must say that the trends of our times have completely reversed the traditional positions to the point, I believe with all of my heart, I have a greater degree of confidence in the American people and their capacity to judge one another as individuals than is expressed in the affirmative action program.

Mr. Kemp. Thank you, Mr. Chairman.

Mr. O'Hara. Mr. Dellenback.

Mr. Dellenback. Thank you, Mr. Chairman.

This has been most helpful testimony and I have had a chance to read your statement, Dr. Hester. Yours is very helpful, I gather from some of the things you said, and I heard Mr. Roche make his statement. May I ask, President Hester—at the end of your testimony you make a clear statement you see the need for affirmative action programs—do you have anything to add to what has been said by several others about the need for affirmative action in the sense that, without it, these things would or would not have taken place, that have taken place?

Do you think that affirmative action as a program has been a principal causal element in bringing about changes? I am not now talking about student practices, but about employment practices.

Mr. Hester. There is no question that the university community is sensitive to an obligation that was recognized by conscience in the past, but has been enforced through this mechanism in a way that is beneficial. The pressure on our departments to consider all sources for potential faculty members when they are recruited, and on our nonacademic employment offices to consider all sources is beneficial.

We are in touch with hundreds of agencies representing minority groups, women, others, when we seek candidates for jobs which we did not deal with in the past. We just were not operating that way. I think that is good.

This effort is opening up opportunities in our society that are very desirable. I do want to emphasize the point which is the crux of my testimony, however, and that is the delicate subject of the philosophy that the Federal Government will adopt with regard to the evaluation of goals. We are setting goals—we have been required to—and we think there is a certain amount of merit in the setting of goals, provided they are really goals. But if we are going to be held in 5 years to having exact numbers of people in position or else be out of compliance and have our contracts canceled, the program will be disastrous.

It is an unworkable system from that point of view. I do concur in what Professor Lester writes in his book in this regard. It is much more practical to prescribe goals for the first appointment to a faculty than it is to try to prescribe goals for the granting of tenure.

Mr. Dellenback. From testimony we had in the subcommittee in recent days, the distinction between current practice and total compliance must be the greatest problem. I think this should be nondiscrimination. I think that, with all of its difficulties, it is achievable in current practice relative to hires, promotions, salaries, and all personnel practices.

But if the affirmative action goals, and I will make the distinction and go along with you between "goals" and "quota," which distinction you made, but the current practice, nondiscriminatory practices, if they are to be followed, I find great difficulty in being sure that some sort of arbitrary period, and as short a period as 5 years, is achievable relative total composition compliance.

Are you all in agreement on that?

Mr. Fleming. Yes.

Mr. Hester. Yes.

Mr. Dellenback. Do you think that will come about or do you think it is irrelevant?

Mr. Roche. Will you repeat what you said?

Mr. **Dellenback.** My question is essentially this: We say, there must be nondiscrimination in regard to race, creed, color, national origin, and sex. Now if you then have a faculty of *x* thousand, take, for simplicity of measurement, 1,000 composition, and let's assume that the average turnover is 20 years, that somebody comes on the faculty and is with you 20 years. If, in the simplistic analysis, that means you take on 50 a year, 50 at one end and 50 at the other end, I can see the 50 that come on in a given year that you can if you immediately put into effect voluntarily or, with some assistance, prodding from the Government, the practice that says there shall be no discrimination and we might within that have a rough goal, simply say if there is in truth nondiscrimination on the average that should end with *x* number of women and *x* number of minorities and so on.

Then you put it into effect for the new class that comes in. The next year you do the same thing with the new class that comes in. You do it for 5 years running. You are really concentrating on each increment that comes along as it comes along.

At the end of 5 years you are not going to have, you are not going to have brought the total mass of 1,000 into anything like the goal relationship that you set as whatever your best basic method of measurement is, the available pool or composition of society or whatever it may be, and it is in the effort of bringing these two into harmony that I have my greatest trouble.

Mr. **Roche.** I have two problems with this, Congressman. The first problem is simply that it depends a lot on the tenure situation on a given campus, but I understand there are departments at Stanford, to pick an example, where they were complaining of this very thing not too long ago in which they have departments on campus so locked in a tenure position with senior professors that they expect a 5-percent turnover between now and the late eighties, which is enough, of course, to give any college administrator, you know, gastritis just thinking about it. It locks him in an impossible situation. It certainly locks him in a noncompliance situation in terms of what you described in hoping to have something done in 5 years, so on that ground, I doubt if it can be done.

No. 2, if I could restate the essence of what I have tried to say today, I doubt very much that with such compliance, by the time we have begun judging people as members of groups rather than as individuals would produce in 5 years or 25 years the goal we are looking for, because of the resentments and misjudgments automatically built into a system when we try to judge people as members of a group rather than as individuals.

Mr. **Dellenback.** Mr. Fleming, I have a question going back to the University of Michigan, because the University of Michigan, where I did my law work, is likened to also my University of Oregon within my district; they are both wrapped up in some of this affirmative action question.

When the officials of the Government spoke with you about the affirmative action program, did they talk in terms of number of years within which something was to have taken place?

Mr. **Roche.** I don't recall that they did; no. Although the goals that we were asked to set, I remember, did have a period of time. I frankly don't remember what it was at the moment, whether it was a 5-year period or what it was and, as I say, we never did hear after we submitted it.

Mr. **Dellenback.** When you say you put a number of years into your goals program, was this done on your own initiative?

Mr. **Roche.** I think, as I reflect on it, I think they must have given us some period. I don't remember exactly what it was.

Mr. **Dellenback.** Do you have a general idea, was it short or long?

Mr. **Roche.** I would say it was not longer than 5 years and it might have been 3, but I think probably it was 5.

Mr. **Dellenback.** We had before us, the chairman will recall when we had the other day's testimony on this, and I was pushing the same general line of questioning, "What are they really pushing for, current practice change or total overall?"

I was left with the feeling that they were forcing to the effect that current practices be without discrimination. But they were also stressing that in pushing for affirmative action programs they were setting 5-year periods by which I am certain things were to take place and yet on my questioning they were not really making those hard and fast, but really talking about current practice.

What I really want to know is this: Are the enforcement officials of the Federal Government, as they move into colleges and universities relative to hiring practices, setting goals within such short periods, and I think a short period is 5 years, by which certain changes are to take place or are they not doing it and you are not able to say at the moment?

Mr. **Fleming.** Maybe I could respond this way. A great many things that the agencies ask us to do we are never really sure whether it is the rule or not, because they are never pursued any further. I am sure that they did, as I think back on it I am sure they did ask us to state goals and they did give us a period of time, although I don't remember exactly what it was, and nothing has ever happened on that since we did that one way or the other.

I can tell you what we have done internally, but frankly we don't know whether we are in compliance or not.

Mr. **Dellenback.** What is your practice?

Mr. **Fleming.** What we do, we named an affirmative action director for the university. Then we sent our instructions to all of the department with regard to their obligations on affirmative action and we said to them:

> You must be able to show you have in a bona fide way advertised this position, you must be able to show that you have made efforts, genuine efforts, to get qualified people for this field, you must be able to show that you have considered them thoroughly without any discrimination with respect to the consideration you have given their applications.

But the capstone of that is:

> Our instructions to you are to pick the best person you can find out of that whole group without respect to age or to race or to sex or to ethnic origin, and we want only that you be able to bear the burden of any inquiry and be able to demonstrate that you did pick the best person.
>
> Now, if you can do that, we will run our risk with HEW or anybody else.

When one of the regional office people once made a public statement that we would be required under such circumstances to hire anybody who was equal to the least qualified person we had, I promptly responded publicly by saying we would never do that unless ordered to by the court or some such authority.

The following day a person in the national office of HEW said, this was not their rules, that that had been an inappropriate statement from the regional office.

But that is where it ended. Now, we have never heard anything more about it. We don't know whether the procedure we are following is acceptable to them or not, but that is the way we do it.

Mr. Dellenback. Would any of the other three indicate—President Randolph, are you having that same kind of lag in dealings with the office?

Mr. Randolph. Yes; we were required to come up with a 3-year plan, which I strongly resisted.

Mr. Dellenback. Your plan dealing with what?

Mr. Randolph. Goals.

Mr. Dellenback. Goals in changing current practices or goals in ultimate composition?

Mr. Randolph. Ultimate composition. We resisted that.

Mr. Dellenback. In 3 years you were to have done it?

Mr. Randolph. Perhaps because they were very upset with us.

I am in a New England college, New England community where there are few minority people, so therefore very few in the composition in the student body as well as the faculty, and here again is a problem of the person representing the agency had a hard time understanding, that simple fact that we were not a large urban community where it would not be difficult to get minority students and faculty.

We turned in our plan with 5 years and we have not heard from them, as Dr. Fleming said.

Mr. Dellenback. How many years since you did that?

Mr. Randolph. 1 year.

Mr. Dellenback. And no word?

Mr. Randolph. No, sir; we are following almost the exact same procedure that Dr. Fleming prescribed.

Mr. Dellenback. Dr. Hester, have you faced this?

Mr. Hester. We submitted the plan I mentioned in 1969. That was not a statement of goals, but it was a statement of a plan. We have never heard from them whether that was acceptable or not until last Monday when they told us they would arrive this morning to examine our plan in the course of this week because an atomic energy contract with our Mathematics Institute has to be approved within the next few weeks.

This is the first time this 1969 plan has been reevaluated.

Mr. Dellenback. You don't know how yet that will come out because you are here and they are there.

Mr. Roche, any comments on that? Have you placed staff in your office at all?

Mr. Roche. We neither solicit nor accept State or Federal funding for any purpose on campus because we do handle this program very nicely.

Mr. Esch. Will you yield for a minute?

Our counsel just saw a bumper sticker on the back of Congressman H. R. Gross' car this morning and it said, "There is always free cheese in a mousetrap."

Mr. **Dellenback**. May I ask this one question? It is my understanding that some of the effort to set goals, where there has been striving on affirmative action, something about the total composition, maybe even current practices, because of stiff competition, have led to higher salaries having been paid if you are going to follow these particular roles, but I understand then also in some instances at least the university or college involved has been involved under the Equal Pay Act and that was the 1972 act, as we all recall, to bring the professional staffs and administrative staffs and staffs of colleges and universities into line and is this a serious administrative problem?

Mr. **Fleming**. It is certainly a problem.

There is no question but what departments, as a classic example of the free market operating, there are a limited number of minority people for these spots, therefore, this is exactly what you would expect to happen. It is the same thing that happened with physicists and mathematicians right after World War II when everybody wanted the most distinguished mathematicians they could find and physicists. So salaries get bid up.

Now it is true that department often, if they want to recruit a first-class minority person, will find themselves bidding against alternative employers and I have had departments consistently ask me over the years what I thought we ought to do about this, and I consistently responded, but with very little confidence, that they did what I told them, that they should not bid those salaries up because it would come back to haunt them, that as soon as they did that, they would find themselves being faced either by inequity charges on the part of peer groups within the structure or of the Pay Act.

Now, as I say, we run a sufficiently decentralized operation that I would not be surprised to discover that we have some examples of cases where they did not follow my advice, but as of this moment I don't know that and I am afraid to look.

Mr. **Dellenback**. But it has been an administrative problem.

Mr. **O'Hara**. You will find out when the equal pay complaints are filed.

Mr. **Fleming**. Yes.

Mr. **Dellenback**. Thank you, Mr. Chairman. I have other things to ask, but I have already used my time, so I yield.

Mr. **O'Hara**. Mr. Huber?

Mr. **Huber**. I am sorry I missed the presentations this morning, but I enjoyed these later comments. In listening to Dr. Randolph, I was a little concerned. When you turn to the Government to inform the motivating force behind the decisions that they ought to be arrived at in a freer atmosphere, I wonder if you don't sometimes run into a busting or destroying of the situation.

Now you have a ruling that is bothering you as being a push on the part of bureaucracy to implement a good concept to the point where now I think, for instance, in the suburbs of Detroit certain disasters, the flight we had in the past will be nothing compared to the flight we will have in the future as a result of these decisions.

I wonder if, when you finally turn to the Government to give impetus to these changes, it isn't self-destructive eventually because it gets into the hands of individuals who write the rules and, depending on that individual, you may have all kinds of rules that are fiscally hurting you.

Mr. FLEMING. That is why I say I have mixed fears. I share your concern. We have all seen excesses and the problems that occur right after a major social change. The same thing occurred in the South.

You know, right after those decisions, the meshing of schools and loss of jobs. There is a loss in the initial throes of major social change and perhaps it is more of a criticism of me and my lack of faith in institutions as I have served them, but I am still of the opinion you need some Federal thrust and guidance in these particular areas.

The nature of it, and how it is administered and reviewed, this kind of thing, you know about the use of affirmative action certainly, but I would hate to see no real guidelines given when one accepts the position of a Federal contractor.

Mr. HUBER. I wonder if we look back at the busing situation, on hindsight, if we really made any accomplishment in the next 5 years? Considering the reaction to what is going to happen, if we had to do it over, what we would do in view of what is now happening?

I don't mean to go into that. I remember we had an investigation of a Michigan campus. We were on 55 campuses of colleges and universities and what we found was that the information officer in the university knew the least about what was going on.

I thought that was rather a startling observation. The presidents were a close second in not knowing. That was also an interesting observation.

The statistics showed students wanted an education and didn't want to be interfered with and didn't want interruption and I was just intrigued to see the results of that study. I certainly enjoyed it.

Did anybody ask Dr. Fleming what was going to happen in Ohio?

Mr. O'HARA. We could have Mr. Schembechler in.

Mr. HUBER. That is all I have.

Mr. O'HARA. He will be here next week.

Mr. HUBER. There was no bias in the selection of Ohio.

Mr. O'HARA. We will have to ask Burt Smith from Michigan State University about that one.

Mr. ESCH. I would just comment from a point of personal privilege I only commented to a group in Ohio recently, "Can you imagine what would have occurred in Southern California in the Rose Bowl had the Big Ten sent its best team?"

Mr. O'HARA. I am not going to ask Dr. Fleming if he applies different standards to the admission of football players. But, you know, the other day a witness said to us, "Well, any time you have to choose, there is discrimination."

Now, I don't agree with that. It seems to me when you choose on the basis of merit and performance or some criteria that has to do with what one's own personal efforts and personal qualities are, that is not discrimination. But if you choose on any other basis it is. Therefore, I think I would have to agree with the president of Westfield State that it is wrong to favor anyone on any basis for admission or employment other than their qualifications and I agree that lots of wrongs have gone on and they continue and there is no question about that, but I find that we are sort of in the place, in my view anyway, of fostering new wrongs.

I know they don't require it and I know the rhetoric of it. I have been through it in the Democratic Party.

I also know the pressures put on you, you know you have to file reports. First, you file your goals and you don't know—well, no, you never hear back as to whether your plan is all right. Then you have to file all of these reports as to what you are doing in meeting your goals and you never hear back on them. You don't know if anyone is examining them or not, but they might be. At least there is that concern in your mind, you know, so there is that spur for you to go ahead.

Then you put in a position yourself of cutting some corners—well, winking at a little preference here or there because it will make your report look better, and you are darned sure not going to have some bureaucrat coming down from Washington if your report shows you are overachieving, you know. So you just have that pressure all the time.

Dr. Fleming, under your system I bet you the department people feel the same pressure. You say to them:

> Look, we want you to hire the best qualified people. If you do that and can assure us you have done that, we are not going to bother you.

But I will bet you nevertheless there is a different reaction over in your office when the department of whatever it might be, civil engineering, finds themselves, someone they represent to be a qualified woman faculty member or qualified black faculty member, I guess you greet that with real beams and you know that they will and so they are on the safe side when they walk in with that kind of application, so I think it is a kind of subtle kind of thing. It is a pressure that I believe we do get some unjust results sometimes.

Mr. FLEMING. I think you underestimate their strength and depth of feeling about this in the department. I don't have much fear myself if we say to a department, "You must be able to demonstrate you have made a fair impartial search," but beyond that if you come up with an individual that you say is the best person you can find and you are willing to defend that and it is not a capricious judgment, then you don't need to worry about us. We will be with you in defending that before any attack.

I believe at our place at least that the depth of feeling in the various departments would be so great on that point that I would not be much afraid that they would alter that.

Mr. O'HARA. Very remarkable people in that case.

I think we are all going to—maybe more than any other and justifiably so within the equal pay area—have complaints in the way we have had a dual standard with men and women in the past.

Mr. FLEMING. But we have been making serious efforts to correct it over a period of 2 or 3 years.

Mr. O'HARA. I think you have real problems and I imagine others will have some or already have some. I thank you very much for your contribution. I hope out of all of these hearings we will be able to end up with something that will promote just results and do it in the way that will help us.

Thank you very much and it is now 12 and we have to get to the other important business of the country, which I hasten to add has been going on—full time—all along.

Thank you.

[Whereupon, at 12 noon the subcommittee recessed, to reconvene at 10 a.m., Wednesday, August 14, 1974.]

CIVIL RIGHTS OBLIGATIONS OF INSTITUTIONS OF POSTSECONDARY EDUCATION

WEDNESDAY, AUGUST 14, 1974

House of Representatives,
Special Subcommittee on Education
of the Committee on Education and Labor,
Washington, D.C.

The subcommittee met at 9:40 a.m., pursuant to recess, in room 2261, Rayburn House Office Building, Hon. James G. O'Hara (chairman of the subcommittee), presiding.

Present: Representatives O'Hara, Gaydos, Biaggi, and Dellenback.

Staff members present: Jim Harrison, staff director; Webster Buell, counsel; Elnora Teets, clerk; and Robert Andringa, minority staff director.

Mr. O'Hara. The special subcommittee will come to order.

Today we are going to look into a particular aspect of antidiscrimination having to do with the Equal Pay Act and related Executive orders and regulations.

Our first witness who will be assisting us in this inquiry will be Dr. Mary Jo Small, who is director of personnel at the University of Iowa. Dr. Small, we will be very pleased to hear from you.

STATEMENT OF MARY JO SMALL, ASSISTANT VICE PRESIDENT FOR ADMINISTRATIVE SERVICES, UNIVERSITY OF IOWA

Ms. Small. I am assistant vice president for administrative services. Personnel is one of my responsibilities at the University of Iowa.

I am here today because an interagency dispute among Labor, EEOC, and HEW has placed a burden upon the Nation's colleges and universities. The dispute deals with what constitutes equality in retirement benefits. We hope that Congress will not only work to resolve this specific dispute but to provide the means for avoiding similar such disputes in the future.

Now, the reason that the problem occurs is that most of the Nation's colleges and universities, as employers charged with—and, I think, in most cases desirous of—providing equal employment benefits to all, are subject to overlapping jurisdiction in the fair employment area from the Departments of Labor, HEW, and EEOC.

If these three Agencies followed similar interpretations of equality in retirement programs, there would be no need for me to be here today.

As you are probably aware, EEOC guidelines are inconsistent with those issued by Labor and HEW; and, with all three charged with overseeing such programs, we face a difficult situation.

In its guidelines, EEOC maintains that it is an unlawful practice, under title VII of the Civil Rights Act of 1964, for an employer to have a retirement program "which differentiates in benefits on the basis of sex" and that it is no defense "that the cost of such benefits is greater with respect to one sex than the other."

Both Labor and HEW take the position that an employer is not discriminating "if his contributions are the same for men and women or if the resulting benefits are equal."

Thus, educational institutions are confronted with the problem of complying with inconsistent requirements emanating from the three Federal Agencies charged with assuring equality in retirement programs.

Recently, EEOC comenced proceedings against a few colleges and universities whose faculty and staff are TIAA-CREF participants. Parenthetically, I would say we are one of these institutions and I am here not to complain about that fact. That very fact, however, stimulated our thinking about how and what would be an appropriate solution to the general problem.

The reason that EEOC has commenced proceedings is in an attempt to get a judicial determination of the appropriate standard of fairness. So we have become, in a sense, a pawn in this dispute. We feel that in such cases, where three Federal agencies with overlapping jurisdictions cannot agree and private parties bear the burden of their disagreement, the time has arrived for Congress to resolve the dispute.

Now, there are reasons why colleges and universities are particularly caught in what we think is a kind of Catch-22 situation.

In my written testimony, I go through for several paragraphs describing the insurance-related problems which I will just touch on now.

Many colleges and universities belong to or have their faculty and staff members participate in TIAA-CREF and similar individual annuity programs which are known as defined contribution retirement plans, under which the institution and often the individual faculty member contributes money over the employee's career. At the end of that time, depending on which of the various options for retirement benefits are chosen, the employee receives the benefit of the contributions and accumulated interest.

These plans are typically, and certainly this is true in the case of TIAA-CREF, individually owned. They are fully vested and they are completely portable. TIAA-CREF was indeed set up to provide such a program for higher education because there was a great deal of mobility in past years and this mobility generated a need for such an insurance program.

Now, typically in Government and in industry there is a kind of retirement program known as a formula-benefit plan. There is a description of that kind of plan in the middle of page 3. Under such plans, the employer normally retains ownership. Vesting occurs, if ever, only after several years of service, and the funds are not transferrable when the employee takes a new job.

Benefits under such plans are calculated according to a formula based on such factors as years of service, the average annual salary for a set period of years prior to retirement, and cash accumulations.

Now, the TIAA program that we participate in—in which 2,600 other institutions of higher education participate—are judged to be nondiscriminatory under the standards and guidelines which labor uses to enforce the Equal Pay Act and under which the Office of Federal Contract Compliance operates.

HEW has provisionally accepted the labor standards in drafting its title IX guidelines. The EEOC, on the other hand, because the benefits under some of the options are not equal for men and women, judges the TIAA-CREF and similar programs to be discriminatory.

TIAA-CREF provides, if an employee dies before retirement, equal death benefits for men and women. If either a man or a woman chooses an option where a survivor is also provided for, all things being equal the man and woman will get the same benefit. But if a woman chooses an option which provides only for her lifetime, the TIAA-CREF and other similar individual annuities programs base benefits on actuarial tables which differentiate between sexes. TIAA-CREF female annuitants are judged to have 4 years of longer life than the males, and therefore their monthly benefits under single life options are lower.

It is that which has caused EEOC to judge the program to be discriminatory. That is the point at issue.

The reason that we are here is that we feel caught in the middle of this conflict. EEOC's disagreement is, at least at the first stage, with the TIAA-CREF program but they have no jurisdiction over the insurance industry and they do have over employers.

They have been unable, as we understand it, to resolve the dispute at the national level among themselves, labor, and HEW. They have been unable to reach an agreement with TIAA-CREF or other carriers to change their programs.

So it is their feeling, as it has been expressed to us by the district EEOC office, that in order to get a resolution of the dispute, they will proceed against individual employers—in this case institutions of higher education—and seek a judicial determination.

Now, this places us, we feel, in an intolerable situation. We have two choices. We can acquiesce in EEOC's judgment in what is proper or we can go to court and litigate the merits of the issue.

If we acquiesce, there are two things we can do. In view of existing practices—and now I am roughly at the top of page 4—in the insurance industry, one option would be to abandon TIAA-CREF and similar programs and convert to some kind of formula benefit type of retirement system which in our individual case would probably mean coming under the State public employment retirement system, which is much less advantageous for our employees. If we did not do that and we wanted to choose to remain with the present carrier, we would have to, in some way, increase contributions so that we could provide equal periodic retirement benefits for those women employees who elect a single life option. Not all women employees will, in other words, require this additional money but some women employees would.

If we were to withdraw from TIAA-CREF and go into the State system, our present employees, would suffer serious harm and our ability to recruit and retain outstanding faculty would be dealt a heavy blow. This is particularly difficult for us because, though there are 2,600 institutions who participate in TIAA-CREF, only a few of them by chance have been chosen to be proceeded against.

In other words, at least initially, individual institutions would bear the burden of the EEOC ruling, although it is clear that the ultimate result aimed at is to change the TIAA-CREF policy.

If we chose, on the other hand, to acquiesce in EEOC's decision, we would have to find some way of increasing contributions for those women who elect single life option. We feel that this we would create at least a perception of inequity on our campus, since it is clear, under an attorney general's opinion in our State, that that money contributed to annuity is compensation.

Also, this procedure might raise serious questions with regard to the Equal Pay Act because it would be clear that we are compensating women in greater amounts than men. We are most desirous of not being placed in the position of litigating EEOC's position. I think any other individual institution would feel the same way.

The real issue seems to be the propriety of using mortality tables which differentiate between the sexes. In essence, EEOC's position implies that unisex mortality tables are the only lawful tables, and Labor and HEW seem to have concluded it is lawful to use dual tables.

Individual colleges and universities—and I am now at the top of page 5—are powerless to control the insurance industry's use of dual mortality tables. It seems improper, therefore, that we be required to litigate an issue about which Federal agencies disagree and over which we have no control.

Furthermore, we find it difficult to take a position as to which is a fairer position for actuarial projections—unisex or dual tables. We hear various and convincing arguments in support of both positions.

If one favors the use of unisex tables, one can argue that it costs as much for a retired woman to live as it does for a retired man and hence retirement benefits for women should be equal on a periodic basis to those of men.

It has also been argued you can make other distinctions, such as race or living habits, which one might expect to have an impact on actuarial projections. Why, then, is sex the only one used?

One also can look at the formula benefit retirement program and note that many if not most of them do not distinguish in benefits on the basis of sex. Why should TIAA-CREF and other similar programs make such a distinction?

It can also be argued that, in simple fairness, if a woman earns the same, she ought to benefit the same. Then there is the general argument that sex is impermissible as a characteristic to make such distinction.

You can go through these arguments for unisex tables and then find people who will argue equally convincingly and plausibly on the other side. They will argue that need is not a factor which ought to in any way impinge on benefits because if one chooses a joint option, providing for both husband and wife regardless of who is the primary annuitant the benefits provided are even less on a periodic basis, and in such cases you have two people to provide for instead of one.

The insurance carriers such as TIAA argue that, at least for their annuitants, race and living habits have not proved to be significant and other distinctions should not be used in addition to or rather than sex.

In response to the argument involving formula benefit retirement plans, it is noted that, while they often have this virtue of equal benefits regardless of sex, they have other disadvantages, such as lack of vesting rights, portability, and so forth.

In response to the question of whose premiums result in greater benefits—a man's or a woman's—it is argued that it is a matter of perspective. If you look at it month by month, the man may receive the greater benefit. Viewed from the perspective of the total life span of the female, she is likely to receive more.

Finally, while it can be argued that sex is an impermissible characteristic, there has been a recent Supreme Court decision—*Kahn* v. *Shevin*—in which it was decided that it is permissible to provide some benefits—in this case a real estate tax exemption for widows—on the basis of sex.

The factors I have set forth above and the variety of arguments cited point up the need for congressional action in this area. Congress has the authority to reconcile the conflicting positions of the Federal agencies involved. Congress can provide a national forum in which the views of all interested parties—individuals of both sexes, employers, the insurance industry, public interest groups, and governmental agencies—can be expressed effectively. Congress, and only Congress, can create the administrative mechanism for settling the dispute one way or another.

Finally, I urge Congress to address itself to and take decisive steps to resolve an issue which transcends this particular dispute. Open disagreement among the Federal agencies charged with enforcing laws requiring equality significantly dilutes the moral force of those laws. Employees whose economic interests are vitally affected understandably are disturbed by a perceived unfairness in a process whose fundamental goal is fairness.

Carrying out the spirit as well as the letter of equal opportunity laws is impeded by the inability of Federal agencies to agree as to what the laws require. Attempts to resolve interagency conflict by litigation which threatens interests as vital as retirement benefits serve only to exacerbate the detrimental effect created by the existence of such conflict.

Apparently with these considerations in mind, Congress provided, in the Equal Employment Opportunity Act of 1972 for an Equal Employment Opportunity Coordinating Council composed of representatives of agencies involved in the equal employment area—with the significant omission of HEW—the statutory purpose of which is to:

> Maximum effort, promote efficiency, and eliminate conflict, competition, duplication, and inconsistency among the operations, functions, and jurisdictions of the various departments, agencies, and branches of the Federal Government responsible for the implementation and enforcement of equal employment opportunity legislation, orders, and policies.

As the present interagency dispute so forcefully demonstrates, however, the Coordinating Council has been unable to substantially eliminate duplication and conflict among agencies. But if citizens and institutions as employers and employees are to continue to be subjected to the overlapping jurisdiction of multiple Federal agencies in this area, some kind of effective coordination is imperative. If it is to be the EEOCC, then HEW's absence must be eliminated forthwith.

Something must be done in addition to require the agencies involved to take the EEOCC and the need for coordination seriously, by perhaps requiring all regulations, guidelines, and other official agency interpretations to undergo review and approval by the Coordinating Council prior to becoming effective.

Other means of achieving effective coordination may occur to this committee. Whatever means are chosen, however, the elimination of interagency conflict, with its attendant adverse consequences upon individual citizens and institutions, must be eliminated if the goals of equal employment legislation are not to be irreparably crippled by the very process of enforcement.

[Ms. Small's prepared statement, with appendixes A and B attached, follows:]

Statement of Mary Jo Small, Assistant Vice President for Administrative Services, University of Iowa

Mr. Chairman and members of the committee, I am Mary Jo Small, Assistant Vice President for Administrative Services and Personnel at the University of Iowa. I am here today to bring to your attention the burden imposed upon the nation's colleges and universities by a dispute between three federal agencies regarding what constitutes equality in retirement benefits and to seek the assistance of Congress, not only to resolve this specific dispute but to provide the means for avoiding similar occurances in the future.

Most of the nation's colleges and universities, as employers charged with and desirous of providing equal employment benefits to all, are subject to the overlapping jurisdiction in the fair employment area of the Departments of Labor and HEW, and the EEOC, under various statutes and executive orders. If these three agencies followed similar interpretations of equality in retirement programs, I would not be appearing today. As you are aware, however, EEOC guidelines[1] regarding retirement programs are inconsistent with those issued by Labor and HEW; and with all three charged with overseeing such programs, the situation we face is exceedingly difficult.

In its guidelines, EEOC maintains that it is an unlawful practice under Title VII of the Civil Rights Act of 1964 for an employer to have a retirement program "which differentiates in benefits on the basis of sex,"[1] and that it is no defense "that the cost of such benefits is greater with respect to one sex than the other." Both Labor and HEW take the position tha an employer is not discriminating "if his contributions are the same for men and women or if the resulting benefits are equal." Thus, educational institutions are confronted with the problem of complying with inconsistent requirements emanating from the three federal agencies charged with assuring equality in retirement programs.

Recently, EEOC commenced proceedings against a few colleges and universities whose faculty and staff are TIAA-CREF participants, in an attempt to get a judicial determination of the appropriate standard of fairness in dealing with retirement programs. In essence, these institutions have become pawns in a dispute among the three agencies. In such a case, when three federal agencies with overlapping jurisdiction cannot agree and private parties bear the burden of their disagreement, it seems to us that the time has arrived for Congress to resolve the dispute.

The interagency dispute has a particularly harsh impact on colleges and universities because many of these institutions participate in "money purchase" or "defined contribution" retirement plans under which the employer contributes a percentage of the employee's salary toward the purchase of an annuity policy. In most such plans, the individual employee also contributes. These plans are employee-owned, fully vested and completely portable, attributes or the lack thereof which Congress is presently concerned with in other retirement programs. At retirement, the employee possesses an annuity, the value of which is determined solely by the accumulated contributions and interest. The employee then may choose among several options as to how he or she wishes to receive the benefits. The bulk of these plans for colleges and universities are provided by TIAA-CREF, Teachers Insurance and Annuity Association-College Retirement Equities Fund.

---

[1] The texts of the relevant guidelines are set forth in appendix A, infra.

The TIAA-CREF annuity plans in force at many colleges and universities provide for equal preretirement death benefits for men and women. They also provide equal monthly retirement benefits where annuitants, male or female, select an option providing for benefits for survivors, usually a spouse. Only under the single-life options—providing payments only during the life time of the annuitant—do women annuitants receive lower monthly benefits than men. The lower monthly payments are made because TIAA-CREF, in common with other insurance carriers, uses separate actuarial tables for men and women; and such tables project the life-expectancy of a female TIAFF-CREF annuitant to be approximately four years longer than that of a male annuitant. In fact, if each lives her or his actuarially projected life span, the woman receives a larger total amount than the man, even with lower monthly benefits, because of the effect of compound interest for an additional four years. A great many other options are available to faculty and staff members upon their retirement; and whenever a form of a joint-life option is selected, monthly payments to men and women retirees are the same to the extent that all other factors affecting payments are the same.

The plans in force in most colleges and universities contrast with the "formula benefit" programs common in industry and government. Under these plans, the employer normally retains ownership, vesting occurs, if ever, only after several years of service, and the programs are not transferable when the employee takes a new job. Benefits under such plans are calculated according to formulae based on such factors as years of service, the average annual salary for a set period of years prior to retirement, and cash accumulation. In general, it may be said that most of the retirement plans whose deficiencies have inspired Congress to undertake pension reform legislation were formula benefit plans.

The TIAA-CREF program described earlier complies with the retirement benefits guidelines developed by Labor and provisionally adopted by HEW, since equal contributions are made for men and women. In contrast, EEOC has taken the position that the TIAA-CREF programs discriminate against women employees because they provide unequal monthly benefits under the single-life option. Since EEOC"s jurisdiction is limited to employers, it has been unable to proceed directly against TIAA-CREF and other insurance companies. It has chosen, therefore, to proceed directly against educational institutions. EEOC's actions against individual institutions places such an institution in an intolerable position. It is perforce required either to acquiesce in EEO's position or to litigate the merits of that agency's interpretation. In view of existing practices in the insurance industry, acquiescence requires the institution either to abandon its "money-purchase" plan and convert to a "formula benefit" type of retirement system or to increase its contributions in some manner to provide equal periodic retirement benefits for those women employees who elect a single-life annuity at retirement. Neither of these is viable. Withdrawal by any single institution from participation in the TIAA-CREF type of program not only would affect adversely the interests of the institution's employees, but would hamper its effectiveness in recruiting and retaining outstanding staff. This is particularly unfair to both the employees and the institutions involved since out of the more than 2,600 institutions participating in TIAA-CREF retirement programs, only a small handful have been chosen, apparently more or less randomly, as respondents in these EEOC proceedings. On the other hand, increasing the contribution to the retirement funds of a single group of employees—those women who elect single-life options—would create at least a perception of inequity as well as raising serious questions regarding compliance with the Equal Pay Act.

Nor should any individual college or university be forced to litigate the merits of EEOC's position. Notwithstanding the provision in the EEOC guidelines which would seemingly allow an employer to offset the differential effects of separate mortality tables for men and women by contributing different amounts to their retirement policies, it is apparent that the real source of the disagreement among the three federal agencies (and between EEOC and the insurance industry) turns ultimately on the propriety of using such tables. In essence, EEOC's position implies that "unisex" mortality tables are the only lawful tables; while Labor and HEW have concluded that it is lawful to use dual tables. Individual colleges and universities are powerless to control the insurance industrys' use of dual mortality tables. They should, therefore, not be required to litigate an issue amount which federal agencies disagree and over which institutions have no control.

Furthermore, individual educational institutions find it difficult to take a position as to which is a fairer basis for actuarial projections: Unisex or dual tables. Various and convincing arguments have been advanced in support of both positions. If one favors the use of unisex tables, one can argue that:

> It costs as much for a retired woman to live as it does for a retired man, and hence retirement benefits for women should be equal on a periodic basis to those of men.
>
> Other distinctions which one might expect to have an impact on actuarial projections—race, living habits, etc.—are not used and hence sex should not be. (It has also been argued that one of the other distinctions should be used rather than sex.)
>
> As a rule, neither formula benefit retirement programs nor group life and disability programs provided by employers distinguish with regard to benefits on the basis of sex. Why then should individually owned annuity policies?
>
> It is unfair for a woman whose earnings produce the same premiums as a man's to receive less in monthly benefits.
>
> It is impermissible to use sex as the basis of any distinction in employment related matters.[2]

All of the above arguments can be countered with others, equally plausible, to the contrary. Those who favor retaining dual tables will, for instance, tell you that:

> In a "money-purchase" retirement program, the level of benefits results from a combination of factors, principal of which is the amount contributed and the life expectancy of the annuitant upon retirement. Need is not one of those factors. If it were, those choosing a joint survivorship option, which must provide support for two people rather than one, would receive greater and not lesser monthly benefits.
>
> Other factors such as race and living habits have not proved to be actuarially significant for annuity programs such as TIAA-CREF's.
>
> While it is true that many formula benefit retirement plans and group life and disability insurance policies do not distinguish with regard to sex in providing benefits, it is also true that characteristically such plans and policies have other drawbacks. Generally speaking, coverage is lost when employers are changed and there is limited, if any, vesting rights for employees under such retirement plans.
>
> The question of whose premiums result in greater benefits—a man's or a woman's—is a matter of perspective. Viewed in terms of monthly benefits under a single-life option, the man receives the greater benefit; viewed from the perspective of the total amount received in benefits, the female annuitant is likely to receive more.
>
> In *Kahn* v. *Shevin*, the U.S. Supreme Court ruled on April 24, 1974 that it is permissible to provide some benefits (in this case a real estate tax exemption for widows) on the basis of sex.

The factors I have set forth above and the variety of arguments cited point up the need for Congressional action in this area. Congress has the authority to reconcile the conflicting positions of the federal agencies involved. Congress can provide a national forum in which the views of all interested parties—individuals of both sexes, employers, the insurance industry, public interest groups, and governmental agencies—can be expressed effectively. Congress, and only Congress, can create the administrative mechanism for settling the dispute one way or another.

Finally, I urge Congress to address itself and take decisive steps to resolve an issue which transcends this particular dispute. Open disagreement among the federal agencies charged with enforcing laws requiring equality significantly dilutes the moral force of those laws. Employees whose economic interests are vitally affected understandably are disbursed by a perceived unfairness in a process whose fundamental goal is fairness in a process whose fundamental goal is fairness. Carrying out the spirit as well as the letter of equal opportunity laws is impeded by the inability of federal agencies to agree as to what the laws require. Attempts to resolve interagency conflict by litigation which threatens interests as vital as retirement benefits serve only to exacerbate the detrimental effect created by the existence of such conflict.

---

[2] See appendix B for a recent EEOC decision (74-118) which would appear to call into question any insurance program—not simply retirement programs—under which different benefits are paid by or different premiums are charged to men and women based on average characteristics of each of the groups. Thus, the premium differential favoring women policy holders in many life insurance plans—premised upon dual mortality tables—and the lower auto insurance premiums commonly available to women drivers in certain age groups based upon average accident records are rendered suspect by the EEOC approach.

Apparently with these considerations in mind, Congress provided in the Equal Employment Opportunity Act of 1972 for an Equal Employment Opportunity Coordinating Council composed of representatives of agencies involved in the equal employment area (with the significant omission of HEW) the statutory purpose of which is to "maximize effort, promote efficiency, and eliminate conflict, competition, duplication and inconsistency among the operations, functions and jurisdictions of the various departments, agencies and branches of the Federal Government responsible for the implementation and enforcement of equal employment opportunity legislation, orders, and policies." As the present interagency dispute so forcefully demonstrates, however, the Coordinating Council has been unable to substantially eliminate duplication and conflict between agencies. But if citizens and institutions as employers and employees are to continue to be subjected to the overlapping jurisdiction of multiple federal agencies in this area, some kind of effective coordination is imperative. If it is to be the EEOCC, then HEW's absence must be eliminated forthwith. Something must be done in addition to require the agencies involved to take the EEOCC and the need for coordination seriously, by perhaps requiring all regulations, guidelines and other official agency interpretations to undergo review and approval by the Coordinating Council prior to becoming effective. Other means of achieving effective coordination may occur to this Committee. Whatever means are chosen, however, the elimination of interagency conflict with its attendant adverse consequences upon individual citizens and institutions must be eliminated if the goals of equal employment legislation are not to be irreparably crippled by the very process of enforcement.

APPENDIX A

EEOC Guidelines on Discrimination because of Sex, 29 C.F.R. Section 1604.9 (a), (e), (f) (1974):

"(a) 'Fringe benefits,' as used herein, includes medical, hospital, accident, life insurance and retirement benefits; profit-sharing and bonus plans; leave; and other terms, conditions, and privileges of employment.

* * * * * * *

"(e) It shall not be a defense under title VII to a charge of sex discrimination in benefits that the cost of such benefits is greater with respect to one sex than the other.

"(f) It shall be an unlawful employment practice for an employer to have a pension or retirement plan which establishes different optional or compulsory retirement ages based on sex, or which differentiates in benefits on the basis of sex. A statement of the General Counsel of September 13, 1968, providing for a phasing out of differentials with regard to optional retirement age for certain incumbent employees is hereby withdrawn."

U.S. Department of Labor, Sex Discrimination Guidelines, 41 C.F.R. Section 60-20.3(c) (1974):

* * * "In the area of employer contributions for insurance, pensions, welfare programs and other similar "fringe benefits" the employer will not be considered to have violated these guidelines if his contributions are the same for men and women or if the resulting benefits are equal."

U.S. Department of Labor, Sex Discrimination, Proposed Revision of Guidelines, 38 Fed. Reg. 35337, 35338 (Dec. 27, 1973):

"(c) The employer shall not make any distinction based upon sex in employment opportunities, wages, hours or other conditions of employment. Nor shall the employer make any distinction based upon sex in the granting of fringe benefits, including medical, hospital, accident, life insurance, pension and retirement benefits, profit sharing and bonus plans, credit union benefits, leave and other terms and conditions of employment. *Proposed Alternative* (A). It shall not be an excuse that the cost to the employer of such benefits is greater with respect to one sex than the other. *Proposed Alternative* (B). In the area of employer contributions for insurance, pensions, welfare programs and other similar "fringe benefits" the employer will not be considered to have violated these guidelines if his contributions are the same for men and women or if the resulting benefits are equal."

U.S. Department of Health, Education, and Welfare, Education Programs and Activities Receiving or Benefiting from Federal Financial Assistance: Nondiscrimination on the Basis of Sex, 39 Fed. Reg. 22227, 22230, 22237 (June 20, 1974):

"Section 86.46(b)(2) of Subpart E follows the Executive Order regulations in requiring that fringe benefit plans provide for either equal periodic benefits to members of each sex, or equal contributions by the employer for members of each sex. (Sec. 86.36 imposes identical requirements for student benefit plans).

"The Title VII regulation differs in that it prohibits payment of unequal periodic benefits on the basis of sex, and precludes employers from justifying unequal periodic benefits on the basis of differences in cost for males and for assuming equal contributions by all employees, Title VII implicitly requires payment of higher employer contributions for, and the possibility of higher total benefits received by, women. (The Department of Labor is currently considering changes in the Executive Order regulations. One of the proposed changes would result in conforming the fringe benefit requirements with those in effect under Title VII. (See 38 FR 35336-28, December 27, 1973.)

"The Secretary has considered a third alternative for possible adoption by the Department. That proposal would mandate the use of premium or rate tables which do not differentiate on the basis of sex, and would thus require both equal contributions and equal periodic benefits. The Secretary invites comment specifically on whether Sec. 86.46(b)(2) should adopt the Executive Order approach, as it does presently, that of Title VII, or the third alternative as set forth above."

* * * * * * *

"Sec. 86.46 Fringe benefits.

* * * * * * *

"(b) *Prohibitions.* A recipient shall not:

* * * * * * *

"(2) Administer, operate, offer, or participate in a fringe benefit plan which does not provide either for equal periodic benefits for members of each sex, or for equal contributions to the plan by such recipient for members of each sex; and"

APPENDIX B

[¶ 6431] Unequal Benefits Resulting From Sex-Segregated Actuarial Tables Are Sex Biased

Decision of Equal Employment Opportunity Commission, Decision No. 74-118, April 26, 1974.

TITLE VIII—CIVIL RIGHTS ACT OF 1964

Sex Discrimination—Municipal Government Agency—Retirement and Benefits Program—Basis of Payments—Sex-Segregated Actual Tables— Reasonable cause exists to believe that a municipality and municipal agency employer unlawfully discriminate on the basis of sex where they pay lower monthly pension payments to females than to males on the basis of sex-segregated actuarial tables indicating a longer life expectancy for females. Average statistical characteristics of females as a group cannot properly be used to deny equal monthly pension payments to females. Possible higher cost to the employer of equalized payments is not a proper defense to a sex biased pension payment system. 42 U.S.C. Sec. 2000e.

Back reference.—¶ 1208.

Full Text of EEOC Decision

SUMMARY OF CHARGES

Charging Party, a female, alleges that Respondent City is violating Title VII of the Civil Rights Act of 1964, as amended, in that it is a member of a retirement system that pays lesser benefits to females than males, because of sex.

Charging Party further alleges that Respondent A is violating Title VII of the Civil Rights Act of 1964, as amended (hereinafter Title VII), by paying lesser benefits to females than males, because of sex.

JURISDICTION

Respondent City, Charging Party's employer, is a government or political subdivision employing 25 or more employees, is engaged in an industry affecting commerce, and is therefore an employer within the meaning of section 701(b) of the Act.

Respondent A is a governmental agency employing 25 or more employees and is engaged in an industry affecting commerce. Respondent A is also, therefore, an employer within the meaning of section 701(b) of the Act. On the facts of the instant case, see p. 3, *infra*. Respondent A has such a direct involvement in, and control over, the retirement system to which Respondent City belongs and which affects Charing Party, that it falls within the proscriptions of section 703(a)(1) of the Act notwithstanding that Respondent A is not Charging Party's employer. *Wilson v. Sibley Memorial Hospital*,—F. 2d—, 6 EPD ¶ 8964 (D.C, Cir., 1974).

All jurisdictional prerequisites have been satisfied.

SUMMARY OF INVESTIGATION

Charging Party is an employee of the City and will soon be eligible for retirement. The City voluntarily participates in a retirement system run by A.[3] The Municipal Retirement System Act created A and vested it with authority to operate a retirement and benefit system "* * * to provide for the payment of annuities and other benefits to employees and to beneficiaries of employees of participating municipalities * * *." A has many duties and responsibilities in connection with operating the system. Thus, among other duties and responsibilities A determines the employee rate of contribution; it adopts those actuarial tables it believes are appropriate to spread the risk involved; it considers and passes on all applications for annuities and benefits; it may suspend any payment or payments. It is clear that the City exercises no control over the operational aspects of the system. Nor is the City offered options other than whether to participate in the system and how much it will contribute towards its employees' annuities.

It is undisputed that Charging Party has been making contributions, fixed at a percentage of her earnings, into an account with A. When she retires the City will make a contribution which, added to Charging Party's contributions, will be used to purchase Charging Party an annuity. It is undisputed that the amount that this annuity will pay Charging Party each month is calculated on separate actuarial tables for each sex and that "The life-expectancy tables which are used by the System reveal that female annuitants have a life expectancy more than five years greater than that of males of equivalent age." (March 14, 1973 letter from A.) Thus a female of a given salary and length of service retiring from Respondent will receive substantially smaller payments each month than will a male of the same salary and length of service. It is this disparity that Charging Party alleges amounts to unlawful sex discrimination.

A argues that equal monthly payments to female retirees would in fact discriminate in their favor because females, statistically, live longer than men. The logic of this argument is that usually used to support discrimination: an appeal to the average characteristics of a particular sex, race, or other group protected under Title VII. But no person knows when he or she will die. This quote from the Note, *Sex Discrimination and Sex-Based Mortality Tables*, 53 B.U.L. Rev. 624 (1973) makes the point:

"Indeed, the insurance company is *not* concerned with when and if an individual insured will die. Its concern is with the group experience as a whole, with the number who will die per year * * *. The insurance company can no better predict when an individual insured will die than the individual insured can. Because insurance companies can deal with a large number of insureds, however, it can predict accurately with regard to a large group of similar risks. Thus, predictive acumen with regard to any particular individual is no longer relevant or necessary. This, indeed, is a chief value of insurance. * * * [T]he key to life insurance is that it 'deals not with individuals but with groups.' * * *" At n. 10.

---

[3] The A "*Handbook of Information*" states that once a city has joined A it may not terminate membership in the system. The City appears to raise this as a defense. The important factor however, which is undisputed, is that the City joined A voluntarily.

Thus we think that A's argument misses the point. All that A's sex-segregated actuarial tables purport to predict is risk spread over a large number of people; the tables do not predict the length of any particular individual's life.

In our view, any use of sex-segregated actuarial tables that results in payment of different periodic pension benefits to males and females is highly suspect. Because actuarial tables do not predict the length of any individual's life, any claim that such tables may be used to assure equal pension payments over a lifetime between males and females must fail. In order to achieve compliance with Section 703(a) of Title VII [5] and with the Commission's *Guidelines on Discrimination Because of Sex* [6] the periodic pension benefits paid to males and females in equivalent circumstances must be equal. Moreover, it would not be a defense to Charging Party's charge that equalizing males' and females' periodic pension benefits would result in higher costs to Respondents, if indeed this were shown to be a fact. *Guidelines on Discrimination Because of Sex*, 29 CFR Sec. 1604.9(3). See also, *Taylor v. Goodyear Tire and Rubber Co.*, — F. Supp. —, 5 EPD 8545 (N. D. Ala. 1973).

A further contends, however, that if unisex actuarial tables were used [7] * * * that the effect of it would be to charge a male more for the annuity than he could obtain for his money from a private insurance company." (March 14, 1973 letter from A.) Thus, the argument goes, such a method of calculating risk would result in males subsidizing females' annuities. This argument, we think, contains a fatal flaw: The advantages males now enjoy rest on an unlawful system. In short, were uni-sex actuarial tables used, males would fare no worse than they would have had the retirement system been operated in a fair lawful manner all along. *Watkins v. Steel Workers (USA), Local 2369*, — F. Supp. —, 7 EPD 9130, n. 8 (E. D. La. 1974); *United States v. Bethlehem Steel Corporation*, [3 EPD 8257] 446 F. 2d 652, 663 (2d Cir., 1971); *United States v. St. Louis-San Francisco Railway Co.*, [4 EPD 7862] 464 F. 2d 301, 312 (8th Cir. 1972).[8]

DECISION

Reasonable cause exists to believe that Respondents are each violating Title VII of the Civil Rights Act of 1964, as amended, as alleged.

Mr. O'HARA. Dr. Small, I thank you for a very lucid statement. I notice that our next witness is a representative of TIAA-CREF. The subsequent witness, Dr. Woolf, will testify on much the same sort of problem.

If you have no objection, I would like to ask the other witnesses to join you at the witness table and each of them to deliver his statement and then to permit committee members to question the several of you as a panel.

Ms. SMALL. Fine.

---

[5] Section 703 provides:

"(a) It shall be an unlawful employment practice for an employer—

"(1) to fail or refuse to hire or to discharge any individual, or otherwise to discriminate against any individual with respect to his compensation, terms, conditions, or privileges of employment, because of such individual's race, color, religion, sex, or national origin; or

"(2) to limit, segregate, or classify his employees or applicants for employment in any way which would deprive or tend to deprive any individual of employment opportunities or otherwise adversely affect his status as an employee, because of such individual's race, color, religion, sex, or national origin."

[6] Sec. 1604.9(f) of the Commission's *Guidelines on Discrimination Because of Sex* provides:

"(f) It shall be an unlawful employment practice for an employer to have a pension or retirement plan which establishes different optional or compulsory retirement ages based on sex, or which differentiates in benefits on the basis of sex." 29 CFR Sec. 1604.9.

[7] A itself raises the issue of uni-sex actuarial tables. The use of such tables, however, is only one of several possible ways to remedy the situation Respondents find themselves in.

[8] The City queries how it can ". . . resolve a violation of equal employment without there being a violation of State law." (January 29, 1973 letter from City.) The answer is that if State law is found to conflict with federal law, the State law must be held to have been preempted by the federal law through operation of the Supremacy Clause of the United States Constitution. *LeBlanc v. Southern Bell Telephone & Telegraph Co.*, [4 EPD ¶ 7674] 333 F. Supp. 602 (E. D. La., 1971), *aff'd per curiam*, [4 EPD ¶ 7832] 460 F. 2d 1223 (5th Cir. 1972), *cert. denied*, [5 EPD ¶ 8021] 409 U.S. 990 (1972).

Mr. O'Hara. I would like to, then, ask Mr. Donald S. Willard and Dr. William Woolf if they will join Dr. Small at the witness table. We would like to hear first from Mr. Willard.

STATEMENT OF DONALD S. WILLARD, EXECUTIVE VICE PRESIDENT, TEACHERS INSURANCE & ANNUITY ASSOCIATION AND COLLEGE RETIREMENT EQUITIES FUND, ACCOMPANIED BY JoANN SHER, ASSISTANT COUNSEL

Mr. Willard. I am Mr. Willard. I am executive vice president of Teachers Insurance and Annuity Association, or TIAA, and its companion organization, CREF, College Retirement Equities Fund.

My responsibility is that of manager of what we call our college service division, which has primary responsibility of working with eligible institutions and their staff members in the development of sound staff benefit plans. I have with me this morning Mrs. JoAnn Sher, assistant counsel to TIAA-CREF.

If I may, I would like to give a little bit of background information to the committee about TIAA-CREF.

The Carnegie Foundation for the Advancement of Teaching, working with higher education, established TIAA in 1918 as a special purpose nonprofit life insurance company under New York laws. CREF was established in 1952 by special New York Act as a companion nonprofit corporation.

Participation in the TIAA-CREF benefit system is strictly limited to colleges, universities, independent schools, and certain other nonprofit institutions that are tax exempt under the education or scientific exemptions of section 501(c)(3) of the Internal Revenue Code.

TIAA provides fixed-dollar benefits to help educators and their families withstand the financial impact of old age and death. CREF adds variable annuity benefits to help educators sustain their purchasing power in retirement. I might add: It is not doing too well these days.

The major service is the fully and immediately vested, fully funded, portable retirement program in effect, as Mary Jo has indicated, at 2,600 institutions and covering 400,000 staff members, a program which permits mobility of academic and scientific talent among public and private educational institutions throughout the country without loss of benefits.

The TIAA-CREF program was referred to, on several occasions during congressional deliberations on private pension reform legislation, as the model plan after which all private pensions should be patterned.

Types of pension plans: There are two basic types of pension plans—the defined contribution or the defined benefit. Mary Jo has told you a little bit about defined benefit plans and defined contribution plans. The TIAA-CREF retirement plans are of the defined contribution type, under which the pension commitment is made in the form of monthly annuity contributions that are a stated percentage of current salary. They are based on the concept that men and women should receive equal employer contributions toward the purchase of annuities as a part of equal pay for equal work.

For similarly situated men and women, these equal contributions provide equal death benefits prior to retirement and equal accumulations at retirement with which to buy annuity incomes that are actuarially equal.

Under the joint options for husband and wife, for example, two-thirds or full benefits to the survivor for life options which are frequently elected at TIAA-CREF, the equal accumulations pay the same monthly income to a female employee and her spouse as to a male employee and his spouse, given identical ages. The ages of the spouses affect the amount of income; the elder the spouse, the larger the monthly income, and vice versa. But where both husband and wife are the same age, the income paid to a couple for a given accumulation is the same whether the husband or the wife is the plan participant.

However, when benefits are paid out under a single life option, the periodic incomes are larger for men than for women since women's benefits must be spread over a longer period of time because women, on average, live longer than men.

The defined benefit plan is normally found in State retirement systems and throughout industry. This type of plan normally provides that an employee with vested benefits will receive at retirement a monthly single life income determined by a formula representing a specified percentage of the average salary paid by the employer in the years just prior to retirement or termination of service—for example, 1 percent of the final 5-year average salary multiplied by the years of service.

While this standard formula benefit produces a monthly retirement income that is the same for a man and a woman who retire at, say, age 65 with identical salary and service histories, the accumulation—the cost—needed to pay the income is determined by the age, sex, salary, and service of each individual and is larger for the woman than for the man because the formula benefit must be paid to the woman about 3 or 4 years longer, on average, than to the man.

If, however, they elect any of the other income options, such as one of the joint options for husband and wife as discussed above, the female employee receives a larger monthly income than the male employee if again we assume the ages of both to be the same.

Thus, both these pension plan approaches—indeed all types of pension plans—rely on mortality tables that reflect the differences in life expectancies of men and women. In the case of defined contribution plans, or the typical TIAA-CREF plan, they are a significant factor in determining the annuity payout rate, while, in defined benefit plans, they are a major element in determining the cost of annuity benefits.

Federal agencies' guidelines: Again this is somewhat repetitive of what Mary Jo has been talking to you about, but I think it is worth repeating if you will bear with me.

In recent years several Federal agencies charged with the administration of bans against sex discrimination in employment have adopted guidelines with respect to pensions. The first set of guidelines was developed by the Department of Labor to interpret the Equal Pay Act of 1963 and embodies the "either/or" approach to equality in pension plans—either the contributions or the periodic benefits must be equal for similarly situated men and women under this approach.

The EEOC apparently has rejected this approach when interpreting its 1972 guidelines which states:

> It shall be an unlawful employment practice for an employer to have a pension or retirement plan * * * which differentiates in benefits on the basis of sex.

While the EEOC guideline itself does not define equal benefits in this area—that is, it does not state whether they mean equal monthly benefits or actuarially equal benefits—the EEOC decisions applying this guideline have interpreted it to mean equal periodic—monthly—benefits.

It is important for this subcommittee to note that the change of approach in the EEOC's guidelines was made despite the earlier congressional mandate instructing the EEOC to follow the Wage and Hour Administrator's policy in matters over which the Equal Pay Act and title VII have concurrent jurisdiction.

Another Federal agency, HEW's Office for Civil Rights, responsible for administering title IX, the Education Amendments Act of 1972, published its proposed guidelines in June 1974. While their proposed guidelines require that penson plans provide either equal contributions by the employer or equal periodic benefits for the similarly situated male and female, in his introductory remarks in the Federal Register the Secretary of HEW indicated that he has considered a third possible alternative approach and has requested comments on its possible adoption.

That alternative approach would mandate the use of premium or rate tables which do not differentiate on the basis of sex and would thus require both equal contributions and equal periodic benefits. Under this alternative, neither the monthly costs nor the rate of paying out accumulated retirement funds could reflect the differences in life expectancy between men and women. This would mandate the so-called unisex approach.

The unisex rate for any pension program or other group of annuitants, such as an insurance company, would be determined by the proportions of men and women in the group and would change from time to time as the proportions of men and women change. The present rate of payout for men would be reduced in order to increase the women's.

When a pension program contained 50 percent men and 50 percent women, the monthly rate of payout per person retiring at that time would be about halfway between the true actuarial rate for men and the true actuarial rate for women. When the group was two-thirds women and one-third men, the unisex rate would be about two-thirds of the way toward the true rate for women, and so forth.

In reality, because accumulated retirement funds would be distributed at a monthly rate lower than the true male rate, men would not live long enough on average to receive the true actuarial rate of their accumulated funds. The shortfall in their benefits caused by their shorter duration of life would be used to pay the women more than the true actuarial value of women's accumulated funds.

Insurance companies that concentrated their sales efforts on male annuity business would have the fewest women and the most attractive rates, which would tend to draw the funding of men's retirement benefits away from pension programs and insurance companies having a normal mix of men and women.

A unisex rate for paying out accumulated funds would be no better in its handling of individual equity than "uni-age" rate for paying out accumulated funds to all persons of the same sex retiring between say, ages 60 and 65. A reduced "uni-age" monthly rate for persons retiring at age 65 would mean they could not live long enough on average to receive the true value of their accumulated funds, with the shortfall in their benefits being used to increase benefits for the younger retirees.

In short, semantic changes won't change the facts of life and death. Women do live longer than men, and younger people do live longer than older people. Age and sex, then, are the two statistically reliable and objective factors that significantly influence the expected duration of annuity payments and therefore the rate of payout per $1,000 of accumulated funds in all types of retirement plans.

The problem to be considered by this subcommittee is: Which of these three conflicting definitions of equality in pensions—equal monthly contributions, equal monthly benefits, or unisex approach—as a practical matter, best accommodates the needs of higher education while also accommodating the letter and spirit of equal employment opportunity legislation?

Involved in this problem is the question of whether an educational institution should continue to have the right to choose the type of pension arrangement best suited to its needs or whether this desirable flexibility is to be precluded by mandating a standard arrangement.

Also to be thoroughly examined is the issue of whether educational institutions should be able to provide pension plans which recognize the difference between male and female longevity in the payment of benefits.

TIAA-CREF suggests that it has not been established that there is only one fair and equitable way to structure pension plans. We believe, therefore, than an educational institution and its staff members should have the right to choose the type of pension plan most suited to their needs from among those already approved by Federal and State laws and regulations.

And we do not believe that actuarial tables, based on statistically valid longevity factors and the laws of probability are discriminatory. Rather, such tables use a two-component system which separates annuitants by expected duration of life and therefore expected duration of payments.

The fact that age and sex are the two objective and statistically reliable factors used in determining expected rates of mortality is not unlawful discrimination between men and women any more than it is unlawful discrimination between young people and old people.

TIAA-CREF thanks the subcommittee for the opportunity to express our views on this important subject. We will be happy to furnish the subcommittee with any additional information it may find helpful.

[Mr. Willard's prepared statement follows:]

STATEMENT OF DONALD S. WILLARD, EXECUTIVE VICE PRESIDENT, TEACHERS INSURANCE AND ANNUITY ASSOCIATION, COLLEGE RETIREMENT EQUITIES FUND

Thank you, Mr. Chairman and Members of the Committee. I am Donald S. Willard, Executive Vice President of the Teachers Insurance and Annuity Association, hereinafter referred to as TIAA, and its companion organization, the College Retirement Equities Fund, hereinafter referred to as CREF. I am responsible for the management of Our College Services Division, which has primary responsibility of working with eligible institutions and their staff members in the development of sound staff benefit plans. With me this morning is JoAnn Sher, Assistant Counsel to TIAA-CREF.

TIAA-CREF

The Carnegie Foundation for the Advancement of Teaching, working with higher education, established TIAA in 1918 as a special purpose nonprofit life insurance company under New York laws. CREF was established in 1952 by Special New York Act as a companion nonprofit corporation.

Participation in the TIAA-CREF benefit system is strictly limited to colleges, universities, independent schools, and certain other nonprofit institutions that are tax-exempt under the educational or scientific exemptions of Section 501(c)(3) of the Internal Revenue Code. TIAA provides fixed-dollar benefits to help educators and their families withstand the financial impact of old age and death. CREF adds variable annuity benefits to help educators sustain their purchasing power in retirement. The major service is the fully and immediately vested, fully funded, portable retirement program in effect at 2,600 institutions and covering 400,000 staff members, a program which permits mobility of academic and scientific talent among public and private educational institutions throughout the country without loss of benefits. The TIAA-CREF program was referred to on several occasions during Congressional deliberations on private pension reform legislation as the model plan after which all private pensions should be patterned.

TYPES OF PENSION PLANS

There are two basic types of pension plans—the Defined Contribution or the Defined Benefit. The TIAA-CREF retirement plans are of the "Defined Contribution" type, under which the pension commitment is made in the form of monthly annuity contributions that are a stated percentage of current salary. They are based on the concept that men and women should receive equal employer contributions toward the purchase of annuities as a part of equal pay for equal work. For similarly situated men and women these equal contributions provide equal death benefits prior to retirement and equal accumulations at retirement with which to buy annuity incomes that are actuarially equal. Under the joint options for husband and wife, e.g., two-thirds or full benefits to the survivor for life options which are frequently elected at TIAA-CREF, the equal accumulations pay the same monthly income to a female employee and her spouse as to a male employee and his spouse, given identical ages (the ages of the spouses affect the amount of income: The older the spouse, the larger the monthly income and vice versa). But where both husband and wife are the same age, the income paid to a couple for a given accumulation is the same whether the husband or the wife is the plan participant. However, when benefits are paid out under a single life option, the periodic incomes are larger for men than for women since women's benefits must be spread over a longer period of time because women, on average, live longer than men.

The Defined Benefit plan is normally found in state retirement systems and throughout industry. This type of plan normally provides that an employee with vested benefits will receive at retirement a monthly single life income determined by a formula representing a specified percentage of the average salary paid by the employer in the years just prior to retirement or termination of service, e.g., 1 percent of the final five-year average salary multiplied by the years of service. While this standard formula benefit produces a monthly retirement income that is the same for a man and woman who retire at, say, age 65 with identical salary and service histories, the accumulation (the cost) needed to pay the income is determine by the age, sex, salary and service of each individual and is larger for the woman than for the man because the formula benefit must be paid to the woman about three or four years longer, on average, than to the man. If, however, they elect any of the other income options, such as one of the joint options for husband and wife as discussed above, the female employee receives a larger monthly income than the male employee, if again we assume the ages of both couples to be the same.

Thus, both these pension plan approaches, indeed all tyeps of pension plans, rely on mortality tables that reflect the differences in life expectancies of men and women. In the case of defined contribution plans, they are a significant factor in determining the annuity payout rate; while in defined benefit plans, they are a major element in determining the cost of annuity benefits.

FEDERAL AGENCIES GUIDELINES

In recent years several federal agencies charged with the administration of bans against sex discrimination in employment have adopted guidelines with respect to pensions. The first set of guidelines was developed by the Department of Labor to interpret the Equal Pay Act of 1963 and embodies the "either/or approach" to equality in pension plans: Either the contribution or the periodic benefits must be equal for similarly situated men and women under this approach.

The EEOC apparently has rejected this approach when interpreting its 1972 guideline which states: "It shall be an unlawful employment practice for an employer to have a pension or retirement plan * * * which differentiates in benefits on the basis of sex." While the EEOC guideline itself does not define equal benefits in this area, the EEOC decisions apply this guideline have interpreted it to mean equal periodic benefits. It is important for this Subcommittee to note that the change in the EEOC's guidelines was made despite the earlier Congressional mandate instructing the EEOC to follow the Wage and Hour Administrator's policy in matters over which the Equal Pay Act and Title VII have concurrent jurisdiction.

Another federal agency, HEW's Office for Civil Rights, responsible for administering Title IX, the Education Amendments Act of 1972, published its proposed guidelines in June, 1974. While their proposed guidelines require that pension plans provide either equal contributions by the employer or equal periodic benefits for the similarly situated male and female, in his introductory remarks, the Secretary of HEW indicated that he has considered a third possible alternative approach and has requested comments on its possible adoption. That alternative approach would mandate the use of premium or rate tables which do not differentiate on the basis of sex and would thus require both equal contributions and equal periodic benefits. Under this alternative, neither the monhly costs nor the rate of paying out accumulated retirement funds could reflect the differences in life expectancy between men and women. This would mandate the so-called "unisex" approach.

The unisex rate for any pension program or other group of annuitants, such as an insurance company, would be determined by the proportions of men and women in the group and would change from time to time as the proportions of men and women changed. The present rate of payout for men would be reduced in order to increase the women's. When a pension program contained 50 percent men and 50 percent women, the mothly rate of payout per person retiring at that time would be about halfway between the true actuarial rate for men and the true actuarial rate for women. When the group was two-thirds women and one-third men, the unisex rate would be about two-thirds of the way towards the true rate for woman, and so forth.

In reality, because accumulated retirement funds would be distributed at a monthly rate lower than the true male rate, men would not live long enough on average to receive the true actuarial rate of their accumulated funds. The short fall in their benefits caused by their shorter duration of life would be used to pay the women more than the true actuarial value of women's accumulated funds. Insurance companies that concentrated their sales efforts on male annuity business would have the fewest women and the most attractive rates, which would tend to draw the funding of men's retirement benefits away from pension programs and insurance companies having a normal mix of men and women.

A unisex rate for paying out accumulated funds would be no better in its handling of individual equity than a "uni-age" rate for paying out accumulated funds to all persons of the same sex retiring between say ages 60 and 65. A reduced "uni-age" monthly rate for persons retiring at age 65 would mean they could not live long enough on average to receive the true value of their accumulated funds, with the short fall in their benefits being used to increase benefits for the younger retirees.

In short, semantic changes won't change the facts of life and death. Women do live longer than men, and younger people do live longer than older people. Age and sex then are the two statistically reliable and objective factors that significantly influence the expected duration of annuity payments and therefore the rate of payout per $1,000 of accumulated funds in all types of retirement plans.

The problem to be considered by this Subcommittee is which of these three conflicting definitions of equality in pensions, as a practical matter, best accommodates the needs of higher education while also accommodating the letter and spirit of equal employment opportunity legislation. Involved in this problem is the question of whether an educational institution should continue to have the right to choose the type of pension arrangement best suited to its needs or whether this desirable flexibility is to be precluded by mandating a standard arrangement. Also to be thoroughly examined is the issue of whether educational institutions should be able to provide pension plans which recognize the difference between male and female longevity in the payment of benefits.

TIAA-CREF suggests that it has not been established that there is only one fair and equitable way to structure pension plans. We believe, therefore, that an educational institution and its staff members should have the right to choose the type of pension plan most suited to their needs from among those already approved by federal and state laws and regulations. And we do not believe that actuarial tables, based on statistically valid longevity factors and the laws probability are discriminatory. Rather, such tabels use a two-component system which separates annuitants by expected duration of life, and therefore expected duration of payments. The fact that age and sex are the two objective and statistically reliable factors used in determining expected rates of mortality is not unlawful discrimination between men and women any more than it is unlawful discrimination between young people and old people.

TIAA-CREF thanks the Subcommittee for the opportunity to express our views on this important subject. We will be happy to furnish the Subcommittee with any additional information it may find helpful.

Mr. O'HARA. Thank you very much. We would appreciate it, Mr. Willard, if you and your counsel would remain with us so that we will have an opportunity to hear Dr. Woolf's statement and then direct some questions to the group.

STATEMENT OF WILLIAM B. WOOLF, DIRECTOR OF ADMINISTRATION AND ASSOCIATE SECRETARY OF THE AMERICAN ASSOCIATION OF UNIVERSITY PROFESSORS

Mr. WOOLF. Thank you, Mr. Chairman.

To be technical, I had best read the first sentence of my statement.

While I appear before you as an individual rather than as a representative of any organization, you should know that I am director of administration and associate secretary of the American Association of University Professors, and that, it is in that capacity that I have become acquainted with the issues we will discuss today. Indeed, the very complexity of these issues, and the strong and conflicting positions held by members of the academic profession, have made it impossible for my association yet to reach a firm and carefully reasoned policy position on the subject of sex-determined variations in fringe benefits.

We do not have a firm position. We have had a great deal of activity within the association discussing this. The annual meeting in April, which is a meeting of delegates from across the country, but not the ultimate policymaking body, voted in favor of equal monthly benefit payout for retirement systems. So, there is that policy position.

The Committee of the Association on the Status of Women in the

Profession strongly holds the position that payout formulas for retirement systems should provide equal monthly benefits to otherwise identically situated males and females. So, while there is not an official position of the association, there is a great deal of activity and a formal position taken by the meeting and by the Committee on the Status of Women in the Profession.

Another committee, the Committee on Fringe Benefits, tentatively took a year ago the position that equal pay for equal work, by which they meant equal contributions on behalf of the individual by the employer, did constitute equity and was a proper position. That would be the position that the TIAA contracts reflect.

The annual meeting to which that committee reported was unhappy with that position. The one this year voted to take the opposite position.

I will not bore you by reading much of my statement, since it repeats much which has been said by Dr. Small and Mr. Willard. I recount, as both Mary Jo and Don have, the status of the several administrative agencies and the conflict between their regulations. I assert that in my opinion the subject is sufficiently controversial and sufficiently a public policy question rather than a technical question; that, it is inappropriate, in my view, for the rulemaking procedures of Federal agencies to resolve it. Rather, it should be resolved in the policymaking arena.

I also opine that, I think the courts are not appropriately a vehicle for resolution of the issue. I think you can give good equity arguments for any one of three positions here, and I should imagine that a court would have considerable difficulty adjudicating that on the basis of the various and sundry pieces of legislation, including the Constitution, which bear on the issue.

So, I should think that a happier resolution would result from careful examination of the issue by this committee or some other committee of Congress. I am not expert enough to know which committee in Congress properly would look at the question as to what is equity in the handling of insurance in general and retirement systems in particular.

We are talking here about a retirement system so far, but the same question applies, for example, in the provision of life insurance. The cost to insure otherwise identically situated males and females is higher for males than it is for females. For exactly the same reason—they are liable to die sooner—premium dollars will flow for a shorter length of time, so you have to charge a higher premium.

In the case of life insurance provided by employers, it is common to suppress that difference in cost when you charge the employee his piece of the premium. You pool, as we say, across the sex variable.

Now, life insurance is true group life insurance as distinguished from individually owned annuities, as in the case of TIAA retirement program; that causes a difference which may be illuminated as we go into the question and answer period. Don and I have discussed this on several occasions.

Returning, however, to what I think is the hard issue, not the life insurance, but the retirement, I have been staring at this problem off and on for 2 years. I started out absolutely convinced that the way that TIAA-CREF operates is a proper way, if not the proper way.

I have started at the problem for 2 years and talked to lots of people about it, over coffee and in conferences. I am less confident of that position now and more inclined to believe that equity requires us to share the risk of longevity equally between men and women.

In other words, yes, it requires the pool of men to be merged with the pool of women and equally to share the average cost of living out to the average length of life. This does mean unisex. That is what I am talking about.

There have been, in the last couple of years, other suggestions around such as "topping up." These attempts to resolve the issue seem to me to be inadequate and to fall apart upon examination.

The unisex theory—and this is where we will some back to Mr. Willard's very excellent discussion of the issue—in theory seems to win the equity argument. It makes the conscious public policy decision that you will spread the risk across men and women and not separate them. You cannot wave away the fact that the women, on the average, do live four years longer than the men. You do not wave it away.

You agree explicitly to spread that charge among the entire population. Mr. Willard's statement properly points out the problem that I have not yet been able to resolve in my own mind; if retirement systems were one monopoly, rather than being provided by a competitive industry, that monopoly could establish unisex rates—one unisex table for the entire population it was insuring—and that would be it. The problem would be solved.

However, you have many companies in the business. Each of them, in order to be actuarially sound, must establish its own unisex mortality tables based on the mix of its annuitants. If some company has a largely male pool of annuitants and some other company has a largely female pool of annuitants, they must charge different rates.

The male pool will be charged less for their retirement system than the female pool. Otherwise, one of the companies is going to go broke, and the other will make a roaring profit. That does create a competitive situation, I think, of such economic importance that it can't be waved away. I do not pretend, at this point, to have a resolution of that difficulty in the unisex proposal.

[The statement referred to follows:]

TESTIMONY OF WILLIAM B. WOOLF, DIRECTOR OF ADMINISTRATION, AND SECRETARY OF THE AMERICAN ASSOCIATION OF UNIVERSITY PROFESSORS

My name is William B. Woolf. While I appear before you as an individual, rather than as a representative of any organization, you should know that I am Director of Administration and Associate Secretary of the American Association of University Professors, and that it is in that capacity that I have become acquainted with the issues we will discuss today. Indeed, the very complexity of these issues, and the strong and conflicting positions held by members of the academic profession, have made it impossible for my Association yet to reach a firm and carefully reasoned policy position on the subject of sex-determined variations in fringe benefits.

Let me take a moment to describe this issue as I see it. It is a statistical fact, almost universally recognized and accepted, that women as a group live longer than men. That fact has several correlaries: It will cost more to provide a given retirement income to a group of one thousand females than to an otherwise identically situated group of one thousand males; it will cost less to provide that same group of one thousand women with a certain level of life insurance than to provide the same level for the one thousand otherwise identically situated men. The issue is whether or not it is proper public policy to permit insurers to reflect these actuarial facts by paying smaller monthly retirement benefits to individual women than to similarly situated men, or by charging higher life insurance premiums to individual men than to similarly situated women. Or should we mandate a sharing of risk in both pension and life insurance plans which would make costs *and* benefits equal for men and women?

There are several laws and executive orders which speak to this general area, and several agencies charged with the administration of these laws and orders. The Office of Federal Contract Compliance in the Department of Labor is charged with enforcing Executive Order 11246, as amended by Executive Order 11375. It is currently the policy of that office that an employer is in compliance with the Order if either of the following tests is met: The costs of benefits for otherwise equally situated males and females are the same; *or* the benefits provided to otherwise equally situated males and females are the same. It should be noted that there are hearings scheduled in September to examine this specific point, based on the Department's publication of proposed changes in regulation.

The Office for Civil Rights in the Department of Health, Education and Welfare, which acts for the Office of Federal Contract Compliance in the area of Education, also enforces Title IX of the Education Amendments of 1972. Pursuant to that responsibility, the Office of Civil Rights has issued proposed regulations for comment by October 15th of this year. OCR's proposed regulations suggest three possible alternatives, and solicit comment on the appropriateness of each. The alternatives are: (1) that benefit plants must provide equal periodic payments to annuitants, whether or not this results in higher cost (larger contribution) for women; (2) that employer contributions must be the same for male and female employees; or (3) that a shift be made to use of plans with premium and rate tables which do not differentiate on the basis of sex, thus requiring equal contributions and equal benefits.

The Equal Employment Opportunity Commission administers Title VII of the Civil Rights Act of 1964. Its regulations hold it unlawful to have a retirement plan "which differentiates in benefits on the basis of sex." This language has been interpreted to require that otherwise similarly situated males and females should receive equal periodic benefits from a retirement system (as contrasted with actuarially equal cumulative benefits). The Wage and Hour Division of the Department of Labor administers the Equal Pay Act of 1963, Section 6D of the Fair Labor Standards Act of 1938, as amended. That agency has held that an employer "will not be considered to have violated . . . [the] guidelines if his contributions are the same for men and women or if the resulting benefits are equal."

It is clearly untenable to have disagreement among agencies on federal equal employment policy. Congressional intent is thwarted by a lack of uniform standards as to what constitutes discrimination. Even if employers attempt to act in good faith in following federal fair employment practice laws, they must ask which law to follow. Moreover, insurers have not offered employers alternative plans. The hesitancy of the insurance industry to formulate policies which would reflect the employer's legal obligations may well be related to the lack of uniform federal policy on the issue.

Even assuming that the responsible agencies could reach a consensus and promulgate a single set of regulations, we must ask whether the basic problem involved is not one of sufficient substance that agency rule-making is not enough. If the intent of the legislation and Executive Orders were clear on this issue, would we have been so long in arriving at its resolution? On the contrary, I would submit that the intent of the existing laws is *not* clear, and that the issue involved is one of fundamental public policy that cries out for prompt legislative resolution, rather than administrative or even judicial consideration.

I do not suggest that the process of writing legislation in this area will be easy: The conflicting equity considerations and the possible difficulties of implementation will require considerable study and analysis by the staff and the Committee, and will probably require extensive hearings to allow interested parties to present their viewpoints. As a layman who has spent the last two years, off and on, looking at this issue, I have come to a tentative conclusion as to what I think ought to issue from such deliberations. I will attempt to outline this conclusion briefly, mentioning one or two unresolved difficulties inherent in it. I am confident that my good friend Don Willard from TIAA will elaborate further on the problems his organization sees in what we have come to call the "unisex" solution.

At the present time persons retiring under the TIAA-CREF retirement plan (and many other retirement plans commence receipt of a monthly retirement benefit which is calculated from mortality tables drawn up separately for males and females. Under the "unisex" plan, retirement plans would be required to draw up a single mortality table for their pool of participants and annuitants. Such a table would, because of the actuarial fact that women live longer—on the average—than men, reflect the composition of that pool of participant annuitants. An insurer whose pool of annuitants was all female would have a "unisex" mortality table identical to the current female mortality table, while an insurer whose pool was composed entirely of males would have a "unisex" mortality table identical with the current male mortality table. But an insurer with a mix of males and females in the covered pool would have a mortality table reflecting that mix. Under this system, similarly situated participants would pay in equal amounts during their working years, and would receive equal monthly benefits upon retirement.

The whole principle of insurance and retirement plans is the principle of pool-sharing risk: Persons who die earlier than predicted in the mortality tables receive less than they have contributed to the system, while those who outlive the mortality predictions receive more. The "unisex" plan would mandate that men and women share equally the costs of providing retirement income to the entire pool.

As I understand it, the major difficulty facing such a unisex system derives from the fact that there are competitive retirement benefit plans. If there were one single retirement monopoly which could utilize one single mortality table for the entire population, there would appear to be no theoretical barrier to the utilization of a unisex table. This, however, is not the case; insurance companies compete with one another in providing retirement systems. The requirements of actuarial soundness make it essential that each company utilize a unisex table constructed to reflect the male-female mix of its pool of participant annuitants. If, by chance or design, one company were to have a largely male pool, and another a largely female pool, the first company would be able to charge rates significantly lower than the second. Equivalently, any retirement plan might have pressures on it to minimize the number of women participants. I do not pretend to have devised a solution to this problem, but neither am I convinced that no solution can be devised.

A second problem hanging over the heads of all of us concerned with this issue is in some sense independent of the unisex plan. If any court or executive agency holds that retirement systems based on the principle of equal contribution or cost, but providing unequal periodic benefits to similarly situated males and females, are in violation of either the law or administrative regulations, the question of restitution or "back pay" will immediately arise. I know of no one who has articulated an equitable resolution of this "retroactivity" question. Whether this Committee can devise legislation to provide a solution, or whether it can only be formulated through judicial decisions, I do not know, but it seems inevitable that the problem will plague us for quite awhile.

I thank you, Mr. Chairman, and the members of the Committee for the opportunity to contribute to this discussion.

Mr. O'HARA. Thank you, Dr. Woolf, and I thank all of you.

Mr. Willard, in your statement, you point out, "In short, semantic changes won't change the facts of life and death. Women do live longer than men, and younger people do live longer than older people. Age and sex, then, are the two statistically reliable and objective factors that significantly influence the expected duration of annuity payments. . . ." Is that last sentence really correct? Aren't there differences in annuity tables based on occupation, based on race, and based on other factors?

Mr. WILLARD. Not that I am aware of. The question of race is one that always comes up in a discussion of this sort. I think what is important to focus on, in fact, is that we are talking about annuitant population, not general population.

You cannot set an annuity rate on the mortality or longevity experience of the general population, because it is quite different from the mortality rate of annuitants as a group of individuals. General population statistics do show, granted, that blacks do not live as long as whites. To my knowledge, there are no statistics on annuitants distingushing between blacks and whites.

We have made every attempt that we know of, and we will be delighted to have any suggestions that any of you may have, to try to determine whether indeed there is any differential in life expectancy between black and white annuitants. I even talked with the senior vice president and actuary of the North Carolina Mutual Life Insurance Co., which is the largest black-managed insurance company in the country. They have no annuitant population whatsoever. They sell only life insurance and health and accident insurance. They assured me this was true of other black-managed companies, too. From studies that have been done in this area, as best as that can be determined, the differences in longevity between blacks and whites is because of economic and environmental factors, not some innate biological factor. And that, where blacks and whites are living in much the same economic and environmental conditions, there is no evidence of any differential in the longevity of blacks versus whites.

Population statistics, I might also add, show, too, that there is a crossover in the differential in life expectancy between blacks and whites at about age 70, and that, indeed, blacks that live to age 70 have a longer life expectancy than whites that live to age 70. It is the older ages, 65 basically and older, which are the only ages that life expectancy comes into play in setting annuity rates. The rate of mortality prior to retirement age is not a factor at all.

Mr. O'Hara. It seems to me that I have seen some indications that marital status has something to do with longevity. Maybe it does not have anything to do with it, but that married males, for instance, tend to live longer than unmarried males.

Mr. Biaggi. It only seems longer, Mr. Chairman.

Mr. Willard. I have not seen such statistics, and I doubt their reliability.

Mr. O'Hara. My point is, that I would not be surprised if there were other differences.

Mr. Willard. I am sure there are other differences. I think the question is, No. 1, are they significant differences? Are they things that can be measured statistically? Are they objective factors?

When you start trying to put those factors together and determine what other differences there are, then you have the question I suppose of just how far does a company go in breaking down the differences in life expectancies among different groups of people.

You have heard Bill say that one extreme is unisex, where you have no breakdown at all. Another extreme would be to have all sorts of breakdowns and all kinds of things, if, indeed, there were reliable, valid, objective statistics that would be used.

Mr. O'Hara. I think that is the problem—you see—that I think many women would see. If you don't break it down on the basis of race, if you don't break it down on the basis of marital status, if you don't break it down on the basis of occupation—and I am convinced that Members of Congress—I don't know what effect the seniority system has on it—live longer than any other group in our society——

Mr. Dellenback. Only those of you from safe districts.

Mr. O'Hara [continuing]. Those who are very sensitive to the rights of women might well object and say, if you are not going to break it out for these other purposes, then what justification is there for breaking it out to the detriment of women, who are beneficiaries of these plans? If you are not going to break it out as between the school janitor and the professor of horticulture, then why are you going to break it out between men and women?

I think one could make a very good argument; I am sure those arguments have been made much more effectively than I could at Mr. Woolf's annual meetings, which led them to vote in favor of equal payment plans.

Does anyone have any comment on that?

Ms. Small. The only thing I was going to add, Mr. Willard, is that I think that since your annuitants are still predominantly faculty and professional, TIAA-CREF would tend to have an annuitant pool which is quite similar in occupational background, more so maybe than a general insurance company which dealt with a wider variety of annuitants.

Mr. O'Hara. I guess they would at that.

Ms. Small. That might condition the kind of statistics they get as opposed to those of another kind of company.

Mr. Woolf. Don, did you nod when Mary Jo asked whether they are largely faculty?

Mr. Willard. I did neither. They are largely faculty, but there are a number of nonfaculty people as well.

Mr. Woolf. Over the years TIAA-CREF has moved from a company insuring or providing retirement benefits for faculty only, to a company providing benefits at many institutions for the entire staff and, certainly, many institutions for a staff much larger than just the academic staff.

One illumination of the problem that Don cites to you about unisex can derive from that fact. Suppose it is correct that faculties are largely male, as I think it is, unfortunately, and suppose it is correct that support staff at institutions is heavily female, as I think is roughly correct, if you had a unisex system and TIAA were back 20 years ago insuring mainly faculty, they would have largely a male pool. They would have natural reasons, economic reasons, to resist extending their coverage to that largely female support staff, because the extension would raise the rates of the policies they were providing.

So, there would be an economic pressure against what I would presume to be otherwise sound social policy; namely, that they extend that coverage to the entire staff of the institution. There is this real economic difficulty with the unisex system.

In context, I am persuaded by the studies that I have been witness to—I can't say that I have done—that the 4-year differential between the average male and the average female at age 65 in longevity is a much more significant difference than you are going to find in those other variables, even if you do find some difference.

I am easily persuaded that sex is a very powerful determinant as to average longevity among the annuitants. You can't ignore it. You have to confront it face on and say how you want to deal with it.

Mr. Biaggi. Does anyone concede that sex is a most powerful component in these pension systems and other areas? I think we have seen—and what we will see to a greater extent, with the passage of time—a large infusion of females into the pension system. At least 25 years ago, the actuarials in the large pension plans didn't take into consideration the almost insignificant presence, numerically, that is, of the females. They spoke in terms of contribution, equal contribution, based on the fact of longevity. Some of those females would benefit to a greater extent because they came in on an equal basis.

But, with the infusion of females into the system in great numbers, in an actuarially determined plan, I think it is inescapable that the rates must go up, or the males will suffer by being required to pay a greater share of the cost of the system.

I agree with you. I think it is simply a question of policy, really. That could be said of each one of these proposals.

Mrs. **Sher**. Mr. Chairman, it is not my role to speak today, but I did want to comment on two of the questions that you had raised earlier, if I may.

You suggest that the problem that we are grappling with here is, essentially, a lack of data. I will agree with you that, in the question you raised concerning black annuitant mortality versus white annuitant mortality, there is indeed a lack of data. However, on the other issue that you raise, the marital status, which is not unlike some of the other issues that are raised, for example, smokers versus nonsmokers and so on, you have a question as to the reliability and validity of the statistics. Personal habits, such as smoking, obesity, alcohol, or even, if you will, marital status, is subject to change and consequently doesn't become the kind of reliable, valid statistics that one would use in establishing annuity tables.

Mr. **O'Hara**. That is a point well made.

Mr. Dellenback, do you have any questions?

Mr. **Dellenback**. I don't know whether I have too many or none.

Mr. **O'Hara**. I think, very clearly, that it is an intolerable situation as it now stands with the three agencies, each of them imposing different requirements.

The problem I have is deciding how to come to grips with it.

Mr. **Dellenback**. I would take it one step further than that, Mr. Chairman. That is, I would agree with Dr. Woolf's idea that this really is not a decision that ought to be left to the courts, nor certainly to the administrative agencies. This is a policymaking decision, and that is what we are talking about. Therefore, it becomes a congressional responsibility.

Would you mind, Dr. Woolf, going a little bit further into the "whys" of your change of attitude? You said that when you first began to look at this 2 years ago, you were instinctively of the feeling that what was being done—and still is being done—at the present time—was right. You have apparently moved very considerably away from your original position, according to my reading of your statement today. I don't know if I misstate the situation.

Mr. **Woolf**. I think that is correct, except, I cannot resolve what I think is a serious economic problem in implementing unisex. Until I can persuade myself that that problem has a resolution, I am not in a comfortable position.

Mr. **Dellenback**. From the standpoint of equity, why did you move to that position?

Mr. Woolf. Two reasons—a member of our Committee on the Status of Men and Women in the profession has done a short paper which contains a little graph which I find very persuasive. It is a graph of the years of death of 1,000 men and 1,000 women who start out at age 65.

The graph is very simple. The graph for the men starts at age 65—let me say right here—goes up and down. The graph for the women starts lower at age 65, humps later and goes down. You see that women die later on the average.

Then, she goes on to point out that if you take these 1,000 people and pair them by age of death, you can pair 68 percent of the men with 68 percent of the women, so that each pair dies at exactly the same time. You have left over 32 percent—I am sorry, you paired 68 percent of the total group. You have left over 16 percent of the group, which are men, who died earlier than women. You don't have any women to pair them with left. You have 16 percent of the group who are women who died later than any man because you have used up the men who died at that time in pairing.

So, 68 percent of these 2,000 people are indistinguishable. It is the fact that there are 16 percent on this end that are unmatchable and 16 percent on this end unmatchable, that requires you to use sex in determining how to price the system.

It is not clear to me that all 2,000 people have to be differentiated because 32 percent of the 2,000 behaved differently. That is reason No. 1.

Reason No. 2 is in a sense another way of saying that. Insurance business is the business of sharing risks. We pool all kinds of risks.

As I mentioned in my initial remarks, it is common to ignore the sex variable in distributing the cost of life insurance to an employee group. I am not saying that the premium is not dependent on the sex mix of the pool, but the price charged is the same to men and women assuming the employees are paying part of the premium on the group insurance, that is, their cost independent of the sex variable.

The employer knows how the premium is determined, and it is determined with an eye to the sex mix as well as age mix of the group, but the charge is then passed on, on an equal basis.

Now, I don't see any equity argument against similarly pooling across the sex variable in the case of retirement. Since we have made the public policy determination that we may not classify by sex as to employment, I draw the conclusion that that very properly can be said to mandate that the employees shall share the differential cost of longevity.

Mr. Willard. I want to make a comment, if I may, on Bill's second point, because there seems to be a different understanding of what is unisex and what is not unisex.

As I see it, unisex is a pooling, as Bill points out, of male and female, and you come up with a "people table," if you will—not differentiating in any way in terms of cost or benefit.

Bill's point on group life insurance—this is not a unisexing, if you will, under a group life insurance plan, but rather it is the very same thing that is done under defined benefit plans. Mortality factors, the differences in longevity between male and female, are taken into account, but there in group life, as under defined benefit plans, the differences are reflected in the cost, not in the benefit.

Indeed, under group life plans, the employer puts in more money for men than for women to recognize this difference in longevity.

Mr. Biaggi. I would like to make a point. We are taking two points of view. If you talk in terms of an insurance company, of course, that becomes a problem that you have to grapple with, and the competitive situation.

Let us go back to the individual male. This strikes me as analogous to some of the abuses that we found in other areas in affirmative action. In order to provide for the female, we work a hardship on the current status of the male. It is an accepted fact, and I think an established fact, that there is a longevity difference. We must deal with that equitably.

What you are requiring is the male to pay for that difference. I don't think it is fair. We don't quarrel with the notion of buying equality for the female, but at what price, and who is to pay? That is a question I pose. The answer, of course, is not that easy.

Mr. O'Hara. Will the gentleman from Oregon yield to me?

Mr. Dellenback. I will be glad to.

Mr. O'Hara. It seems to me that excellent arguments can be made on either side of this issue. I thoroughly agree it is not the sort of thing that a Federal agency ought to be deciding on its own, saying we have weighed these relatively equal arguments and we have decided in favor of the one—perhaps by a narrow margin, but we have decided. Therefore, everyone must fit our mold.

It is clearly more the responsibility of the Congress to make those kinds of decisions as Mr. Dellenback has pointed out. I even hesitate to do that. My own inclination is to say, well, there are good arguments that can be made either way. Maybe we ought to leave these issues to be determined by the individual groups involved.

In other words, if you have a collective bargaining agreement at an institution, a collective bargaining agreement could define the sort of plan they ought to have.

Mr. Dellenback. The trouble I would see with that, Jim, is that we have in existence certain statutes dealing with lack of discrimination.

Mr. O'Hara. If we define equality as being either equally defined contribution or defined benefit, which HEW does now, for instance——

Mr. Dellenback. HEW is reaching for a third road at the present time.

Mr. O'Hara. No.

Mr. Dellenback. Labor has gone one way, HEW has gone another way, but there is a third possibility, and EEOC has gone another way.

Ms. Small. Right.

Mr. O'Hara. Are there any defined benefit plans in force to your knowledge at institutions, possibly secondary institutions?

Mr. Willard. Most of your State retirement systems are defined benefit plans; yes.

Mr. O'Hara. If we came down, for instance, on the side of an equal contribution definition, a lot of the State schools would be out of step?

Mr. Biaggi. When dealing with equal contributions in defined contribution pension plans, don't they make allowance for the different ages of the annuitant?

Mr. **Willard.** No. Do you mean participants in the plan: do they contribute different amounts because of different ages?

Mr. **Biaggi.** Yes.

Mr. **Willard.** No. The contributions are a percentage of an individual's salary. A person age 30 may be earning $20,000 and someone age 60 may be earning $20,000, but they contribute the same percentage of their salary.

Mr. **Biaggi.** Is it a standard percentage?

Mr. **Willard.** Yes.

Mr. **Biaggi.** Are there some plans that have varying percentages depending on your age?

Mr. **Willard.** Yes. There are some plans that grade their contributions by age, usually not more than two gradations. For example, they may require contributions totaling 10 percent up until age 45, then 15 percent from 45 to 65.

Mr. **Biaggi.** I am familiar with certain plans in the City of New York that deal directly with the age of the annuitant, and the gradations vary at great length.

Mr. **Willard.** Yes; under your New York City retirement system.

Mr. **Biaggi.** They contribute on a percentage basis, but their age is a major factor. You can understand it in an actuarial determination. If a man enters the service at 21 years of age, and he is eligible to retire after 20 years, he has the ability to live, statistically, beyond that to a very substantial period.

Mr. **Dellenback.** I was trying to get a feel for the last part of your testimony, Ms. Small. You have, in your paper, argued cogently a series of reasons why one stand is right and then you counter that with a series of equally cogent reasons why you come out the other way.

Mr. Woolf has indicated his conclusions, with some caveats, after an attempted investigation. What are yours?

Ms. **Small.** As I study this issue, I find that I am swayed first one way and then the other. It is not really a decision I can make. That is one reason why I argued so strongly that Congress ought to make it. For instance, I personally, as a potential TIAA annuitant who at the moment would choose a surviving spouse option, am not affected by this. I also see economic arguments in terms of women on both sides. I don't see how you can change the retirement insurance programs and not change life insurance, and hence lose the advantage that women now have in buying individual life insurance policy and the advantage that, at least under some policies, women have in automobile insurance, because their accident rates are better. So, I can't even decide where my own economic self-interest lies, let alone where the proper social policy lies.

What has come home to me more, as someone sitting at an institution, is that this is an issue which generates a good deal of emotion on the part of individual potential annuitants, particularly male annuitants.

Mr. **Woolf.** Both.

Ms. **Small.** In our own institution, the most vocal discussion has been on the part of women who see themselves as being unfairly treated. What worries us, at least as much, however, is that when you discuss the issue with individual male staff members who are very strongly committed to the general notion of affirmative action, you find a great deal of anxiety generated.

There is almost nothing that I can think threatens people as much as what is going to happen to them in their old age. For them to perceive the institution being caught and through what seems like by chance, treated differently, at least for a period of time, from other schools who are doing the same thing, because one agency has decided one thing and one another, we feel may generate the very worse kind of reaction.

Rather than trying to decide which side of a very difficult and complex issue I come down on, I have worried more than anything else about the damage to the good social policy intended by legislation which could be undermined between agencies.

It is like the novel "Catch 22." Whichever way we turn we get caught. That is what worries me. That follows on your point that even to say the either/or standard is permissible, would need some action, because EEOC has chosen the other.

Mr. DELLENBACK. Any way we go, it seems to me, we must legislate because we have created the "Catch 22" situation, ourselves. We have created a different set of laws, and we have created different agencies to administer them, and the difficulty is compounded in that they are just not administering them the same.

Mr. Woolf, let me ask you a couple more questions. First, what is the principal composition, male and female, of your group?

Mr. WOOLF. Our group is, I think, the last time we checked, about 21 percent female.

Mr. DELLENBACK. In spite of your group being only about a quarter female, it came to a decision which, on the surface at least, might be disadvantageous to the male?

Mr. WOOLF. One committee, which is the Committee on the Status of Women, which is much more than 21 percent female, came out strongly for the equal monthly benefits. Another committee, which was a committee of economists and had one woman on it out of five, came out the other way.

Mr. DELLENBACK. But that was tentative, you said, and that was a year ago.

Mr. WOOLF. A year ago.

Mr. DELLENBACK. And then it was repudiated by the full body.

Mr. WOOLF. At the full annual meeting—it is hard for me to tell you what the composition of that meeting was, but I have no reason to assert that it wasn't 21 percent or less female. It was not biased in favor of lots of women there.

Mr. DELLENBACK. It says something to me. I would have understood the decision of overturning of the first committee more readily had it been 21 percent male and 79 percent female in attendance at the annual meeting.

Mr. WOOLF. I think it is fair to say that the people who compose that vote had not been exposed by us to any reasonably extensive debate on the issue.

Mr. DELLENBACK. So, the principal debate was carried in the second instance, at least, by the committee which had already concluded that that is the way it would go, and the body went with the committee?

Mr. WOOLF. I am not sure that is true because the committee did not present an extensive report. The body was not acting on the report of the committee. The body was acting on a motion from the floor. The discussion of the issue was from the floor. So, it was on the peculiarities of the issue, not after extensive debate of its details.

Mr. DELLENBACK. It seems to me we accept as fundamental the fact that we should move. It seems to me that we have an obligation, Mr. Chairman, to move fairly rapidly on this issue. Whatever we are going to do—even if the decision is a decision of inaction—it is a decision we should move on fairly soon.

I don't think we should delay and wait to see a series of decisions from the courts, which may just compound the problem. If we decide to move on this, I believe you have suggested, Mr. Woolf, that we would probably require extensive hearings.

Mr. WOOLF. Somewhat extensive, I think; is the phrase.

Mr. DELLENBACK. Actually, it is on page 4 of your testimony; and it says "* * * will probably require extensive hearings * * *" and "* * * will require considerable study and analysis * * *" May I ask for a simplistic answer to this one. As we dig deeply into this issue, are we going to find a host of different factors that we have to take into consideration—as some problems require extensive hearings to get the full panoply of reasons—or are we going to find that the arguments are summed up in this small paper on both sides?

There are good arguments on both sides, and in hearings, we will find them vehemently pushed on one side or the other. Is this problem that kind of complex question, or is it just a difficult policy decision?

Mr. WOOLF. I think the arguments that you have adduced do a very fair job of laying the structure of the debate. I suppose the reason that I made that comment in the testimony was precisely the point I have made here orally; that, I have not yet been able to figure out how to come to grips with the economic impact, the economic issue that Don has laid before us and that I have tried to articulate as well.

Therefore, I have not been able to figure out how to implement what seems to me tentatively to be the equity choice. So, I assumed you would have some trouble coming to grips with it and resolving it. I think that is all I meant to say there.

Now, if you go another route and decide to leave the ball game wide open, any one of the three is legal and equitable, then maybe you don't have to work very hard. If you try that out to get public reaction, I am not sure that public reaction will be very favorable. At least, I know segments of the population who will react unfavorably who feel very strongly that equal pay-in and unequal pay-out is inequitable.

I know there is a segment of the population that holds that view.

Mr. O'HARA. You had better wait until after election in spite of the need for haste.

Mr. DELLENBACK. What is the phrase—"due and deliberate speed?"

Mrs. Sher, in spite of the fact you said we shouldn't participate, is there anything else you would add?

Mrs. SHER. I would like to say that not only as a member of TIAA corporate legal staff, but in the past 8 months, I have been chairing a task force that has been looking into the very issue of what we call the fair annuity benefit. I can tell you that, with each aspect that we examine, we understand that there are more aspects that have to be examined.

So that, you will find, probably, that you will be examining the question from two vantage points. One is a very serious public policy question, and then, the other will be whether, from a public policy instinct, can the facts be implemented technically. So that, once the actuaries become involved, you have that kind of complication as well.

We can do very funny things with numbers; all of us can. I would like to say for the record, not critically, but only descriptively, that we (TIAA) have had funny things done to some of our figures by well-meaning people. Some of the figures that were quoted before this committee today were not prepared by actuaries. I would only say that, before accepting them, the committee would want to, I am certain, have an actuary examine them.

Mr. DELLENBACK. You are adding to what Mr. Woolf said, in effect, that if we really started to dig into this, we would find that the argument is a fairly simple one and can be laid out quite intrinsically.

Mrs. SHER. I find very much that the contrary is true.

Mr. DELLENBACK. Mr. Willard, would you add anything else?

Mr. WILLARD. I would agree wholeheartedly with what both Bill and Jo Ann have said. It is an exceedingly complex issue. There are good arguments on both sides of the issue. This is one reason, frankly, that I think we have taken the public posture and the position that the either or guidelines are the ones that should be the ones that apply to all employers.

I agree with what Mr. O'Hara said earlier that this is an issue that I think employers should have the flexibility of making the choice, whether it is at the collective bargaining table or through other means to determine what plan they feel best can meet the needs of their staff members.

I have been at TIAA for 20 years. By far, it is the most slippery problem that I have ever had to deal with and try to get a handle on. What is fair and what is equitable really seems to me the basic question.

Mr. DELLENBACK. Does it place in jeopardy the basic work that you are doing? Does it place in jeopardy any of the basic programs that you are administering?

Mr. WILLARD. I would answer that question in this way: I hope that we are sufficiently talented so that we can write pension plans anyway that it is so mandated they should be written. As I indicated in my comments, our plans almost without exception are all defined contribution plans, but we have the capability of writing defined benefit plans just as many insured plans in industry are underwritten by insurance companies on a defined benefit basis.

We don't happen to believe that that is the best approach for higher education because of the mobile type of community that we are dealing with. We believe that the defined contribution approach better meets their needs. But we can write a defined benefit plan, and it would affect our operations, yes, to the extent that if defined benefit plans were mandated, obviously, we would have to go through rather extensive and expensive change in order to accommodate to this type of approach.

Mr. DELLENBACK. I suppose I was really asking counsel a legal question. Does it place in jeopardy plans now in existence as opposed to capacity to modify future plans? If this issue were suddenly decided in the courts and they were to rule along the EEOC route, would that give you concern about any of those plans which are now being followed? Will you find yourselves suddenly having to change that which exists?

Mrs. Sher. There are several parts to the response, if I may. We believe that, since our system provides an individual contract between TIAA and each employee, we do believe that should there be either a legislative or court mandate today which takes a contrary view to the procedure we have been following, that such a mandate could only be prospective because it could not impair the contractual rights which have existed heretofore. So, in that regard, the existing plans, we believe, would not be disturbed, could not, in fact, be disturbed.

In terms of prospective changes, depending on what the mandate was, for example, if the EEOC guidelines were to prevail in the sense that equal periodic benefits under all options were required, then it would require adjustments to our procedures. The adjustments, however, could be in a funding and under certain options. If you are asking whether it places in jeopardy our system, I would have to say no.

Mr. Dellenback. You answered the other phase of the question when you made the distinction between prospective or restrospective. I didn't know if it was in contention.

Mrs. Sher. Of course, precedents have not been followed by some court, in order to provide change. There is no precedent for this particular set of facts. Nevertheless, we do feel confident in saying that we think a change would have to be prospective only, given our individual contract situation.

Mr. Dellenback. Thank you very much.

Thank you, Mr. Chairman.

Mr. O'Hara. My thanks to all of you for your contribution to our understanding of this problem. I am afraid, now that we understand it, we will be unable to solve it.

Thank you.

The committee will now stand in adjournment until tomorrow morning at 10 o'clock in this room.

[Information to be included in the record:]

Testimony of Dr. Norma K. Raffel, Head, Higher Education Committee, Women's Equity Action League

I am Dr. Norma Raffel, member of the Pennsylvania Commission on the Status of Women, past National President and currently Head of the Higher Education Committee of the Women's Equity Action League (WEAL). WEAL is a national voluntary organization which promotes equality in education and employment through legislation, litigation, and by pressing for full enforcement of existing anti-discrimination laws on behalf of women.

I am pleased to be here today representing WEAL. Congress has acted repeatedly and decisively to end unequal treatment of women in employment and education. Recently anti-discrimination laws have been extended and new laws enacted. Title VII of the Civil Rights Act of 1964 was amended in 1972 to include all educational institutions. The Education Amendments Act of 1972 extended the coverage of the Equal Pay Act of 1963 to executive, administrative, and professional employees, including college and university faculties. The Comprehensive Manpower Act of October, 1971, which amended the Public Health Service Act forbids sex discrimination against students in health-related programs. Title IX of the Education Amendments was passed in 1972, and forbids sex discrimination in any educational program or activity receiving Federal financial assistance.

In the employment practices affected by this anti-discrimination legislation individual women can no longer be evaluated by the standards relegated to the "average woman." Women may not be grouped separately from men in hiring, promotion, or salary. The Equal Employment Opportunity Commission's Guidelines on Discrimination Because of Sex issued in 1972 state in Section 1604.2a,1, (ii), "The principle of non-discrimination requires that individuals be considered on the basis of individual capacities and not on the basis of any characteristics generally attributed to the group." Whether it is in the assembling of intricate equipment, lifting weights, or aggressive salesmanship, decision must be made on individual capabilities and not on capabilities attributed to the "average" male or female. It has been shown that while "average" performance of men and women may differ, there is usually a considerable overlap in the performance of the sexes. For example, the "average" man may be able to lift a heavier weight than the "average" woman, but some women may be able to lift more weight than some men. Therefore, weight-lifting laws which restrict women have been repealed and persons are now considered according to their individual capabilities and not on the basis of their sex. If grouping people by sex is not allowed in employment decisions such as hiring, promotion, and pay, such grouping should not be allowed in employee benefits.

It is not reasonable to group by sex in pension plans because distributions of the death ages of men and women are very similar and using the "average" death age is very misleading. Dr. Barbara Bergmann, an economist at the University of Maryland, has shown this clearly in a draft statement for the American Association of University Professors. She states, "While the 'average' woman dies later than the 'average' man, there is considerable overlap in the distributions of death ages. If at a single point in time we were to pick at random 1000 men age 65 and 1000 women age 65, and follow them through and observe their death ages, we would find an overlap of 68.1 percent (See Figure 1). This means that we could match up 68 percent of the men with 68 percent of the women as having an identical year of death. This leaves 32 percent of the population, of whom 16 percent are men who die relatively early, unmatched by women's deaths, and of whom 16 percent are women who die realtively late, whose deaths are unmatched by male deaths."

If an employer subscribes to a pension plan which provides higher monthly benefits for men than for women on the rationale that all men are like the "average man," and all women are like the "average woman" in terms of age at death, then the 68 percent of the men in the overlap group, who have an identical year of death with 68 percent of the women, benefit from the early death of 16 percent of the population which are men and who die early. Similarly, women in the overlap group bear all of the costs of the 16 percent of the population who die late because they happen to be women. The benefits and penalties of those in the overlap group are based entirely on their being the same sex as the person in the groups outside of the overlap. Therefore, women in the overlap group, with the same work histories as men, receive lower monthly benefits. Their standard of living may be adversely affected because everyone knows that the cost of a bag of groceries and the apartment rent for men and women is absolutely the same. A far more equitable and just solution would be that the extra burden of supporting that 16 percent of the population who live longer be shared by all of the persons receiving pensions, and likewise the savings in annuity cost of that 16 percent of the population who die early could be spread among the entire group of persons in the pension system. Sharing the risk among the pool of participants is done with other factors which affect longevity such as heavy smoking, heavy drinking, obseity, and hereditary predisposition to disease. Why then was sex singled out? True, it's easy to identify and remarkably constant, but also, a splitting of the pool by sex originated at a time when men made the decisions and women seldom questioned them. Times have changed.

WEAL urges that all insurance companies and pension plans be required to adopt mortality tables that do not distinguish between men and women in pricing or paying monthly benefits. In other words—a unisex table—anything less would, of course, be sex biased.

It is just as feasible to keep men and women in one group and charge each person in that group the average cost needed to provide an equitable retirement income as it is to split the group on the basis of sex. Then persons with the same salary and years of service would receive the same retirement benefits, and this would reflect the concept of equal pay for equal work. I believe that using sex in computing retirement benefits originated at a time when the prevailing social attitudes limited women in all areas of employment, and women were not as dependent on paid employment as they are today. Such a classification by sex is unacceptable in today's world. Congress has acted to end discrimination in other areas of employment and it is now time to end discrimination in retirement benefits.

[Whereupon, at 11:05 a.m., the subcommittee recessed, to reconvene at 10 a.m., Thursday, August 15, 1974.]

CIVIL RIGHTS OBLIGATIONS OF INSTITUTIONS OF POSTSECONDARY EDUCATION

THURSDAY, AUGUST 15, 1974

House of Representatives,
Special Subcommittee on Education
of the Committee on Education and Labor,
Washington, D.C.

The subcommittee met at 10 a.m., pursuant to recess, in room 2261, Rayburn House Office Building, Hon. William Lehman presiding.

Present: Representatives O'Hara, Lehman, Benitez, and Dellenback.

Staff members present: Jim Harrison, staff director; Webster Buell, counsel; Elnora Teets, clerk; and Robert Andringa, minority staff director.

Mr. Lehman. I call the Special Subcommittee on Education and Labor to order. I apologize for being a few minutes late and for the temporary absence of our good chairman, who has been appointed to the new Budget Committee and is meeting with them.

Today we continue with our hearings on the requirements which existing civil rights statutes, Executive orders, and related rules and regulations impose upon postsecondary education institutions.

In today's hearing we will be taking testimony on operational aspects of this question. The availability of data needed to meet the requirements of affirmative action programs will be discussed by Dr. Betty Vetter, executive director of the Scientific Manpower Commission.

The dollar costs of affirmative action programs will be explored by Mr. Robert Johnson, vice president of the University of California; and Mr. Robert Stitt, counsel for Columbia University, will discuss some procedural questions relating to the administration of these statutes and regulations.

Today's hearing will be our last until after Labor Day recess. After that recess, the subcommittee will take further testimony on affirmative action and other equal opportunity programs. The exact dates and sequence of those hearings will be announced as soon as they are firmed up.

Dr. Vetter, will you begin today's proceedings?

STATEMENT OF BETTY M. VETTER, EXECUTIVE DIRECTOR, SCIENTIFIC MANPOWER COMMISSION

Mrs. Vetter. Thank you, Mr. Lehman and gentlemen.

Good data are essential to meet the requirements of equal opportunity in training, employing, and promoting women and minorities and, where necessary, carrying out programs of affirmative action to overcome the results of past discrimination.

Planners must have a knowledge of the number and proportion of women and minorities who have been and are being trained and/or who are presently in the work force. Without such data, realistic affirmative action programs cannot be structured. Further, unless the numbers and proportions of women and minorities already trained or in training is known, no base line measure for progress is available.

Educational data in the United States have included sex breakdowns for many years. Thus, we know how many women have graduated at each degree level over the past several decades, and we have these data broken down by field of major. Summary data for doctorates is shown in table I.

[Table I follows:]

TABLE I.—DOCTORAL DEGREES AWARDED BY U.S. UNIVERSITIES, 1920–73, BY FIELD AND SEX

Field	Total number	Number women	Percent women
Life sciences	73,870	9,029	12.22
Agricultural sciences	9,372	258	2.75
Biological sciences	51,501	8,070	15.67
Medical sciences	7,521	825	10.97
Physical Sciences	93,309	4,758	5.10
Mathematics/computer sciences	15,972	1,129	7.07
Physics and astronomy	24,777	666	2.69
Chemistry	44,039	2,729	6.20
Earth sciences	8,918	243	2.72
Engineering	41,047	209	.51
Social sciences	43,018	4,997	11.62
Psychology	28,827	6,246	21.67
Political science	8,924	776	8.70

Sociology	7,644	1,381	18.07
Anthropology	2,827	659	23.31
Arts and humanities	65,376	13,030	19.93
Professional fields	17,509	1,977	11.29
Education	76,625	15,662	20.44
Total—All fields	438,368	56,577	12.91

Source: Doctorate Records File, National Research Council.

Mrs. Vetter. Data breakdowns for minorities are much more recent, less accurate, and less readily available. We do know the number and proportion of the major minority graduates at the Ph. D. level in 1973, for example, through the work of the Commission on Human Resources in the National Research Council, which maintains the docorate records file. These are shown in table II.

[Table II follows:]

TABLE II.—1973 DOCTORATE RECIPIENTS BY FIELD OF DOCTORATE, RACIAL/ETHNIC GROUP

Racial/ethnic group	Physical sciences	Engineering	Life sciences	Social sciences	Arts and Humanities	Professional fields	Education	Total
White Caucasian:

Mrs. VETTER. We do not have this information for earlier years but we have some data supplied by the National Research Council on both women and minorities within the working population of science Ph. D.'s in the United States derived from questionnaires to a sample of that population in 1973. Table III shows these breakdowns by scientific field. We have no similar information on minority and women doctorates in the nonscience fields.

[Table III follows:]

TABLE III.—TOTAL NUMBER AND PERCENT DISTRIBUTION OF U.S. DOCTORAL SCIENTISTS AND ENGINEERS BY FIELD OF IDENTIFICATION, SEX AND RACIAL GROUP

Field of identification	Total population	Percent— Females	White/caucasian	Minority group [1]	No report
All fields	244,921	8.7	86.8	5.4	7.7
Mathematics	15,952	6.3	85.4	5.9	8.7
Physics	18,350	2.7	85.2	5.8	8.9
Chemistry	31,041	5.6	87.7	5.9	6.5

Mrs. Vetter. The data on women are accurate. Data on minorities is underreported in some instances and overreported in others. This comes about because of the different systems used in assembling data from a sample population.

Where questions of minority status are asked directly of individuals in a particular population and reported as received, the numbers will be underreported to some degree since answering such questions is always optional. This is the case in the data in tables II and III.

On the other hand, some reporters of data, such as the Census Bureau, allocate those persons who do not indicate racial or ethnic origin according to their general proportion within the population. This inevitably results in an overcount of both minorities and women in fields and at educational levels where these groups are grossly underrepresented.

In engineering, for example, the census data for 1972 show about 20,775 women engineers in the working population, while we know from other sources that fewer than 5,000 women have graduated in engineering at all degree levels combined over the past 24 years, and some of them are no longer practicing engineering.

The Engineering Manpower Commission estimates that 19,600 women are working in engineering, of whom 3,500 have engineering degrees. Among approximately 14,800 blacks in engineering occupations in 1973, about 8,100 have engineering degrees.

A major problem for administrators seeking to plan and carry out programs of affirmative action is that the existing data are scattered, some available information is unpublished, and much of the existing data that has been collected by professional organizations from their own memberships is not widely known outside the particular group which collected it. In some instances, these organizations are the only reliable source of data on the professional working population, particularly when it comes to minorities.

The Scientific Manpower Commission is in the process of bringing together in one place all the available data that exists from the many sources where it has been collected. We believe this will be a valuable resource for higher education as well as for other employers. It will include sufficient annotation to explain the discrepancies that exist in the data. Unfortunately, the work has not yet been completed.

Accurate data are essential for setting realistic goals for affirmative action. For example, a plan that sought to achieve a faculty made up of 51 percent women and 12 percent minorities—about the proportion in the general population—would be completely unrealistic since the number of qualified women and minorities is proportionately less for those groups than for white men.

Further, within particular fields, the proportion of trained women and minorities is substantially different. In the sciences, for example, about 16 percent of the Ph. D.'s granted in the biological sciences over the past 40 years have been granted to women, compared to only 6 percent in chemistry, 7 percent in mathematics, 3 percent in physics, and 0.5 percent in engineering. On the other hand, about 20 percent of Ph. D.'s in the arts and humanities, 22 percent in psychology, and 12 percent in the social sciences have been earned by women. Those proportions are now increasing.

Despite the relatively small proportions of women in the doctorate population, most universities and colleges have even smaller proportions on their faculties. At assistant professor rank and above, 17.7 percent of faculties nationwide in 1972–73 were women, compared to 18.1 percent of all Ph. D.'s that were granted to women in that year.

At universities, women made up only 13.2 percent of this faculty, compared to 28.3 percent at 2-year institutions. Among full professors, only 9.8 percent are women, while 39.9 percent of all instructors in 1972–73 were women. Table IV contains some of these breakdowns.

[Table IV follows:]

TABLE IV.—WOMEN'S SHARE OF FULL-TIME FACULTY JOBS, 1972-73

[In percent]

	All ranks	Professor	Associate professor	Assistant professor	Instructors
All institutions	22.3	9.8	16.3	22.8	39.9
Public institutions	22.7	10.0	15.8	23.7	39.2
Universities	17.1	6.7	12.3	20.0	44.4
Other 4-year	23.2	12.7	17.4	24.7	44.0
2-year	32.3	21.2	24.3	31.3	35.1
Private institutions	21.2	9.5	17.2	24.1	42.5
Universities	14.5	5.4	12.9	19.0	41.0
Other 4-year	23.6	12.3	19.1	25.7	41.5
2-year	45.4	31.5	34.3	41.3	53.8

Source: National Center for Educational Statistics.

Mrs. Vetter. It is discouraging to note that these proportions are not improving. In 1959–60, 9.9 percent of the full professors were women, compared to 9.8 last year. At the associate professor level, the percentage of women was 17.5 percent in 1959–60, 14.6 percent in 1971–72, and 16.3 percent in 1973. If we look even further back, we find that the highest proportion of women faculty was in 1879, when about 36 percent of all college faculty were women, compared to 22 percent in 1973.

The racial background of college and university teaching faculty in 1972–73, together with other characteristics by field, degree, rank, and position, is shown in table V.

[Table V follows:]

TABLE V.—SELECTED CHARACTERISTICS OF COLLEGE AND UNIVERSITY TEACHING FACULTY, 1972-73, BY SEX

Characteristic	All institutions (percent)		
	Men	Women	Total
Racial background:			
White Caucasian	95.1	93.6	94.8
Black/Negro/Afro-American	2.4	4.8	2.9

Source: Teaching Faculty in Academe: 1972-73, by Alan E. Bayer, American Council on Education.

Mrs. VETTER. Necessary availability data also includes knowledge of the relative unemployment rates of highly qualified persons. The National Research Council, in its 1973 survey of science Ph. D.'s in the United States, found that 0.9 percent of the men were unemployed and seeking employment, compared to 3.9 percent of the women. In every field of science, the unemployment rate for women Ph. D.'s was higher than for men. These data are corroborated by other studies as well.

In a 1974 study by the American Chemical Society of employment among chemists and chemical engineers, at all degree levels combined 1.2 percent of the men and 3.5 percent of the women were reported as unemployed and seeking employment. This relative unemployment ratio for men and women has persisted for each year since 1971, when the American Chemical Society began this annual survey. Minority unemployment was measured for the first time in 1974, at 2.7 percent, higher than for white men but lower than for women.

The 1973 survey of professionals in physics conducted by the American Institute of Physics found 1.1 percent of the male Ph. D.'s and 5.2 percent of the women Ph. D.'s unemployed and seeking employment.

The data make it apparent that well-qualified women are available for faculty positions, although in some instances they are less mobile than men. There is less certainty about the relatively few members of minority groups whose educational background, when considered alone, makes them eligible for faculty slots.

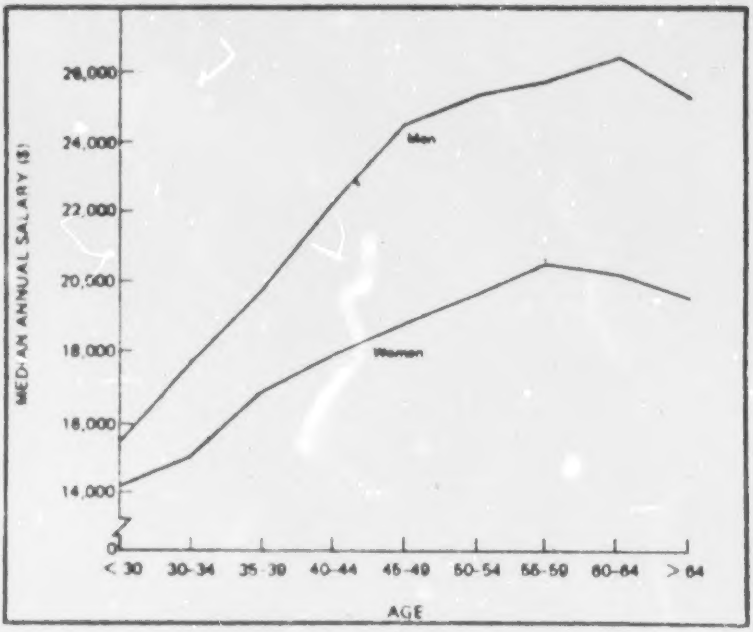
The proportion of American Indians, blacks, Chicanos and other Spanish-heritage groups, and those from Oriental stock who have reached the top of the educational ladder is much lower than for white men and well below that for white women.

There are no data that I am familiar with that indicate any substantial incidence of unemployment among well-educated minorities. There is, however, a serious disproportion of these groups entering and completing higher education. The situation is improving slowly.

The civil rights statutes also require equal pay for equal work. There is a substantial amount of data available to show that women at the same level of education, experience, age, and type of employer earn considerably less than men. The median annual salary for doctoral scientists and engineers in 1973 was \$20,890. For men, the median was \$21,170; for women doctorates, \$17,620—17 percent less. The differential persists from the year of the Ph. D. onward but increases with age, as shown in figure 1.

[Fig. 1 follows:]

FIGURE 1.—*1973 median annual salaries of doctoral scientists and engineers, by age and sex*



Source: *Doctoral Scientists and Engineer in the United States, 1973*, National Academy of Sciences.

Mrs. VETTER. Men in the 60–64 age bracket reported median salaries of $26,470, while women in that age bracket reached only $20,760—a 22-percent difference.

Median salaries of women faculty are well below those of men in every kind of higher education institution. In 1972 differences ranged from 19.7 percent less in large public universities to 17.5 percent less in all 4-year institutions combined, to 9.3 percent less in large public 2-year institutions.

One final requirement for effective affirmation action is the ability to locate qualified women and minorities for placement on higher education faculties. A great many resources for locating such persons have been and are being established. Many of the professional associations in specific disciplines have established womens' committees or caucuses and/or minority groups concerned with their status in the profression. Some of these groups have prepared directories, rosters, or registries of their women or minority members. These are available under varying conditions for use as recruitment resources.

The placement offices of America's large universities are also good sources for new Ph. D.'s who are women or minorities. Some of the largest institutions in terms of Ph. D.'s granted to women employ the smallest proportion of women faculty. As is now well known, women make up 50.4 percent of all high school graduates, 43 percent of all baccalaureate graduates, and 37 percent of advanced degree graduates but only 24 percent of all college faculty and 9.8 percent of all full professors.

Black Ph. D.'s are employed in a significant proportion in predominantly black institutions. Other minority faculty are scattered throughout the higher education system but employed in larger numbers in those areas where the minority group of which they are a member is substantially represented in the regional population. For example, Chicano faculty are more predominant in the Southwest and West than in the Northeast.

A list of rosters and registries of women professionals has been compiled by and is available from the Federation of Organizations for Professional Women. A list of the several minority rosters is being compiled by the Office of Opportunities in Science of the American Association for the Advancement of Science.

Additionally, the Equal Employment Opportunity Commission is compiling a list of rosters of both women and minorities which should be available sometime in September.

The Scientific Manpower Commission will include these lists along with the existing availability data in the reference work now in preparation. Although this is not yet available, I have brought with me a copy of most of the data thus far compiled, some 280 tables, and I will be happy to answer any specific questions you have on data as well as any other questions you may have. Thank you.

Mr. LEHMAN. Thank you, Mrs. Vetter. I have enjoyed your testimony. If you think it is bad for women in education, you ought to take another look at industry. I was on the Dade County School Board several years ago; I was chairman of that group. We were involved out by Eastern Airlines with a group to try to get the top executives of the 8 or 10 largest employers in the Dade County—Miami area and they had people there from Eastern Airlines, the First National Bank group, from National, from Florida Power & Light, Southern Bell, Dade County School System, University of Miami.

Of all the people there, we were the only group—we had one woman among the top executives; that was an area superintendent. There was not a single woman among the other industries. As bad as education is, it is good compared to some of the other categories.

Mrs. VETTER. That is correct.

Mr. LEHMAN. I have been an automobile dealer; I am a General Motors dealer. I have had opportunity to go into the district office in Jacksonville; not a woman, even in front line management.

You go to the regional office in Atlanta. It is "Can you type?" In fact, if you came up here on the Hill looking for a job, the first question they ask you is——

Mrs. VETTER. Can you type?

Mr. LEHMAN. But if a man came in, they would not ask if he could type.

Mrs. VETTER. That is right.

Mr. LEHMAN. So we are all guilty. In fact, coming from a State that just for the second year in a row has voted down the ERA, I am a little guilty myself.

But I think the women furnish the greatest untapped resource that we have in this country. I think the real fault that I have found out is the fear of male middle management, that women can't get by that frontline middle management. Once they get past that, they can go up, but they can't get past middle management.

In my own business, I can get management to accept blacks and Puerto Ricans. I can't get them to accept a woman salesman. In the city of Miami there must be, I guess, 1,500—at least 1,000—new-car salespeople and not 1 woman. They can sell real estate but the automobile industry——

Mrs. VETTER. Since women buy so many cars, one would assume that a saleswoman would be able to sell a car.

Mr. LEHMAN. Every dealership has Spanish-speaking salesmen, black salesmen, but they don't have a woman salesperson. The main problem is basically your white middle frontline management. That is one of the problems in the automobile business today; they don't get enough input from women at the management level.

Mrs. VETTER. It is quite possible that, since higher education is being forced by regulation to make some steps in this direction, when they succeed—and they will—in providing appropriate numbers of well-qualified women on staffs and it becomes apparent to industry that this has worked successfully, perhaps that will be the greatest bridge across those barriers, because there are few laws requiring that kind of thing from industry.

Mr. LEHMAN. In another committee, we are going to be dealing with some legislation called the Child and Family Service Act of 1974. I think it would be well to write into this act some kind of child care centers at the universities, not just for young female family people they can bring on their staff but for young students on the staff and as a laboratory facility to train people to take care of children.

Mrs. VETTER. That is right.

Mr. LEHMAN. I think all the opportunity in the world is not going to do you any good if you have a 2-year-old child who is going to need your care at that time when you are competing for promotion and you are competing with a male who doesn't have to assume those duties. I am going to try to work something out along those lines.

Would any of the staff like to ask questions?

Mr. HARRISON. I would, Mr. Chairman.

Mr. LEHMAN. Go ahead.

Mr. HARRISON. At the absolute end of page 4 of your statement, you say—

> On the other hand, some reporters of data, such as the Census Bureau, allocate those persons who do not indicate racial or ethnic origin according to their general proportion within the population. This inevitably results in an overcount of both minorities and women in fields and at educational levels where these groups are grossly underrepresented.

I am sorry; statistical analysis is not my thing; I do not understand what you are saying in that paragraph.

Mrs. VETTER. In the census data, everyone is asked to report his minority status or racial background but it is not a required question. It is against the law to require it. So for those people who refuse to answer it—and this includes both minority groups and nonminority people who refuse to answer it on principle—in other kinds of reporting but not in Census Bureau they simply report the number of people who announce themselves as belonging to a particular minority.

The Census Bureau decided instead to allocate all unreported people as being female or black or brown or whatever on the basis of their proportion within the population. Therefore, 51 percent of all the persons who did not designate sex are assumed to be women. This works all right when you are working with a total population.

On the blacks, they did it with a regional allocation. If you did not report your ethnic origin and you were from Alabama, for example the allocation to black was proportional to the sectional population of blacks. This works all right when you are working with big numbers. But when you are working with populations in which very small numbers of blacks or other minorities or women are represented in a discipline, if you get 17 engineers who do not designate sex and you decide that 51 percent of them are women and 12 percent of them are black, you come out with very greatly overreported numbers.

Mr. HARRISON. Thank you.

Mrs. VETTER. It took us a long time to find out why the census data were so completely off from everybody else's data.

Mr. HARRISON. What you have said would tend to confirm another impression I have about your data. When you are making comparisons in these areas, 17.7 percent of faculties nationwide were women, 18.1 percent Ph. D.'s—at any rate, the percentages that appear on page 6, for the most part you are talking about a small enough population so that the small differences among these percentages——

Mrs. VETTER. They are not accurate necessarily when you are reporting for minorities. Minorities are reported in one of two ways: By visual observation—somebody looks and decides what minority group he or she thinks someone may belong to—or by asking the individual himself to state the minority group.

In either case, if you get no answer from the respondent, you have to either ignore him—in which case you are under-reporting—or judge by observation. I am certain that the people who do these counts—I have known some of them—are not trained to distinguish accurately; they may not be able to tell what the ethnic background is.

So the numbers on minorities are very inaccurate. We do have a great deal of data on minorities and it does not agree very well. That is the major reason why. It depends on the way in which you use what you have collected and the way you collect it.

Mr. Harrison. You also have very small total figures here. Going to page 8, 1.1 percent of the male Ph. D.'s and 5.2 percent of the women Ph. D.'s in physics are unemployed and seeking employment; 1.1 percent of male Ph. D.'s in physics is how many?

Mrs. Vetter. It is about 283.

Mr. Harrison. And 5.2 percent of the women Ph. D.'s?

Mrs. Vetter. It is about 31.

Mr. Lehman. Mrs. Vetter, how do our data compare to Western industrial, European nations, Scandinavian, Britain, West Germany?

Mrs. Vetter. We are way below in women. They don't have the same minority proportions generally that we do.

Mr. Lehman. Dentists, doctors, and things like that?

Mrs. Vetter. We are way below in women. We graduate fewer women in the professions. We put fewer women in the graduate school. For example, in the medical profession, women make up a much higher proportion of the medical profession in almost all of the—I started to say "civilized"—the advanced countries than in the United States. Women earn 27% of the medical degrees in France, 30% in Germany, 12% in Italy, 26% in Sweden and 8.5% in the United States. In Russia, women physicians are in the minority.

Mr. Lehman. I welcome Congressman John Dellenback, whose wife is a well-known writer.

Mr. Dellenback. She will be very pleased to hear you say so.

Mr. Lehman. A TV personality. If you would like to get into the act, Mr. Dellenback, welcome aboard.

Mr. Dellenback. Mr. Chairman, I must be apologetic. We are in the process of doing one of the things that happens in the Congress. We are supposed to be at two places at the same time. We have been dealing with the Public Lands Organic Act in the Interior Committee. I have been at it and I apologize for not having been here earlier.

I wonder, Mr. Chairman, whether, in view of the fact that I haven't yet had a chance to read the testimony of Mrs. Vetter, it would be in order for counsel to ask a couple of questions.

Mr. Lehman. We were doing that anyway.

Mr. Dellenback. If that would be in order, I would appreciate Mr. Andringa's asking some questions.

Mr. Andringa. Are you or others in the Commission as involved in the collection of data on women and minorities for nonacademic employment as well as academic employment?

Mrs. Vetter. Yes.

Mr. Andringa. Could you give us some idea, then, as to how these kinds of statistics which you have shared with us about academic employment for women and minorities are comparing with progress made in other sectors of the economy? The statistics you mention on the bottom of page 6 are very discouraging, to say the least.

Mrs. Vetter. Yes, they are.

Mr. Andringa. Are the statistics as discouraging in other sectors or, because women were traditionally less involved early on in other sectors, might their progress show greater advancement?

Mrs. Vetter. No, I don't think there is any area in which they have made much progress since 1920, not really. We had proportionately more women trained in 1920. The proportion of women doctorates was higher in 1920 than it has ever been since. It dropped steadily through the fifties, starting back up in 1960, and is now climbing quite rapidly; but, even though we are training more women, they are having greater difficulty finding jobs, even the fully trained ones.

For academic areas generally, we can assume that the Ph. D. is probably as good a measure as we can find—how many women have Ph. D.'s in a field—because it is the best single measure you can use statistically to find out whether there are qualified women available for faculty positions.

Mr. Andringa. Could you look at the chart on page 6? In almost every case the proportion of women is higher as you move down in faculty rank.

Mrs. Vetter. That is right, as you move down in faculty rank and down in prestige of institution, as you move from university to junior college.

Mr. Andringa. Would that kind of profile in 1972–73 compare favorably with a similar profile, say, 20 years ago, or is it encouraging that at least at the lower levels this is a much higher proportion of women? If the normal tenure process and promotion process takes place, would we expect to find the percentages in the associate professor and professor level moving up in 10 years?

Mrs. Vetter. I think we will find them moving up, but present proportions are less than in 1920. We had very few 2-year institutions in 1920. What we had, instead, was 4-year colleges and universities. The proportion of women faculty in 4-year institutions was 27 percent, compared to 19 percent in 1972.

Mr. Andringa. Could you comment on the general question of timing in meeting affirmative action plans, given the current enrollment projections, collective bargaining trends, tenure rule, and so forth?

Mrs. Vetter. There has been an estimate made by the Carnegie Commission on Higher Education that if 50 percent of all new hires at universities 1970 to 1990, were women, faculty composition would reach 30 percent women by 1990. Obviously, 50 percent of all new hires are not women. So it is going very slowly.

But we are increasing women graduate students faster than that. We are increasing the proportion of women Ph. D.'s faster than that. The opportunities for training women are improving faster than the opportunities for employing women in higher education.

Mr. Andringa. So it is not so much a matter of the supply side?

Mrs. Vetter. It has not been the supply side for a long time. There are a great many unemployed women Ph. D.'s seeking academic positions. There are a great many academic institutions who say they can't find any qualified women. In come cases they genuinely can't because they don't know where to look and don't know how to go about it. And in some cases they obviously didn't try.

Sometimes they have queried groups like mine, for example, asking: Do I know any qualified women biochemists? Generally speaking, I know more about the women in science than I do in other groups because of the nature of my commission.

But yes, I do, and I will send them back the information they need. I will later find that they have never contacted a single one of the women who were recommended to them; but, on their statement of affirmative action of what they did to fill this job before they hired a pale male to fill it, "they checked with me and found out there wasn't anybody available." I have had that happen more than once.

Mr. Andringa. When will you be completing the compilation of data that you have in preparation?

Mrs. Vetter. I wish I had a perfect answer to that. Hopefully we will have it done in the fall. There turns out to be much more available than we thought there was when we started.

Our problem is the same as almost everybody elses. We can't get the support to finish it, we can't increase the staff to get it moving, so we are doing it in between everything else.

Mr. Andringa. If, as you suggest, this will be the most complete compilation available, although changing regularly, how far along will we be toward the ideal goal in terms of availability of information?

Mrs. Vetter. I would say, on women, we will have almost everything that is needed. As a matter of fact, we are up to that stage now. On women, there will be all the data anybody needs to know what a realistic affirmation action goal should be for hiring in any department in any university.

Mr. Andringa. This is to include master's degree?

Mrs. Vetter. Yes; we have all the information on master's. We will also include information on: Where do you go to look for the people? Where can you find lists? And sometimes these lists are in the form of simple directories that will give you a name and address and degree level. Sometimes they are rosters that will give you a little more information. Sometimes there are registries that will give you back history.

Mr. Andringa. One final question. Does your commission keep on file any résumés or personal information about specific individuals and make that avalable?

Mrs. Vetter. Not on purpose we don't. A lot of people think we must be a placement agency, so they send us résumés. At the same time, a lot of people who are looking for somebody think we must be a placement agency, and they send us job descriptions. Once in a while these two match up and I make copies and send each one copies of the other person's request.

But by and large, no, we don't. But we do know where all such résumés are maintained. There are a number of groups in higher education that work in academic placement. The most outstanding one is the Cooperative College Registry, which operates in Washington and is a placement service for college and university hiring, a nonprofit service. It is a very good place to locate women and minorities.

Mr. Andringa. Thank you.

Mr. Dellenback. Mr. Chairman, may I ask one question. It is not really covered by your testimony, Mrs. Vetter. It is a matter of searching within this committee for a road that I find difficult to locate. I believe in affirmative action. I think we ought to be doing something and not leaving it to chance.

But, in listening to the testimony these last weeks in this area, I see a difficulty, the resolution of which I don't quite see. If we, say, when it comes to employment as opposed to salary and raises and so on, in a given year, whatever the increment to be added must be nondiscriminatory, maybe you don't set quotas but you set some goals and the goals are in rough proportion to the available pool or the constituency being served or whatever it may be.

But you take the increment and apply a true measure of nondiscrimination to the increment added to. If you do this for 2, 3, 4, 5 years in a row, you will have had an impact on the normal pale male mass?

Mrs. VETTER. A little, not much.

Mr. DELLENBACK. But you will have had some impact on it but it will not have brought the mass of the given area into anything like a balance?

Mrs. VETTER. That is right.

Mr. DELLENBACK. On the other hand, if you change the incremental input so that within *x* years, whether it be 5 years or 7 years or 10 years, you have a substantial impact on the mass so that it comes closer to what we might consider balance, you do it in a way that means the incremental input discriminates?

Mrs. VETTER. That is right.

Mr. DELLENBACK. How do we resolve this issue? What is the right way for us to draw legislation which insists on nondiscrimination?

Mrs. VETTER. I think there is no fair way that this sort of thing can be decided. We have the same problem in reference to trying to make up to the Indian populations for that which our forebearers did to the Indians that they should not have done. We have the same kind of problem with any kind of discrimination which has existed in the past.

I think the only kind of answer that makes sense is: In hiring, when there are proportionately more qualified women or blacks or any other minority group available than there are men, then positive steps toward affirmative action seem to be indicated.

When the unemployment rates for highly qualified women are considerably higher—they now are from two times to seven times higher than for men—then, it seems to me, some affirmative action probably is completely justified.

Mr. DELLENBACK. Let us assume it were the other way and the women were in the predominant numbers and in a given year you and I were applying for a single faculty position and your qualifications were better than mine and they said, "Dr. Vetter, we have to bring this into balance; we are going to take Dr. Dellenback instead of Dr. Vetter for this particular position." It would not be fair to you.

Mrs. VETTER. I would not question for a moment taking the best person you can find. I do question, because I have seen it happen so often, whether anybody really looked to see who was the best person.

It is true—not because women are smarter or brighter or faster or anything else than men are—but it is true that highly qualified women, women who have reached the Ph. D., by any measure of testing or anything else we have, come out above the men, not because they are brighter but because they are so highly selected. Any woman who has the stamina and ability to go that far was selected way above her male compatriots, who did not need quite as much push.

We have large numbers of women who reach that level, and certainly every person who has reached a Ph. D. does not necessarily stand for something, but it is a measure we can use.

When we have fairly high unemployment among women who have gotten that high in the circuit and when those women, as a statistical group, have much better qualifications than the men do, they came out higher on the test scores, their graduate record exam scores were higher, their grades as graduate students were higher, then I think some affirmative action is necessary.

But that does not mean—when you come down on an individual basis, if you will truly look at some available women and some available men, I think always you should take the person who is best for the position if you will just be honest with who is best.

Mr. Dellenback. I will agree with you that the affirmative action of insisting on a true search instead of just saying, "We already have three applicants; they are all male; so we will go this way and we won't really try to open the information to the field and really look at the broad selection"——

Mrs. Vetter. We have to eliminate the old boy system of hiring or we have to get the women into the old boy system. I don't think there is anything wrong with the old boy system except that it is pretty exclusively male.

Mr. Dellenback. I understand, Mr. Chairman, with apologies, that we have another witness.

Mr. Lehman. Thank you, Mrs. Vetter.

Mr. Johnson, because we are going into session a little early, would you kindly summarize your statement? You may be assured your entire statement will be inserted in the record.

STATEMENT OF ROBERT L. JOHNSON, VICE PRESIDENT, UNIVERSITY RELATIONS, UNIVERSITY OF CALIFORNIA, BERKELEY, CALIF.

Mr. Johnson. Mr. Lehman and Mr. Dellenback, you have a long statement in front of you, a part of which I had intended to read and part of which I simply added as supplementary information. I think perhaps if we leaf through this very quickly without reading it at all, I will point out to you on page 1, I really would ask you to pay attention to the first paragraph because I do want to stress that, quite apart from whatever the monetary cost is, the commitment to affirmative action does indeed change an institution. I think this is very important.

Then you will notice that it is very difficult to aggregate dollar expenses but we have given you, on page 1 here, a motion of some $3 million for the current fiscal year at the University of California. You will remember we are talking now about nine campuses. We have given you a notion of the fact that most of this is a redirection of our own resources, only $250,000 coming from public moneys from the State of California, $500,000 from the university's governing board's own resources.

Then I would particularly point out, and I think this relates specifically to the previous speaker's comments that, if we are going to break up some of the old boy patterns of recruitment that, if you will look at the bottom of page 2, we give an illustration here of the fact that probably in the past, not probably but certainly in the past, that financial restrictions along with preconceived notions have meant only candidates which fitted the image of best bet have been invited by academicians for faculty appointment.

Since women and minority scholars are not usually part of personal knowledge of available scholars, they are less likely to be invited for interviews.

To correct this will take a lot of money in our judgment, probably as much as $620,000 in a year.

We have given you some indication here of what the cost has been recently for nonacademic positions, citing two instances here of over $3,000 each spent in appointments of just two positions where over 500 applications have come in.

I think I would particularly at this moment also like to point out some of the difficulties that occur with respect to the regulating agencies.

You will note on page 4 that we make reference to the fact on the Berkeley campus a painstaking effort to put together numerical goals for OCR and then learned that contract employment offices were told to emphasize percentage goals, one group we were working with from HEW telling one thing and another group telling us we need to do it another way.

No objection to what we are trying to do, but a real cost involved in changing the approach.

I will point this out from the EEO report. I would like to take a second, if I may, because I think this will give you some notion where I think there is no question about our all having the same purpose but the kind of difficulty we can get into.

Unless my memory fails me, the current EEO—one report places Philippinos with all other minorities. The EEO-situation report, if it is promulgated in a way we are told it will be, Philippinos will become part of an Asian group with others who were previously listed as Orientals. In California, Philippinos are not an insignificant number. For us, I think you can readily understand what this does to a computer program system and particularly it will probably mean we are going to have to maintain the old records and the new records in order to do any kind of continuity and the kind of sharp availability analysis and employment analysis that we would want.

Just to complicate this a little more, in the compliance report for OCR on students there is no mention of Philippinos at all. So, I have to infer that they would go back into the all other category again.

So any notion of our trying to match student enrollment, student opportunity, and student census with the occupational census as required under the EEO situation report and what they mean really to our keeping track of what we have been doing and where we are going becomes complicated, to say the least.

The rest of this is an elaboration of what the internal staff direction of energies is.

I have some comments here about the sort of pervasive nature, requirements, the commitment of staff time, and energy. I point out here that in the university we have 61 employees alone currently filling positions specifically earmarked for affirmative action, in no way counting all the others who are involved in whole or part time.

Then I think the one other thing that I would just highlight here is the kind of indepth analyses of personnel actions which we have taken. These are, indeed, expensive, time-consuming and necessary.

As chairman of the university's management program, for example, I can tell you we are reviewing all 550 so-called management programs of the university to look for any disparate effect in either classification or payment for women and ethnic minorities. This is going on at the academic level and management level at the university.

Lastly, I call your attention to some of the things that have happened at the university in a positive way, particularly noting some of the things that we have moved into that are not specifically required of us by law.

I would really close with that last sentence that I can say with conviction that we are a better institution for all this and, although the cost has been heavy, the benefits are certain. But the costs are, indeed, very real.

[The statement referred to follows:]

STATEMENT OF ROBERT L. JOHNSON, VICE PRESIDENT, UNIVERSITY RELATIONS, UNIVERSITY OF CALIFORNIA, BERKELEY

I will be frank. It is extremely difficult to isolate the cost of affirmative action efforts. Genuine commitment to affirmative action permeates an institution, influencing all activities at all levels. It *changes* an institution. The nature of this change is in some ways obvious, but often subtle. If the change is difficult to quantify and analyze, the cost of this change is even more so. I would not argue that the change stems solely from Federal requirements. The University is changing with the times; Federal legislation simply speeds the process and confirms our own sense of what is right and what must be done. Indeed, we hope it is true that the University of California has been a leader in this process.

Having indicated that much of the cost of our affirmative action efforts—probably a majority of the cost—can never be calculated, though real dollars are involved, let me give you some gross dollar figures. So far as we *can* calculate cost, we estimate this to be more than $2 million in 1973–74 and approximately $3 million during the current fiscal year. In 1973–74, only $350,000 of the total was new money. The State of California appropriated $250,000 and The Regents of the University appropriated $100,000. For 1974–75, the State has continued the $250,000. The Regents' appropriation is $500,000. The remaining costs of over $2 million for 1974–75 will, as was true last year, be met by a redirection of existing resources, including staff energies.

To sum, for 1974–75, we will spend over $2 million by absorbing costs within regular institutional resources; another $500,000 from internal funds is specifically earmarked for affirmative action, and $250,000 from State funds is earmarked for affirmative action, for a total of approximately $3 million.

Funds specifically allocated for affirmative action in 1974–75 and costs absorbed internally relate to five broad categories of expense: program coordination and administration ($385,000 earmarked), employment recruiting ($237,000 earmarked), training (no specific appropriation), data production and analysis (no specific appropriation), and related programs ($128,000 earmarked, including $40,000 for student affirmative action).

Let me use employment recruitment, because it is easier to quantify, as illustration of the expense associated with vigorous affirmative action. Every career job vacancy in the University is required to be openly listed in some manner. The University has been engaged in a vigorous effort to search out, identify, and encourage applicants from groups underrepresented in our workforce—with special emphasis on those occupational categories where women and minorities are underrepresented. This includes contact with national and local organizations, community groups, and a variety of recruiting sources. On some campuses, recruiters are assigned full-time to this outreach recruiting effort. Extensive advertising costs are incurred in conformity with the requirement for a full-scale search and recruitment of a diversified pool of candidates. Additional costs are incurred in paying travel expenses of candidates brought for interview.

On the academic side, for instance, departments have normally reimbursed travel expenses of only one or two candidates. Financial restrictions have meant that only candidates who fit a previously conceived image of "best bet" have been invited. Since women and minority scholars often may not fit this stereotypic image, they may have been less likely to be invited for interviews. Faculty members are aware of this problem and are most anxious to correct it by seeking to ensure that an honest and vigorous search be made for all competitive candidates. We estimate an additional expense of $1,000 per new ladder rank appointment to permit a much-needed expansion of the interview process, totaling perhaps as much as $620,000 in a year.

On the staff side, costs of advertising, long distance calls, and travel expenses recently exceeded $3,000 for each of two high-level management positions. Over 500 applications were received for one of these openings, Executive Director of Computing, and each application received close attention. The $3,000+ price tag for recruiting does not, of course, include the time of members of the search committees to scrutinize resumes and interview candidates.

Having indicated the sorts of costs which can be identified in rough approximation for purposes of budget requests and allocation of funds, let me turn to other costs, especially focusing on program coordination and administration and on generation and analysis of data.

Program coordination and administration takes place at two levels: University-wide and on the campus or at the laboratory. We have 14 affirmative action programs relating to employment, one for each of the nine campuses and three laboratories, one for the Office of the President, and one for Cooperative Extension. University wide guidelines for written affirmative action programs are formulated in the Office of the President, which then reviews each of the 14 programs to ensure conformity with the guidelines. Guidelines concern designation of responsibility, personnel policies and practices, recordkeeping, monitoring functions, and statistical analyses—including utilization analyses, analyses for substantial disparity, and establishment of goals and timetables.

In formulating these guidelines, University-wide staff maintain regular liaison with Federal compliance agencies to keep abreast of requirements, to seek assistance in interpreting requirements, and to comment on proposed requirements. This task involves untold manhours under the best of circumstances. Unfortunately, inconsistency sometimes arises among agencies or between central and regional offices, resulting in extraordinary cost to an institution.

These situations indicate the complexity of the entire process of adapting to institutions of higher education laws and regulations designed for application to industry. This process can be as confusing and difficult for Federal agencies as it is for the University.

As an example, during discussions with the Berkeley campus in the spring of this year, the Office for Civil Rights, DHEW, placed emphasis on the need for numerical goals—[illegible] opposed to percentage goals. As a result, the Berkeley campus workforce analysis just submitted to OCR contains numerical goals established through painstaking calculations. Now we learn that as long ago as January of this year the Office for Federal Contract Compliance sent Technical Guidance Memorandum No. 1 on Revised Order 4 to contract compliance officers emphasizing the need for percentage goals. It appears certain that we will have to recalculate utilization analyses and establish new goals on a percentage basis, expending manhours for calculations and typing as well as costs for reproducing and distributing the new workforce analysis. There's a morale factor in such instances, as well. Staff who take pride in their work, who are accurate and who meet deadlines, visibly lose motivation when they discover their careful job must be done all over again through no fault of their own. And, of course, University-wide guidelines must be revised in light of new information.

To take this subject just a bit further, let me point out that too frequent changes in Federal guidelines are a significant source of institutional cost. Each change can create enormous retooling costs—changed data bases and reporting systems—and, importantly, may force loss of comparability with the past. For example, the now proposed Higher Education Staff Information Report EEO-6 would necessitate immediate, major modification of computer programs in order to completely recode the ethnic identity of employees to conform to proposed new definitions of ethnic groups. Additionally, the proposed EEO–6 report, by combining University academic and nonacademic positions in occupational categories, would require institutions to keep dual sets of data—one based on current EEO–1 occupational categories in order to maintain continuity with historical information; another based on proposed EEO–6 categories for the purpose of providing EEO–6 reports.

To return to program coordination at the University-wide level: personnel policies are developed and review to ensure equal opportunity and non-discrimination in all employment areas, including recruitment, selection, employee development, promotion, salaries, benefits and separation. Standardized job descriptions and minimum qualification for each staff title are developed and reviewed to eliminate arbitrary or unnecessary requirements and to provide equal pay for equal work. These processes include extensive coordination with the campuses and employee groups.

Guidelines are developed for analysis of workforce composition and establishment of goals and timetables and for the analysis of all employment actions, as required under implementing regulations of Executive Order 11246. To assist the campuses in conducting utilization analyses and establishing goals and timetables, data on the availability of women and minorities are developed and tailored to fit the occupational mix and recruitment area for each campus. (Incidentally, the inadequacy of existing "availability data," particularly in the academic area, is a source of current frustration to all institutions of higher education.) For staff personnel, occupational subcategories of the Federal Occupation Codes are established to provide more detailed and accurate comparisons of University workforce data with availability data.

At the University-wide level, the monitoring function includes development of mechanisms to identify any problem areas in campus programs. Careful consideration is given to campus needs in order that limited resources can be optimally utilized. Funds provided by the The Regents and the Legislature are distributed to campuses for support of specific efforts designed to further affirmative action.

Multitudinous reports are prepared in the Office of the President, for external and internal audiences, describing the results and effectiveness of affirmative action programs and including statistical information on the University's workforce.

At the campus level, program management includes the interpretation and application of University-wide guidelines; preparation of written affirmative action programs, reports and statistical analyses; the conduct of in-depth analyses of personnel actions when the data indicate a problem may exist; the evaluation and monitoring process; and responsibility for wide dissemination and uniform adherence to the campus written affirmative action program. On the campuses, procedures for the application of personnel policies are developed and implemented. In a very real sense, affirmative action is the manner in which the ongoing personnel programs, both academic and staff, are carried out by the departments. Program management on the campus also involves constant and time-consuming interaction with groups of all sorts: employee groups, supervisors, administrators, advocate groups and community representatives.

Generation and analysis of data includes the high cost of adapting our computer information systems to the demands of affirmative action reporting requirements. This has been expensive and complicated, and the process is by no means complete. Further technical improvements are necessary to ensure accuracy and usefulness of computer reports. It is also necessary that our data processing system be modified to provide comparative studies based on historical personnel information.

We must produce reports on University workforce composition by sex, ethnic group, and occupational category and must maintain detailed records of all internal personnel actions. This involves not only the expense of computer hardware and software, keypunch operators, programmers, machine time, and report production, but also the cost of personnel throughout the University system who develop and maintain manual records and who analyze these and computer print-outs to produce a variety of statistical reports.

It is in this area, particularly, that the costly effects of changing Federal definitions and inconsistent requirements are felt. Seemingly minor differences in reporting requirements, such as counting or not counting non-citizens separately, or including or excluding Other Non-Whites from the Total Minority category, necessitate reprogramming and recalculating all down the line.

Quite apart from Federal reporting requirements, however, the expense involved in data gathering and analysis relates directly to the monitoring process and the identification of possible problems. Only by learning where these problems exist can we investigate them and take corrective steps. So we are committed to the expense involved, major as this is.

As I have mentioned, much of the cost of affirmative action is absorbed through a revision of institutional priorities and redirection of staff energies. Without question, affirmative action is the single major focus of administrative activity throughout the University at the present time. It touches nearly every employee, from the faculty members who spent time reviewing the 900 applications recently received in response to widely advertised vacancies in an English Department to the secretary who recorded each applicant on a computer input form by sex, ethnic group, recruiting source, and reason for acceptance or rejection. It affects the supervisor who interviews eight to ten candidates for a secretarial position, instead of the two or three of former times, to provide consideration of a diversified pool of candidates and opportunity to appoint qualified candidates who will meet affirmative action goals. It affects the personnel manager who meets with employee and community advocate groups. It affects the department head whose employees are away from their desks attending training courses.

If I may cite a personal example of the effect on existing staff, which I believe to be typical: two members of my immediate staff who were hired for general administrative staff work are now spending close to 100% time on affirmative action matters. For my own part, I have recently been spending 50% time in this area.

You may be interested to know that figures compiled only last week indicate that 61 employees in the University are currently filling positions which are specifically earmarked as affirmative action positions. These employees are responsible for such functions as implementation of affirmative action policies and procedures, affirmative action data maintenance, statistical analysis, and report writing, making recommendations for correction of problem areas, monitoring and evaluation of program results, and employee development and training. The majority of these staff are part of a campus or laboratory affirmative action or equal employment opportunity office. The 61 positions do not include estimates of the substantial time spent by the president and chancellors in providing leadership or by the various vice chancellors and vice presidents while carrying out line responsibilities, nor do they take into account the vice chancellors and the vice president who serve as affirmative action officers.

With the knowledge that effective affirmative action programs depend upon the support of the entire University community, affirmative action advisory committees have been established throughout the institution. There are approximately 275 members on these committees, providing representation from the academic, staff, student, community, women, and minority segments of the University system. The committees review and monitor the various affirmative action programs, assisting with formulation and implementation of policy and monitoring of compliance. A new University-wide committee, advisory to the president, is being planned to assist in establishment of institutional priorities and review of programs. This group, also, will include broad representation from the University community.

Add, too, the cost of paper. I believe I could have brought you two box cars of reports produced in the past year. In addition to reports produced for government agencies and distributed, as well, to internal Affirmative Action Officers and advisory committees and the Board of Regents, there is the requirement for written affirmative action programs and the wide dissemination of these both within and outside the University. We have 14 such programs, as well as University-wide guidelines for the Programs, all of which have received broad, and therefore costly, distribution.

Aside from the paper which we generate, there is the paper which we receive and must retain at considerable cost; that is, application materials and resumes on the enormously increased number of candidates now applying for University positions. In fact, one serious problem for us concerns the length of time during which we must retain these records in order to respond to complaints and suits.

One very costly area which we have only begun to explore concerns the in-depth analyses of individual personnel actions which must occur, under Executive Order 11246 and implementing regulations, when data indicate a disparate effect on women or minorities. Such analyses may involve an individual-by-individual review of all job applicants within a particular occupational category, and a comparison of their qualifications with qualifications listed for vacancies and the qualifications of candidates who were appointed. An in-depth analysis now being conducted on the Berkeley campus involves a review of the qualifications and appointment levels of all new ladder rank faculty in a three-year period. Should this review indicate genuine salary inequities, compensatory payments will be needed. Nowhere in the budget figures I quoted earlier is this taken into account, nor can we guess what the cost, if any, might be.

At your request, I have emphasized the costs of affirmative action. In closing, I would note briefly some of the achievements. Faculty recruitment furnishes a particularly good example. Departments which would never have considered advertising faculty vacancies in journals read widely by women and minorities now do this routinely. And the results are significant.

On the Berkeley campus, for example, women represented 3% of the appointments to ladder rank faculty positions in 1967 and 6% in 1970; in 1973, women filled 13 of the 48 vacancies, or 27%, at the Assistant Professor level, where all but a few of the total vacancies occurred. A comparison of actual ladder rank appointments of women and minorities in 1972 with the expected numbers of such appointments, based on availability data, shows that the actual number of women hired was twice the expected number (16 v. 8) and actual number of minorities hired was more than three times the expected number (11 vs. 3). Women and minorities represented 27 of the 73 new ladder rank appointments in that year, or 37%.

At the Santa Cruz campus, affirmative action goals for academic appointments in the fall of 1974 were set at 11 appointments for women and 6 for minorities. Of the 35 new fall appointees on that campus, 4 are minority women, 10 are Caucasian women and 6 are minority men, for a total of 20 appointees who are women or minorities or both. Thus the campus exceeded its goals for both minorities and women. At the San Diego campus, 39% of the 173 new full-time faculty appointments from 1971 to 1973 were women and minorities.

There is also evidence of progress in the staff area. For example, minorities comprise 24.7% of the civilian labor force in the San Francisco-Oakland Standard Metropolitan Statistical Area. Currently, minorities comprise roughly 30-35% of all staff employees at the UC Berkeley campus, the San Francisco campus, and the Office of the President. These figures demonstrate that progress has been made in bringing minority group members into University employment. However, we are well aware that there are too few minorities and women in the higher paying professional and management job categories.

In the student area, substantial gains have been made in recruiting the ethnic minority student. The Educational Opportunity Program, an undergraduate program to encourage disadvantaged youths to enroll in the University, had an enrollment in 1965-66 of 100 students on six campuses. By 1972-73, 7,679 students on eight campuses were participating in the program. In 1972-73, ethnic minority students made up 83% of the students participating in the EOP program. I would emphasize that the University has put $30 million of its own resources into that program between 1967 and 1972. Since 1968, there has also been a substantial increase in applications and enrollment in the graduate financial assistance programs for ethnic minority students organized at the Berkeley, Davis, and Los Angeles campuses.

Policies governing University employees have been altered remarkably. Maternity leave benefits have been implemented, nepotism policies essentially gutted, and retirement policies revised. As evidence of a commitment beyond that required by law, the University has implemented two programs—the Affirmative Action Construction Program and the Minority Vendor Program—which show remarkable potential to extend affirmative action principles to the business arena. And now we are launching a comprehensive, University-wide student affirmative action effort.

I can say with conviction that we are a better institution for all this and that, although the "cost" has been heavy, the benefits are certain.

The above concludes the oral testimony. The remainder of my written statement describes briefly a variety of additional activities and concerns which together indicate the impact of affirmative action on the University of California.

Employee Training.—To some extent, this effort can be translated into dollars. But, insofar as mobility of women and minorities within the University's work force depends upon supervisors who are trained to upgrade and encourage employees and who can take time away from general administrative duties for this, the cost of training cannot be assessed.

On the staff side, training emphasis has been on the education of supervisors to an understanding of affirmative action as it related to employment interviews, selection among candidates, performance evaluation, and identification of employees for promotion. Two programs intended to develop meaningful support for the University's affirmative action programs were developed last year at the University-wide level in coordination with the campus training officers, "Performance Appraisal" and "Supervisor-Supervisee Training."

Employee training and development programs vary in availability and sophistication fom campus to campus. Each campus does maintain training programs, however, and is expanding those programs with emphasis on affirmative action principles. Courses are offered to employees, without cost and during working hours, on subjects ranging from Shorthand to a program for women entitled "How to Stop Discriminating Against Yourself." University training efforts include a personnel policy which permits employees to draw up an employee development plan and, based on this, take courses at a variety of educational institutions with reimbursement for fees from the University.

On the academic side, a special summer benefits package is proposed for faculty at a cost of $2,000 per participant. This would enable junior faculty to be given this sum for purposes such as summer research salary, computer time, travel to libraries, and laboratory assistance. This program would help in enabling new women and minority faculty members, most of whom have heavy teaching and student counseling assignments, to complete the research necessary for advancement.

Related Programs.—Two programs discussed here reflect the University's commitment to affirmative action in the broadest sense. One of these, the Minority Vendor Program, was designed to increase the University's purchasing volume conducted with minority-owned and operated businesses. In a four-year period, this volume has risen from virtually zero to over $1.5 million after a strenuous effort on the part of material managers. With existing staff, we anticipate doubling that figure next year. No subsidy of minority business is involved; materials are obtained only on a low-bid basis. Costs of the program relate to identification of minority vendors, matching vendor abilities to University needs, training vendors in the processes of University bidding, encouraging submission of bids and shepherding paper work, and education of University staff to the importance of this effort. We had estimated a cost of $112,000 for this program in the current year. Although it now appears that no University funds will be available, funds may be available from the State Minority Business Agency.

The second program, Affirmative Action Construction Program, we believe to be one of the most comprehensive of its type in the country. Designed to prevent discrimination on University construction jobs and provide positions for members of minority groups at every level of the trade, the program will enable the University to provide leadership in setting a trend for the requirement of affirmative action programs on all construction jobs.

Briefly, the program consists of two major components: the education of all contractors and sub-contractors to Federal and University affirmative action requirements, and the provision of assistance to such contractors in developing affirmative action programs; and the determination of bidder eligibility under affirmative action program requirements and the monitoring of all construction jobs to ensure strict compliance with affirmative action programs and principles.

Much of the work of this program is handled at the campus level by existing staff. In addition, $80,000 will be expended at the University-wide level to conduct the educational programs, develop appropriate personnel goals, and monitor contract compliance.

Student Programs.—While there are presently no Federal regulations requiring the development and implementation of student affirmative action programs, the University of California has moved ahead in this area. Our commitment to action on student enrollment stems from our belief that institutions of higher education have a fundamental obligation to assist in enlarging the pool of women and members of minority groups qualified to hold professional positions. We also believe that affirmative actions are necessary to comply with the spirit of Title VI of the Civil Rights Act, as well as Title IX of the Education Amendments.

Since 1965 the University has been engaged in an Educational Opportunity Program designed to provide access to the University and academic support services for undergraduate students who, for socio-economic reasons, might not otherwise have pursued higher education; to increase the number of students from ethnic and economic groups underrepresented in the University; and to increase the cultural diversity of the University's student enrollment. In 1965–66, there were 100 students enrolled in the Program on six campuses. By 1972–73, 7,679 students were participating in the Program on eight campuses, and the annual budget had grown to $13,887,000 including $1,759,000 in administrative costs which include 134 full-time employees.

Various support services are provided by the campuses for the EOP student, including initial recruitment, pre-admission counseling, and on-going academic and personal counseling once enrolled. Tutorial services are available. Financial assistance is also available to the EOP student. Of the 7,679 EOP students registered for academic year 1972–73, 84% received some form of financial aid. Of the financial aid funds available to EOP students, 44% was funded from Federal sources and 56% from University resources.

Campuses have also recognized the need for special services for the low-income, disadvantaged, or ethnic minority graduate student. One campus has an organized recruiting committee whose purpose is "to search for the student who would not otherwise enroll in graduate study without special recruitment, financial assistance, and/or academic support services." For the most part, recruiting efforts and academic support services has been left to the discretion and resources of individual departments and professional schools at each of the campuses. Faculty and students donate an appreciable amount of their own time for recruitment. Many third and fourth year graduate students provide tutorial support for the first year graduate student. These efforts are reflected in the dramatic increase, over 500%, in the number of applications to the graduate financial assistance programs, and the fact that an appreciable number of the students participating in these programs are obtaining graduate degrees. The social sciences and the professional schools have made the greatest advancement toward recruiting and graduating the ethnic minority student.

Recently, interested parties from the campuses have convened to discuss ways of combining campus efforts to attract more ethnic minority students, particularly to the hard sciences. This group has suggested publication of a booklet describing the various programs and financial aid available on each of the campuses for disadvantaged and/or ethnic minority graduate students. They have also proposed an active admissions and financial aid referral system and a uniform "offer" date for financial aid. The group plans to serve as an "information exchange" and to use their combined interests and knowledge to find financial and institutional support for recruitment, tutorial, counseling, and financial aid services for these students.

Given the substantial progress in these specific student programs, the University is, nonetheless, now in the process of reviewing all aspects of the educational process—including recruitment, admissions, academic and student life support, and financial aids—in an effort to identify any barriers to equal opportunity. Once such barriers are identified, we must move aggressively to eliminate them through policy changes and corrective programs.

Title IX Regulations (As Proposed by DHEW).—Since Title IX guidelines dealing with sex discrimination in higher education have only recently been distributed for comment, and since such guidelines will not take effect until at least January 1, it is difficult to make an accurate estimate of the potential cost of institutional compliance. Following, however, are a list of the affected areas and a description of the type of activities which may be required to comply with the executive mandate.

Recruitment: Where members of one sex are underrepresented in a given educational program, institutions may be required to undertake special efforts—above and beyond normal, non-discriminatory recruitment—to attract members of that sex. This might well involve hiring new recruiters with special knowledge and skills, publication of new recruitment materials, or any number of other, potentially costly devices.

Policy Dissemination: The guidelines require that, once the Federal policy takes effect, each institution publicize its adherence to the policy within 90 days in local newspapers and in all catalogues, applications, periodicals, and other materials with general distribution. Cost of revising all such publications within 90 days could be high.

Financial Aid: As currently worded, the guidelines would prohibit institutional acceptance or administration of scholarship funds designed for the use of only one sex. Compliance with these sections would require the University to nullify single-sex designations in gifts and bequests accepted prior to January, 1975 and to refuse all new gifts and bequests restricted as to sex of the recipient.

Housing: During the past several years, the University has gradually extricated itself from the "in loco parentis" policy of policing the quality of off-campus student housing. The new guidelines appear to require that we reverse this trend and carefully supervise the quality, quantity, and cost of student housing. If rigidly interpreted, these sections would require the University to either (A) hire large numbers of staff members to investigate all housing listed by the University and conduct appropriate statistical comparisons of housing available to men with that available to women or (B) discontinue off-campus housing listing services.

Comparable Locker and Shower Facilities: A recent inventory of University recreational facilities revealed very little in the way of inequities in this area. Most campuses, in fact, have nearly identical facilities for men and women. On several of the older campuses, however, either the men's or women's facilities could be labeled inferior due to age, size, etc. While most campuses have included plans to correct these problems in future building proposals, financial support for building programs is presently quite limited. Without additional funds these corrections may be some time in coming.

Athletic Opportunities: Intercollege athletic programs at the University approximate $6.1 million in annual cost. Historically, the bulk of this money (over 95%) has been spent on men's programs. In recent years, however, expenditures on women's programs at the University have climbed at a remarkable rate—faster, perhaps, than anywhere else in the country. While we are approaching the standard of equality of opportunity suggested by the guidelines, a lack of additional funding has hampered this movement. Compliance with the Federal standard will undoubtedly eventually require hundreds of thousands of new dollars for women—as well as a gradual cut-back in men's programs.

Mr. LEHMAN. Thank you, Mr. Johnson.

Mr. Dellenback.

Mr. DELLENBACK. I will put the same question in general to Mr. Johnson that I put to Mrs. Vetter. As I listened to what you have to say, Mr. Johnson, and read what you have put into this very helpful testimony, you talk in terms of the increment.

On page 6 you are talking of the Berkeley campus, of what you have done in 1973 in the filling of vacancies. You don't talk in terms of the total mass. Is your emphasis on affirmtaive action directed to each year's increment, or are you striving relative to affirmative action to reach some sort of goals so far as the total mass is concerned?

Mr. JOHNSON. We certainly are striving to reach a goal, but at the same time the only place one has any opportunity to change substantially is at the margin, which is that increment that you were talking about. Particularly in a period of steady state we have to deal with what positions become open. We have set numerical goals as best as we can determine them. This, of course, as you know, is one of the ar[illegible] of considerable conflict in talking about availability.

[illegible]. DELLENBACK. You said in 1973 women filled 13 of the 84 vacancies or 27 percent at the assistant professor level.

Mr. JOHNSEN. Right.

Mr. DELLENBACK. I don't know what the composition of the assistant professor level is for the entire Berkeley [illegible]mpus. I would be certain that it would be considerably less than 27 percent. Now was 27 percent for women at the assistant professor level the goal, either for the mass or for the increment?

Mr. JOHNSON. No; I don't think that it was the goal for either. I don't happen to have their particular plan in front of me, Mr. Dellenback. I would have to see this. We estimate that there will be so many vacancies, given normal attrition, in a year. But then again this has to be looked at by department and by discipline with respect to the manpower availability that was referred to earlier.

Mr. **Dellenback.** Person power availability.

Mr. **Johnson.** So I can't answer you without having those specifics in front of me.

Mr. **Dellenback.** You see the concern that I feel, and I am not quarrelling with you. I am just seeing a difficulty here and maybe Mrs. Vetter was giving us a good guide as we reach for that in saying that affirmative action should strive to make the full knowledge of available positions widely known. There should be a genuine search to bring into the process not just the old boy or not just the best bet but to bring in the widest possible set of people who might fit and then in the ultimate selection it will be on a basis of the best qualified, not on the basis of saying we will pick so many women, so many males, so many caucasians, so many minorities.

Mr. **Johnson.** I would subscribe to that, speaking personally now, with one caveat; that is, without some effort at a reasonable goal for individuals who are going to be making the decisions.

Mr. **Dellenback.** Goals for the increment or goals for the mass?

Mr. **Johnson.** Probably goals for the mass, trying to look at a long period of time. Let us take Ph. D.'s in biochemistry, for example, over a long period of time. I am simply afraid without some kind of target, changing that status quo which has produced primarily Caucasian males, is probably not going to occur.

I totally agree with the previous statement that one of the things that we have to do is to make sure that the ethnic minorities and the females are a part of our search pool and that in itself will certainly make a number of changes, but I am not sure that left to its own momentum that will automatically produce the kind of momentum that we are talking about.

I happen to think that one can talk about goals without talking about quotas and without talking about making preferential hiring on a personal basis.

If I may just for a second, I think one of the very unfortunate things which has occurred here is that somehow the higher education community has tended to get itself into some kind of adversary position with HEW.

Now, there is no question that we have a lot of things to correct, but I assume that what we are talking about here is increasing the number of women and ethnic minorities in positions in higher education at all levels.

If that is our goal, and I don't know of anybody in higher education who would deny that we ought to be doing that, we ought to be able to sit down and figure out how we can achieve this without perhaps getting into the kind of detailed quibbling over availability, utilization, complicated reports, none of which in my judgment is going to really add people.

I mean the report process and procedures. As a result we get into very elaborate intellectual arguments over statistical significance, over what is by chance.

It seems to me this is superfluous. We know what the job is. I would submit to this group that the greatest contribution the higher education community can make to affirmative action in this country is to increase the number of women and ethnic minorities who are available for all kinds of positions throughout this country.

I just regret that somehow we have gotten into this kind of jockeying position about regulations and compliance officers' interpretation of industrial relations for an academic community, because we are different. But I don't think there is any difference in our objectives.

Mr. Dellenback. Thank you very much. I do appreciate your testimony. We regret that the contingencies keep us to such a short time.

Mr. Lehman. Dr. Benitez, would you like to take the chair now and ask some questions. I will have to excuse myself.

Mr. Benitez. Thank you. I will retain this chair and inquire.

I am very sorry I was not able to hear your full testimony, but there are some questions that I hope you will clarify for me. If they have been covered already, I am sure that the answers will bear repeating.

The first question: How long have you at California, which has been noted to be one of the outstanding liberal institutions throughout the world, how long have you at California been deliberately pursuing this goal of a wider commitment to the equalization process of opportunity for students and faculty, but at this point the faculty, as far as females and minorities are concerned?

Mr. Johnson. At the student level the university undertook its own educational opportunity program in 1965. This was a program really designed to improving access to the institution for those population groups which have traditionally been disenfranchised as far as admittance was concerned.

With respect to affirmative action at the hiring level, we began to undertake programs in 1969—I am talking about designed kind of effort—and then, of course, most recently since the revised orders and regulations in 1972 and 1973 which very clearly spoke to the application of the laws to higher education.

Mr. Benitez. So, as far as faculty is concerned, it is a rather recent undertaking?

Mr. Johnson. In an organized or recordkeeping sense, sir, yes.

Mr. Benitez. Now, you talk about goals for this purpose, but how much do those goals, if at all, speaking with frankness, impinge on the other goal of quality and excellence in your instruction and in the nature of the university responsibility?

Mr. Johnson. I think that it impinges very heavily. I can answer that question in a variety of ways. Having said that they impinge, I don't think that that means that they are contradictory. Let me put it to you this way.

Mr. Benitez. Will you then clarify how they impinge and yet are not contradictory?

Mr. Johnson. Certainly. Let me use the student area as an example first.

The University of California admits from high school only those students in the upper 12½ percent. In reality it probably comes closer to the upper 5 percent of graduating high school seniors. Now, I am very much convinced that there are loads of high school students who fall within that rubric whom we are not getting at the university.

The notion that somehow that means we have to lessen our admission standards to bring in people is simply not true. There is a pool of youngsters there. For a variety of reasons they don't come to the university. That, I think, is something we have to work at.

Now, I think the same thing is true at the faculty level when one goes to hire. This gets into one of the subtleties and one of the difficulties in talking about availability because, as the previous witness said, a Ph. D. is probably, you know, the first indication of qualification, but a Ph. D. is not a Ph. D. is not a Ph. D. as far as we are concerned.

We have some very real feelings about the long-range contribution of an individual to the discipline that he or she is going to undertake. You know, we make a lot of qualitative subjective judgments, but I do not think, in fact it seems to me that it is impossible to take the position that all groups in our society can't produce individuals that meet those same qualifications.

Mr. Benitez. The argument is, to my judgment, clear enough as far as students are concerned. Where I think the problem will come, and I am asking you to address yourself to it, is with the faculty, because of the multiplicity of departments which are oftentimes associated with university leadership.

I know that the basic crucial criteria of intelligence, training, independent minds, must hopefully constantly prevail in selectivity of teachers, yet because of the previous injustices and the previous imbalances you are going to have much lesser numbers of the union-card-carrying members of the profession at levels where you find yourself the weakest.

Mr. Johnson. That is correct.

Mr. Benitez. Is your institution and are the institutions of higher learning in the United States adopting a position where these antecedents are balanced or taken into account in endeavoring to comply with this basic responsibility?

Mr. Johnson. They are taken into account in evaluating any one given individual in the sense that some of those antecedents could be particularly judged or a decision made. But there has been no change in the fundamental position of the institution with respect to the overall quality or attainability of the individual to be hired.

You might very well evaluate some things in background different, but the ultimate decision is still the same.

Mr. Benitez. Would you agree that there will have to be, of necessity, if these goals are to be advanced, not achieved, just advanced, a disposition to appreciate the higher value of intelligence and imagination and intellectual qualities rather than compliance with the set of norms which have become appended to the process of employment? Is that an accepted criterion today?

Mr. Johnson. I can't say that that is an accepted criterion, but I would certainly say that is a point of view that, if not concensus, it surely is a growing one.

I think I can give you better illustrations with the admissions process. I realize you are speaking to the hiring.

I think there is no question in our own institution we are looking very hard at those admissions criteria that we have used for years to judge just exactly the sort of thing you are talking about for young people who don't come through the normal process.

Mr. Benitez. Thank you very much.

I am very happy to see that our regular chairman is back.

Mr. O'Hara [resuming the chair]. Thank you, Mr. Benitez.

Mr. Dellenback, do you have any further questions?

Mr. Dellenback. No, thank you.

Mr. O'Hara. I want to apologize for missing this hearing. I had to be a blood donor this morning, and then there was a matter involving the new Committee on the Budget, of which I am a member. If you are going to serve on the Budget Committee, you are going to have to learn how to give blood.

I thank you very much for coming.

I see someone has already made a point of order that a quorum is not present. The House is unable to do business until we get over there. That is the only time we really feel important.

Mr. Johnson. Thank you, Mr. Chairman.

Mr. O'Hara. We have another witness to hear. I am wondering how we ought to best do this.

We are going to ask Mr. Benitez if he can stay. I will go answer the quorum and return as quickly as I can. I would like Mr. Robert Stitt of Columbia University, who is legal counsel of Columbia University, to take a place at the witness table.

Mr. Benitez, if you wish to take over again, I give you the badge of office.

Mr. Benitez. For 30 years I have used this.

Mr. O'Hara. That is right.

Mr. Benitez. Mr. Stitt.

STATEMENT OF ROBERT S. STITT

Mr. Stitt. I feel at home with you because my firm also does work for the Commonwealth Oil Refining Co. I have been to Puerto Rico on a number of occasions.

Mr. Benitez. I hope that this association has given you a better insight into the problem we are discussing.

Mr. Stitt. My name is Robert Stitt. I am a lawyer; my firm, Thacher, Proffitt & Wood. My specialty is civil litigation. One of the firm's clients is Columbia University.

As I pointed out in my statement, my testimony is as an individual only. I am here on my own time and at my own expense.

In my statement I have tried to summarize the problems involved in the development of Columbia's affirmative action plan, which is about a 2-inch thick document, problems regarding agency investigation, production of records, and the litigation that a university finds itself in, in a variety of forums, in this whole area of equal employment opportunity.

In my oral statement I will try to concentrate on some of the key problems confronting universities in this area, and then I will try my best to answer the questions the subcommittee may have.

With regard to affirmative action plans, I would simply state that HEW representatives on too many occasions have been too eager to interfere or to threaten interference with university Federal contracts.

Now, Columbia's problems have been solved. I am speaking now in general, and I do not intend to rehash our experience of 1971 and early 1973. But I would state that universities depend heavily on

Federal revenues. Even a private institution such as Columbia, half of our money each year comes from Government sources.

Federal contracts and grants are revised and reviewed periodically, if not annually. It does not require a formal debarment order to shut off this income. A single letter, a single telephone call to a single contracting agency within the Government will stop the flow of this income. I have been there, I know this is the fact.

Mr. BENITEZ. How come?

Mr. STITT. Because when a contract, say, for $1 million or more is coming up for renewal, say it is a contract for Lamont Doherty, oceanographic observation, under which Columbia has done work for the Navy. Say one of their contracts comes up for renewal. A contract of that amount requires under the procedures then in effect to place a call to the compliance agency within the Government for educational institutions, in this case, HEW. If HEW says, "Well, we are not sure that Columbia has the capability of complying with its equal employment opportunity obligations," just that simple statement, just that simple letter shuts off that contract.

Now, these short delays not only place severe financial handicaps on colleges and universities, and we have all been operating at sizable deficits, even Columbia's resources which are great are not unlimited.

But in addition to financial damage, there is scientific damage. In oceanographic research experiments have to be programed in advance. We have to have ships. We have to have men to man them. We have to have scientific personnel on board. What may seem a very slight interruption to someone in HEW may have very severe consequences at Lamont-Doherty.

In my opinion, and there are men and women I respect who disagree with me on this, but in my opinion, and I have set it forth in my statement, due process requires that a government not interfere, and I emphasize the word "interfere," with the contract of a college or university or any other contractor without first giving adequate notice, hearings where you have an opportunity to be heard, and then a decision with written findings.

Now, section 13 of the 1972 Equal Employment Opportunity Act is ambiguous on this point in two key respects. First of all it is ambiguous with regard to the rights of institutions whose plans have not been approved and it takes a long period of time for a plan to be approved in this area.

Second, it is ambiguous with regard to institutions who have approved plans, such as Columbia, but who are accused of a substantial deviation from that plan.

Now, my recommendation is that section 13 be amended to make it crystal clear that no Government contract should be denied, withheld, terminated, suspended, or interfered with without notice hearing and adjudication provided for in the Administrative Procedure Act.

Now, this will have an added benefit beyond due process. When an educational institution is subjected to the pressure of having its Federal funds shut off or even the threat of it, their first instinct is to do anything, in colloquial terms, to get the Government off its back; and in those circumstances under that kind of pressure, when you are dealing with a team of investigators, an educational institution is apt to make compromises about records, concerning private individuals, which should not be disclosed which upon further reflection the investigator did not really need but which were disclosed because you simply lacked the time to sit down and discuss and negotiate.

My firm, and I personally have never had a problem with a single investigator from a single agency in this area, whether it is HEW or EEOC or the New York State Division of Human Rights or the City Commission on Human Rights. When we have simply been dealing with a single investigator investigating a single complaint, we have always been able to work out an accommodation.

But a revision of section 13 will, I think, provide the additional time, reduce the pressure which will enable records to be handled responsibly even with regard to the team compliance reviews.

One point I do want to touch upon, and I will try to be brief, is in the area of multiforum litigation. The pertinent legislative history, as I can understand it, and the deferral procedures which are found in the Equal Pay Act and in title VII seem to say, seem to intend that an employer need litigate a given issue, a given grievance, once, not twice.

Unfortunately, some loopholes have developed and these loopholes should be closed. This duplicative process is an imposition not only upon universities but also the administrative agencies themselves and beyond that the Federal courts.

The Federal courts, and I am speaking particularly of the southern district of New York, where I do most of my practice, are overcrowded with claims of litigants, many of them deserving litigants, who have no other place to go.

Now, I have four basic recommendations, and I will cover them briefly.

First, I would recommend that complainants be required to use intrauniversity grievance procedures first before proceeding with these agencies. At Columbia we have had informal grievance procedures for years. I don't believe they use a stenographic transcript. There are no lawyers, but a complainant is heard by a panel of his peers, and they have worked well. And they are inexpensive.

In June of 1973 I was at a panel of the National Association of College & University Attorneys. Mr. Frohnmayer, from the University of Oregon, was on the panel, so was John Pemberton, from EEOC. Mr. Pemberton and I disagreed on many things. There was one thing we did agree on. That was by and large, within universities, individual complainants make out better, get better results from intrauniversity grievance panels than they will from governmental agencies.

In my view it makes no sense to incorporate into these large affirmative action plans—as I say Columbia's is 1½ to 2 inches thick—it makes no sense to incorporate into these plans, union grievance procedures, staff grievance procedures and faculty grievance procedures, if the complainants are not required to resort to them first.

If that were done, I think this would reduce the administrative caseload in this area and the court caseload.

Mr. BENITEZ. May I interrupt you at this point.

Mr. STITT. Please.

Mr. Benitez. Am I to understand that although there are these intrainstitutional complaint procedures, the complainant is at liberty to foresake them and go directly to another structure of complaint? What other structure is that?

Mr. Stitt. The complainant can go to many places. She can go to HEW.

Mr. Benitez. Direct?

Mr. Stitt. Direct. She can go to OFCC.

I am not saying this is the way this should legally be done. I am saying this is the way it happens, this is the way it is. Go to HEW; go to the OFCC; go to the National Labor Relations Board; go to the New York State Division of Human Rights; the City Commission of Human Rights; and the Equal Employment Opportunity Commission.

Mr. Benitez. Your position is that as a matter of orderly procedure and perhaps propriety, the built-in system of complaint should be the first step?

Mr. Stitt. That is right. I am not saying that he or she should be prohibited from going to these agencies ultimately or if they lose in the university they are prohibited from doing so. But this should be the initial procedural step.

Mr. Benitez. Is what you are saying equivalent to the old principle of law that you have to exhaust the administrative remedy?

Mr. Stitt. That is exactly the principle. Apply an administrative remedy to a university with an approved affirmative action plan.

Mr. Benitez. It has not been observed, you say?

Mr. Stitt. We still have a number of grievances. We had one employee recently who brought suit against the university in the supreme court in New York County. Judge Silverman said, "Will you offer this woman in-house grievance procedures?" We said, "Of course we will." That was the end of that lawsuit.

Mr. Benitez. Then what are you complaining about?

Mr. Stitt. Unfortunately, there are a lot of judges and a lot of administrative agencies that do not take that view. This was a simple employment grievance.

Mr. Benitez. What you are recommending is that a specific declaration be placed in the regulations or in the law to that effect?

Mr. Stitt. Either in title VII or in the regulations. I think probably in title VII would be best, but I am really not qualified to express an opinion on that point. I am interested more in these basic changes than I am as to how it is done.

Second, the deferral to State 706 agencies should be extended. Under the present procedure, when EEOC gets a complaint, they defer to local State agencies which meet the 706 standards which our agencies in New York do. But EEOC can reclaim the case after 180 days.

In New York it takes a local agency a year to investigate and decide a case. The statute should be amended to require EEOC to defer beyond the 180-day period, and it should prohibit EEOC from reclaiming a case if hearings have commenced.

Third, I recommend the scope of the Federal court review be limited. Now, at the present time, a complainant can receive a complete trial de novo in Federal court even if the complainant has had a fair and full hearing before a local agency. I would recommend that the Federal court's scope in this area be limited to simply a review as to whether the local agency has acted arbitrarily or capriciously and whether the findings are supported by substantial evidence, pretty much the type of appellate review that already prevails in the Federal system.

On the other hand, I think the Federal court's power of stay should be increased. It has the power now to stay title VII actions while State proceedings are pending, but this is only for a period of 60 days. This is too short a period and the courts are reluctant to use this tool.

It should be increased; it should be made more flexible.

Last, when a complainant proceeds in more than one agency at a time, the investigative process and even conciliation is complicated, it becomes more expensive. When this situation arises, and here I would recommend interagency agreements, a lead agency should be designated to handle the case.

This is done by insurance companies in defending liability claims where more than one insurance carrier is on the risk, a designated company is the lead carrier, and the lawyer reports to that company.

Mr. BENITEZ. Are you recommending that this be done in advance or after the complaint is filed?

Mr. STITT. It could be done in both. I think the agencies should be encouraged to exchange letter agreements in this regard, but they should defer their own inquiries while the lead agency is proceeding with its investigation. If the lead agency and the parties themselves should agree on conciliation, the other agencies should be prepared to give their prompt written approval.

I have had a lot of difficulty where I have been able to work out a conciliation with a party and the particular investigating agency which is conducting the investigation at the moment but then when I have to get approval from several other agencies before whom similar complaints have been filed by the same individual, it takes time and it is expensive.

Those are my basic recommendations. I do thank the Congressman and the staff for their attention.

[The formal statement referred to follows:]

STATEMENT OF ROBERT S. STITT*

PRELIMINARY STATEMENT

During the past three years much of my time has been spent helping prepare Columbia University's affirmative action plans and in defending a variety of claims including allegations of unequal pay, wrongful termination, refusal to hire, violations of the affirmative action plans and refusal to grant admission to remedial programs. These matters have brought me in contact with the United States Department of Health, Education and Welfare, the Department of Labor, the Equal Employment Opportunity Commission, the New York State Division of Human Rights, the New York City Commission on Human Rights, the Supreme Court, New York County and the United States District Court, Southern District of New York.

I appear as an individual only. My statements are my own and should not be construed to be the position of Columbia University or any other client. In his invitation of August 7, Chairman O'Hara stated that these hearings are

---

*A.B. Amherst College 1950; L.L.B. Columbia Law School 1953; Private practice of law 20 years, specializing in litigation; partner, Thacher, Proffitt & Wood, attorneys for Columbia University; Co-author of *University Fair Employment Practices Litigation—Strategy and Tactics*, The Journal of College and University Law, Volume 1, No. 1, Fall, 1973.

designed to provide the Subcommittee with an objective, informed view of what the federal government is "requiring of or suggesting to" institutions of post-secondary education under the Civil Rights statutes and executive orders and regulations. Chairman O'Hara asked me to focus on procedural difficulties and deficiencies of agency enforcement. I will try to concentrate on the problems involved in the development of an affirmative action plan, debarment from federal contracts, individual complaints, agency investigation and multi-forum litigation.

AFFIRMATIVE ACTION PLANS

No useful purpose would be served by rehashing the past difficulties between Columbia and HEW. The University has prepared and HEW has accepted its Affirmative Action Plan submitted April 10, 1972. The last significant modifications were made in March 1973. Since that time HEW has conducted several compliance reviews. In each instance HEW has found that the University was in full compliance with Executive Order 11,246 as amended, and that all personnel decisions were being made in a non-discriminatory manner. The University has been given written assurance by HEW that its government contracts will not be withheld or suspended again without being given prior notice and an opportunity to resolve any complaint that may be made. Yet, a brief summary of Columbia's experience may be of interest and, perhaps, helpful.

The thrust of HEW's principal complaint against Columbia was that it lacked an adequate personnel system. In the light of standards imposed by federal equal employment opportunity regulations, the personnel practices of universities generally are extremely archaic. For example, as of November 1971 there were 390 listed job titles at Columbia for which the Personnel Office had job descriptions for only 110. Generally universities keep only rudimentary data on applicant flow, appointment, promotion and transfer practices. This is especially true in the academic area where employment and promotion decisions are made at the departmental level.

There has been an extraordinary amount of linguistic footwork by federal officials seeking to set forth the view that goals for minority employment at universities are not in fact quotas. The Jewish community is deeply concerned about this problem. Having struggled for so many years with discriminatory quotas set up by academic institutions to keep them out, it is not easy for them to accept reverse discriminatory quotas set up to bring new minorities in.

Half of the University's annual income comes from government sources. No institution likes to be in the position of negotiating for its survival with Uncle Sam sitting at the other side of the table. An institution's instinct in these circumstances is to promise almost anything in order to get the government off its back.

The pressures from the federal government relating to real or threatened loss of federal contract funds are enormous. They can polarize an educational institution creating a situation in which those who hold contract funds will feel that the administration is not doing enough to hold them whereas those who are not supported by federal contracts will maintain tha adminisraors are in danger of selling out the institution's integrity under federal pressure.

It was expected that Columbia's conception of reasonable goals in the employment of minorities and women during the five year period ahead would be rejected as inadequate and that newer and more ambitious figures would have to be produced. This did not happen. Columbia was permitted to project its own goals for affirmative action without interference.

Under its affirmative action plans, the University institutes search programs designed to seek out qualified women and minority candidates. The adequacy of each search is reviewed by a faculty affirmative action advisory committee. This committee has been in existence since February 1972 and has always including female and minority members. Only after the committee has certified that the nominee was selected in a non-discriminatory manner will an offer of employment be made. The figures which are available show that during the past two years 25% of faculty appointments have been women and 10% have been minorities. These figures are significant since women comprise approximately 10% and minorities 1% of the national pool of potential candidates. In order to achieve these results, Columbia has not been required to engage in preferential hiring of minorities and women. It has not been required to inject any considerations beyond merit and excellence into its appointment process. Failure to give an appointment to a minority person or a women in one instance does not force the University in any way to make an appointment in another instance.

On the other hand, the style of federal enforcement thus far involving as it has a variety of forms of tough handling, including real or threatened suspension of federal funds, can occasionally cause university administrators to make mistakes in order to remove themselves from the stress caused by government pressures. For example, President McGill has seen letters from deans and department chairmen in universities across the country stating that a faculty appointment being offered was specifically reserved for a black person or a woman. In a letter to a brilliant Chinese student in physics at Columbia, a university in the mid-south explained that he could not be considered for faculty appointment because the appointment was reserved for minorities under the protection of affirmative action and that even though he had an oriental name, he was not an American citizen and thus not qualified.

This kind of thing is illegal and must be stopped. These examples, including the one just cited, are illustrative of panicky, over-zealous reactions on the part of university administrators attempting to interpret their obligations under affirmative action rather than what I consider an accurate reflection of federal policy.

It is still too early to judge the full force and effect that affirmative action has had on American colleges and universities. Everything depends on how the federal government intends to enforce affirmative action programs. It seems perfectly correct that universities should state numerical objectives for faculty employment of minorities and women provide that such objectives are treated as good faith statements of what universities seek to achieve and not as enforceable contractual commitments. The question arises as to what will happen should a university, despite its best efforts, fail to meet its goals. Is such a failure to be treated as a violation of a contractual commitment to the government and thus subject to federal enforcement action? If this should happen, then the so-called goals of affirmative action are employment quotas, no matter what they are called.

DEBARMENT FROM FEDERAL CONTRACTS

Withholding contracts is a drastic remedy and its use as a tactic to express displeasure or to force compliance exacerbates these pressures and is manifestly unfair. Although questioned by others, it is my opinion the government cannot legally interfere with a university's status as a federal contractor without first according the university a full hearing and adjudication.[1] There are three thrusts to this argument: (1) due process; (2) Executive Order 11,246; and (3) the Civil Rights Act of 1964, as amended.

With respect to due process, recent Supreme Court decisions have confirmed the standards and procedures which an agency or department must follow before depriving an individual person of benefits received from the government. Among such requirements are a hearing where the person who may be affected by a proposed agency action has the opportunity to confront and cross-examine adverse witnesses and to present evidence on his own behalf.[2] Any action by HEW declaring that a university is no longer a responsible contractor, without notice and without hearing, is in my view a clear violation of due process. Any other result would be unconstitutional taking from the university since summary suspension prior to hearing is only permitted where "harm to the public is threatened and the private interests enfringed is reasonably deemed to be of less importance."[3]

Similar provisions for hearings prior to the imposition of sanctions against the contractor are provided by the Executive Order[4] and the Equal Employment Opportunity Act of 1972.[5] There are, however, some difficulties raised by Section 13 of the 1972 Act. It is clear that once a contractor has had its affirmative action plan approved, the contractor can be debarred from further contracts only after full administrative hearings conducted pursuant to the Administrative Procedure Act.[6] But what are the rights of a contractor prior to the approval of its plan, and what are its rights when there are allegations of a "substantial deviation" from its approved affirmative action plan?

[2] *Goldberg v. Kelly*, 397 U.S. 254 (1970).

[3] *R. A. Holman & Co. v. Securities and Exchange Commission*, 299 F. 2d 127, 131 (D.C. Cir. 1962).

[4] Section 208(b) of Executive Order No. 11246, as amended provides that:

> No order for debarment of any contractor from further government contracts under Section 209(a)(6) shall be made without affording the contractor an opportunity for a hearing.

In *Crown Zellerbach v. Wirtz*, supra note 1, the district court held that this provision prohibited the Department of Labor from interfering with the contractor's eligibility for government contracts prior to a full administrative adjudication on the merits of the contractor's compliance with the Executive Order.

[5] Section 13, P.L. 92-261, 86 Stat. 103 [42 U.S.C.A. § 2000e-17 (Supp. 1973)].

In the first situation, where there has been no approval of the plan, it appears that full administrative hearings are still required.[7] It does not appear from the statute's legislative history that the *Crown Zellerbach* case[8] was intended to be superseded in any way. Indeed, judging from the comments of Senator Ervin during the Senate debate, this provision was intended to provide the same protections as accorded the court in *Crown Zellerbach*.[9] It is my opinion that when there are allegations of a "substantial deviation" from the approved affirmative action, the contractor is entitled to some sort of pre-suspension hearing to determine whether there has been, in fact, a "substantial deviation." Under the standards established by the Supreme Court in *Goldberg* v. *Kelly*,[10] such a hearing need not take the form of judicial or a quasi-judicial trial with a particular mode of proof. Nevertheless, a university should be provided with timely and adequate notice detailing the reasons for the proposed determination plus an opportunity to confront adverse witnesses and to present evidence on its own behalf. The agency's determination must be in writing, must give reasons and must be based on evidence produced at the hearing. Anything less would be denial of even "rudimentary due process."[11]

Nevertheless, it has been suggested that Section 13 could be construed as authorizing the elimination of the aforementioned notice and hearing procedure with respect to a contractor whose affirmative action plan had not yet been approved. It has also been suggested that the statute authorizes elimination of such notice and hearing procedure for an employer who has submitted an approved affirmative action plan if he is being accused of having "deviated substantially" from that plan. Section 13 is especially obscure on this point. These ambiguities should be eliminated.

Therefore, Section 13 should be amended to make it crystal clear that no government contract or portion thereof will be denied, withheld, terminated, suspended or interfered with by HEW or by any other agency without first having accorded the contractor the notice, hearing and adjudication provided in the Administrative Procedure Act.

AGENCY INVESTIGATION—PRODUCTION OF RECORDS

The opening salvo of any investigative agency involved with colleges and universities—HEW, EEOC or local commissions—is usually a demand for records which is often broad and all-encompassing. The demand is made by letter, request to produce, subpoena or, in some cases, all three. These demands are always subject to discussion and negotiation. No client of my firm has had any difficulty in a "one-on-one" relationship with a single investigator investigating a single complaint. A more difficult situation is when an institution is confronted with a group or team of investigators conducting a "pattern" inquiry or a compliance review and contracts have been held up pending the results of the inquiry. Under these circumstances, an educational institution may be compelled to fight a rear guard action against compromising its rights. Thus, the recommended revision of Section 13 of the 1972 Act so as to make it clear that the government cannot interfere with the status of any contractor without first having notice, opportunity for hearing and other due process should have the additional effect of enabling educational institutions to deal reasonably and responsibly with demands for production of records.

Disclosure of confidential employment information to federal officials involves two strong countervailing policies: the government's need to obtain this information and the University's equally strong right to protect its internal procedures and processes from unnecessary governmental intrusion. Columbia has adhered to a case-by-case approach. Since each request for information is unique, no inflexible rules can or should be adopted.

[9] Cong. Rec. S. 578-580, January 26, 1972.
[10] *Supra*, note 2.
[11] *Id.* at 267.

I have read with interest the report of the Equal Employment Opportunity Task Force of the American Council on Education dated December 18, 1973 concerning procedural deficiencies in HEW's administration of Executive Order 11,246, as amended. This document contains recommendations which should be carefully considered by the Committee, HEW and other regulatory agencies. Nevertheless, my own experience is that a clear Congressional statement on due process for contractors through a revision of Section 13 is the sole additional protection that a college or university needs in order to protect its records from undue disclosure.

In summary, a relationship between a university and governmental agency, when based on mutual respect for the proper functions and needs of each, can and has worked well. Members of the university community realize that they do not enjoy legal privileges and immunities not enjoyed by other citizens. However, the government must recognize and respect the privacy of individuals which is jealously guarded by the university community.

MULTIFORUM LITIGATION

Problems arise when an individual or group of complainants proceeds in more than one forum or tribunal concurrently or consecutively. Such repetitious litigation imposes burdens on universities which are readily apparent. The time which concerned officials must spend preparing for an attending hearings and trials can be enormous. Attorney's fees are also increased significantly. While there are some techniques and procedures available under current law which tend to reduce these burdens, none are completely satisfactory.

At Columbia, informal, inexpensive grievance procedures have worked well over the years. The University has been spared the expense of legal fees and individuals have learned that they can receive a fair and sympathetic hearing from a panel of their peers within the University. At a panel discussion before the National Association of College and University Attorneys in June 1973, an EEOC representative conceded that by and large, complainants receive more favorable results from university grievance panels than from governmental agencies. This has been my own experience. Certainly, there is little point in having universities incorporate union, faculty and staff grievances procedures into affirmative action plans if complainants are not required to resort to these remedies before going to state or federal administrative agencies.

In the event a complainant should proceed before administrative agencies, minor revisions in the law could give universities meaningful relief from the burden of duplicative litigation without diminishing the rights of complainants to due process. Usually, EEOC will defer all complaints to a local 706 agency.[12] However, EEOC can reclaim the case after 180 days. In New York, it usually takes a year for a local agency to investigate, hear and decide a particular case. Accordingly, EEOC should be required to continue its deferral beyond the 180 day period. Certainly, EEOC should be prohibited from reclaiming a case if the local agency has commenced hearings.

I would also suggest that the scope of review by the federal courts be limited. Under the present law, a federal court is required to conduct a complete trial *de novo* even if the complainant has had a full and fair hearing in the state administrative agency.[13] It would be more appropriate to limit the role of the federal courts to a determination as to whether the state agency has acted arbitrarily or capriciously and whether its findings are supported by substantial evidence. This approach has worked successfully in dealing with complaints of discrimination by federal civil service employees.[14] Certainly, such limited judicial review is sufficient when the hearing was held before a local agency whose procedures and practices have been examined and approved by a federal agency such as EEOC. In summary, this recommendation would extend the existing Section 706 deferral procedures to federal courts.

---

[12] Section 706(c) of the Civil Rights Act of 1964, as amended, [42 U.S.C.A. § 2000e–5(c) (Supp. 1973)] provides that a complainant must file charges with the local FEP agency before pursuing the EEOC remedies. *Love v. Pullman Co.*, 92 S. Ct. 616 (1972). By administrative rulings, these deferral procedures are applicable only with respect to state and local agencies which have been designated "706 Agencies" by the EEOC. 29 C.F.R. § 1601.12 (1973). See also *Crosslin v. Mountain States Tel. & Tel. Co.*, 400 U.S. 1004 (Douglas, J. dissenting) (1971).

[13] See, *e.g. Voutsis v. Union Carbide Corp.*, 452 F. 2d 889 (2d Cir., 1971) *cert. denied* 406 U.S. 918 (1972).

[14] *Hackley v. Johnson*, 360 F.Supp. 1247 (D.D.C., 1973), *Johnson v. United States Postal Service*, 364 F.Supp. 37 (N.D.Fla., 1973), *Handy v. Gayler*, 364 F.Supp. 676 (D.Md., 1973), *Tomlin v. United States Air Force Medical Center*, 369 F.Supp. 353 (S.D. Ohio, 1974), *Thompson v. U.S. Dept. of Justice*, 7 FEP Cases 347 (N.D.Cal. 1974).

Under present law the federal courts are authorized to stay Title VII actions while state agency proceedings are pending but only for a period not to exceed 60 days.[15] Such a limited remedy is insufficient to protect universities from duplicative litigation and the courts are reluctant to employ it. Title VII should be amended to permit a longer stay pending completion of state administrative proceedings. This is especially appropriate if the state tribunal has been designated a 706 agency.

When complainants proceed before more than one agency investigation and even conciliation becomes complicated. My experience is that one agency is reluctant to rely on another agency's investigation. I have also encountered difficulty in obtaining consents of other agencies to conciliation agreements. When one agency learns that another has already commenced an investigation it should postpone its own inquiry. Similarly, when the "lead" agency and the parties themselves have agreed on conciliation, the other agencies should be prepared to give their prompt, written consent.

Such duplicate administrative process is not an imposition upon educational institutions alone. It is also a burden upon the agencies themselves and the federal courts which, as the Committee already knows, are overcrowded with litigation.

CONCLUSION

The issue of equal employment opportunity is one of the thorniest problems to confront universities in many years. It will also prove, I am sure, a difficult problem for this Committee. I hope that my testimony and this statement will be of some assistance.

Mr. BENITEZ. Thank you very much.

I have raised most of my questions during your testimony.

Thank you, Mr. Stitt.

Mr. STITT. I thank you. It has been a pleasure to be here.

Mr. BENITEZ. Thank you very much, all of you.

The meeting is adjourned, subject to the call of the Chair.

[Whereupon, at 11:30 a.m., the subcommittee adjourned, subject to the call of the Chair.]

[15] Sec. 706(f) (1), Title VII of The Civil Rights Act of 1964, as amended.

CIVIL RIGHTS OBLIGATIONS OF INSTITUTIONS OF POSTSECONDARY EDUCATION

TUESDAY, SEPTEMBER 17, 1974

House of Representatives,
Special Subcommittee on Education
of the Committee on Education and Labor,
Washington, D.C.

The subcommittee met at 9:40 a.m., pursuant to call, in room 2175, Rayburn House Office Building, Hon. James G. O'Hara (chairman of the subcommittee) presiding.

Present: Representatives O'Hara, Dellenback, Benitez, and Kemp.

Staff members present: Jim Harrison, staff director, Webb Buell, counsel, Elnora Teets, clerk, Yvonne Franklin, minority counsel.

Mr. O'Hara. The Special Subcommittee on Education will come to order.

Today we are resuming our hearings on the civil rights obligations of institutions of post-secondary education.

These hearings have variously been described by those who have been discussing them as "affirmative action hearings," "title IX hearings," "EEOC oversight hearings" and by other descriptions.

All of the above to some extent are true. But I think it would be worthwhile to state once again on the record what it is I am trying to have this subcommittee do in this particular phase of our hearings.

We are getting ready for legislative actions on the provisions of the Higher Education Act which will expire during the next Congress.

One of the basic questions which this subcommittee must face as we look toward that legislative action is what an institution of post-secondary education should be and do in order to qualify for participation in Federal programs.

First, we have sought to find out by talking to the agencies involved and the spokesmen for the institutions what it is that those institutions are presently required to be and to do. What are, in short, the current civil rights obligations of such institutions? To what extent do these arise out of statutory law and to what extent do they arise out of Executive order, regulations, and practices of the agencies?

During the next 2 weeks we will be taking testimony from people who for the most part will be telling us what they believe these obligations ought to be. I suppose some of the witnesses will have views on how those obligations should be formulated, whether it is statute or administrative order.

I think it is fair to say to the witnesses, who are going to be testifying today and in the days just ahead, the chairman of this subcommittee has some views on those subjects.

My views are not fixed in cement. They are not lightly held either. Nor are they any mystery to most of those who have been listening to me talk on this issue.

First, as to how these obligations should be imposed, I have a long-held belief in article 1, section 1, of the Constitution. I believe that individuals and institutions have rights and obligations. They should arise out of the Constitution itself or out of statute law in conformity with the Constitution.

I think the Congress has erred substantially over the past generation. I have been as guilty as any in compounding these errors, in giving to administrative agencies too broad a mandate and leaving too many blanks in the law to be filled according to the wisdom of civil servants whose numbers, anonymity, and job tenure relieve them of public responsibility.

No statute can cover all the possibilities. Administrative action and administrative agencies will always be needed to make decisions of fact and to apply the law in specific cases.

But I very deeply believe that those agencies should be limited to applying the law as it stands written by the legislative branch and should not extend to the making of whole new areas of law simply by administrative fiat.

So whatever the Congress decides in the last analysis should be the civil rights obligations of postsecondary institutions, should in my judgment be written into the law and not left to stand on the dubious authority of Executive orders and administrative rulemaking.

There may be a direct irreconcilable contradiction between civil rights statutes and Executive orders on which most affirmative action programs are based. If this is the case then the requirements of the statute should take precedence. If this result is unacceptable to the legislative branch or repugnant to the Constitution, then the statute should be changed so as to eliminate the conflict if there is one.

I should also freely state for the record that I have some views on what the law should be as well as on the procedural question of where it should be stated.

I will continue to give my total support to the proposition that each individual American is entitled to the full range of human rights and in institutions of higher education and that Government should be blind to color, indifferent to sex, ignorant of creed and deaf to accent. I read the Constitution and the laws as requiring exactly that.

But I read the regulations and Executive orders as they are enforced as requiring that institutions become hypersensitive to the very qualities which the law and the Constitution say should be irrelevant.

I listen to witnesses urging in the name of equal opportunity that we apply unequal standards depending on accidents of birth.

I do not hesitate to admit, indeed to boast, that I don't share that view of what the Constitution, the laws or the simple requirements of human equaliy require in institutions of postsecondary education or permit for Government agencies.

We have today witnesses who are going to contribute a great deal to our understanding of just what institutions of postsecondary education ought to be and what they ought to be required to be for participation in Federal programs.

The first of these witnesses is a distinguished Representative from the State of Colorado who has made admirable contributions to the U.S. Congress during the short time in which she has been a Member of the House.

I refer to the Honorable Patricia Schroeder, Member of Congress.

TESTIMONY OF HON. PATRICIA SCHROEDER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF COLORADO

Mrs. SCHROEDER. Mr. Chairman, I appreciate the opportunity to testify today on the subject of civil rights compliance requirements for institutions of higher education. I am very concerned because it appears to me that a sentiment is developing that somehow current civil rights obligations required by the Federal Government of its university contractors place an unwarranted and unnecessary burden on academia, a burden not felt by the general run of Government contractors.

What I would like to do is state what my understanding is of the current obligations and suggest why my experiences as a law student and as a lawyer seeking a teaching job at a law school convince me that—although there is certainly room for strengthening and improving current procedures—these requirements are absolutely vital to assure equal educational and economic opportunity on campus.

The status of women in law school, both as students and faculty, has improved in the past few years. When I entered Harvard Law School in 1961, I was 1 of 20 women in a class of 558: a 3-percent minority. Last year over 18 percent of the entering class at Harvard were women. In two other schools of special interest to me, the University of Colorado and Denver University, women this year composed 23 percent and 28 percent of the entering classes, respectively. Nationwide the total enrollment of women in law schools has increased from 3 to 4 percent during the fifties and early sixties to 15.6 percent in 1974. Obviously, a number of factors account for this dramatic change, not the least of which are the increased expectations of women of what they can achieve.

But any woman who went through law school at an earlier time can tell you it was not a "revolution in rising expectations" alone which accomplished this change in women's enrollment in law schools. Also important was the fact that for a variety of reasons law schools decided more women should be in law school. Initially in the mid and late sixties, increases were prompted by the need to fill empty chairs left by men who had been drafted to fight in Vietnam. In the early 1970's when increases in women at law school were exponential, title IX which forbade sex discrimination against students in programs receiving Federal assistance appeared to play a major role. Schools learned, for example, they could not stack the deck of who would apply to their schools by only recruiting at male institutions. If recruiters were sent to single sex undergraduate schools, they had to recruit at both women's and men's schools. They also found that traditional barriers to women applicants, including refusals to accept married women students or women with small children were contrary to title IX. As these barriers dropped, applications from women increased and so did admissions.

The situation of women on law school faculties has also shown improvement, though the progress has not been spectacular and generally is confined to the lower ranks. While only 4 percent of faculty members were women in 1970, 8 percent were so reported in 1973. Most of the increase was accounted for by improved representation of women at the instructor level—up 7 percent from 16 percent to 23 percent. Women still compose a small fraction of the top rank of full professor—2.5 percent. And while 49 percent of male faculty have tenure, only 21 percent of female faculty do.

Despite the weak spots, generally a record of progress in achieving equal opportunity for women and minorities is being recorded at the law schools and other branches of academia. It is my contention that these gains can be directly attributed to the civil rights obligations imposed on higher education institutions by Federal law. All one has to do is juxtapose the dates of the marked patterns of improvement with the extension of civil rights coverage to colleges and universities. But at the very time a true merit system is developing within universities—and thus threatening the status quo—a growing opposition to "Government interference" is emerging. The criticisms seem to center on Revised Order No. 4 and its affirmative action requirements as the chief instrument of big brotherism on campus.

It seems to me that Revised Order No. 4 has three basic components. The first requires contractors to analyze their staffing to determine the extent to which women and minorities have been hired. This is the so-called utilization analysis. The second major requirement is that in light of the utilization analysis, the organization must set goals and timetables for rectifying any deficiencies in its utilization of women and minorities. The third component is comprised of a number of suggested procedures the organization may utilize in its efforts to promote equal opportunity for women and minorities on campus.

Since each of these components has come under attack, additional comment on each seems in order. The utilization analysis is an essential first step for an organization to find out what the true status of equal opportunity is within its ranks. Only in this way can discrepancies between the number of minorities and women on board and the number in the available pool be brought home to institutional leaders. Once confronted with the statistics they will be forced to acknowledge what the rest of us already know.

The establishment of goals and timetables is the most controversial part of the revised order. First, I must reiterate that goals are not quotas. Quotas have historically been used—significantly by universities as well as other organizations—to exclude or limit certain groups. Quotas are clearly illegal and must not be permitted on campus again. Goals, on the other hand, are target figures which are set by the institution in light of its present utilization of women and minorities in comparson to the available pool of female and minority talent. They are not ironclad figures which must be achieved at any cost, but guidelines to remedy the effects of past discrimination. For example, Berkeley has no women in its 40-member chemistry department yet 8 percent of all chemistry doctorates are women. It would seem reasonable that when Berkeley develops its affirmative action program, it would determine that a female chemistry professor would be added to the staff when equal opportunity measures are implemented. A timetable would be established based on likely turnover in the staff over the next year or two.

The third component of revised order No. 4, the suggested procedures for achieving equal opportunity on campus would come into play when the university begins to try to figure out how it can attract talented people of all types to its job opportunities. These procedures may include open advertising in scholarly journals and professional magazines, contacting women's or minority caucases in the appropriate disciplines, or establishing a variety of tools that academic departments must use in conducting a search for new talent.

A question might be raised as to whether contacting special groups and soliciting job applications is reverse discriminaton. I don't think so. The reason such special measures may be necessary is that there has been a good deal of racial and sexual apartheid in academia. As others will no doubt testify, if department heads and senior faculty follow traditional methods of recruitment, they will rely on the "old boy" network of personal contacts which is almost exclusively male and white. Professional associations and their meetings have also been dominated by relatively small groups of white male professionals, and it is unlikely that even active participation in the national associations such as the ABA will broaden institutional leaders' contacts with women and minorities. Thus, since traditional recruitment methods tend to produce only nonminority male candidates, it seems reasonable that new techniques would seek to increase the applications from women and minorities.

While on the subject of reverse discrimination, I should like to return to the subject of goals. To my knowledge, not a single school has even been in a position to say, "Look, we set a goal, we tried hard but didn't come up with the talent we expected and therefore that goal has been deferred." If a school were in a position to make that statement, it is inconceivable to me that HEW would order a school to meet a goal or risk losing Federal funding. What has happened, however, is that schools have not tried hard to broaden their contacts with women and minorities, have not established goals and have then complained when HEW found the university deficient in its compliance.

The true roots of opposition to affirmative action lie not in resulting reverse discrimination, but in an increase in competition for those who have traditionally been given preferential treatment. Taking an example from law school admissions, an article in the ABA Journal put it bluntly:

> In the fall of 1974 there were 900 fewer men in law school than there were in 1972.

If this decrease meant a loss of equal opportunity as some claim, then we should be compelled to reexamine the situation. However, the same article points out that women's mean scores on the LSAT are 531 while men's are 520. Women's and men's grade point averages are approximately the same with women's slightly higher. Clearly there has been no favoritism, no reverse discrimination, in the increased attendance of women. The same principles apply to faculty hiring. It will of course be harder for nonminority males who traditionally have been given preferential treatment to find jobs when they are genuinely competing with qualified minorities and women.

While the fundamentals of revised order No. 4 and the affirmative action program are sound, these basis components have been subject to attack and some wide-ranging changes proposed in the Federal civil rights compliance program for universities. One proposal would exempt universities from revised order No. 4 and offer instead an arbitration board composed of university people which would settle individual complaints of race and sex discrimination. While most of us believe arbitration is generally a good thing, in this case it is totally inappropriate. Most importantly, it would thrust the burden of obtaining equal rights back onto the individuals on campus. Anyone familiar with the civil rights struggle during the 1950's knows that the greatest impediment to progress in that era was the requirement that rights be established on a case-by-case basis. There could be no more effective sabotage of equal rights than to abandon affirmative action on the grounds that an arbitration panel could do the job.

A second proposed change is that universities should be exempt from the revised order No. 4 requirement that employers define the skills required of job applicants. Allegedly, academics hire people with talent—not people who perform certain jobs—and talent is mysteriously unmeasurable. But somehow I do not believe that the skills required for academic jobs cannot be defined. If some insist that they need rubber yardsticks such as "capacity to succeed" for measuring job candidates, I am suspicious. Anyone who has ever made a personnel selection knows that the better defined the job skills, the more likely it is one will hire the right person to do the job. Far preferable to the elastic skill qualification is a list of specific requirements: teaching skills, research funded, papers published, professional association participation. These are relatively concrete, easy to specify and comparately easy to use in measuring various candidates qualifications in each area.

A third proposed change is that if HEW must continue to enforce civil rights regulations on campus, then a special office should be set up to monitor civil rights compliance at the major, national universities. The claim is made that regional offices are not uniform in their application of revised order No. 4 and this places some of the major universities at a disadvantage. This proposal could be rejected on a number of grounds, but one practical reason will be sufficient. Although the charge of inconsistent interpretation and application of the regulations has some basis, it seems that the smaller and less prestigious universities are the ones who truly suffer. The proposal for a special office could be rejected on a number of grounds, but one practical reason will be sufficient.

What is a major university? Is it only the Ivy League plus Berkeley? Denver University and the University of Colorado have students from all 50 States. They are national institutions: will HEW determine they are major also? And what will I tell them if it won't? Colorado School of Mines is the finest metallurgical mining school in the country. Does it qualify? The pitfalls in this proposal are endless. It seems to me the equitable solution is not giving certain prestigious schools a special office in HEW so that they can browbeat HEW officials into giving them preferential treatment, but rather that we instruct HEW to do a better job of communicating uniform standards to regional offices. Then, all our institutions of higher education will receive equal treatment from HEW. I would be less than candid if I did not state that I find the elitism and favoritism implicit in this proposal morally repugnant and another example of unequal treatment under the law.

As I am sure my colleagues are aware, the Griffiths Joint Economic Subcommittee last week held hearings on the Department of Labor's Federal contract compliance program in certain areas including higher education. Describing the efforts of the Labor Department's Office of Contract Compliance and its designated compliance agencies as "puny," Mrs. Griffiths suggested that the discrimination review functions of the Labor Department might be better handled by the Equal Employment Opportunity Commission. The Civil Rights Commission first made this suggestion in 1969, and many others have made it since.

Another alternative which should be considered is a strengthening of HEW's current operations. The Director of HEW's Office for Civil Rights testified before the Griffiths subcommittee that many of the current difficulties in enforcing its compliance responsibilities stem from inadequate staff and resources. Others—including women's and minority groups as well as university administrators—have complained of the OCR's lack of clear policies and its general inefficiency and incompetence.

Affirmative action has been rightly hailed as potentially one of the Government's strongest tools in the effort to bring about equal employment opportunity. Although there have been some just complaints, and errors acknowledged by HEW officials themselves, the solution should not be to abolish the law or exempt higher education from its coverage. Rather, we should remedy the defects in enforcement procedures. OCR's Director also noted in his testimony the unwillingness of some institutions to cooperate in supplying needed information to compliance officers. If we do not demand that our institutions of higher learning practice equality, we will have difficulty in convincing the rest of the Nation of our serious commitment to that goal.

Mr. O'Hara. Thank you very much, Mrs. Schroeder.

In your testimony, you call attention to the article from the "ABA Journal" with respect to law school admissions.

You point out that the article contains the information that women's mean scores on the LSAT are 531 and men's are 520. Grade point averages are approximately the same with women's slightly higher. "Clearly there has been no favoritism, no reverse discrimination, in the increased attendance of women."

I gather that you are of the opinion that the difference in attendance is due to the fact that law schools are now requiring the same standards for men rather than requiring higher standards for women. Is that right?

Mrs. Schroeder. That is right. When I went to law school it was reverse discrimination for women. You had to have higher scores.

Mr. O'Hara. Is it your feeling then that this is the appropriate way to do it?

Would you object to a system that required lower grade point averages and lower scores for women?

Mrs. **Schroeder.** Yes, I would. I think what women want is the right to compete equally. I don't see why we have to have higher grades and higher law school scores to get in, which was the instance in my case.

Mr. **O'Hara.** I am not making any defense of any past practice. I want that clearly understood.

With respect to the faculty hiring you speak of a situation where the chemistry department at Berkeley had 40 faculty members and none of them were women. But 8 percent of the chemistry Ph. D.'s are women.

So you are suggesting that Berkeley ought to hire a woman Ph. D. as a member of its chemistry faculty?

Let us suppose that we had a vacancy at Berkeley right today. Let us suppose they went through affirmative actions you suggest and advertised the vacancy and brought in more people for interviews and tried very hard to get men and women applicants both.

Then let us suppose further that after this affirmative action effort—mind you, there is just the one vacancy—they narrow the field down to two candidates and the selection committee believes, being as objective as it can, that the male candidate in this particular instance is better qualified than the female candidate.

What do you think they ought to do?

Mrs. **Schroeder.** Mr. Chairman, you have hit a very sore point with me because I have been in the position of looking for one of those university jobs at one time.

I must tell you how very painful it is as a woman who went to all the local law schools at our local area and went through the interview procedures.

I was immediately suspicious that something was wrong because none of the local law schools hired any women. The entire faculty would take me to lunch at the most elegant place in town. I would be wined and dined. I would sit there and realize that half of them were classmates of either my school or Yale that I had seen at many alumni things.

Then I would always be told, "If you would like to teach part time a course called 'Women in the Law' at $4 an hour, of course you can't have an office or anything, we would be glad to have you. But we probably aren't going to hire any more Harvard or Yale graduates because we think we are a little heavy right now on that."

Everyone had a different one. "We want somebody from our own university. We are moving in that area."

Then they would turn around and hire someone. Once they hired someone from my own class who had a lower grade point average and less teaching experience than I had. I still can't figure out what that excuse was.

I went back and confronted the dean with this. He said, "It is because we don't have a faculty women's room and it will cost a lot of money."

I am just very impatient with those kinds of things because I have felt that very intensely. "If you want to come down here for a couple of hours and teach 'Women in the Law,' but you didn't want to, fine. But we don't want to really have to deal you into the deck."

We had a tremendous problem with this. I think if they can make a good case—this is why I feel so strongly about setting up the job qualifications—if they can make a good case that someone has more teaching experience or a higher grade point or has written more scholarly articles or anything, I could accept that. But I don't like this fuzzy stuff.

Mr. O'Hara. I agree completely with that. I see no reason why they can't set up job descriptions and objective criteria so they can be checked on what they do.

Mrs. Schroeder. They haven't been. It has been much more the "old boys' club."

Mr. O'Hara. That is absolutely correct. That is the usual way for filling faculty positions, for the head of a department to call up a couple of friends of his or heads of departments of other institutions and say, "I am looking for an instructor. Do you have any good people?"

Usually they don't put something in the classified section.

Mrs. Schroeder. That is right. I had one dean ask me if I would give a course on how one obtains babysitters when one becomes a lawyer. I really thought that was kind of condescending.

If they can make the case that, yes, the male was truly more qualified, fine. I don't think HEW should shut off their funding on that basis. But I haven't heard any schools saying that. They are against reverse discrimination. But they haven't done anything to prove it.

Mr. O'Hara. I don't think that our views are very far apart on this. I think we can find statutory language that will do the job.

Mrs. Schroeder. Thank you.

Mr. O'Hara. Mr. Dellenback?

Mr. Dellenback. Thank you very much, Mr. Chairman.

We welcome your testimony, as always eloquent and helpful.

Certainly the kind of thing we are concerned about here is the sort of thing with which the Congress, both the House and the Senate, ought to set its procedures up and show the rest of the country how eloquently we do it. We, of course, don't discriminate. We, of course, have adequate job descriptions. We, of course, are very balanced in the way we do this kind of thing—we don't have any sexual imbalance. If we can just get that message across to the public then we would have a standard to which all should repair. But I won't do that.

I would like to follow up for a moment on the question that the chairman asked as that is really one of the tough ones.

I think that so far as sexual discrimination and minority discrimination is concerned, there is clear evidence that it has existed and in the halls of academia. Further, we should be doing something constructive about it. This should be not only in the admission of students, but in the composition of faculty, as well as practices within the faculty for tenure and raising of salaries.

The tough issue comes, Mrs. Schroeder, when we get to the question of how do you rectify the situation in a mass that is unbalanced?

Let's assume you have an institution where you have 2,000 people involved in the mass. There are very few minority employees—very few, if any, women involved. The increment—the turnover each year—is 100. It is about a 20-year term on the average.

One feels that one wants to change that composition of the mass. We do it by dealing with the increment. How do we do it? Do we set a goal for the increment? Or do we set a goal for the mass?

If we set a goal for the mass, are we going to have a turnover of 20 years to bring about that change, or do we attempt to do it in 5 years. How do we structure our efforts so as not to discriminate with the increment if what we are really struggling to do is to change the imbalance of the mass?

Mrs. **SCHROEDER.** My feeling is that it isn't quite as difficult as a lot of people make it out to be. I think we make a long step forward when we just make the faculty sit down and look at what they have.

Mr. **DELLENBACK.** Any difficulty with that first point: the analyzing of staffing? There should be no difficulty whatsoever.

Mrs. **SCHROEDER.** That is exactly right. Then I think they have to realize how narrow their normal procedures of hiring the new group coming in really is. It is a very narrow and old boy club when you call your buddy and find out.

So that seems to make sense.

Mr. **DELLENBACK.** I agree with you completely, Pat. If you talk loudly about breaking discrimination, and then so structure your method of looking for additions that you just don't have any balance, you are not going to bring about a change. I strongly agree with you on that.

Mrs. **SCHROEDER.** Then I think you try very hard to write objective job descriptions, to be aware of where you are short on your faculty as new people come in through turnover. That is where you really direct yourself to.

You are obviously not going to take someone with tenure and push him aside and say "now we are going to put in five women or two blacks or three Spanish-speaking." You really can't do that.

Mr. **DELLENBACK.** You are not really answering my question; nor did you answer the chairman's question.

Mrs. **SCHROEDER.** I don't think women are asking for special treatment, nor are racial minorities. It is just to be considered, No. 1. I think they can compete very well once they are considered.

Mr. **DELLENBACK.** Let us go back to the chairman's question and try to pin down an answer. If, in an academic department with a faculty of 20 males where there is going to be one change this year, their analysis concludes that the best applicant is a male——

Mrs. **SCHROEDER.** Do they have objective criteria for saying that?

Mr. **DELLENBACK.** Oh, yes, perfectly objective criteria. They have really researched it and they say objectively—there is always judgment in this but let us assume it is really objectively done—the best applicant is a male.

Do you have any difficulty now in their choosing the male, even though it means that there is no change in the mass? The mass is still 100-percent male.

Mrs. **SCHROEDER.** OK. I could accept that if it is true, truly objective. But I don't think it has ever been objective before.

Mr. **DELLENBACK.** If it is truly objective, do you have any difficulty?

Mrs. **SCHROEDER.** No.

Mr. **DELLENBACK.** So, we are not really talking about setting a goal for the mass. You don't think that in affirmative action there should be a goal set for the composition of the mass.

What you think should be done is to focus on the increment and insure that there is no discrimination in that year's increment. Is that correct?

Mrs. SCHROEDER. All I am saying is that I see no way of dealing with the mass without some kind of pumping and pushing laterally. I think that would be intolerable because you have people who have tenure.

But let us look at the new people. They have to have goals. They have to know where they are. They should be moving ahead.

When they start saying, "Yes, we truly tried and we contacted with these other groups and we did interviews on women and with our objective criteria based on this we selected a man," fine. But I haven't heard them say that yet. They are just screaming about the fact that they don't want to have to bother.

Mr. DELLENBACK. You and I understand each other on all the things that are wrong. They should change procedures. They should set standards. They should set job descriptions. They should really search the matrix and bring people in.

When it comes to setting goals, you are telling us that the goals should not be set for the mass.

Mrs. SCHROEDER. That is right.

Mr. DELLENBACK. The goals should be addressed to the incremental addition.

Your testimony has been very helpful to us, and your analysis is good. I appreciate your taking the time to be with us.

Mrs. SCHROEDER. Thank you.

Mr. DELLENBACK. Thank you, Mr. Chairman.

Mr. O'HARA. Thank you, Mr. Dellenback.

Mr. Benitez?

Mr. BENITEZ. Mrs. Schroeder, I also congratulate you on your statement. I must say that there are some qualifications I would make. I would inquire as to your views concerning your trust of the objectivity and on the potentials of achieving this rectification without adopting a moral position concerning the overall situation.

My utmost concern is not so much with the situation as it affects women because I am somewhat of a male chauvinist since I come from a culture where that is practiced. I am deeply concerned of the racial and ethnic problems on a number of bases which are not rational.

But my point is this: unless one assumes that the only thing that needs to be done is to establish a sort of formula of mathematical equality that will achieve the objectives, it will be of course much better than anything that prevails at present.

I agree with the thrust of your presentation. I think that we are dealing with a present evil which is moral in its nature and one which requires a disposition to assess, once the scheme of objective tests has taken place.

There is a wide marking of other necessities in any statute. I would formulate that given the unbalanced situation it is not only legitimate but necessary to take into account in the evaluation the desirability of balancing in this objectivity that must be present in any type of academic selection.

You don't agree with that?

Mrs. SCHROEDER. I think that that certainly is one thing that should be taken into consideration. I really do. I don't think that is the primary thing. If you find that you just don't have somebody else qualified to teach something.

I am really very apprehensive about subjective judgment because we have seen it used for centuries to discriminate against qualified people.

Mr. BENITEZ. You would have to have them now to balance the score because subjectivity is of the essence in human relations. They have to be projected. I agree that as far as you can solve the situation via the obviously minimal requirements or even basic fundamental requirements then there is a point of value judgment and we cannot erase value judgment from the evaluation.

I would think that we have to face the basic fact that this is how value judgments have been exercised against the minorities.

When we say, "let the value judgments be exercised for the minorities if otherwise they qualify," I don't think we are doing anything worse than trying to balance and to be fair to the fundamental composition of society.

Mrs. SCHROEDER. Yes. But the more objective you are, the more I think you will be able to confront this. I think that is what I mean.

Mr. BENITEZ. We cannot erase——

Mrs. SCHROEDER. That is right.

Mr. BENITEZ. The evaluation of many human relationships.

Mrs. SCHROEDER. That is right.

Mr. O'HARA. Thank you very much, Mrs. Schroeder.

What that last colloquy added up to is that if one is better qualified than the other objectively, go ahead and take that one. If they are equally qualified objectively.

Mrs. SCHROEDER. And you have no women or blacks or Spanish speaking. Is it going to be pretty hard——

Mr. O'HARA. If in the past you have discriminated against women now you should discriminate against men.

Mrs. SCHROEDER. I don't think that is discrimination. I think that is filling a need.

Mr. O'HARA. That is sort of an equity in a way.

Mr. BENITEZ. That is my position.

Mr. KEMP. Mr. Chairman?

Mr. O'HARA. I am not sure I would agree with that.

Mr. Kemp?

Mr. KEMP. I have a few brief questions. What effort do you think should be made with regard to the utilization anlaysis? Would you explain how you would define "minority" and how you undertake a utilization analysis?

Mrs. SCHROEDER. How would I define "minority?" I think we would probably have to use the same definition that is in the Civil Rights Act. I think you could do it on the basis of the ethnic background, religious background——

Mr. KEMP. You would include ethnic and religious?

Mrs. SCHROEDER. I think in our part of the country we lean toward the Spanish speaking and the black-type of discrimination. I don't think we are going to have, you know, 1 percent Greek, 2 percent, that type of thing.

Basically the bilingual, bicultural aspect of the society which is more prevalent in certain census tracts and the racial breakup and the sexual breakdown. Those are the easy ones.

Mr. KEMP. So it is sexual, racial, and religious and ethnic. And utilization analysis would include a statistical breakdown of all of these various groups.

My area, I would suggest, is made up of Polish-Americans, Americans of Italian descent, Americans of Irish descent, German descent. It is a totally heterogeneous community.

I wonder in practice with a utilization analysis as you describe it, how you would dissect a university and identify religious, racial, and ethnic and sexual differences.

I ask with a sincere desire, to learn how this would come about in our society.

Mrs. SCHROEDER. I think most of them already have the facts on file. They have them from their employment data. They have them in the record. It is just a matter of compiling it.

I think nationwide we have two problems here. You have the naitonwide problem and the narrow problem.

I think the biggest problems we have nationwide are including the female sex, including blacks, and including the Spanish speaking, because it is one of the bilingual, bicultural groups of our society today.

In other words, the German-Americans, the Polish-Americans and the others have broken through and become absorbed.

I can tell you that if I were a university up in your area I would suggest to the staff that they also take into account some kind of having people on the staff that would deal with those different minorities, especially if there are a lot of first generation people, because I think it would be very helpful in recruiting. It would be helpful as a community liaison. It would be helpful for all those different kinds of things.

Mr. KEMP. Going back to this hypothetical utilization analysis what if we find that on a particular campus there is an underutilization of a particular ethnic group that does not happen to be so defined as a minority?

Mrs. SCHROEDER. I think that is up to the particular campus. We could leave that to the States and the local areas. I think we could make suggestions that they may want to consider it. They may not want to consider it because it may not be relevant.

They may be interested that half are Irish Americans. But they are third generation and they don't think of themselves that way.

I think it is up to the area. I think the basic nationwide area that we are concerned about is bilingual because that is certainly a cultural problem. Indians in certain parts, the blacks, and women. I don't think it would hurt to have them look at it. They would be better institutions for looking at it.

Mr. KEMP. My next question—because I know we want to get on to other Members of Congress who are to testify—would you describe—I don't mean to try to pin you down for just dispute's sake—utilization analysis again, how or who would do it and how would it be accomplished?

Mrs. SCHROEDER. Utilization analysis could be done easily by the school itself. They have all the employment records. They have all the current job descriptions, history professor, so forth and so on, women's dean, men's dean, so forth and so on. You just put it all out on pieces of paper. It is already in most of their files, all the background.

Mr. Kemp. All this analysis would be sent to HEW, I presume?

Mrs. Schroeder. No; it is like an inventory. You do a personnel inventory, which most companies do anyway. This would be your personnel inventory for the personnel records that you already have. They are probably already there.

Mr. Kemp. I guess the point that I am trying to make is that, in recognizing the great need of our society to be more open and to provide more opportunities for all people and for minorities, it is important one minority is not less equal than another.

Mrs. Schroeder. I agree.

Mr. Kemp. I would hope in our discussions that we recognize that fact.

I appreciate your testimony.

Mrs. Schroeder. But I can see that higher education may not be as concerned about some minorities as others because just as if half the people in your district spoke Spanish and you had no one that spoke Spanish on your staff you would be very concerned. If half of them were Polish-Americans but all spoke English you probably wouldn't bend over backwards to change it. I think that reason enters in too.

Mr. Kemp. Thank you, Mr. Chairman.

Mr. O'Hara. Thank you.

Thank you very much, Mrs. Schroeder. We appreciate very much hearing your testimony.

Mrs. Schroeder. Thank you.

Mr. O'Hara. Our next witness is one of the ablest and most effective Members of the House. He is Representative Andrew Young, Congressman from the State of Georgia.

TESTIMONY OF HON. ANDREW YOUNG, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF GEORGIA

Mr. Young. Mr. Chairman and members of the Subcommittee on Special Education:

With the enactment of the civil rights legislation over the last decade, the Nation made a commitment to redress grave injustices. Great hopes arose for equality in employment, in education, in political life and government services. And these hopes were nourished by the development of constructive programs to bring new opportunities to those who had been wronged.

So it was in the field of higher education. As segregation came to an end in southern colleges and universities, and as more minority students entered northern institutions, Federal assistance to higher education rose rapidly. A very great amount of the progress in education emanated from the House Committee on Education and Labor.

One of the most important advances was the adoption of affirmative action in our colleges and universities. Affirmative action is no more than a practical way of meeting a moral commitment. When a whole segment of a society has been denied opportunity in a given field, the remedy is to make such opportunity a right, and enable people to exercise that right. Thus, the passage of the Civil Rights Act of 1964 was but one step in a process which had to be followed up with policies and programs to implement the rights.

Affirmative action plans are designed to seek out individuals in groups which were systemically excluded from equal educational opportunity—excluded either by legal segregation, or by inadequate primary and secondary education, or by academic tradition. In the case of exclusion based on race, the problem has been massive, because the exclusion existed in America even before the birth of this Nation.

Unfortunately, just as affirmative action plans in higher education have begun to fulfill part of the Nation's commitment to complete equality, and at a time when those plans should be strengthened and continued, the concept of affirmative action has been under heavy attack. "Affirmative action" has been translated by some to mean "quotas"—a code word with the potential damaging impact of the term "law and order."

To me, and I trust to the members of the subcommittee, affirmative action means keeping a solemn promise, and doing what will make this a more healthy, stronger society: Making sure that all citizens, whatever their station or background, will have opportunities to become teachers, doctors, lawyers or educated citizens making a contribution to this Nation.

When that has been achieved, we will have not "quotas" but representative participation in this society—something which many groups have already attained. It is time to finish this job.

Mr. YOUNG. Thank you, Mr. Chairman.

I thank you very much for the privilege of testifying before this subcommittee.

I would just try to share with you my prejudices if I might. I say prejudices because I think that it is a problem that I have with the whole concept.

Before Congressman Schroeder leaves I would disagree with two parts. The main part is that there was a speaker at the American Bar Association who was female. She was president of the Hookers' Union. I wonder if this doesn't say something about or say more about the professional view of American women than we might like to admit to sometimes.

I guess my problem is I don't believe there is such a thing as an objective criteria. I see the truth of our society, the truth as we know it in our time. This is really coming from all of the diverse factors which make up the society.

One of the things we need to do as a society is break out of the ethnocentric bag in which we find ourselves.

I think education historically and perhaps of necessity has been a predominantly white Anglo-Saxon-Protestant phenomenon and that anybody that doesn't come under that category is automatically discriminated against.

And yet my experience has been that that is basically what is wrong with our society and that that is one of the basic limitations of our educational system and until we find a way to broaden the cultural and educational perspective of higher education we are going to continue to suffer from some of those limitations.

My own experience I guess is about all I can draw on. But going back to my early days in college when a white professor of sociology tried to argue with me about the nature of juvenile delinquency—and if it was one thing I knew about as a freshman in college it was juvenile delinquency since half of my classmates from grammar school on up had been at variance with the law—and yet the disagreements over that and the constant arguments we had were responsible in part for just a complete conflict. That kind of conflict you don't get unless you agree with professors in any institution. It seems you don't get grades.

So when I found myself applying to a variety of schools I always found myself rejected. I don't know whether this says a whole lot about me. It probably does. But I think it also probably says a little about the schools since a couple of those schools have since invited me back to give me honorary degrees. One of them even invited me to be dean of one of its colleges or at least talked with me about it.

The point I am making is I think we ought to think of our educational system as a part of our society, reflecting the sickness of that society, and that what we call objectivity most of the time inevitably no matter who says it has a particular cultural or ethnic frame of reference.

Anytime we try to set up criteria according to that frame of reference, whatever it is, I think we are going to exclude somebody. We are going to exclude some concept of truth that we very definitely need in order for our society to function.

We see young lawyers practicing civil rights law out of the frustrations that they experienced in growing up and developing a whole new category of law.

I think we are beginning to see the same thing in the practice of medicine.

All I am saying is that affirmative action is a concept that keeps the doors of education open to new groups. While that may give minorities a little edge in some instances and you may run into the danger of what we now commonly call reverse discrimination, I think the educational system needs this. Society needs this as much as the people we are trying to help.

I think that if we find ourselves bending over backward to be inclusive we will find that that inclusiveness will pervade our society and we will be developing an expansion of resources and even in the instance where the famous case out in Washington—I mean, I think of a white attorney who probably could have gone to a number of white law schools but who instead chose to do his legal work or part of his legal work at Howard University. He also happened to be in the Justice Department at the time of the Kennedy administration. Much of the sensitivity of that administration came from the experience that he had in a predominantly black law school.

My feeling is that a society working toward affirmative action and toward inclusiveness is going to be a stronger and more relevant society than one that accepts the limited concepts of objectivity which we now consider permanent.

I would just stop.

Mr. O'Hara. Thank you for your very valuable insight into the problem.

In essence you say that a person's racial or ethnic experience can be a factor that you would look at in selecting him as a student or for a position on a faculty just as his academic experience might be or his work experience or some other kind of experience the person might have had.

In other words for appointments to the faculty of a department of sociology, that a person's experience, his ethnic experience, his experience, his youth, his childhood, that could be a factor to look at in determining whether he was better qualified than someone else, right?

Mr. YOUNG. I think it is a factor that would never be considered unless we had some kind of overall concept of affirmative action.

We have probably had more books produced from the black community in prison than by college graduates. I for one have come to feel that our prison system probably has much more in the way of intelligence and talent than sometimes our universities and that our universities are functions of privilege and not necessarily talent and intelligence.

There is no way it seems to me to write those kinds of laws unless we have a concept of inclusiveness or affirmative action. I would rather say "inclusiveness" because it says that something is wrong with the society and something is wrong with the institutions.

A law school is going to be better that has a healthy component of female and minority faculty.

Mr. O'HARA. The trouble with that is that while you are talking about a limited number of opportunities as you have in law school now, what you are also suggesting is individual injustices in arriving at a racial or ethnic or male-female proportions in the institution.

I was talking to a friend of mine who was an old friend who is a dean of a large law school. They have a program where they have got to get a certain percentage of minority students.

This is one of those institutions that has a very large number of applicants. They sort of set them up on a grade point average but primarily on LSAT scores.

They run them down a list when they pick up their new entrants until they reach a certain point. At that point they stop and then they wait and see how many black applicants they picked up. If they don't have the right percentage, they start the rest of the way down the list.

It seems to me that whoever that next person was on that list before they started making up their goals for minority students has been done an individual injustice.

That is what troubles me. I wonder how you would react to that.

Mr. YOUNG. I would admit that it is perhaps an individual injustice. But it might be necessary in order to overcome a historic group injustice or series of group injustices.

I would say that because the chances are that that a young white person that is skipped over will have a dozen other opportunities in graduate school, in business.

That would not be true to the person from the lower economic strata or some ethnic minority or a woman.

I would go so far as to say that if I were running the admissions program if a young person happened to be a young person of lower economic strata from Appalachia, for example, I wouldn't skip over him.

I think what we have got to consider is people who have not had opportunity as a result of group discrimination.

A person who comes from a lower income ethnic white community, Irish, Italian, or Polish in a major city, I wouldn't skip over them because I think that in many respects their lot, their plight, in terms of economic discrimination has also been an injustice in our society.

I think we have got to get to the place where we overcome group injustices. I would think that our society is strong enough and healthy enough that what happens while there might be a shortage of law school slots, there is not a shortage of opportunity to serve in this society. Persons of talent where there is no group discrimination will find opportunities to serve.

Mr. O'Hara. I think you and I disagree. I really don't see group injustices. If someone discriminates against Dellenback it is no injustice to me. I might object to it. But I feel no pain, no individual pain.

If on the other hand those last two places in law school—let us make it the last two places now—we had two sons, both male, two sons of migrant farmworkers, one white and one black, I don't see any basis for preferring one over the other.

Mr. Young. I don't either.

Mr. O'Hara. If we had Charley Diggs' son and my son competing for those two spots I don't see any basis for favoring one over the other.

Mr. Young. I would agree with you on those two instances.

Mr. O'Hara. So can't we then set up a system that is color blind, that looks at whether one has overcome obstacles and whether or not one has overcome language problems, whether or not one has overcome other difficulties, economic deprivation and so forth or interrupted schooling or what have you and look at it without looking at the race or ethnic back ground of the applicant?

Mr. Young. Let me backtrack and disagree with myself on that. You sucked me in a little bit. The white migrant and the black migrant, no difference. You and Charley Diggs' children, yes, because the chances are his children grew up in a city, Detroit, and still would have a kind of handicap as a result of that school system. I think that factor has to be taken in there in some instance because——

Mr. O'Hara. On the other hand if his kids are brought up in the suburbs and mine are brought up in the inner city, Detroit, would you give preference to mine?

Mr. Young. Yeah, I think I would. The reason I say that is I would like to stick with the notion that democracy does not work unless it is inclusive. As long as you leave some part or some section of society out of the equation not only does that person suffer but the society as a whole suffers. There has got to be some notion of inclusiveness.

My wife is just part of a faculty in a new junior college that has been established in Atlanta, Atlanta Junior College. It has been very interesting to watch them establish a new junior college from scratch under HEW guidelines.

I think they got a far more exciting and relevant faculty because they were working on a balance of black and white and male and female. They considered the notion of cultural inclusion. They have a really ecumenical faculty.

I think that is going to produce a much better quality of education than, say, Georgia Tech, which is still struggling with guidelines. It was just 2 years ago that they couldn't even find any black football players. There was nobody qualified to play football at Georgia Tech.

Mr. O'Hara. They found some in the meantime.

Mr. Young. After Alabama found them they figured they better.

But I am saying that the institutions will be stronger because of their inclusiveness. This is probably the only point I want to make. The more inclusive they are and the better balanced they are, sexually, racially, ethnically, the better results they are going to produce for a democratic society.

Mr. O'Hara. Mr. Dellenback?

Mr. Dellenback. Thank you, Mr. Chairman.

Let me just say for the record before I put a few questions to our [illegible]ness that not only do I agree with the chairman that the present witness is one of the most able of the new Members of this House of Representatives, but I personally have come to the conclusion that he is one of the most sensitive, one of the warmest, one of the most independent, and one of the most courageous members——

Mr. Young. Can I interrupt the gentleman just for a minute?

Mr. Dellenback. To disagree or agree?

Mr. Young. I am going to take your word for it but remind you that I was rejected at 90 percent of the colleges that I applied to.

Mr. Dellenback. I don't want to be facetious.

Mr. Young. On the basis of their objective criteria.

Mr. Dellenback. That doesn't detract from what I said, Andy.

Mr. Young. I hope it says something about the process of the committee.

Mr. Dellenback. You and I don't always agree on every issue—occasionally you are wrong. But I just wanted to give a personal testimonial to having a friend who I have great respect for as a witness.

In response to some of the dialog that took place between the witness and the chairman of the subcommittee, I really think that schools are being very narrow when they make their selection on just scholastic measures. Exactly what measures we use when we go beyond scholastic measures may be the kind of thing, Jim, you were referring to when you talked about overcoming hardships or something else. However, I think if you stay with strictly LSAT measures, and GTA measures, you are hard put to start selecting at any stage of the game.

I am not sure that I would agree with you, Andy, when you said that there can be no objective measurements, if indeed you said that. I jotted that down as one of the comments that you made.

Indeed, there can be objective measurements. It just can't be done by getting a vibration that this one ought to be "yes," and that one ought to be "no." There have to be measures in any system of equity.

I don't really read you as saying that you don't agree with that. It is just a case of what those measures should be, and how equitably they are applied.

I would ask again—not because I think it is the only issue but because I think it is one of the most difficult issues that is involved—if you are trying to bring about a redress of what can be considered imbalance in the mass, how can you do it without being discriminatory in the increment that is added to the mass on a continuing basis?

If your answer is that it cannot be done without being discriminatory in the increment, then what you are really suggesting to us—even assuming we have gotten away from scholastic measurements and are going to broader measurements—is that the law ought to say, "We discriminate in the increment in order to bring about balance in the mass." Does my question come through clearly?

Mr. YOUNG. It does. I guess I feel that way. I don't want to admit it though. I feel that way because I think I do feel that there is no purely objective criteria.

I had never seen a standardized test until I walked into the college entrance board. By the same token my children started off in kindergarten in a private school simply because we were trying to integrate private schools in the south in those days. They started taking standardized tests in kindergarten.

We got them back in public schools after the private schools were integrated. But they have never had any more trouble with tests and they always do pretty well because they have had them since kindergarten.

I am saying that those tests are going to be discriminatory against certain people. So I don't think we can consider those test scores as purely objective. So I think there has got to be some discretion used to balance out the cultural factors which are present not only in the past but also in the grading of our educational system altogether.

Mr. DELLENBACK. I would agree with at least part of the thrust of what you are saying. In talking to Mrs. Schroeder, it was my feeling that she was willing to ignore setting goals for the mass, and saying, "let us just not discriminate in the increment."

Maybe I misinterpreted. In any case, if we are really nondiscriminatory in the increment, I believe it will come out favorable to women. I am not so sure that is true with minorities. I think that is implicit in what you are saying because with all of the strides that have been made in recent years to bring about equality of educational opportunity, there may be inequalities that arise from the differences in such things as test scores—which are old hat to many white Anglo-Saxon Protestants but are not old hat to many blacks.

Therefore, I think it is more difficult to be both nondiscriminatory in changing the mass and nondiscriminatory with the increment when considering minorities than it is when considering women.

Mr. YOUNG. I would agree with you.

Mr. DELLENBACK. I read you as really saying, in part from your own example, it makes the problem more complex rather than less.

Mr. YOUNG. I think it does. I think it would even be more difficult in regard to places where cultural differences are coupled with language differences.

Actually, with 200 years of attempts by and large at assimilation the distance between blacks and whites in this country is narrowing.

That is not the case with men in many American Indian communities. I think that cultural sensitivity and inclusiveness are things that I keep coming back to.

Mr. DELLENBACK. I appreciate that. I close by saying I think at least on the surface that I disagree with you when you indicate that part of the answer is to discriminate on a reverse basis, even with the increment where you feel it is necessary to do that in order to bring about recitification of past imbalances.

I can't really come to that, Andy, and I think it is a wrong way to do it. For me, the answer lies in writing the measurements for the increment such that they are more than just a few rigid types of measurements which clearly or implicity favor one group over another.

I think that is what we do when we go to law school aptitude tests, or to straight GPA's. I think there are cultural differences and background differences which are certainly not the exclusive measure we should be using in making such determinations.

Thank you very much.

Thank you, Mr. Chairman.

Mr. O'Hara. Thank you.

Mr. Benitez?

Mr. Benitez. Mr. Young, I think your testimony has been excellent.

There is one point that I would like to underscore. I assume you don't agree with the chairman when he says that if an injustice is done to me that it is not an injustice done to him.

Do you feel that if anyone is treated unjustly in a society that that affects the whole of society and not merely the one who was affected?

I take it that is the reason why you claim that opportunity given to a member of a minority does probably more for the society at large than for the individual who happens to benefit.

Mr. Young. That is my contention, Mr. Benitez.

Mr. Benitez. Thank you.

Mr. Young. I might say to the chairman that if the chairman found that Mr. Dellenback was being discriminated against because he was a Congressman and that all Congressmen were being held in some disrepute I would think the chairman would tend to feel very sensitive even before it hit him.

Mr. O'Hara. I think that is right. I would agree that "no man is an island." But I don't think you can remedy the injustice that was done Mr. Dellenback by giving me preference.

In other words if an injustice was done to Mr. Dellenback it ought to be remedied and whoever it was that treated Mr. Dellenback unjustly can't square the account as far as I am concerned when I come along by giving me some preferential treatment.

Mr. Young. Let me take on that question. Let us suppose the American Bar Association had a convention and refused Mr. Dellenback the right to speak on this subject this year and this was the major issue of the convention and because of the refusal to have this point of view represented, the point of view of the subcommittee, by Mr. Dellenback because of internal politics in the Bar Association next year there was an effort to have you speak. Somebody would say that is discrimination in reverse. I don't think so.

That say "we still have to have so many professors. We don't have time for any educational controversy in the Bar Association." It is not reverse discrimination to have that point of view represented in that convention whether it be by you or by Mr. Dellenback.

I think that is the image that I have of our educational system. The educational system has been denied certainly a black perspective. For the most part it has been denied a female perspective. It has been denied the perspective of the folk cultures which make up America. I would think the inclusion of those folk cultures and those minorities would strengthen our educational system.

Mr. O'Hara. I think there might be something to the idea of inclusion of different cultures. If you frankly said that "in selecting our student body we shall use the following criteria, 1, 2, 3, 4" and one of those criteria you used was an effort to obtain representation from various regions of the country—I have seen that, the college admissions criteria in an effort to achieve representation from the various cultural backgrounds, you know——that is all right with me.

But when you say we are going to admit on the basis of ability as demonstrated by performance in previous academic work and as demonstrated by scores on the appropriate tests indicators of success in law school or wherever it might be and then not do it that way. I just don't like the idea. I don't think we are terribly far apart. You are very persuasive. I am not sure we should have asked you here.

Mr. Kemp?

Mr. **Kemp**. Thank you. Mr. Chairman.

Andy, if I can call you so——

Mr. **Young**. Fine.

Mr. **Kemp**. I want to congratulate you on your testimony.

I agree with the chairman that we are not far apart and that we have the same goal. It is a question of how to reach that goal. There are honest differences of opinion. People with honest differences of opinion can disagree certainly without being disagreeable.

I welcome your testimony. I welcome you to Congress. I have only been here 4 years. You have been here 2 years.

But I think that you were elected on the basis of your individual ability, on your articulateness, on your background.

I should hope that you would want to be elected on that basis, not as a white or a black or whatever.

What bothers me about this discussion is that we are sitting here, Andy Young, who may be a Democrat maybe from the South, talking with Jack Kemp, who happens to be a Republican from New York, and in our discussion placing an undue emphasis on color.

You made the statement earlier about white Anglo-Saxon Protestantism. I happen to be a white Anglo-Saxon Protestant and don't take particular pride other than to say this. I was brought up in a family, in a church surrounding, that did not teach discrimination and in fact practiced what it preached.

I find it a little bit unfortunate that the discussion seems to center around that particular subject. I have come from the world of professional sports, where I think there have been cases and there are cases today of discrimination. But generally speaking in practice it seems to me that sports is an area of our society in which ability has been the sole criterion of inclusiveness.

I want to say parenthetically that I do very much agree with you that we should think in terms of inclusion, of trying to make this society of ours as heterogeneous as possible, to make a democracy—where we take advantage of cultural differences. I think we should be proud of it.

But the question I have is this. It seems to me I don't suggest it is right now but it seems that affirmative action to be coming to mean—in some areas inclusion for the sake of inclusion.

For instance I think there are some cases and there is one in particular I know of where a university was looking for a black economist.

If I were an economist and I were black I would find that abhorrent. I think that is the antithesis of what this society should be about. I don't see us moving toward the type of democracy that you want for your children and I want for my children, where people are picked as an economist because they happen to be black.

I wish you would comment on that possibility. I don't suggest it is that widespread. But do you want to live in that type of——

Mr. Young. I think I do for a while.

Mr. Kemp. For how long?

Mr. Young. Until being black no longer means being poor.

Mr. Kemp. No longer means being what?

Mr. Young. Being black no longer means being poor for the most part. The reason I justify a black economist is I have a notion that our society suffers problems. The people who suffer the problems first are people who are on the fringe of the society.

So we have had a problem of unemployment in the black community since the war. So black economists by and large have been living with that problem already for 25 years. And so the inclusion of a black economist in particular in view of the situation that we find ourselves in now where unemployment is affecting everybody in this society like it used to affect only blacks and browns, that temporarily to deal with this problem it might be a good thing to have a black economist.

Mr. Kemp. So you are suggesting that there is black economics and white economics.

Mr. Young. I am suggesting that there are—yeah there are black economics and white economics.

Mr. Kemp. And there are female economics and male economics.

Mr. Young. Yeah.

Mr. Kemp. And there are Catholic economics and Protestant economics.

Mr. Young. Very little any more in our society.

Mr. Kemp. How was it achieved? That is my point. Was it achieved by finding a Catholic economist or a Protestant economist?

Mr. Young. In part it was.

Mr. Kemp. Or in trying to move toward a freer economy.

Mr. Young. Achieved by Catholics by achieving a greater political power base. All of a sudden Catholics became part of our society when Catholics started voting in Boston and New York and Chicago. They developed a power bloc. It was amazing how acceptable Catholicism became. When I was coming up in the South that was not the case.

I think where we are now in terms of blacks is give us another 10 years. Nobody will call it discrimination in reverse anymore. They will want blacks represented because the State legislature will have a power bloc. We have 28 blacks in the State legislature in Georgia now. There is a black on the board of regents which wouldn't have been there had it not been for these guidelines.

The faculty themselves are beginning to see that it is to their advantage to have blacks represented in their——

Mr. Kemp. That is not where the disagreement occurs at least in my mind. What I am concerned about, reducing this to its logical conclusion is this: If there is not a black economist are we denying those black students and those white students on the university campus, quote unquote, "black economics?" We are probably discriminating against all of the students.

I don't know how you can get through guideline to a point in a society where each is going to have the opportunity to be taught white economics or black economics.

Mr. YOUNG. I don't mean that there is such a thing as black economics. I would say that there is a black perspective on the economic life of these United States which is different. I would say that the perspective of a Southern economist is going to be different from the perspective of a New England economist.

One is going to be dealing basically with the problems of a developing area. The other is going to be dealing with the problems of a declining area to a certain extent.

Mr. KEMP. But how would an individual know that he or she has been chosen for a position on the basis of their talent with all the objective criteria that we try to——

Mr. YOUNG. I don't think they ever are in the first place. That is the problem. What we are dealing with is a society that has been discriminating in favor of whites from the very beginning. The Declaration of Independence and the Constitution, they really weren't concerned about blacks and certainly not about Indians, nor about women.

Mr. KEMP. Nor about Italians, Polish——

Mr. YOUNG. That is right. And everybody has had to fight their way up.

Mr. KEMP. A lot of people have been successful. You have been successful not on the basis, I suggest, of being black but on the basis of being a talented, able, articulate spokesman for the area you represent. I wouldn't want to be known for anything else.

Mr. YOUNG. I was successful, frankly, because my daddy was a dentist.

Mr. KEMP. A dentist?

Mr. YOUNG. A dentist. He had enough money to send me to school. That was not true of the other kids in school with me. There were a lot of kids in school that were a lot smarter than me that went to jail, went to the Army and were killed, went every place but to school. It was never on the basis of merit. It was on the basis of economic opportunity, the economic opportunity that was available to us.

I would say that my daddy was a dentist because the churches at the end of the Civil War maybe practiced a little reverse discrimination. I don't know what they called it. But they set up hundreds of schools and colleges in the South for ex-slaves. My parents happened to be among those that got a college education very early as far as blacks are concerned.

So in a sense nobody should discriminate in favor of me. But they ought to in favor of many people of equal and superior ability who have not had the economic opportunities. I would say that is what I call a wholesome society, a society that seeks to include the people who have been systematically excluded.

Mr. KEMP. We agree and the record should be clear that we do agree. My concern is your concern.

But a college wrote a letter, I won't mention which college, saying that it is currently engaged in an affirmative action program, the goal of which was to recruit, hire, and promote ethnic, racial, and women candidates until they comprise the same proportion of the faculty as they do of the general population.

I would suggest that with the tremendous degree of diversity in the ethnic and religious heritage that this country has, that type of a society which each university campus must reach some hypothetical heterogeneity seems to me to be not only impossible per se but exclusionary and the antithesis of the type of society you want for your children.

Mr. YOUNG. Except that the university system in Georgia just since these guidelines is beginning to move along. It is amazing the number of qualified and competent people that they are getting.

The interesting thing is that in that university system where students have an opportunity to choose their professors the blacks who may have 2 years ago been considered less qualified don't have any problem with people volunteering to take their courses.

I would say that I would hate for us to get away from that goal because I think that it has been a worthy goal.

I want to take just a moment to disagree with you about professional sports because that is still a struggle. I guess the little book "North Dallas 40" would be good reading for you sometime.

Mr. KEMP. I have read it. I am not saying there is not a struggle, Andy.

Mr. YOUNG. That is the kind of testimony I get from black athletes on the Atlanta Falcons even still.

Mr. KEMP. Again for the record I didn't say that there were not problems and not injustices and not discriminations. But one can look, say, at professional basketball and see that there are not enough whites in professional basketball.

Mr. YOUNG. That is true.

Mr. KEMP. So what is happening to the NBA or the ABA? The NBA and ABA seem to operate on the basis of ability and most people accept this. People are going to the games. I think it is a manifestation of the type of society that ought to be prevalent in other areas. Education is one.

I have no further questions, Mr. Chairman.

Mr. YOUNG. Thank you very much.

Mr. O'HARA. Thank you, Mr. Kemp.

Mr. Huber?

Mr. HUBER. Mr. Chairman, I missed the speech of my colleague. I do have his report here. It just seems to me that we have had some testimony, I think, and Congressman Kemp referred to a black economist who was very upset because he was solicited as a black economist. That is in the record.

My only point was that I don't think that two wrongs make a right. I think you are trying to solve the problems of 200 years of wrong by going in the other direction. I think what it is going to do is what has happened in the busing situation. I think you are crystallizing the opposition and you are opening the door to a backlash that is going to be disastrous to what you really hope to accomplish.

I think if we try to write laws to rectify 200 years of discrimination by going in the opposite direction I think it is going to be a great mistake for this country. I think it is going to be a great mistake for black minorities as it has been in the school situation.

All the evidence we keep talking about is really fanning the fires. I have seen this in Detroit. We just had a report in Michigan of the black situation where the blacks decided that they were going to use force and violence as a means of accomplishing their ends. With 13 percent of the population it is not a very smart position to take. The local papers have been full of this for the last 3 weeks. I hate to see that.

But I think if that is going to be pushed by black leadership—you are a black leader—if that is going to be the testimony that the only way we are going to solve our problems is by affirmative action, is by reverse discrimination, I think that is going to work to your detriment.

That is just my comment.

Mr. Young. May I just make a response to that? Our experience over the last 10 years has been exactly the opposite. I took children to school in Mississippi and Louisiana and Georgia where there were mobs just like Boston.

I wish you would go back with me now and see those kids and their parents sitting together in the PTA meetings.

The record of integration of public education in the South is really an amazing testimony in the same places.

I would contend that it has been exactly the opposite, that what happened in the South was the leadership, black and white, decided that integration was not as bad as the violence which was being caused in every instance by a small minority.

That is a small minority on the streets in Boston. That was a small minority in Pontiac. When the majority of people of good will in the Nation as in the South assert themselves and when the political leadership begins to stand up and affirm the principles of this Constitution it is amazing how quick the people begin to fall in line, respect the law, and begin to see the good things that come with people living together in spite of their race.

Mr. Huber. Can you give me one instance in the State of Michigan of a successful candidate who took the position that you take, just one instance?

In this room we have got a couple here from Michigan whose position on busing was just the reverse. If I could find one instance in Michigan—in the South Federal force had to be used. Nobody is talking about Federal force in the North now because that is where the population is, down South. It is quite a different situation. It seems to me that we are opposite positions on this.

I will be glad to meditate on a specific example where that situation that you have just said holds forth in my State of Michigan.

Maybe the chairman knows. I don't know one.

Mr. Young. One reason for that is that we have not had any national political leadership for almost a dozen years now. In fact we have had national leadership that has exploited the fears and anxieties of the society. We are reaping the seeds of that discord which was sewn through the last years.

But people are going to come to their senses before long. Governor Askew in the South, who openly campaigned a couple of years ago against Wallace and who was elected overwhelmingly.

Michigan may be a little bit behind Florida and Georgia. But I think you are going to catch up.

Mr. O'Hara. I thank the gentleman for justifying my original introduction.

Mr. Young. Thank you very much.

TESTIMONY OF HON. CHARLES B. RANGEL, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. Chairman, I am grateful for the opportunity you have given me to appear before your subcommittee and submit my views on the importance of affirmative action programs to provide equality of educational opportunity for minorities and women in our society.

Minorities and women have been, and still are, severely underrepresented in institutions of higher education, both in student bodies and in faculties, and as a result, in professions requiring higher education. Only 5 to 7 percent of the undergraduate and 3 percent of the graduate college population is black. Two fifths of the undergraduate blacks and one half of the graduate blacks attend predominantly black schools of lesser quality and status. Fifty-two percent of the Spanish speaking population between the ages of 25 and 29 has never completed high school, and 20 percent of the Spanish speaking population has less than 5 years of schooling. This underrepresentation is not a result of a lack of educational aspiration on the part of minorities and women, but is due to overt, and more frequently, subtle methods of discrimination. Lack of educational aspiration, where it does exist, can be traced to cultural factors. Minorities and women have not traditionally been made to feel that we are adequate higher education and professional material. Guidance counselors have directed black, Spanish speaking, and other minority students into vocational rather than academic courses of study. Women, both minority and nonminority, have been directed into secretarial schools.

Because of the greater awareness brought about through the civil rights revolution in the last two decades, minorities are demanding their right to an academic education. More and more minorities and women are applying to colleges and universities for admission at the undergraduate and graduate levels and for faculty positions. The large increases in minority and female student enrollments and faculty positions, however, have been at 2-year colleges and predominantly black schools. Many minorities and female applicants are being turned down at higher prestige institutions because they allegedly lack the proper qualifications. As of 1973, only 5.4 percent of the black and 8.7 percent of the female Ph. Ds. in the United States were employed as compared to 86.8 percent of the white male Ph. Ds., 0.9 percent of the white male Ph. D.s were termed unemployed and looking as compared to 2.7 percent of the minority and 3.9 percent of the female Ph. Ds. It cannot be said, therefore, that minorities and women are unemployed because they care to be. It is time we took a critical look at just what these qualifications are and examine whether or not these qualifications themselves are a discriminatory tool used against minorities, particularly, and secondarily, women.

Firstly, the elementary and secondary educational system, as it is presently constituted and operated, is not geared to the education of minorities. Many minority students have cultural and linguistic problems to overcome before they are capable of tackling traditional school work. As a result, their grades are not reflective of their ability to succeed in college. The frustration built up by years of trying to overcome such obstacles without adequate sympathy or assistance by uncaring teachers causes many students to "turn off" on education. In addition, minority students may have had teachers who gave them lower grades out of their own social prejudices. IQ tests and college entrance tests have been given almost exclusively in English, thus discriminating against the Spanish speaking minority. A bi-lingual test given in San Francisco showed that 45 percent of those children who had been classified as "educationally mentally retarded" were reclassified as average or better when given the same test in Spanish. The high cost of higher education also acts as a deterrent to further education of minority students who are dependent upon scholarships and loans because they cannot obtain the necessary funds from family resources. Once accepted at a college, the minority student faces a cultural distance which makes it harder for him or her to succeed, and to later obtain a good job on a teaching staff elsewhere. In hiring faculty, institutions of higher education often use the number of publications and amount of research as qualifications. Minorities and women may well have already been discriminated against by publishers or in getting research grants.

It is definitely in the interest of society as a whole, as well as the interest of minorities and women, to increase minority and female representation in student bodies and faculties. In order to provide a relevant learning experience, a school should acquaint the student with the realities of the world that he or she is to live and work in. Keeping a student in a vacuum without contact with members of society different from him or herself can lead to the formation of attitudes and misconceptions that lead to disastrous encounters in later contact with those members of society. Minority and female professionals and students serve as the necessary models to younger minority and female children and show them that those positions are not unattainable. Finally, minority and female professionals are needed in the larger community. A black lawyer is generally better able to win that trust and to solve the problems of a black client, and a female doctor can generally better relate to a female patient. In his article, "Preferental Admissions: Equalizing the Access of Minority Groups to Higher Education," Robert O'Neil states that less than 1 percent of the members of the American Bar Association are black. Only 17 percent of them are located in the South where they are needed the most. Only 10 out of the 2,000 Denver lawyers have Spanish surnames, while the Chicano and Mexican-American population of the city is 9 percent of the total population. These minorities are being legally underrepresented.

Ideally, the answers to these problems would be to better the elementary and secondary systems of education, and financial barriers to the poor, end cultural biases, and find alternative testing procedures that would be less discriminating. If all of these things were effectively done, an individual could just apply and be accepted purely on his or her recognizable achievement. Unfortunately, these tasks are not easily achieved. So many people are applying for acceptance into the postsecondary education system that some qualified people are inevitably turned away. We cannot just sit back and wait for the above mentioned changes. They are goals we must work toward. In the meantime, we must take affirmative action to get minorities and women into the system to provide an example for those to follow. The affirmative action programs being used now, have increased, somewhat, the minority and female representation in universities. These programs must be continued and expanded. If these programs are terminated, it would serve as a severe blow to our efforts to provide full and meaningful equality of educational opportunity for minorities.

There have been many criticisms of the affirmative action programs required of all schools receiving Federal funds. The establishment of goals and timetables for increasing their minority and female populations have been especially criticized. The predominant criticism heard is that the affirmative action programs require schools to establish quotas, which, it is said, necessarily reduce standards by forcing admission of less qualified minority candidates at the expense of presumably more qualified whites. This type of criticism clearly stems from a misunderstanding of what is required. Revised order No. 4, issued by the Department of Labor requires each school receiving Federal assistance to do an "availability-utilization" analysis which would determine the availability of qualified minorities and women in relation to their proportion in the student body and on the faculty. It does not require the school to accept any student or hire any faculty member that would lower the standards of the facility. In fact, the court has decided in *Commonwealth* v. *O'Neill* that it is unconstitutional to hire less qualified people. Revised order No. 4 states:

"Goals may not be rigid and inflexible quotas which must be met, but must be targets reasonably attainable by means of applying every good faith effort to make all aspects of the entire affirmative action program work."

Judgment of the extent of compliance with the order will not be based solely on the attainment of goals, but on the efforts made to attain them.

A second major criticism of affirmative action is that it results in "reverse discrimination;" that qualified students are being denied access to higher education because minorities and women are being given preferential treatment. In response to this commonly voiced complaint, I would like to point out that preferential treatment is nothing new in higher education. Preferential treatment has been given to athletes, the children of trustees and prominent people, and to individuals from a geographic area who have been desired to give the university a regional or geographic mix to produce greater diversity. The greater number of people applying for admission and for teaching positions at universities necessitates some of them being turned down, as has been above mentioned. Those decisions are often quite arbitrary. In that sense, someone is always being discriminated against. If a white male is denied an acceptance which is offered to another white male, there is no cry of discrimination. But as soon as that acceptance is offered to a black, it is called discrimination. All other things being equal, why not accept the black to add "diversity" to a campus just as one would accept the Californian to add diversity to a New York campus? And why not, upon closely looking at an applicant's history and finding certain indications of motivation and success, accept a minority or female applicant even though their grades might be somewhat lower?

Richard Lester himself, in a book which attacks affirmative action programs speak of the complex acceptance and hiring procedures of American universities. Grades, test scores, publications, and the like, are not the only criteria, he says. Why not use those other "complex" and abstract criteria to the benefit of minorities and women rather than against them?

Another criticism of affirmative action programs is that race, ethnicity, or sex should not be a criteria at all. Universities should be "color blind" and simply accept the best qualified person. However, until the complex cultural biases of the earlier education systems are changed so that all individuals may apply on a truly equal basis, the universities must be "color conscious" in order to increase the representation of minorities and women.

A fourth criticism is that not all minorities and women are "disadvantaged," and, therefore, should not all be lumped together. Although not all minorities are poor, they have all suffered the emotional effects of discrimination, which may have in turn affected their qualifications as compared to nonminority students.

University officials also complain of the paperwork required of them to prove that they are making "good faith" efforts. The records asked of them are, for the most part, records which they should have in their possession. If the universities are to be considered responsible employers, these records are ones which should be kept anyway.

From a superficial examination of previous testimony and related acts and others, there appear to be certain valid citicisms. Universities have complained that orders are complex and hard to follow, and that different Federal agencies often have multiple lines of jurisdiction. The Department of Health, Education, and Welfare is responsible for dealing with "pattern" compliants of discrimination and the EEOC is responsible for dealing with individual complaints. Each office has its own specific requirements governing what the school must do to prove compliance. These requirements are often contradictory. For example, in regard to pensions, the EEOC requires that no program differentiate between monthly payments to men and women even through the cost may be unequal due to the longer life expectancy of women. HEW requires that overall contributions be the same for men and women. Executive Order 11247 states:

"The Attorney General shall assist Federal departments and agencies to coordinate their programs and activities and adopt consistent and uniform policies, practices, and procedures with respect to the enforcement of title VI of the Civil Rights Act of 1964. He may promulgate such rules and regulations as he shall deem necessary to carry out his functions under this order."

Where departmental discrepancies do exist, the Attorney General should make use of the powers vested in him and solve the said discrepancy. Lack of clear policies and demanded obligations on the part of departmental agencies is no reason to end a severely needed program.

The critics of affirmative action programs have offered alternative suggestions. One prominent suggestion is to allow universities to arbitrate privately. Up until this point, many universities have not made the effort to increase minority and female representation. It left to arbitrate privately, this practices may continue. If the school is truly dedicated to increasing the representation of minorities and women, it should not matter who does the arbitration. Justice is justice no matter who declares it. The other suggestion is that the burden of proving "good faith" should not be on the school. The EEOC should identify discrimination and deal with it where it exists. This would be an after-the-fact solution. Asking a school to submit a program before discrimination is found is a preventative measure which can help avoid later strain.

In conclusion, affirmative action programs are a necessary tool in increasing minority and female representation in higher education in a situation where leaving things to the staatus quo might do so. Affirmative action programs have advantages for the whole society and are vital to the individuals who benefit directly from them.

STATEMENT OF HON. JAMES BUCKLEY, A SENATOR FROM THE STATE OF NEW YORK

Mr. O'HARA. The Chair is going to yield to the gentleman from New York, Mr. Kemp, for the introduction of our next witness.

Mr. KEMP. Thank you, Mr. Chairman.

I would like to take a moment to introduce the very able distinguished, and articulate Senator from the State of New York, Senator James Buckley.

He has a long history of interest in this subject. He is a supporter of civil rights laws and has a perspective that I think can be very useful to this subcommittee.

I personally want to welcome him and thank him for his testimony because I have read it and appreciate very much his insights.

Thank you, Mr. Chairman.

Mr. O'HARA. Senator Buckley, you are very welcome. You represent one of the most populous States. Not only that but you are a leader of your party. We are very happy to have you.

Mr. BUCKLEY. Mr. Chairman, I want first to express my thanks to you and to the members of the committee for the opportunity to offer my views on what I am convinced is a problem of profound importance to our Nation. I also want to express my personal thanks to you and the committee for holding these hearings which, I believe, are the first to be held in regard to the problems of affirmative action programs.

It is by now a commonplace that the Congress and the American people will usually not respond to a problem unless that problem first reaches critical dimensions; for example, the energy crisis. The facts that led to the energy crisis were apparent years before the actual crisis occurred. Yet little was done to increase dwindling supplies and reduce consumption until the Arabs reminded us of the dangers of an excessive dependence on foreign sources.

I bring this to your attention because I believe there is another potentially explosive situation occurring in the United States, one that could set back the cause of social harmony. The facts are available, but there does not seem to be any sense of urgency in dealing with them. More and more, we see evidence that the discrimination inherent in the "affirmative action" programs now being enforced by the Federal Government are already causing hardships and controversies throughout the land. The problem is complex, but at its heart is a simple question: Is it just for the U.S. Government to require discrimination in favor of some ethnic or racial groups as opposed to other ethnic or racial groups? In short, are some Americans to be treated as more equal than others? This is what I consider to be at the heart of what may well develop into a new civil rights crisis. I want to emphasize that what we are talking about is not "reverse" discrimination; it is discrimination period.

The New York Times, June 28, 1974, carried a news story headlined "Minority Hiring Said To Hurt Colleges." The story said in part:

> The affirmative action program by which the Federal Government is compelling colleges and universities to hire more women and blacks is lowering standards and undermining faculty quality, according to a report to be published today under the sponsorship of the Carnegie Commission on Higher Education.
>
> Lacking an adequate pool of qualified women and blacks for tenured appointments, the 168-page report asserts, institutions are "playing musical chairs," pirating the limited number of minority and women faculty members from each other.
>
> Moreover, it is charged that new minority and women appointees may be paid more than white male faculty members at the same level and that some do not have proper qualifications for the tenured and untenured positions to which they are appointed * * *.

The report in question has received nationwide publicity and for good reason. It is the first scholarly study to stress what many have long known: The affirmative action programs now being enforced by the Federal Government are a mockery of fair play and a perversion of the concepts of individual dignity and of equal justice for all under the law. Today I would like to address myself to some aspects of this growing national problem, one that is entirely the creation of overzealous bureaucrats.

For the record, I want to state that my interest in this problem is longstanding. As you know, New York State is blessed with more than its share of this country's institutions of higher learning. As a result, I have received more than my share of the cries of anguish now issuing from our campuses as the tireless agents of the Department of Health, Education, and Welfare's Office for Civil Rights seek to impose "affirmative action plans" on all educational institutions hapless enough to receive funds pursuant to contracts with the Federal Government.

As early as May 22, 1973, I made a statement, "What Does Affirmative Action Really Affirm?" pointing out the obvious inequities in the "affirmative action" programs. At that time I said:

> The absurdity of the exercise ought to be self-evident. But it is worse than absurd. The notion of affirmative action plans designed to achieve precise goals is inherently vicious, inherently discriminatory. It flies in the fact of everything that the civil rights movement has sought to achieve—a society in which every human being is judged on his merits as a human being, a society that is truly colorblind, a society that applies a single set of standards for employment and advancement irrespective of the accident of birth.
>
> This is true whether quotas are applied to universities or businesses, or unions. The human soul does not know distinctions of race or sex or ethnic origins. To attempt to catalog human beings by such categories for purposes of employment is to insult their humanity * * *.

Mr. Chairman, I support the Civil Rights Act of 1964. I also support the principles underlying Executive Order 11246 from which the entire affirmative action programs have directly arisen. What I do not support—what I cannot support—is administration appointees and bureaucrats asking young Americans today to pay for the sins others have committed in the past.

I recently came across two documents which I believe have very much to tell us about the crisis. The first was an article by George F. Kennan, concerning parts I and II of Alexandr Solzhenitsyn's "Gulag Archipelago," and the second was a speech given by the distinguished member of the House of Representatives, Representative Edith Green. At first glance, there two documents would appear to have little in common, but I am convinced that both are speaking to the same issue.

The review by George Kennan contains the following statement, concerning the Stalinist terror of the 1930's:

> * * * Only a tiny percentage of those who were made victims of the system can be said to have been in any sense political opponents of the regime. People were arrested and consigned to this terrible half-world not as individuals—not, as a rule, for anything they themselves had individually done—but as members of categories. 'Prophylactic' considerations—i.e., the reflection that certain categories of people might be theoretically more capable than others of making trouble for the regime in the future—no doubt had something to do with the identification of the categories from which arrests were to be made * * *.

Mr. Chairman, the idea that human beings should be treated as members of categories is repugnant to Americans. Yet, we are at this very moment treating certain Americans as members of "favored" categories and others as members of "nonfavored" categories in hiring, in academic institutions and in a broad range of areas. We are, in short, officially engaging in a practice which formed the philosophical structure of the Great Terror.

I need not emphasize the fact that Congresswoman Edith Green has long been at the forefront of the fight for true equality of opportunity. This is why her words are so important. Here is what she said:

> In drafting the language of Title IX I never intended it to be interpreted as establishing a quota system. I consider the rhetoric of some in saying, 'We don't require quotas, we require goals', as nothing more than a game of semantics * * *
>
> One of the most damaging things about prejudice, in my view, is that it gives primary value to a group characteristic rather than recognizing the unique individuality of each human being. It does not matter whether this discrimination works in the person's favor or against him. What he or she still loses is the irreplaceable privilege of being looked upon as an individual rather than an anonymous face in the crowd.
>
> As I see it—only genuinely equal opportunity—containing neither advantage nor disadvantage can provided this * * *.

The eloquent words of Representative Green are something more than a denunciation of the wrongs perpetrated by bureaucratic quota systems. They are instead an appeal to the conscience of the Congress, an appeal that cannot be denied and no longer can be ignored. And there is ample evidence that what Representative Green has warned us against is fast becoming accepted practice in many parts of our nation. Allow me to illustrate that point with one recent example.

The Wall Street Journal—Friday, August 2, 1974—carried an article which shows just how far we have moved as a nation toward accepting an alien and dangerous philosophical viewpoint concerning the true meaning of equality. It seems that one of the biggest growth industries are the consulting firms that help companies implement equal employment opportunities programs. Here is what the article stated about the motivation behind most affirmative action programs:

> "It's a business problem of dollars and cents and should be approached as such," says Barbara Boyle, a partner in the consulting firm of Boyle-Kirkman Associates, Inc. Her own scare tactics include showing clients a pamphlet distributed by the National Organization of Women that gives women step-by-step guidance on how to sue their employers.

So we have come to the highly ironic state of affairs in this country that scare tactics are used to bludgeon employers to hire high-priced consultants whose chief task is to show the employer ways in which he may most expeditiously discriminate against present and would-be employees, all in the name of justice.

In order to demonstrate what the bureaucratic mind can do to twist the clear intent of the legislation we enact, I believe it is worthwhile to examine briefly one part of the affirmative action programs.

In trying to thread my way through the labyrinthian world of affirmative action policies, I had had occasion to read "The Higher Education Guidelines" issued by the Department of Health, Education, and Welfare through its Office for Civil Rights. On page 3 of that document we find the following:

> The *affirmative action* requirements of determining underutilization, setting goals and timetables and taking related action as detailed in Revised Order No. 4 were designed to further employment opportunity for *women* and minorities. Minorities are defined by the Department of Labor as *Negroes, Spanish-surnamed*, American Indians, and Orientals.

Now it happens that the word "minority" does not appear at all in Executive Order 11246 or in the 1964 Civil Rights Act. I therefore wondered how the term came to be used as it is in the guidelines for implementation of that Executive order. I discovered that the Office for Civil Rights relies on a document of the Department of Labor called "Revised Order No. 4 as the basis for its guidelines. An examination of "Revised Order No. 4" revealed that the word "minority" or some form of that word is used no fewer than 65 times—but is never defined. Where, then, was the basis for the particular definition of the word "minority" contained in the OCR guidelines?

I asked the scholars of the Library of Congress to attempt to answer this question. I want to include in these remarks excerpts taken from a response given to Mr. Paul Downing of the Library of Congress by Mr. Irving Kantor, Assistant Executive Director, U.S. Civil Service Commission:

> The term "minority group" first appears in our files in connection with a 1961 study of minority group employment in the Federal government, conducted by the President's Committee on Equal Employment Opportunity . . . the Civil Service Commission developed a working definition for field use and identified those groups that appeared to be identifiable and significant enough to measure statistically in the Federal civilian work-force. These minority group designations—Negroes, Spanish surnamed Americans, American Indians, and Oriental Americans—as you indicated in your letter, remain pretty much the same in current usage.
>
> Obviously, there are numerous other ethnic and religious minorities in our pluralistic society, but ethnic and religious identification of all employees would be impracticable, and we believe not particularly useful for equal employment opportunity program purposes. . . .

In his covering letter, Mr. Downing stated:

> . . . On 3/22/74 I discussed use of this term with Mr. James Scott, an assistant to Mr. Kantor. Mr. Scott cited two reasons for selection of particularly minority groups.

(1) The minority groups selected are those which have historically suffered most discrimination and which have suffered discrimination continuously to the present.

(2) The minority groups selected are those most easily identifiable as minority groups. . . .

Some questions arise at this point. Why should the criteria for special governmental treatment be limited to identifiability and the statistical prominence of one group? And how, precisely, is "identifiability" defined? Why is it "impracticable" to identify other ethnic groups? What have the bureaucrats done to analyze the reasons for this alleged "impracticability?"

Now I believe the record shows it is reasonable to state that the arguments given by these bureaucrats for making some minorities more equal at the necessary expense of others is at the very least questionable, when seen in the light of the nondiscrimination requirements of the 1964 Civil Rights Act. But to make matters even more complicated, there are, unknown to most Americans and, I would think, even to most in Congress, whole categories of minorities who are by official admission discriminated against but are not, apparently, important enough in the eyes of the bureaucracy to warrant protection. Once more I want to quote from my previous speech in order to show what the affirmative action philosophy has brought us to:

. . . the problem of the universities in attempting to cope with the infinite variety of human beings is just beginning. To show what may lie ahead, let me quote from "Guidelines on Discrimination Because of Religion or National Origin," issued by the Department of Labor and printed in the Federal Register on Friday, January 19, 1973, which have to do with affirmative action in another area of employment. Part (b) of 60–50.1 of those guidelines reads as follows:

. . . the problem of the universities in attempting to cope wit hthe infinite variety of human beings is just beginning. To show what may lie ahead, let me quote from "Guidelines on Discrimination Because of Religion or Nationai Origin," issued by the Department of Labor and printed in the Federal Register on Friday, January 19, 1973, which have to do with affirmative action in another area of employment. Part (b) of 60–50.1 of those guidelines reads as follows:

> Members of various religious and ethnic groups, primarily but not exclusively of Eastern, Middle, and Southern European ancestry, such as Jews, Catholics, Italians, Greeks and Slavic groups, continue to be excluded from executive, middle-management and other job levels because of discrimination based upon their religion and/or national origin. These guidelines are intended to remedy such unfair treatment.

. . . All of this presents us with a complex problem . . . As it stands now, the Government of the United States has decreed, officially, through the Department of Labor, that while members of European minority groups and certain religions are definitely victims of discrimination in business employment, it has also decreed, through HEW's Office of Civil Rights, that when it comes to employment on a campus, they are not entitled to the same regulatory protection that is now accorded Negroes, the Spanish surnamed, American Indians and Orientals. I, for one, have no doubt that in due course, the OCR will not only catch up with, but leapfrog the DOL as more and more groups seek the very real advantages of reverse discrimination that will accrue to them by virtue of membership in a class officially found to be subject to job discrimination. And so our colleges and universities will find themselves forced to punch into their computer cards more and more categories of human beings so that they may achieve the exact mix of sex, race, religion and national origin that will be required to satisfy their ever more fastidious inquisitors . . ."

Mr. Chairman, I am in no way arguing that we should add new categories of Americans to the "preferred list." I am instead directing your attention to the logical and practical inadequacies and injustices inherent in any system of preferment. The way to rid ourselves of this new discrimination is not by setting up officially designated groups for special treatment or by adding more and more categories to the arbitrary list in order to make the new discrimination look more justified. The way to achieve equal employment opportunity is to simply enforce the laws already on the books concerning discrimination and to let every man and woman know that it is the person, not the group to which he belongs, that counts when it comes to employment. Let's not discriminate against some minorities as a means of making up for past discrimination against other minority groups. Most important of all, let us return to commonsense and common decency when it comes to dealing with the complex and important task of racial and ethnic harmony in this country. However noble in original purpose they may have been, the "affirmative action" programs have become disasters in practice. What we need is a fresh start, with each individual guaranteed that he or she will be free from discrimination.

I would like to conclude, Mr. Chairman, by quoting from an excellent study of this problem. George Roche, the president of Hillsdale College, who has already eloquently testified before this committee, has written in his new book "The Balancing Act."

> If we give way before the force which now menaces higher education and our saciety as a whole, we are not only opening the door to second-rate standards and a ne and more vicious and permanent form of injustice. We are also passing control of tomorrow's leaders and tomorrow's dominant ideas from the privacy and independence of the academic community to the realm of egalitarian politics. If Affirmative Action gains the final say in curriculum, faculty, and admissions throughout higher education, effective control of society will have passed to the social engineers and the politicians, and America will have lost one of her greatest resources in the struggle to remain an open and effective society.

Mr. BUCKLEY. Thank you very much, Mr. Chairman.

Thank you, Jack, for your kind remarks.

Mr. O'HARA. Thank you very much, Senator Buckley, for a very good statement.

Senator Buckley, in your statement you indicated that you had no objection whatsoever in fact you supported the implementation of affirmative action programs. It is the manner in which affirmative action was to be achieved through the system of numerical goals and quotas to which you objected.

Is that a fair statement?

Mr. BUCKLEY. Yes. By that I meant to make sure that we didn't rely entirely on the "buddy system" of phoning cronies at the next campus, but, instead make a fair attempt to make known the availability of jobs so that applicants could be notified and screened.

Mr. O'HARA. I don't suppose that you would have any objection to a system of admissions to institutions of higher education or a system of screening for employment that took into account particular circumstances in the history of the individual applying and the applicant's economic background, whether the applicant has overcome particular difficulties associated with interrupted schooling, associated with language problems or whatever, as long as they were applied in a way that was not racially or ethnically select.

Mr. BUCKLEY. Correct. I find it easier to answer your question in the context of admissions to schools. Schools will set for themselves a whole variety of standards of what they hope to achieve both in academic terms and in terms of benefit for the student and faculty alike.

I believe that rigid criteria that can be mathematically determined is probably the worst way to go about that. With respect to employment I would certainly reject any requirements that are unrelated to the capacity of the individual to perform that job that has to be done.

Mr. **O'Hara.** Yes; I think that is right. I also think that if one demonstrates a great strength of character, determination, by overcoming great obstacles, that is something that you would look at when you were looking for a member of your staff.

Mr. **Buckley.** Certainly.

Mr. **O'Hara.** Thank you very much, Senator.

Mr. Dellenback?

Mr. **Dellenback.** Thank you, Mr. Chairman.

Thank you, Senator Buckley, for taking time and waiting so patiently. We apologize for such prolonged dialog with preceding witnesses.

Mr. **Buckley.** We have such problems at the other side of the Hill.

Mr. **Dellenback.** I thought the Senate ran smoothly and never suffered from this sort of thing.

Senator, let me be sure that I understand what your feeling is, per se, about affirmative action.

If affirmative action means to take such steps as are in order to be sure that discrimination does not occur, then you would favor and do favor affirmative action.

Mr. **Buckley.** In principle. The question is how is that principle translated into practice.

Mr. **Dellenback.** I am trying to walk it through because quite frankly, as you perhaps noted from the questioning of previous witnesses, we have great difficulty when we talk about selecting new people, trying to see how we can bring about a rectification of the imbalance that exists, whether it be racial or sexual or whatever it is. Without doing something that is potentially discriminatory.

Mr. **Buckley.** May I interrupt you right there?

Mr. **Dellenback.** Yes; please do.

Mr. **Buckley.** I don't see how one can move to redress an existing imbalance without in fact embarking on inherently discriminatory practice.

Mr. **Dellenback.** One can rectify an imbalance in procedure, but one can only with great difficulty rectify an imbalance in the composition, numerically, of those who make up the group, without falling into the trap that you and I are both seeking to avoid.

Mr. **Buckley.** Right. In other words I think in the course of time if one were truly nondiscriminatory in future hirings one would end up with a turnover, a natural rollover, a natural attrition, with a student body or a faculty body that would in the availability of a particular case represent a true merit system.

Mr. **Dellenback.** I can see that within the practices of an already existing body, when it comes to applying uniform procedures for faculty advancement, for tenure, for promotion, for salaries to be paid, et cetera. I can see how this can be done—how one can redress the imbalances of the mass.

But where I have difficulty is with the additions to the mass—if you really try to be fair and impartial with the increment, then you can't have one eye cocked on how to skew the additions this year so as to bring about a rectification in the total over a short period of time.

I gather that is really what you are speaking about on that particular point.

Mr. **Buckley.** Yes. I find it abhorrent that, in too many cases, letters are going out saying, "white male of German extraction, American, specializing in Byzantine theology, need not apply."

Mr. **Dellenback.** You have more esoteric courses in your colleges than mine, but I understand what you are saying. I appreciate your input. This has been a helpful dialog, and I also appreciate your printed testimony. Again I say "thank you" for having joined us.

Mr. **Buckley.** Thank you.

Mr. **Benitez.** Mr. Buckley, I am very happy to have seen you now in this reverse situation momentarily. I also thank you for your patience.

I would like to raise a few questions.

Question No. 1: Is it your feeling that, prior to the affirmative action program and legislation, the system of selection at campuses and faculty were fair and nondiscriminatory?

Mr. **Buckley.** I can't speak from any broad knowledge. My guess would be that they were not consciously discriminatory, but rather they were habits of selection. People would automatically go to such and such graduate schools for such and such skills.

One would telephone a friend teaching at some other university and say, "Do you have any bright Ph. D.'s coming along who might be interested in a position in my department?"

To the extent that your entire educational system at the doctorate level on up was drawing its strength from certain categories of Americans, then the whole system was, in fact, nonrepresentative.

But I am not at all persuaded—let me put it this way: I have no basis in experience to suggest that if an extremely competent American of Spanish background were to present himself at Yale, with credentials in physics, that he would be turned down because he happened to be Spanish speaking.

Mr. **Benitez.** That might be so at Yale or it might not. But certainly if you look at the wide spectrum of the Nation and look at the universities throughout and take a point of reference of the year 1960, would you still say that you would have no basis for judging that the academic input was loaded with discrimination, even if it was not conscious?

Mr. **Buckley.** I have no personal basis of knowledge to suggest that did or did not represent discrimination. That the faculties were predominantly male and white, I find as easy to explain by virtue of the fact that very few nonwhites were going into higher education, which is a natural reservoir for drawing your professors. Women, by and large, were not seeking higher education.

If the question is, was the representation in those faculties represented by a cross-section of the Ph. D.'s seeking employment in those faculties, I just don't know.

Mr. **Benitez.** And seeking admission to school?

Mr. **Buckley.** And seeking admission to school.

Mr. **Benitez.** Would it be a more likely assessment in the absence of personal knowledge—which is not what I am inquiring about—on what is the situation if you have zero members and either in the student body or in the faculty and a potential candidacy of hundreds or even thousands, would there be in that situation a nonrepresentative structure of the Nation?

Mr. **Buckley.** I think if you go back far enough, there were quota systems at various colleges, which is something we are supposed to be getting away from. There have been accusations that there were quota systems affecting Jews in Ivy League colleges. I feel that is wrong.

I think also that it is clear that there have been categories in the past. But I think that going into the past doesn't give us any useful guide as to what we should be doing now—what is just now, what is just for the future.

Mr. **Benitez.** The reason for the questions is that even assuming that the particular bent that affirmative action has taken is evil or is inadequate, unsatisfactory, is there an evil that was meant to be remedied which was cause for at least some other answer than just letting what exists pass?

Mr. **Buckley.** I believe that we have taken giant steps in remedying such discrimination as did, in fact, occur in the past by passing the law saying there shall be no discrimination in hiring practice based on race, color, religion, or sex.

Then the question is, how do we see to it that these laws are observed?

The Civil Rights Act of 1964 and the Executive orders issued thereunder went a step further and say rather than allowing a rather passive process of having the aggrieved party sue, let us require affirmative action, which originally at least was interpreted to mean let there be a demonstration of bona fides measured in terms of allowing vacancies to be published broadly so that anyone who might have the qualifications would know where and when to apply.

But I think where we have gone, namely to the establishment of quota systems—and this is the only candid way of describing this—a quota system is the total antithesis of any concept of human equality, of human right.

Mr. **Benitez.** Holding no brief for bureaucracy. I would like to inquire if you have any method or any other methodology or any other suggestion as an alternative way out of the present unbalances.

Mr. **Buckley.** If you are speaking about the present imbalances I have no overnight solution because the only way you are going to change the present imbalances is to fire an awful lot of people who have been around for a number of years. I don't believe that you and I believe that would be just.

All I can offer is to make sure that the current laws against discrimination in future hiring be obeyed and if someone has a complaint—and Lord knows people aren't shy about going to the courts these days to assert wrongs—let that be the course taken.

And let one of the burdens of proof be that an employer has to submit that the employer has, in fact, made wide enough, widely known, the nature of the jobs for which there are vacancies and let it be demonstrated that the examinations and the standards required are standards that are relevant to the job to be done.

Mr. **Benitez.** Mr. Senator, isn't the whole history of social rectification and change that passing a law and letting it stick on the books without any structure to make it real and imperative just results in a negation of the objective that it sought to achieve?

Mr. BUCKLEY. I would deny that that is a necessary consequence of merely passing laws. I believe we have seen in this country, certainly in the last decade or so, innumerable groups that have a passion for sniffing out any scent of a potential injustice and going to the courts to rectify this.

Mr. BENITEZ. Thank you.

Mr. O'HARA. Thank you, Mr. Benitez.

Mr. Kemp?

Mr. KEMP. I, too, Senator Buckley, want to commend you on your remarks and your eloquence in bringing to the attention of the committee what possibilities exist with regard to the implementation of these so-called affirmative action programs.

I noticed in your press release you said you were going to meet with Secretary Brennan. What do you feel can be done vis-a-vis Revised Order No. 4 in order to bring about some type of amelioration of some of the absurd consequences of a desirable goal?

I know that you share the goal, as do I, of having an open opportunistic society and higher education opportunity.

What can be done with regard to Revised Order No. 4?

Mr. BUCKLEY. First of all, dismantle the whole concept of imposed quotas. This is what we are talking about.

Secondly, perhaps to define the kinds of procedures that I suggested to Congressman Benitez of establishing some procedures which an employer would have to satisfy to support a prima facie attempt to hold positions open to the broadest possible category of applicants with a selection made on merit, again, the emphasis being on allowing the public to know that the job is there and secondly making sure that none of the screening tests and other practices have the effect of loading the dice in the direction of one group or another.

Mr. KEMP. There is a debate as to where these practices exist, or what the cause of these practices is, whether or not it is at the university level or whether it is at the level of, say HEW.

I would like to quickly read into the record a statement that was made by a university and also identify the remark of HEW with regard to the treatment.

A letter was received from an individual seeking employment opopportunity at a college in the Northeast.

The response from the college was this:

> It is quite true that we have an opening here and I have examined your dossier. It is a very impressive dossier indeed. And I wish that I could invite you for an interview. But at present our department is interested in the appointment of only minorities. I appreciate very much your interest in the college and I know with your excellent qualifications you will find a position. Naturally I shall keep you in mind should any changes occurs.

He complained to Mr. Stanley Pottinger about his treatment and he was told, among other things, in a letter by the Director of Contract Compliance Division, that—

> In these instances what appears to be reverse discrimination was in effect an effort to correct discrimination and appointment against those protected classes which in the past have been denied equal employment opportunities in educational institutions.

So in practice what is happening, as you pointed out, is that we are categorizing people. We do reach, it seems to me, the conclusion somewhere of that type of a society in which people are put into a computer and lose their individuality and seem to be part of a category to the exclusion of, as I said, their individuality.

Mr. BUCKLEY. I think you have put your finger right on the central problem. The report Mr. J. Stanley Pottinger was giving us was pure bureaucratic gobbledygook. There is no way you can parse that sentence of his without coming up with discrimination:

> No, we are not discriminating against this gentleman. However we are bent on discriminating in favor of other gentlemen.

Well, what is the practical effect of that but discrimination? I personally regret that the Supreme Court did not undertake the hearing of the *DeFunis* case to settle this point once and for all.

I cannot believe that our Constitution can justify that kind of a system.

The insidious effect of this kind of thinking is that it causes Americans to think of themselves in terms of categories. I think this is a vicious—this is contrary to what the civil rights movement was supposed to be all about.

Therefore I think that not only is it per se a setback but it will cause increasing numbers of other hapless individuals to feel that they are in fact being discriminated against and thereby give rise to renewed racial consciousness.

Mr. KEMP. It seems to me it points out my statement as well as yours that the problem is with this attempt to bring about affirmative action and how it gets translated into quotas somewhere down the line. It seems to me that the focus of attention is on the wrong side of the equation.

What we need to do in reaching a more equitable treatment of people in a pluralistic society is to work for a greater supply. But they are on the immediate demand side of this equation, trying to, as you put it earlier, play musical chairs on faculties with the available amounts of categories.

It seems to me that what we have to do is to open up opportunity to provide a greater supply and ultimately allow for a manifestation of this pluralism or heterogeneity.

I have no further questions.

Thank you for appearing. We appreciate your efforts.

Mr. BUCKLEY. Thank you.

Mr. O'HARA. Thank you, Mr. Kemp.

Mr. Huber?

Mr. HUBER. I just want to welcome my classmate from Yale to our House of Commons. Having had Senator Buckley and Mr. Lindsay and Mr. Huber from Yale they certainly didn't discriminate unduly.

One question I tried to communicate to Mr. Young, somehow unsuccessfully, do you perceive a blacklash in this type of affirmative action, a backlash in business as well as the educational community?

Do you feel there is a backlash? Do you think this kind of affirmative action, as reverse discrimination, will polarize and set back the movement that it is realistically trying to have equality in race, color, creed, national origin?

Mr. **Buckley**. This is my great concern, Mr. Huber, that there is this tendency. I think you can see it growing. There are people who are increasingly beginning to feel they are dealt with as second-class citizens. They don't want to discriminate against anybody. But they do not want to feel that they are precluded from competing for specific jobs on the basis of merit or the basis of accomplishment.

I think it is a dangerous step backward in your goal and mine for a society in which each one of us goes about, unconscious of the national origin, unconscious of race.

Mr. **Huber**. So you actually see as I see in Michigan the reverse happening, the step backward, polarization, strong resentment on the part of the majority that will lash out in a backlash. Do you see that occurring.

Mr. **Buckley**. I see in New York a growing concern, particularly among the Jewish community. The Jewish community in the past had been victims of quota systems to restrict access to institutions of higher learning. The fact that that quota system of some years back as a tacit practice finally was broken was for them a great step forward in terms of civil rights.

They hate to see something equivalent to that restored.

You do begin to hear people, white collar workers and blue collar workers, beginning to express resentment at the fact that they feel they are no longer accorded equal opportunities.

Mr. **Huber**. I have no other questions, Mr. Chairman.

Mr. **O'Hara**. Thank you very much.

Thank you, Senator.

I can recall when I was a student many years ago objecting to the quotas that limited the number of Jewish applicants that would be accepted at the university medical school at the university I attended. They had such a quota. I felt it was very wrong. I took part in efforts to remove that.

I can imagine now that the children of some of the kids who were denied admission to medical school back then because they weren't Christians are now maybe experiencing difficulty because they are not black or don't have a Spanish surname.

Mr. **Buckley**. That is correct.

Mr. **O'Hara**. I just think that is terribly unjust to handle it that way. I certainly very much appreciate your testimony here today.

Mr. **Buckley**. Thank you, Mr. Chairman.

Mr. **O'Hara**. Our next witness is a very old friend whom I have been associated with in many efforts seeking a common goal.

He is Mr. Norman Hill, associate director of the A. Phillip Randolph Institute.

Mr. Hill, I would like to welcome you. I look forward to hearing you. We appreciate your waiting for us this morning.

TESTIMONY OF NORMAN HILL, ASSOCIATE DIRECTOR, THE A. PHILLIP RANDOLPH INSTITUTE

Mr. **Hill**. Thank you very much, Chairman O'Hara, members of the subcommittee.

I would like to read a brief statement on behalf of the A. Phillip Randolph Institute, its executive director, Bayard Rustin, and myself as associate director.

The controversy over affirmative action and quotas has raised a number of important issues for American society.

Its critics assert that affirmative action as currently administered by government is nothing less than reverse discrimination, forcing employers to give minority groups and female applicants preference over better-qualified white males.

Others see opposition to affirmative action as further proof of the dominant society's resistance to racial advancement.

Some deny that affirmative action formulas devised by the Government and the courts constitute quotas.

Others justify the quota doctrine as a legitimate method for redressing past and present racial inequities.

The A. Phillip Randolph Institute believes the affirmative action concept to be valid and a central contribution to an overall program designed to ameliorate the current effects of racial bias and ultimately to achieve the long-sought goal of racial equality.

We do not believe, however, that affirmative action can or should occupy the pivotal role in a strategy for racial progress. Affirmative action can only succeed when combined with programs which have as their objective the much more fundamental economic transformation than affirmative ation could bring about.

We are furtherore unalterably opposed to the imposition of quotas or any other form of racial hiring.

Our specific objections will be spelled out later. I would only observe that the implementation of affirmative action programs—which have on occasion included—and we must be honest here—the inclusion of quota formulas—has totally failed to bring about any measureable improvement in the economic condition of the black community.

What the imposition of quotas and the resulting furor they have generated is to exacerbate the differences between blacks and other racial and ethnic groups. And to the degree that these tensions and divisions have been provoked, the time when black people are accepted into American economic and social life as full and equal participants has been that much delayed.

The basic issue raised by the quota controversy has less to do with the behavior of the Federal bureaucracy, the role of the courts or even the persistence of racial discrimination, than it has to do with a much more basic consideration. That is the issue of how Government is to proceed about the task of fully and peacefully integrating all segments of society and most particularly how Government is to close the sizable gap between the economic status of blacks and whites.

One of the most striking although almost always overlooked aspects of the affirmative action debate is the fact that it has arisen during the tenure of a Republican administration which has demonstrated little enthusiasm for many of the traditional strategies for racial change.

I am not sure that this is a contradiction, however. We believe, in fact, that the troubles which the affirmative action program has encountered are due in large part to a lack of interest and absence of policy of the administration.

We must remember that black people enjoyed steady economic progress during the 8 years prior to 1969.

There were three basic reasons for this progress. One obviously was the passage of laws which laid the legal framework for the abolition of outright discrimination.

A second reason was the decision of the Government to intervene on behalf of black people and the poor in a broad range of social institutions. Pressure was applied to employers, universities, and other institutions to abolish racially discriminatory hiring and admissions practices and to make special efforts to include those who previously had been excluded.

This early affirmative action was combined with a series of manpower training programs established to help those handicapped by inferior education opportunities to qualify for better skilled, higher paying jobs.

An important point is that this program was not the paramount reason for the economic gains achieved by the black community. The basic reason was the policies of economic growth and high employment promoted by the Johnson administration. These policies increased the living standards of white and black alike. Jobs were available for the unemployed. Better jobs began to open up for those with special skills and abilities.

For the black community the consequences were profound.

To note just a few statistics:

1. The median income of black workers doubled between 1960 and 1970.

2. The median income of black families increased from 51 percent of median white income to 61 percent between 1959 and 1969.

By 1970 black husband and wife families whose head was under 35 years old were earning an income 82 percent of corresponding white families.

3. The percentage of black families living in poverty declined from 56 percent in 1962 to 31 percent in 1969.

4. Unemployment in the black community dropped from 12.4 percent in 1961 to 6.4 percent in 1969.

These represent serious changes that were not produced by persuading a few corporations to hire additional black workers, although the affirmative action effort certainly helped.

More important though was the availability of jobs, improving opportunities for higher education and all the other aspects of an expanding economy.

Today the situation is quite different. The most recent report of the Census Bureau on the social and economic status of blacks shows a real across-the-board pattern of decline.

For instance since 1969 joblessness among black workers has nearly doubled.

The number of blacks living in poverty has increased by nearly 160,000.

The earning gap between black and white workers has once again begun to widen.

The real income of black families has failed to keep pace with inflation while the incomes of white families have remained slightly above price increases.

Finally, a statistic which relates to affirmative action problems, the numbers of minorities moving into higher paying jobs has declined significantly during the last 5 years.

We believe there is a direct link between the economic failures of the last 5 years and the problems which the affirmative action program has encountered.

It is painfully obvious that an affirmative action program will not achieve its objective peacefully and democratically if it must function within the context of scarcity.

We are particularly dismayed by the notion that opportunities are to be expanded for some groups at a time when the job market is shrinking for all. You simply cannot elevate significant numbers of blacks or women into better paying higher skilled or more satisfying jobs if those jobs don't exist.

Racial discrimination still exists. But the high rate of current unemployment and the reversal of hard-won economic gains is not the result of discrimination.

All indications show that racial prejudice, particularly in the area of employment, is declining year by year. Black economic decline is a function of much broader economic failures which have left their mark on all Americans regardless of race.

But as long as inequality is treated as the product of racism rather than economics you seriously divert the attention of society from difficult issues which must ultimately be faced.

Another important reason why the affirmative action program has evoked the criticism of those who would on almost every other occasion support programs which seek the upgrading of minorities is that its basic function has been changed to meet new economic realities. Originally conceived as a means of discouraging racial and sex bias, affirmative action has been transformed into a process to deal with the effects of a faltering economy.

Two areas which have been drawing the most attention from contract compliance officials have been the universities and the construction industry, both of which also happen to be suffering quite seriously from the recessionary economy.

To integrate the construction field has long been a goal of the civil rights movement. But this cannot be accomplished when there are less jobs for everyone and when industry is insufficiently strong to meet employment demands.

There are those who argue that on a short-term basis quota hirings represents an effective and expedient means of resolving a difficult social problem.

But we are convinced that the inherent dangers of the quota principle far outweigh any temporary gains that they might bring.

One of the most serious dangers of the quota doctrine is that it will perpetuate the stereo typical and profoundly mistaken view that blacks lack the ability and the will to make it on their own.

Should quotas become institutionalized as part of social policy society would no doubt conclude as black educator Thomas Sowell has warned that Negroes "must be given something in order to have something."

Quotas are tokenism taken to its logical conclusion. Blacks have objected to the token because it denigrates the abilities of the individual, cheapening both his or her accomplishments and the accomplishments of other blacks to follow. The same is true of the quota, only to a greater degree. The black who "benefits" from the quota suffers the uncertainty of never knowing whether he made it on his merits or simply was hired to meet a government decree.

A predominantly white society will automatically question the abilities of all blacks including the overwhelming majority who have succeeded because of their intelligence, skills, and self-discipline.

We also believe that the wide-scale application of quotas works to the exclusion of certain racial or sexual groups.

One of the affirmative action programs most signal accomplishments is to force society to reevaluate the standards to determine who is hired and admitted to college and so on.

But we are opposed to a broad assault on the concept of qualifications. If legitimate standards are weakened or abolished altogether it is those who are most vulnerable to discrimination who will suffer the most severe consequences.

Blacks are underrepresented in particular professions not only because of racial discrimination but very often because of the inability of large numbers of blacks to qualify for a good job is a function of poor educational background.

It is for this reason that we believe it is essential that Government expand its efforts to compensate for the inferior education in the inner cities.

We would like to conclude by offering some specific proposals for a program of racial advancement.

One. Affirmative action efforts should be largely directed to instances of racial discrimination. Ratio or quota formulas should be prohibited. Those institutions that have been found guilty of practicing discrimination should be given stiff fines.

In other areas of recalcitrance such as have been exhibited by southern police departments, we urge the courts to institute racially blind lotteries to determine hiring procedures.

Two. Federal manpower and education programs should be expanded.

In the manpower area we would like to point to the success of the recruitment and training program which has helped place over 12,000 minority youths with apprenticeship programs with the building trades as a possible model for other programs.

Three. Government should continue to question the standards and qualifications for hiring as to their objectivity and relevance to the task or job performed. But it should keep in mind that standards are most important to those who are the most likely victims of discrimination.

The reforming of standards should not mean their weakening or outright abolition.

Four. Finally there should be a realization that affirmative action by itself can do little to help blacks unless it operates in a positive economic framework.

Affirmative action programs cannot find jobs for the unemployed or help the underemployed in to better jobs if those jobs do not exist.

The most important issue is economic expansion. Above all it must be an economy providing jobs for everyone.

Thank you.

Mr. O'Hara. Mr. Hill, thank you very, very much for your testimony and for drawing much needed attention to the importance of our economic climate to the entire effort.

As long as we are fighting over a few scraps on the economic table no real progress is going to be made. It is only in the context of an expanding, growing gross national product and rising standard of living that anyone is going to have an opportunity.

I think your statement is a very powerful one and I appreciate it. If you would leave a copy with the clerk we will make sure it gets in the hearing record.

[Statement referred to follows:]

Prepared Statement of Norman Hill, Associate Director, A. Philip Randolph Institute

The controversy over affirmative action and quotas has raised a number of important issues for American society. Its critics assert that affirmative action, as currently administered by government, amounts to nothing less than reverse discrimination by forcing employers to give minority group and female applicants preference over better-qualified white males. Its supporters, on the other hand, see opposition to affirmative action as further proof of the dominant society's resistance to racial advancement. Some deny that affirmative action formulas devised by the government, and the courts constitute quotas, others, however, not only acknowledge that quota directives have been issued, but also justify the quota doctrine as a legitimate method for redressing past and present racial inequities.

The A. Philip Randolph Institute believes the affirmative action concept to be a valid and essential contribution to an over-all program designed to ameliorate the current effects of racial bias, and ultimately, to achieve the long-sought goal of racial equality. We do not believe, however, that affirmative action can or should occupy the pivotal role in a strategy for racial progress. Affirmative action, we are convinced, can only succeed when combined with programs which have as their objective a much more fundamental economic transformation than affirmative action could bring about.

We are, furthermore, unalterably opposed to the imposition of quotas or any other form of ratio hiring. Our specific objections will be spelled out later. For now, we would only observe that the implementation of a vigorous affirmative action program, which has on occasion included—and we must be honest here—the institution of quota formulas has totally failed to bring about any measurable improvement in the economic condition of the black community. What the imposition of quotas, and the resulting furor they have generated, *have* accomplished is to exacerbate the differences between blacks and other racial and ethnic groups. And to the degree that these tensions and divisions have been provoked, the time when black people are accepted into American social and economic life as full and equal participants has been that much delayed.

The basic issue raised by the quota controversy has less to do with the behavior of the federal bureaucracy, the role of the court system, or even with the persistence of racial discrimination, than it has to do with a much more basic consideration. That is the issue of how government is to proceed about the task of fully and peacefully integrating all segments of society and, most particularly, how government is to close the sizable gap between the economic status of blacks and whites.

One of the most striking—although almost always overlooked—aspects of the affirmative action debate is the fact that it has arisen during the tenure of a Republican administration which has demonstrated little enthusiasm for many of the traditional strategies of racial change. We do not see this as a contradiction, however. We believe, in fact, that the troubles which the affirmative action program has encountered are due in large part to a lack of interest and absence of policy of the Administration.

We must remember that black people enjoyed steady economic progress in the eight years prior to 1969. There were three basic reasons for this progress. One, obviously, was the passage of laws which laid the legal framework for the abolition of outright discrimination.

A second reason was the decision by the government to intervene on behalf of black people in a broad range of social institutions. Pressure was applied to employers, universities and other institutions to abolish racially discriminatory hiring and admissions practices and to make special efforts to include those groups that had been previously excluded. This early effort at affirmative action, moreover, was combined with a series of manpower training programs established to help those handicapped by inferior educational opportunity to qualify for better-skilled, higher-paying jobs.

An important point is that this program was not the paramount reason for the economic gains achieved by the black community. The affirmative action effort was essential in breaking society's resistance to racial change. But there was a far more basic reason for the broad economic advancement which black Americans experienced in the middle and late 1960's. We are referring to the policies of economic growth and high employment promoted by the Johnson Administration. These policies upgraded the living standards of black and white alike. Jobs were available for the unemployed, and better jobs began to open up for those with special skills and abilities.

For the black community, the consequences of these basic economic policies were profound. To note just a few statistics:

1. The median income of black workers doubled betwen 1960 and 1970.
2. The median income of black families increased from 51 per cent of median white income to 61 per cent between 1959 and 1969. By 1970, black husband-wife families whose head was under 35 years old were earning an income 82 per cent of corresponding white families.
3. The percentage of black families living in poverty declined from 56 per cent in 1962 to 31 per cent in 1969.
4. Unemployment in the black community dropped from 12.4 per cent in 1961 to 6.4 per cent in 1969.

These represent serious changes. They were not produced by persuading a few corporations to hire additional black workers, although the affirmative action effort certainly helped. More important, however, was the availability of jobs, the growing opportunities for higher education, and all the other aspects of an expanding economy.

Today the situation is quite different. The most recent report of the Census Bureau on the social and economic status of the black community reveals that an across-the-board pattern of decline has set in since 1969. Joblessness among black workers has nearly doubled, and the number of blacks living in poverty has increased by nearly 160,000. The earnings gap between black and white workers has once again begun to widen. The real income of black families has failed to keep pace with inflation, while earnings of white families has remained slightly above price increases. Finally, a statistic which relates directly to the problems affecting affirmative action, the number of blacks and other minorities moving into higher-paying jobs has declined significantly during the past five years.

We believe that there is a direct relationship between the economic failures of the past five years and the problems which the affirmative action program has encountered. It seems painfully obvious that an affirmative action program cannot achieve its objectives peacefully and democratically if it must function within the context of scarcity. And we are particularly dismayed by the notion that opportunities can be expanded for some groups at a time when the job market is shrinking for all. You simply cannot elevate significant numbers of blacks or women into better-paying, higher-skilled and more satisfying jobs if those jobs don't exist.

Everyone knows racial discrimination still exists. But the high rate of black unemployment and the reversal of hard won economic gains is not the result of discrimination. All indications, in fact, show that racial prejudice, particularly in the area of employment, is decreasing year-by-year. Black economic decline is a function of much broader economic failures: failures which, moreover, have left their mark on all Americans regardless of race. But as long as inequality is treated as the product of racism, instead of economics, it will seriously divert the attention of society from difficult issues which ultimately must be faced.

An important reason why the affirmative action program has evoked the criticism of those who, on almost every other occasion, would have supported programs which seek the upgrading of minorities, is that its basic function has been changed to meet new economic realities. Originally conceived as a means of discouraging racial and sexual bias, affirmative action has been transformed, by design or otherwise, into a strategy which attempts to deal with the effects of a faltering economy.

Two areas which have drawn the most scrupulous attention of contract compliance officials have been the universities and the construction industry, both of which also happen to be suffering quite seriously from the recessionary economy. To fully integrate the construction and education fields has long been a prime goal of the civil rights movement. But it simply cannot be accomplished when there are less jobs for everyone, or where the industry's growth is insufficiently strong to meet employment demands.

There are those who argue that, on a short term basis, quota hiring schemes represent an effective and expedient means of resolving a difficult social problem. But we are convinced that the inherent dangers of the quota principle far outweigh any temporary gains they might bring.

One of the most serious dangers of the quota doctrine is that it will perpetuate the stereotypical—and profoundly mistaken—view that blacks lack the ability and the will to make it on their own. Should quotas become institutionalized as government policy, society, as black educator Thomas Sowell has warned, would no doubt conclude that Negroes "must be given something in order to have something."

Quotas would further entrench the tendency of society to respond to the call for equal opportunity with tokenism. Quotas, in fact, are tokenism taken to its logical conclusion. Blacks object to the token because it downgrades the dignity and abilities of the individual, cheapening both his or her accomplishments and the accomplishments of other blacks to follow. The same is true of the quota, only to a greater degree. The black who benefits from the quota suffers the uncertainty of never knowing whether he made it on his merits, or was simply hired to meet a government decree. As for the dominant white society, it would automatically question the abilities of all blacks, including the overwhelming majority who have succeeded because of their intelligence, skills, and self discipline.

We also believe that the widespread application of quotas would unquestionably lead to the weakening of the merit principle. We recognize that what has been referred to as "merit" often works to the unfair exclusion of certain racial or sexual groups. Thus one of the affirmative action program's most signal accomplishments is to force society to reevaluate the standards which determine who is hired, admitted to college, and so on.

But we are determinedly opposed to a broad assault on the concept of qualifications and standards. For where legitimate standards are weakened, or abolished altogether, it is those who are most vulnerable to discrimination or whimsy who will suffer the most severe consequences. It should be kept in mind that blacks have entered many skilled trades and professions in significantly large numbers. Very often they won their position precisely because their qualifications were superior to other applicants. That blacks are underrepresented in a particular profession does not by itself constitute racial discrimination. Very often the inability of large numbers of blacks to qualify for a particular job is a function of poor educational background. It is for this reason that we believe it is essential for government to expand its efforts to compensate for the inferior education in the inner cities.

We would like to conclude by offering some conclusions about basic strategies of racial advancement.

1. Affirmative action efforts should be largely directed to instances of racial discrimination. In place of ratio or quota formulas, those institutions that have been found guilty of practicing discrimination should be given stiff fines; in other instances of recalcitrance, such as have been exhibited by southern police departments, government should consider asking the courts to institute racially-blind lotteries to determine hiring procedures. We also favor the cancellation of government contracts in cases where racial or sexual bias has been proven.

2. Federal manpower and education programs should be expanded. In the manpower area, we would like to point to the success of the Recruitment and Training Program, which has helped place over 12,000 minority youths with apprenticeship programs in the building trades as a possible model for other programs.

3. Government should continue to question the standards and qualifications for hiring. But it should keep in mind that standards are most important to those who are the likely victims of discrimination. The reforming of standards should not mean their weakening or abandonment.

4. Finally, there should be a realization that affirmative action, by itself, can do little to help blacks unless it operates in a positive economic framework. An affirmative action program cannot find jobs for the unemployed or help the underemployed into better jobs if those jobs do not exist. The most important issue is an economy of growth and expansion. Above all, it must be an economy providing a job for all.

Mr. O'HARA. Mr. Benitez?

Mr. BENITEZ. I fully agree with the chairman.

I have no questions.

Mr. O'HARA. Thank you very much.

Would you please give our best regards to Mr. Rustin?

Mr. HILL. I surely will.

Mr. O'HARA. Thank you.

The bells are ringing for our attendance at the House.

The subcommittee will stand in adjournment now until 9 on September 19 in this room at which time we will hear from all of the witnesses scheduled for that day and in addition from Mr. Caesar Sereseres of the University of California at Irvine.

He was scheduled for today but will be heard on Thursday in addition to those witnesses already scheduled.

The subcommittee will now stand adjourned.

[Whereupon, at 12:25 p.m., the subcommittee adjourned, to reconvene at 9 a.m., Thursday, September 19, 1974, in room 2175, Rayburn Building.]

CIVIL RIGHTS OBLIGATIONS OF INSTITUTIONS OF POSTSECONDARY EDUCATION

THURSDAY, SEPTEMBER 19, 1974

House of Representatives,
Special Subcommittee on Education of the
Committee on Education and Labor.
Washington, D.C.

The subcommittee met at 9 a.m., pursuant to call, in room 2175, Rayburn House Office Building, Hon. Jaime Benitez, presiding.

Present, Representatives Benitez, Dellenback, O'Hara, and Biaggi.

Staff members present: Jim Harrisson, staff director, Webster Buell, counsel; Ednora Teets; and Robert Andringo, minority staff director.

Mr. Benitez. The committee will now come to order.

This is the second hearing this week on civil rights obligations in universities and institutions of higher learning.

At our first meeting, we had scheduled four distinguished witnesses and one of them—the first witness today, Dr. César Sereseres—was unable to testify then and will be the first witness today.

We are glad to welcome this distinguished professor of political science of the University of California and descendant of Mexican parents who has made a mark of distinction in the academic world of the United States.

He will be our first witness today.

Dr. Sereseres.

STATEMENT OF CÉSAR SERESERES, UNIVERSITY OF CALIFORNIA AT IRVINE

Mr. Sereseres. Thank you very much.

I realize that there are quite a few people who are scheduled today so I will try to make it as brief as possible. Hopefully, on the basis of this presentation some questions can be generated.

Mr. Benitez. In any case, your full text will be included in the record. You may proceed reading from it or summarizing.

Mr. Sereseres. I am by training a political scientist. I obtained both my undergraduate and graduate degrees from the University of California.

I now teach at the University of California at Irvine.

I am concerned, both academically and personally with the public policy questions involving the obligations of institutions of higher education to the Mexican-American community.

Throughout my discussion I will only refer to two institutions that I know fairly well. The University of California system in general and the Irvine campus in particular.

For the last couple of years I have been concerned with two principle questions. First, as a public employer and an educational institution, has the University of California met its legal and moral responsibilities to minorities and women?

Second, is the University of California taking steps to break the cycle of discrimination through the implementation of, and commitment to, a viable affirmative action program?

My contention is that the answer to both questions is an emphatic no.

Further, I believe that there is substantial data to support this conclusion.

Mr. BENITEZ. Excuse me, when you refer to the University of California, are you referring to the whole complex called the University of California or are you referring to the Irvine campus?

Mr. SERESERES. I am referring to both. The University of California system in general and the Irvine campus in particular.

In regards to the Irvine campus, I would like to submit for the record—or at least for informational purposes—a report, a study of one campus, the Irvine campus, that I believe fully documents the disparities in employment, salaries, recruitment of graduate students and the like.

I will leave the subcommittee staff a copy of a report, written by the Chancellor's Minority Affairs Committee, entitled: "The Pattern and Practice of Discrimination Against Minorities at the University of California, Irvine."

Mr. SERESERES. In order to understand the magnitude and seriousness of this statement, consider the following. California is a culturally and racially plural State. Conservative estimates place the minority population at 33 percent; 18 percent Spanish-speaking, 10 percent black, 3 percent Asian-American, 1 percent native-American, and 1 percent other nonwhite.

Second, the University of California is believed to be the State's second largest employer. Only Pacific Telephone is believed to have more employees.

Third, the total amount of Federal money that is awarded the entire University system is unknown. We do know, however, that the millions of Federal dollars play a significant role in the operations and development of this institution.

As an example, the University of California at Irvine obtained 91 percent of its extramural funds for fiscal year 1972–73 from the Federal Government. This amounted to some $12 million.

Mr. BENITEZ. When you say that the total amount of Federal funds accruing to the University of California is unknown, what do you mean that it is unknown?

Mr. SERESERES. My impression, from discussing this question with regional and Washington authorities, is that the two primary monitoring Federal agencies in HEW and the Labor Department have no idea of the total amount and sources of money from the various Federal agencies.

There is no central informational center that tells us how many contracts and grants have been awarded by the Defense Department, NASA, Labor, and a multitude of other Federal agencies to the University of California.

HEW knows how much HEW provides but there are certain limitations that we are aware of as far as total amounts from all Federal agencies.

Mr. BENITEZ. I wanted to have the record clarify that this is not hidden money but it is money that is not centralized.

Mr. SERESERES. Exactly. Now, what I am arguing here is that the State of California, as well as the University of California offers a microcosm of problems confronting minorities in the larger society and in institutions of higher education.

The experiences of minorities at both the Berkeley campus and the Irvine campus are relevant to the interests of this committee. Both campuses provide an insight into the bureaucratic guerrilla warfare that university officials have begun throughout the United States in their efforts to avoid effective monitoring by the Federal Government.

As an example, University of California Berkeley officials since 1972 have had their affirmative action plan rejected on seven different occasions. It is a classic case of how a powerful public institution can make use of its own internal resources in order to protect itself from outside pressures.

To understand the resistance to civil rights laws by institutions of higher education, one has to go beyond the philosophical and legal issues revolving around this public policy debate. One also has to look at the following causes for the resistance to civil rights laws and affirmative action principles.

The first is that these laws—prohibiting discrimination and forbidding Federal agencies from subsidizing such discriminatory practices—become a threat to the institutional character which is overwhelmingly male and Anglo.

Secondly, such laws provide the public for the first time with an insight into the patronage system that exists within such large public institutions as the University of California.

Thirdly, such laws tend to affect the power relationships within these institutions. For example, there is no university chancellor who is willing to risk his $50,000 salary and assortment of benefits by trying to implement civil rights and affirmative action laws.

In short, sanctions from within the university for officials attempting to enforce compliance are far more real than those sanctions from Washington for not complying with those laws.

Mr. BENITEZ. May I interrupt you again to clarify an expression? Since you are extemporaneously covering this subject, perhaps it is easier to inquire about something at this point. You say that the problem with the situation at the University of California is that aside from the law, the persons running the university—the administrators of the university—are out of sympathy with the law and, therefore, find out ways of defeating it.

Do you have or foresee any remedy against that situation, assuming you are right?

Mr. SERESERES. Most definitely. As I will mention in my recommendations, the laws have to be taken seriously. Before the laws will be taken seriosuly by university officials, the U.S. Congress and the Executive have to take the laws seriously. For example, if the Secretary of HEW states that he will not use the ultimate sanction in order to enforce the laws—that is, withhold Federal funds, which the law prescribes—then the law is meaningless because the sanctions are not taken seriously by those institutions which are expected to comply with the law.

As I will mention later, nobody at the University of California, from President Hitch on down, believes that the Federal Government will withheld funds.

Mr. BENITEZ. Thank you.

Mr. SERESERES. As I mentioned, the reality of the situation is that the pervading mood among university officials is that HEW will not really do anything to the U.C. system. They simply don't believe the Federal Government will withhold funds, believing that with a combination of bureaucratic guerrilla warfare and political favors from Washington, the University will be able to withstand the efforts of Federal agencies to follow through with title VI and revised Executive Order 4.

Let me give you an example of what I mean by this. The University of California at Irvine, where I teach, has received several hundred million dollars for construction and for research from the Federal Government. Yet there has never been an onsite inspection or review of the institution's compliance with title VI or Revised Executive Order 4.

When minorities were made aware of this and were told that an HEW review was not forthcoming—not because they didn't want to do it but because they didn't have the manpower—we took it upon ourselves to do it. This is the document I leave with you. The results of that extensive 1-year study—

Mr. BENITEZ. Who is "we"?

Mr. SERESERES. Minority group faculty members and staff, women, minority student organizations, and off-campus community groups.

Mr. BENITEZ. When you say "we" in this sense, it is not an institutionalized structure but a group——

Mr. SERESERES. I am sorry. It took the form of the Chancellor's Minority Affairs Committee, appointed by the chancellor.

The responsibility was not to write the report. It was a cosmetic function that had been performed in the past. This was the first time somebody decided to write a report.

Mr. BENITEZ. But your point is that the report is not cosmetic.

Mr. SERESERES. We believe it is not since it does expose the discrepancies in hiring practices, in salaries, and in the positions that accrue to women and to minorities.

I don't want to prolong my testimony but I would like to provide the subcommittee with a few examples: Out of 1,110 academic employees 3 percent are Mexican/Spanish American, 2.5 percent are black, and 0.3 percent are American Indians. Out of some 231 tenured faculty, 0.4 percent are Mexican/Spanish Americans, 1.3 percent are black, and there are no American Indian faculty.

Out of 376 student assistants, 3.71 are Mexican/Spanish American, 3.1 percent are black. Out of 26 administrators at the University of California, Irvine, there are no Mexican/Spanish Americans and there is only 1 black. Out of 212 professional employees, 5 percent are Mexican/Spanish American and 4.7 percent are black. Of the total number of Mexican/Spanish American staff employees, 70 percent are secretaries, operators, and service workers.

Not only do these figures not reflect the State's minority population, but, minorities are found in the lowest salaried and nonskilled areas. Now, why the gap between the law and the reality of the situation?

I believe there are three reasons for the discrepancy. First is the misuse of the affirmative action plan which is thought to be a tool for removing the inequities and the inequalities of the institution.

Second, we have seen the tactics of what I call paperclip guerrilla warfare as a means of avoiding compliance.

Third is our inability to conceptualize the issue and to make explicit the value preferences of the Federal Government regarding equality and social justice.

Briefly, the affirmative action plan has often turned into a vehicle for bureaucratic stagnation of civil rights laws. The University of California has in fact been able to use affirmative action plans to forestall compliance rather than as a vehicle for insuring the fulfillment of its obligations. The university has been able to accomplish this by deliberately structuring and maintaining a bureaucratic oriented and powerless affirmative action program and by defining affirmative action in academic and in bureaucratic terms rather than in terms of eliminating discrimination.

This has been made possible through what one might call protracted administrative guerrilla warfare.

Now, the official justification for this state of affairs has recently come to light in a statement by the Secretary of HEW. He stated that if funds were withheld in order to force compliance with the law it would only cause more problems and in no way solve the problem of discrimination.

If this is the case, then the law is meaningless because the possibility of sanction for violation is removed.

We thus see protracted periods of administrative guerrilla war between universities and Federal agencies, each escalating the paper war in the hope that the other will finally submit when the volume of paper finally overloads the administration of the other's institutions. In the meantime minorities and women are more important as "body counts" for paper war games than for their actual presence in institutions of higher education.

The numbers game never seems to end.

We are told by university officials of the great advances being made in the numerical presence of minorities and women. Critics add however that affirmative action has disrupted and adversely affected the quality of higher education.

Yet within these last few months we have been confronted with reports that the number of minority and women faculty has increased in insignificant quantity and that the number of minority graduate and professional students has in fact declined.

I conclude that a massive state of confusion exists today regarding the impact and the presence of minorities and women in institutions of higher education.

The third contributing factor that has caused the gap between the law and the reality of the situation is the inability to conceptualize the issue and explicitly state the value preferences of the Federal Government.

The question is: Why should there be a Governmental preference for compensatory programs? Why should reasonable classification be permitted? What justifies remedial programs that make such criteria as sex and ethnic origin important determinants in the employment and education recruitment practices of institutions of higher education?

For the answer, at least from my particular perspective, we must turn to the reality of American society. The reality of American society consists of the following virtues. Equality of opportunity exists in America if you are male and if you are Anglo.

Second, American society is open and competitive if you are male and if you are Anglos.

Third, sharp inequalities exist in American society today. The achievers are overwhelmingly male and Anglo despite the fact that over half the U.S. population is female and that some 20 percent is made up of ethnic and racial minorities.

The male Anglo by far gets the good start in the race for success. Why else do we find 97 percent of the engineers and 85 percent of the lawyers being male Anglos?

If one can see this kind of perspective of American society, then preferential issues become that of: (1) determining how Government power can be used to eliminate the inequalities that are prevalent in American society today, and (2) recognizing, as Prof. S. M. Lipset has suggested, that a fundamental change is taking place in American society—a shift from the rights of individuals to the rights of groups. What this suggests is that the primacy of equality of opportunity must be replaced with the far more important primacy of the equality of results.

From this perspective one can readily see the critical distinctions between defining civil rights obligations of institutions of higher education in terms of individual rights—that is, equality of opportunity—rather than in terms of group rights, equality of results.

I conclude with several recommendations for consideration by this committee.

First, there is no need for new legislation, new laws, or new bureaucracies. There is, however, a need for a decisive decision—arrived at jointly by the Executive, by Congress and by Federal agencies—that the existing laws and sanctions are to be taken seriously.

What can Congress do? The first thing that can be done is to hold oversight hearings in Washington to find out if Government agencies are working together or at cross purposes in the enforcement of civil rights laws. The committee should also hold informational hearings on such campuses as the University of California.

Second, Congress could generate information for the Federal Government so that it would be possible to effectively and fairly carry out compliance.

Third, Congress should encourage the necessary political support from the Executive. When such political support is not forthcoming, the laws are underminded as was the case when the former Director of the Office of Civil Rights was fired in 1970. He had attempted to enforce the law and was rewarded by being fired.

Fourth, Congress can assist in developing the institutional capabilities within the Federal Government. Congress must take a realistic look at the capabilities of such agencies as the Office of Civil Rights of HEW. Its Higher Education Division has a staff of slightly over 100 to monitor 2,700 institutions of higher education. How realistic is that?

Last, Congress can contribute by educating the general public, the Federal bureaucracies and institutions of higher education to the fact that the interests of minorities and women, though in some cases they may be unique, are in fact compatible with the concerns and interests of the greater society.

In the end, one can only reach the conclusion that the laws have not been taken seriously—either by Congress or by the institutions of higher education.

Before completing my testimony I would like to leave this committee with three personal observations.

The first: Given the need to rectify existing inequalities in American society, why do people begrudge special considerations that are mandated for minorities and women by the Civil Rights Act and by Executive orders?

Second, why has the Federal Government tolerated discrimination and inequalities in American institutions of higher education, institutions that are so vital to the future development of American society?

And, third, if so many private citizens and so many public officials are for equality and justice, why is so much inequality and so much injustice remaining in American society today?

Thank you very much.

[Mr. Sereseres' prepared statement follows:]

PREPARED STATEMENT OF PROFESSOR CESAR D. SERESERES, SCHOOL OF SOCIAL SCIENCES, UNIVERSITY OF CALIFORNIA, IRVINE, CALIF.

THE UNIVERSITY OF CALIFORNIA AND AFFIRMATIVE ACTION: EQUALITY OF OPPORTUNITY OR EQUALITY OF RESULTS—WHAT IS AT ISSUE?

I would first like to thank the Committee for allowing me to testify this morning. I would further like to comment that I am pleased that this committee has become interested in the issue of the Civil Rights obligations of institutions of higher education. I hope that these hearings will become the first step in resolving this very delicate and consequential public policy problem.

I am by training a Political Scientists who over the years has become academically and personally interested in the public policy debates related to the status of minorities and women in institutions of higher education. I was born, raised, and educated in California. I obtained my undergraduate and graduate degrees from the University of California and have taught at the State University of New Mexico and I am presently an Assistant Professor of Political Science at the University of California, Irvine. My personal interest in this issue comes from the fact that I am a second generation Mexican-American. I believe that my training, experience, and cultural background provide me with an insight and distinct perspective on the issue that you are concerned with in these hearings.

Throughout my discussion I will refer to the institutions that I know best: the University of California system in general and the Irvine campus of the University of California in particular. In studying the manner in which the University of California has handled its Civil Rights obligations, I have focused on two questions:

> As a public employer and educational institution, has the University of California met its legal and moral responsibilities to minorities and women?
>
> Is the University of California taking steps to break the cycle of discrimination through the implementation of, and commitment to, a viable Affirmative Action program?

I contend that the answer to both of these questions is *no*. Further, I believe that there is substantial data to support this conclusion.

In order to understand the magnitude and seriousness of this statement, consider the following:

> California is strongly a culturally and racially plural state. Conservative estimates place the minority population at 33%—18% Spanish-speaking, 10% Black, 3% Asian-American, 1% Native-American, and 1% "other non-White."
>
> The University of California is believed to be the state's second largest employer—only Pacific Telephone is believed to have more employees.
>
> The total amount of federal money that is awarded to the University of California is unknown. We do know, however, that the millions of dollars play a dominant role in the operations and development of the University of California. As an example, the University of California at Irvine obtained 91.1% of its extramural funds in FY 1972-1973 from the federal government. This amounted to some $12 million.

What I am in effect saying is that the State of California and the University of California provide microcosms through which to obtain a better understanding of the problems and complexities in the attempt to critically assess the Civil Rights obligations of institutions of higher education.

The experiences at the Berkeley and Irvine campuses of the University of California are relevant to this Committee's interests. Both campuses provide an insight into the bureaucratic guerrilla warfare that university officials have begun to wage throughout the United States in their efforts to avoid effective monitoring by the federal government. As an example, UC Berkeley officials, since 1972, have had their Affirmative Action Plan rejected on seven different occasions. It is a classic case of how a powerful public institution can make use of its own internal resources in order to protect itself from outside pressures.

The law is quite explicit regarding what institutions of higher education must do regarding compensatory efforts directed at minorities and women. Why do institutions resist such efforts and why does it appear that federal agencies are ineffective in enforcing compliance with federal laws? Drawing from my own personal experiences I would argue that the philosophical and legalistic arguments for resistance are hollow and misleading. I would suggest that one need also look at the following causes for the resistance to Civil Rights laws and Affirmative Action activities.

> such laws become a threat to the institutional character which is overwhelmingly male and Anglo as well as being class and culture specific
>
> such laws provide the public with an insight into the patronage system that exists within these large institutions as well as exposing the fact that those so-called high standards are in fact discriminatory
>
> such laws tend to affect the power relationships within these institutions, i.e., there is no University of California Chancellor who is willing to risk his $50,000 salary and an assortment of benefits by trying to implement Civil Rights and Affirmative Action laws. *Sanctions from within the University for officials attempting to enforce compliance are far more real than sanctions from Washington for not complying!*

THE OBLIGATIONS OF INSTITUTIONS OF HIGHER EDUCATION UNDER THE CIVIL RIGHTS ACTS AND EXECUTIVE ORDERS:

It seems to me that the laws concerning the obligations of institutions of higher education are quite explicit. The two most important laws relating to minorities are:

> *Title VI of the Civil Rights Act of 1964.*—Title VI states that the federal government may not subsidize discrimination on grounds of race, color, or national origin. Under this prohibition, HEW's responsibility, exercised by the Office for Civil Rights, is to see to it that universities that receive subsidies from the federal government or enter into contracts with it do not discriminate, under penalty of not receiving federal funds.
>
> *Revised Executive Order No. 4 (as amended).*—This Executive Order embodies two concepts:
>
> > *Nondiscrimination*—requires the elimination of all existing discriminatory conditions—whether purposeful or inadvertent.
> >
> > *Affirmative Action*—requires the contractor to do more than ensure employment neutrality with regard to race, color, religion, sex, and national origin. The basic requirement of this Executive Order is that a federal contractor must maintain a written affirmative action plan which explicitly details the manner in which the employer will make

additional efforts to recruit, employ and promote qualified members of groups formerly excluded.

The Reality of the Situation: Non-Compliance and Deception

Unfortunately, there is a tremendous difference between what the law requires and what the institutions of higher education actually comply with. The prevailing mood among University of California officials is that HEW will not really do anything to the UC system. They simply do not believe that the federal government would withhold funds—believing that through a combination of bureaucratic guerrilla warfare and political favors from Washington, the University will be able to withstand the efforts of federal agencies to follow through with Title VI and the Revised Executive Order.

In most cases, if it were not for a handful of minorities and women who are found within institutions of higher education, little would come to light and even less pressure would be forthcoming to enforce the law. Why is this case? Minorities and women become involved in these issues at a risk to their own careers. To become involved in time consuming monitoring not only takes away from one's own academic and administrative responsibilities, but in the process of raising such issues as discrimination and affirmative action one does not make the best of friends among colleagues and least of all among administrators of the institution. But if the federal government will not raise these issues—a responsibility that was legislated by both Title VI and the Revised Executive Order—who will?

The University of California at Irvine has received several hundred million dollars for construction and research from the federal government—yet there has never been an on-sight inspection or review of this institutions hiring practices! When we were made aware of the fact that none would be forthcoming the minorities and women took it upon themselves to initiate their own review. The results of that intensive one year study are to be found in the summary that is appended to this testimony. Because I believe that this study, which is intitled "The Pattern and Practice of Discrimination Against Minorities at the University of California, Irvine," will clearly demonstrate the significant differences between the law and the implementation of the law as it relates to the Civil Rights obligations of institutions of higher education, I would like to respectfully submit a copy of the complete study for the record. I believe that you will find it informative.

The results of the study clearly suggest that a pattern of exclusion exists in all areas of University activity—academic personnel, management positions, skilled positions, graduate education. As has been noted by others, institutions of higher education are microcosmic studies of integration in American society—a growing presence with no power. Decisions regarding curriculum, faculty recruitment and promotion, graduate and undergraduate admissions, the awarding of student loans and fellowships, general employment are made almost exclusively by male Anglos. Federal government and minority pressures have forced universities to have a visible presence of minorities and women: but there is little evidence of upward mobility into positions of power.

Two factors have directly affected the status of minorities in institutions of higher education.

> The pressures of social tensions and conflict generated by campus and off-campus minority groups has diminished. The moral and legal aspects of the Civil Rights movements of the 1960's were institutionalized into legislation; however, the federal government has failed to ensure compliance with these laws.
>
> The effective pressures from the largest minority has turned the focus from minorities *per se* to women, with women being a much more visible and better organized minority.

Why the Gap between the Law and the Reality of the Situations?

There are several reasons for the considerable discrepancy between what the law says are the obligations of institutions of higher education and the actual practices of those institutions. Setting aside the conventional arguments regarding concerns for "equal opportunity," "reverse discrimination," and other philosophical rhetoric, it would be instructive if one were to explore three far more important and relevant areas: (1) the misuse of the Affirmative Action Plan as a tool for removing the inequalities of the instructions, (2) the tactics of "paper-clip" guerrilla warfare as a means of avoiding compliance, and (3) the inability to conceptualize the issue and to make explicit the value preferences of the federal government regarding equality and social justice.

The Affirmative Action plan has turned into a vehicle for the bureaucratic stagnation of Civil Rights laws. In the case of the University of California at Irvine, the plan was purposely designed to be an "Equal Employment Opportunity" statement rather than an "Affirmative Action" statement. Equal Employment Opportunity legislation is basically passive and is intended to *open* employment opportunities to minorities. Affirmative Action, on the other hand, is a positive, *result-oriented* approach to employment opportunity for minorities and women. University officials fail to recognize the legal and moral obligations for developing a practical Affirmative Action plan geared to specific action.

Another way in which an Affirmative Action plan can act as a bureaucratic restraint on Civil Rights laws is the way in which the "available, qualified persons for employment" is defined. In the case of the University of California the available qualified minority manpower in the workforce is severely limited because, among other things, the University of California itself has done little to either develop the minority workforce or to ensure that those that contract with it have integrated workforces.

Furthermore, it is the responsibility of a public, tax-supported educational institution to set goals which reflect the minority population of a State such as California—not the nation as a whole. This is particularly important for Mexican-American and Asian-Americans because they are regional minorities with a heavy concentration in the State of California. To use nation-wide population and education data is to greatly distort the employment and education needs of California's minority population as well as to minimize the Civil Rights obligations of the University of California. This was not the intent of the laws nor the Executive Orders, but the distorting effects of bureaucratization has taken its toll.

The University of California has in fact been able to use Affirmative Action palns to forestall compliance rather than as a vehicle for ensuring the fulfillment of its obligations. *The University has been able to accomplish this by deliberately structuring and maintaining a bureaucratic oriented and powerless Affirmative Action program and by defining Affirmative Action in academic and bureaucratic terms rather than being directed at eliminating discrimination.*

What has permitted this to take place? Over the last few years the institutions of higher education have entered into a protracted "administrative guerrilla warfare" with federal agencies such as the Office of Civil Rights of HEW. Federal agencies such as the latter are funded to monitor and oversee compliance. The laws state that there are penalties for violating existing legislation. Yet, the universities have not shown good faith in their relationship with either federal agencies or minorities and have in fact not complied with the law. So why are institutions of higher education continuing to be funded by the federal government when they are in violation?

The official justification for this state of affairs has recently come from the Secretary of HEW, Caspar Weinberger. He stated that if funds were withheld in order to force compliance with the law, it would only cause more problems and in no way solve the problem of discrimination. If this is the case, then the law is meaningless because the possibility of sanction for violation is removed. We thus see protracted periods of "administrative guerrilla warfare" between universities and federal agencies—each escalating the "paper war" in the hope that the other will finally submit when the volume of paper finally overloads the administration of their institution. In the meantime minorities and women are more important as "body-counts" for paper "war games" than for their actual presence in institutions of higher education—be they as students, instructors, administrators, or employees.

The efficacy and accuracy of "body-count" warfare is far from certain. We are told by university officials of the great advances being made in the numerical presence of minorities and women. We are also told that Affirmative Action has distrupted and affected the quality of education—yet we are confronted with recent reports that in fact the number of minority and women faculty has increased insignificantly and that the number of minority graduate and professional students has in fact declined!

For example, data presented in a recently released Carnegie Commission on Higher Education report indicated that from 1968 to 1972, the number of Blacks on university faculties increased only from 2.2% to 2.9% while the number of women increased from 19.1% to 20%. This could hardly be described as a massive intrusion into institutions of higher education as a result of Affirmative Action programs. Furthermore, a recent study headed by Prof. Madelon Stent of City College of New York, indicates that the enrollment of Blacks and Spanish-surnamed students in professional and graduate schools has gone down.

I suggest that a massive state of confusion exists today regarding the presence of minorities and women in institutions of higher education. However, one thing is certain with the passing of each day: Higher education institutions, such as the University of California, are consciously avoiding compliance with Civil Rights laws and Executive Orders. Senator Proxmire's inquiry into the relationships between the University of California and NASA is an excellent example of the collusion necessary in order to find ways to get around the law. In the case of NASA, a "national security" interest was declared in order to get around Equal Employment Opportunity requirements. Some federal agencies make no effort to make sure that contractors comply with the law. Until federal agencies are also held accountable for violation of the law—few contractors will take the laws seriously.

The third contributing factor to the gap between the law and the reality of non-compliance is the inability ot conceptualize the issue and to explicity state the value preferences. If Affirmative Action is a compensatory program that calls for remedial action in order to overcome past and present discriminatory practices, then it is reasonable to pass laws that distinguish between groups. In legal terms, such *reasonable classification* is permitted *if there is a compelling state interest involved.*

Why should there be a governmental preference for compensatory programs? Why should reasonable classification be permitted? What justifies remedial programs that make such criteria as sex and ethnic origin important determinants in the employment and education recruitment practices of institutions of higher education? For the answer—at least from my particular perspective—we must turn to the reality of American society. The reality of American society consists of the following virtues:

> Equality of opportunity exists in America—if you are male and Anglo.
>
> American society is open and competitive—if you are male and Anglo.
>
> Sharp inequalities exist in American society today. The achievers are overwhelming male and Anglo despite the fact that over half the population is female and that some 20% is made up of minorities. The male Anglo by far gets the good start in the "race for success"—why else do we find 97% of the engineering and 95% of the lawyers being male Anglos?

If one can see this perspective of American society then the preferential issues become that of:

> Determining how government power can be used to eliminate the inequalities that are prevalent in American society?
>
> Recognizing, as the noted political sociologist S. M. Lipset has suggested, that a fundamental change is taking place—*a shift from the rights of individuals to the rights of groups.*

What this suggests for me, again to take from Professor Lipset, is that the primacy of "equality of opportunity" must be replaced with the far more important primacy of the "equality of results." From this perspective one can readily see the critical distinctions between defining the Civil Rights obligations of institutions of higher education in terms of individual rights, *equality of opportunity*, rather than in terms of group rights, *equality of results.*

Recommendations

There are two levels of change needed in order to insure that institutions of higher education comply with their Civil Rights obligations. I will not discuss the needed changes at the institutional level at this time: however, some of these recommendations can be found in the appended portion of the written testimony. At the level of national policy, I would like to make the following suggestions:

> There is no need for new legislation, new laws, nor new bureaucracies.
>
> There is, however, a need for a *decisive decision*—arrived at jointly by the Executive, Congress, and federal agencies—that the existing laws and sanctions are to be taken seriously.

There exists the necessity for a follow-through effort regarding Civil Rights legislation and Executive Orders. Congress could provide a meaningful service by using its power of the purse to give direction in this public policy issue. Congress could articulate and communicate its seriousness about this matter by:

Holding *oversight hearings* in Washington to find out if government agencies are working together or at cross purposes in the enforcement of Civil Rights laws and Executive Orders and by holding informational hearings on such campuses as the University of California so as to personally assess the extent to which institutions of higher education have in fact complied with their Civil Rights obligations.

Generating *information* for the federal government so that it would be possible to effectively and fairly carry out compliance. Someone in the federal government has to find out how much money institutions are getting, from whom they are getting it from, for what purposes the money is being awarded, and under what conditions. How can one monitor the University of California when this data is not available?

Encouraging the necessary *political support* from the Executive. When it is not forthcoming, the laws are undermined as was the case of Leon Panetta—the former Director of HEW's Office for Civil Rights—who was fired by the Administration in early 1970. He is an example of what happens when strong enforcement attitudes prevail within the monitoring agencies, but without the necessary political support from the top decision-makers. Under such circumstances, only lip service can be paid to the laws.

Developing *institutional capabilities* within those federal agencies responsible for monitoring compliance of the law. Congress should realistically assess the small staff in HEW's Office for Civil Rights which is responsible for some 2700 institutions of higher education. Can a staff of that size become actively involved with that many institutions without the fear of being "paper-clipped" to death! At this point the instinct to survive will exceed that of conviction and the requirements of the law.

Educating the general public, the federal bureaucracy, and institutions of higher education to the fact that the interests of minorities and women—though in some cases they may be unique—are compatible with the concerns and interests of the greater society. This would perhaps be the most difficult chore for Congress. We need not look at Affirmative Action, for example, in conflictual terms, but rather in terms of benefits to the entire society.

In all due respect to this Committee, if one takes the perspective of minorities and women it appears that neither Congress nor the Executive are serious about the Civil Rights acts or the Executive Orders. If the United States Congress and the Executive *appear* not to take these laws seriously, then why should institutions of higher education take these laws seriously? I would contend that until Congress gets serious about insuring full compliance with Civil Rights laws and Executive Orders by institutions of higher education—we will just be kidding ourselves about equality and social justice in American society.

This completes my testimony. I would like to thank the Committee for its time and for the considerations given my testimony. I would, however, like to leave the Committee with three last thoughts—three very troubling thoughts for me. I do not know if anybody can satisfactorily answer them, but they continually need to be raised.

Why do people begrude the special considerations that are mandated for minorities and women by the Civil Rights Act and by Executive Orders—given the need to rectify existing inequalities in American society?

Why has the federal government tolerated the discrimination and inequities in America's institutions of higher education—institutions that are so vital to the future development of American society?

If so many private citizens and public officials are for equality—Why is there so much inequality in American society today?

THE PATTERN AND PRACTICE OF DISCRIMINATION AGAINST MINORITIES AT THE UNIVERSITY OF CALIFORNIA, IRVINE—INTERIM REPORT

(Chancellor's Minority Affairs Committee)

MAY 27, 1974.

To: Chancellor Aldrich.
From: Chancellor's Minority Affairs Committee.
Re: Report on "The Pattern and Practice of Discrimination Against Minorities at the University of California, Irvine."

As Chairperson of your Minority Affairs Committee, I am forwarding you a copy of the Committee's report on *The Pattern and Practice of Discrimination Against Minorities at UCI*. The Committee's limited time and resources have not permitted a full-fledge inquiry into the problems confronting minority faculty, staff, and students. However, our *preliminary* findings, as presented in this report, strongly suggest that a complete HEW/Office of Civil Rights investigation is necessary in order to help eliminate the discriminatory practices in employment and student recruitment/support services.

The Committee has distributed the report to interested public officials, governmental agencies, and members of the community. Hopefully, a constructive and meaningful dialogue will develop between UCI and the minority community. The Committee's goal is to help rectify the problems that have been identified and documented in this report, according to the needs of the minority community and the requirements of the law.

I request that you meet with the Committee and representatives of the minority community in early June. We hope that at this time productive discussion will take place in order to help solve UCI's most serious problem—*providing for the employment and educational needs of minorities and women on campus and in the community.*

FRED FLORES,
Chairperson, Minority Affairs Committee.

SUMMARY

This *interim report* by the Chancellor's Minority Affairs Committee (MAC) represents an effort to inform University officials, faculty, students, and the community about the status of minorities at the University of California, Irvine (UCI). Since October 1973, members of the Committee have gathered data, spoken to University officials, and interviewed faculty, staff, and students on the UCI campus. The MAC sought to answer a fundamental question: *As a public employer and educational institution, has UCI met its legal and moral responsibilities to the minorities of California?* In addition, this Committee believes the primary issue to be whether UCI is taking steps to break the cycle of discrimination through the implementation of, and commitment to, a viable Affirmative Action program.

THE AFFIRMATIVE ACTION PLAN

The Committee found the University's Affirmative Action Plan totally inadequate for several reasons. First: *The Plan is inadequate because it is essentially an "Equal Employment Opportunity" statement rather than an "Affirmative Action" statement.* Equal Employment Opportunity legislation is basically passive and is intended to open employment opportunities for minorities. *Affirmative Action is a positive, result-oriented approach to employment opportunity for minorities and women.* Chancellor Aldrich should recognize the legal and moral obligation of developing a practical Affirmative Action Plan geared for specific action.

Secondly: The Chancellor notes in his "Policy Statement" on Affirmative Action that UCI will be concerned with the "available, qualified persons for employment." This means that UCI will base its Affirmative Action analysis on the availability of qualified persons in the work force. The available qualified minority manpower is, however, severely limited mainly because the University of California has done little to either develop the minority work force or to insure that those agencies which contract with it have integrated work forces.

Thirdly: The Committee believes that it is the responsibility of a public, tax-supported educational institution like UCI to set goals which reflect the minority populations of California, not the nation as a whole. This is particularly important for Chicanos and Asian-Americans because they are regional minorities with a heavy concentration in the state of California. *To use nation-wide population and educational data is to greatly distort the employment and educational needs of California's minority population as well as to minimize the responsibilities of the University of California.*

Specifically, UCI's Affirmative Action Plan is unacceptable because of the following weaknesses:

No analysis was provided to identify employment problems in such areas as recruitment, selection, placement, promotion, salary, tenure, and training.

Utilization analysis was inadequate because it was not broken down by department and professional schools.

The Plan failed to clearly delineate the status of the Affirmative Action officer.

Job categories by Federal Occupation Code were not divided into groupings with common skill requirements and earning ranges.

Goals and timetables were calculated on the most conservative estimate of availability which reflected the discrimination of outside employment and educational practices—thus insuring minimal results.

PATTERN OF EMPLOYMENT DISCRIMINATION

UCI's academic year 1973/74 employment records reflect the following pattern of minority employment:

out of 1110 academic employees, 33 or 3% are Mexican/Spanish American and 28 or 2.5% are Black, and there are 3 or .3% American Indians;

out of 231 tenured faculty members, 1 or 0.4% are Mexican/Spanish American and 3 or 1.3% are Black, and there are no American Indian faculty;

out of 376 student assistants, 14 or 3.7% are Mexican/Spanish American, 12 or 3.1% are Black, and 2 or .5% are American Indian; and

out of 41 Librarians, there is no Mexican/Spanish American, and only one Black.

There are a total of 1217 staff career employees at UCI. In this latter area, 96 or 7.9% are Mexican/Spanish American and 70 or 5.8% are Black. The breakdown within this category is as follows:

out of 26 administrators, there are no Mexican/Spanish Americans and 1 or 3.8% Black;

out of 212 professional employees, 11 or 5.2% are Mexican/Spanish American and 10 or 4.7% are Black; and

out of 81 craftsmen, 4 or 4.9% are Mexican/Spanish American and 3 or 3.7% are Black.

By going beyond the aggregate figures on minorities, underrepresentation and employment clustering becomes evident. Some 70% of all Mexican/Spanish American staff employees are either secretaries, operators, or service workers—over 50% of the Mexican/Spanish American staff employees are clerks and secretaries. Some 60% of all Black staff are secretaries, operators, laborers, or service workers.

Further detailed analysis by the MAC concludes that minorities in the Physical Plant and other University units are overwhelmingly in the non-skill areas of maintenance, grounds, and service. And, where they are concentrated, such as in Housing and Physical Plant, there are no minority foremen or supervisors even though many of these minorities have been working at UCI since the school opened. The following examples will help to explain the status of minorities in the staff career and staff casual areas of employment at UCI:

56 of 64 Mexican/Spanish American women employed as staff career employees are in the office/clerical/service job categories;

21 of 32 Mexican/Spanish American men employed as staff career employees are in the clerical/operator/labor/service worker job categories;

42 of 45 Blacks employed as staff casual employees are in the clerk/labor/service worker job categories; and

42 of 42 Mexican/Spanish Americans employed as staff casual employees are in the clerk/labor/service worker job categories.

WAGE DIFFERENTIATIONS BETWEEN MINORITY AND ANGLO EMPLOYEES

It is clear that UCI's minority employees are paid less than Anglo employees. The monthly income pattern is as follows:

Academic Black employees average $1049 a month, while Mexican/Spanish American employees average $1041 a month and Anglo academic employees earn $1318 a month.

Black staff employees earn $752 a month, Mexican/Spanish American staff employees earn $706 a month while Anglos average $862 a month.

Black staff casual employees average $449 a month, Mexican/Spanish American staff casual employees average $480 a month while Anglos in this category average $536 a month.

The University's own salary records help to illustrate the disparity in employment and promotional practices for minorities at UCI. In examining employment categories where comparable salary data was available, the following pattern of disparity was discovered:

The overall campus summaries point out that 325 minority employees earn an average of $809 per month as compared to Anglo averages of $999, a difference of $2280 per year.

The academic staff had only 83 minorities while the Anglo employee staff numbered 709; average wages for minorities came to $1105 a month compared to Anglo monthly salaries of $1318, a difference of $2556 a year.

Regular career staff positions showed 178 minority employees compared to 931 Anglo staff, average salaries for minorities was $729 compared to Anglo figures of $862, a difference of $1596 a year.

Casual staff minority employee positions numbered 33 compared to 214 Anglos; average wage for minorities $488 compared to $536 a month for Anglos, a difference of $576 a year.

There were 15 minority student instructional assistants with an average salary of $856 compared to 94 Anglos with an average salary of $889, a difference of $300 a year.

There were 6 minority librarians with an average salary of $964 compared to 33 Anglos with an average salary of $1173, a difference of $1308 a year.

MINORITY STAFF: CAREERS AS CLERKS, GROUNDSMEN, AND CUSTODIANS

There are four basic determinants affecting the status of minority staff on the UCI campus: (1) their fears and frustrations, (2) the ineptness of the Personnel Department, (3) the inaccessability to training programs, and (4) an ineffective and unresponsive Affirmative Action Coordinator. All of these factors have contributed to the concentration of minority staff in the lower pay categories and limited-skill employment areas, the absence of minority foreman and supervisory personnel, and job stereotyping of minorities. In general, *minority staff employees have been subjected to discrimination with respect to compensations, conditions, privileges, and opportunities of employment.*

The Personnel Department has not: (1) communicated the rights of workers to minority employees, (2) made a concerted effort to inform minorities about new positions or traineeships, and (3) been effective in recruitment of *qualified* minorities. As one lawyer has noted after a brief investigation of UCI hiring practices:

> jobs are "gifts" from department heads;
>
> open competition for jobs is very rare;
>
> the Personnel Department does not approve jobs in most instances, but gives its *imprimatur* at the department head's request.

Of principal concern to minority staff employees is the way in which individual University units and the Personnel Department classify staff positions. It appears certain classifications and job titles are directed at minorities; in this manner, UCI officials make sure that there are the needed "number" of "visible minorities" in order to comply with federal laws. For these reasons, minority staff are convinced that a tacit system of "Black girl desks" and "Chicano desks" exists in order to insure the continual presence of minorities—a presence limited to specific job categories and to certain numbers.

These positions have no future or likelihood of meaningful advancement. Curiously, University officials argue that quotas are illegal when it comes to hiring of faculty, but UCI's unofficial quota of hiring minorities in menial jobs is perfectly acceptable. *Hiring minorities only in certain type of job categories in order to produce a "visible minority" is not a policy of Affirmative Action.*

MINORITY STUDENTS AT UCI

The University administration has noted with pride that it has vastly increased the number of minority students on campus: some 1,299 minority graduate and undergraduate students, or 15% of the total number of students attending UCI. However, the MAC takes direct issue with the figures as well as with the significance of the "Ethnic Survey Data." What the University fails to mention is that there are qualifications to the aggregate data on minority student enrollment. These qualifications (especially for the Mexican/Spanish American student category) include: (1) "minority/disadvantaged" status (EOP), (2) part-time status, and (3) foreign-national status. These considerations significantly reduce the minority presence at UCI. This report stresses the fact that the concept "minority" is a very subjective term, and it can be defined to suit anybody's purpose. Several examples will suffice to explain the distorted image given by UCI's data on minority students:

the largest bloc of "minority" students at UCI is the Asian-American (321) but only 20% identify with EOP/Special Services—as compared to 80% for Black and 90% for the Chicano.

of the 358 undergraduate Mexican/Spanish American students, only 296 are regular, full-time students.

What is disturbing is that of the 296 Mexican/Spanish American students, some 268 have come via the Educational Opportunity Program (EOP). Thus, from facts such as these, *the Committee concluded that UCI's "Ethnic Survey Data" is misleading and distorts the true picture of the minority students' presence.*

Perhaps the most important issue that the Committee had to deal with in regard to students is that *Affirmative Action has to be seen as a comprehensive program which not only deals with the recruitment, hiring, and promotion of minority and women staff and faculty, but also deals with students.* In January 1969, President Hitch, in a letter to all Chancellors, stated that ". . . affirmative action in admissions and in hiring at all levels is national policy and is University policy." Further elaboration of this policy came from UC Vice President for Administration, Robert L. Johnson, who in August 1970, stated that ". . . the Uninversity of California states its concern for equal opportunity for women today as *students*, faculty, and staff personnel." *It is only reasonable that the concept of equal opportunity is applicable to minority students.*

If Affirmative Action is applicable to students, and the Minority Affairs Committee believes that the above statements verify that this is the case, then policy issues involving EOP and "minority students" in general come under the purview of Affirmative Action laws and the Affirmative Action Plan. Furthermore, if Affirmative Action applies to students then *there must also be goals and timetables for their admission—at both the undergraduate and graduate levels—in proportion to California's total minority population.*

CONCLUSIONS

UCI's "pattern and practice of exclusion of, and discrimination against, minorities is in violation of Title VI and VII of the Civil Rights Act of 1964 and in violation of the Equal Protection Clause of the Fourteenth Amendment. The "pattern and practice" of discrimination is sophisticated and subtle. The Minority Affairs Committee after eight months of inquiry, concludes that University of California at Irvine officials—namely the Chancellor and others named in this report—are responsible for:

deliberately structuring and maintaining a bureaucratic oriented and powerless Affirmative Action program;

encouraging that Affirmative Action be defined in academic and bureaucratic terms rather than being directed at eliminating discrimination;

refusing to enforce compliance of Affirmative Action principles and granting unit heads, with a history of exclusionary practices, authority over hiring and promotions;

refusing to discipline personnel who discriminate against minorities;

refusing to set Affirmative Action guidelines based upon the minority population of California;

utilizing the most conservative method of estimating work force availability for minorities;

clustering data that has the effect of misrepresenting the presence of minority faculty, staff, and students.

RECOMMENDATIONS

In order to reverse the pattern and practice of discrimination at UCI, the Minority Affairs Committee recommends that:

the position of Vice Chancellor for Affirmative Action be created for the implementation of the Affirmative Action Plan and specifically for the treatment, hiring, promotion, reclassification, admission, and recruitment of minority faculty, staff, and students—both present and prospective;

the Affirmative Action Plan establish the coordination of goals, procedures, FTE distribution, and a scholar/teacher training program to prepare minorities in accordance with UCI's responsibilities as a Ph. D. granting institution;

fifty percent (50%) of new faculty FTE's allocated to UCI be set aside for the exclusive recruiting of minorities;

the Affirmative Action Plan include provisions for regular, EOP, or Special Action minority students that will include goals and timetables as well as a provision that UCI will be responsible for tutorial and counseling services, academic advice, and financial aid for these students;

University officials conduct a review of graduate and undergraduate applications for admission, fellowships, teaching and research assistantships, and other forms of aid to determine whether there is discrimination against minorities;

a job training program for minorities be established to qualify them for skilled and supervisory positions;

on campus minorities—especially those in Physical Plant and Housing—be *immediately* selected for foreman and supervisory positions;

there be a *complete investigation* of the procedures and policies of the Personnel Department—especially those policies and procedures that affect the Department's practices in reporting the necessary information for Affirmative Action monitoring and the recruiting, training, and promoting of minorities.

Mr. Benitez. Thank you very much.

I would like to add one or two questions more to the ones we already raised.

The first one pertains to the gap that you have referred to between the population and—the percentage of minorities within the population and then the smallness vis-a-vis that size of the members of the faculty or of the administration.

The first question that is always raised in this context, which I would like to again bring up with you, deals with the supply. This is with the availability of adequate personnel, which is not being utilized.

Do you have any information or any approach that you would like to make on that issue?

Mr. Sereseres. Two comments here. One, I am not convinced there is not the availability—and I can give you some very specific examples.

Why would a Spanish surnamed Ph. D. political scientist—let me remind you that I am 1 of 15 Spanish-speaking political scientists in the United States out of 12,000—go unhired this academic year? This individual was a congressional fellow—the first time a Spanish surname was ever awarded this. He worked for Senator Joseph Montoya. He has already presented two papers at the most prestigious political science associations in the United States. Yet, he could not get a job in the University of California system. Why is the University of California at Irvine firing three qualified women at the same time they hire others? They get the publicity for hiring women and forget the fact they fired three.

One of those fired was an Asian female who has obtained national recognition in manpower studies. She was working within a department totally dominated by male Anglos. She had served the university and the community as well, yet she was not protected when her tenure came up. She was considered unqualified to continue teaching in the university system. It was inferred that she didn't deal with "academically relevant subjects," meaning her research dealt primarily with women and minority problems.

So, I am not convinced the available manpower is not there. Furthermore, when the courts have enforced quotas—not goals but quotas—institutions have seemed to find the qualified minorities and women. That effort only came after a court order. Such has not come from HEW or from the Labor Department.

Second, affirmative action must apply also to graduate education.

If the University of California can't find the qualified available Ph. D.'s, it has the responsibility to train them.

Mr. DELLENBACK. I have read your testimony, and I have listened to the dialog between you and my colleague. Yet, I am not sure that I get the full flavor of what it is you really think should be done.

You say on page 9 there is no need for new legislation, new laws or new bureaucracies. Then you go on and talk in general about conducting oversight hearings, encouraging political support, developing institutional capabilities, and educating the general public.

I am interested in the specific area in which our subcommittee is examining this. Not the broad problem, but rather what it is that is being done, or should be done, in both secondary and higher education.

I am troubled with what looks and sounds to me like an inconsistency based on having had a great many witnesses testify before us. The inconsistency to which I refer does not deal with those aspects of affirmative action that focus on broadening the area under examination, and insisting that they deal with more than the network and really search out all possible sources of new employees. This inconsistency does not deal with the question of once one is within the mass of those who are part of the faculty, being sure that salary increases, promotions, tenure, and so on, are equitably applied.

Instead, this inconsistency focuses on how one can both nondiscriminate in the increment that is added each year to the mass and, at the same time, bring about any sort of accelerated change in the mass so far as total distribution.

Would you have anything to say to us about that point of distinction?

Mr. SERESERES. I hope I get to your point this way. On Tuesday of this week, this notion of reverse discrimination was brought up. I would answer your question by looking at that concept and then looking at what I have mentioned in the text regarding preference. That is, are we more concerned with the quality of opportunity or with the quality of results?

Now, on the concept of reverse discrimination, it seems to me——

Mr. DELLENBACK. Let me break in for a moment.

I understand the distinction you make between quality of opportunity and the quality of result, but that is not quite on all fours with what I am talking about as the point of trouble.

You can talk about equality of result in terms of those who are going to be added to a faculty in a given year as opposed to equality of opportunity for such addition. And I see that point of distinction.

For the moment, let's zero in on equality of result. Let's assume we have a faculty with 2,000 people in it, and the mix is unrepresentative both as far as minorities and women are concerned. In fact, let's assume there are none—zero. They are all male and they are all Anglo. You are going to add, because you have approximately a 20-year-average turnover, approximately 100 new people in a given year.

Now, if you want to change the total composition of the 2,000 in less than 20 years to achieve a balance, you will have to alter the selection process for the incremental 100 for the next few years. You will have to hire those on a disproportionate basis in order that the mix of the mass be accelerated and changed.

Can you do that—stay with your concept of result rather than just opportunity—can you do it without discriminating within the incremental additions in a given year?

Mr. SERESERES. I think I was on the right track here. Let me answer by giving you an example. I am not sure that I have, and I am not sure if the subcommittee here has any information regarding the attrition rate of faculty and other university personnel. I know for a fact that at the University of California at Irvine we had 70 new positions. We hired one black, one Spanish surname and one native-American out of 70. OK?

I am not sure what the nationwide turnover rate is.

Mr. DELLENBACK. But you are not on target with my question yet. You are talking only about the additions. I am asking you to tell me first, before you talk about discrimination in a given situation, which are you going to talk about? Are you going to say that our concern should be with the increment that is added each year—in your instance, 70 new employees—or the general mass of employees. Should we be sure that that 70 is balanced in both opportunity and result, or should we say you have to go way beyond balance in the 70 in order to bring about an accelerated balance of the mass to which the 70 is added?

Consequently, let's not focus at this point on the discrimination within the 70. That is another issue which I am also interested in. But, at present, I am talking about the distinction between the 70, and the mass to which the 70 is added.

Where do we turn to bring about true equality?

Mr. SERESERES. I am afraid I can't follow that. When you say mass, are you referring to the population——

Mr. DELLENBACK. What is the total number of faculty at Irvine to which the 70 vacancies were to be added?

Mr. SERESERES. Probably about 500 full time.

Mr. DELLENBACK. You have 500 in total. Does it have any sort of balance, or is it predominantly male Anglo?

Mr. SERESERES. It is predominantly male Anglo.

Mr. DELLENBACK. In a given year you have 70 additions.

Mr. SERESERES. Correct.

Mr. DELLENBACK. Let's assume——

Mr. SERESERES. Which was unusual for this year but that is what we had.

Mr. DELLENBACK. Let's assume, for the moment, that that is an average figure. Thus, you have a 10-year turnover. Let's assume the 500 had no female and no minority—they were 100-percent male Anglo.

Focusing now on this situation, we see two different things. We see that, measured by results, the 500 apparently reflect discrimination. We want to bring about a change in that pattern, and you can't do so without adding new employees. This year we will add 70. Now, when we talk about what we shall try to do with an affirmative action program, or anything else, should we be concentrating on this year's 70 to be sure that within that 70, there is both equality of opportunity and, if you will, equality of result. Or, on the other hand, should we be saying our real target is the 500, and, therefore, we must do whatever we need to do with the 70—make the 70 completely minority or completely female, et cetera, or whatever needs to be done—because our target is the 500.

Now, is my question clear? What is your target group? The 70 incremental additions, to be sure there is no discrimination practiced in that 70, or is the target the 500, and you do whatever you need to do with those additions to the group in order to bring about a balance within that 500?

Mr. **Sereseres**. If you are saying something has to be done with those people who already have jobs, I say no. If it means hiring disproportionately, that is more women and more minorities than anybody else in that 70, I say yes.

Title VI and Executive order call for this kind of mandate. Over a period of time you are affecting the total faculty profile of that educational institution.

Mr. **Dellenback**. But are you not violating revised Executive Order No. 4 if you discriminate on a preferential basis in the 70?

Mr. **Sereseres**. No; you are not.

Mr. **Dellenback**. I see. So your comment to us is that one cannot worry about what one does with the increment. One can be preferential. One does not need to be nondiscriminatory in the increment.

Mr. **Sereseres**. That is the point I was going to get at. First, at the base of all this is the Constitution which forbids discrimination of any kind. However, if past and ongoing selection procedures in education and employment are in themselves unlawful because of their exclusionary results, there can therefore be no constitutionally protected right to educational opportunity or employment vested in those who would qualify from such practices.

In other words, until the selection procedures on hiring and educational opportunity in institutions of higher education have been properly evaluated—which has not been done—it is illogical to argue that affirmative action procedures result in unconstitutional discrimination or the lowering of employment standards or quality of education. I would contend that the burden of proof lies with the institution to prove it is not engaged in discriminatory practices. It doesn't lie with me or anybody else, women or minorities, to prove that affirmative action is not, in fact, "reverse discrimination."

Mr. **Dellenback**. I am not putting any burden on you. I am asking you a philosophical question. I thought you had answered that question, but now I am not sure.

In the situation at Irvine or anywhere else, 70 people are to be added to a faculty in a given year. Under title VI or revised Executive Order No. 4, should any discriminatory practices whatsoever—either to favor minorities or to give advantage to minorities, or to favor women or to give special disadvantage to women—should any discriminatory practices be used in connection with that incremental 70? Or should those 70 be dealt with in a vacuum to be absolutely sure that in practice there is no discrimination in any way so far as those 70 are concerned? A minute ago, I thought you said that you can favor minorities and women within that additional 70 because of something else you are trying to do with the group to which those 70 are to be added.

Should there be any discrimination whatsoever in any direction practiced in that illustrative 70 of which we are speaking?

Mr. SERESERES. You have already loaded the question by throwing in the word "discrimination." I am not prepared to say that because you hire or give preferential hiring to women and minorities that that is, by fact, discriminatory. I don't think the question should be worded that way.

Mr. DELLENBACK. So there can be preferential practices, and those preferential hiring practices that operate in favor of women or minorities would not be discriminatory, in your opinion.

Mr. SERESERES. I do not believe that it is productive to develop a dialog regarding affirmative action on the basis of it being discriminatory or not. I am saying that: (1) It is a value preference of mine and (2) it has been stated in Federal law and in Executive orders, that an effort has to be made to resolve the injustices and inequalities that prevail in institutions of higher education.

I will not label affirmative action as discriminatory or as nondiscriminatory, but as a value preference. We must increase the presence of minorities and women as employees, as administrators, or graduate students, and as faculty members in institutions of higher education. I do not believe that charges of reverse discrimination, that is, that Anglo males are being discriminated against because preferential treatment is given to women and minorities, should be the focus of the debate. I don't think that is the issue. The issue is: Do we want to resolve the inequalities and injustices that prevail in schools of higher education? To me, that is the vital question.

Mr. DELLENBACK. Thank you very much.

Thank you, Mr. Chairman.

Mr. O'HARA. Thank you very much. We appreciate your coming before the committee.

Mr. O'HARA. Our next witness is Bernice Sandler, director of the Project on the Status and Education of Women, Association of American Colleges.

We would like very much to have the benefit of your testimony.

STATEMENT OF BERNICE SANDLER, DIRECTOR, PROJECT ON THE STATUS AND EDUCATION OF WOMEN, ASSOCIATION OF AMERICAN COLLEGES

Ms. SANDLER. I have submitted a statement for the record; and rather than read the whole statement, I will summarize it.

Mr. O'HARA. Without objection, your testimony will be printed in full in the record and you may proceed in whatever manner you choose.

Ms. SANDLER. Thank you.

I am Dr. Bernice Sandler. I have a long history of working in women's rights in a variety of roles. In 1970, I worked for this very committee.

I was an educational specialist where I worked on the hearings on sex discrimination that laid the foundation work for title IX and other legisation.

I have also taught at the University of Maryland and I have testified before numerous congressional committees on the issue of sex discrimination in education.

Until recently, sex discrimination on the campus whether against faculty, staff, or students was largely unnoticed, unchallenged, and unchecked. Indeed, such discrimination against most women in the academic community was legal. Educational institutions without Federal contracts could legally discriminate against faculty women and students.

The 92d Congress, in a little-noticed legislative explosion, articulated a national policy to end sex discrimination on the campus. Title VII of the Civil Rights Act was extended to cover all educational institutions whether or not they receive Federal moneys; the Equal Pay Act was extended to cover faculty, and title IX of the Education Amendments Act of 1972 was enacted to forbid sex discrimination against students and employees in federally assisted education programs.

There was virtually no opposition to the passage of these laws by either the educational community or the public at large.

Discrimination, once only a philosophical or moral issue, is now a legal issue as well. These laws are not merely employment laws: they are civil rights laws with a different legislative and judicial history.

Prior to this, many institutions holding Federal contracts had already felt the sting of the Federal Government under Executive Order 11246 as amended, which requires all Federal contractors to end discrimination in employment and to have a written plan of affirmative action.

More charges of sex discrimination have been filed against institutions of higher learning than against any other industry in the country. More than 500 institutions have been charged under the Executive Order 11246, about 1,600 have been charged under title VII and perhaps as many as a thousand under the Equal Pay Act.

Of all the areas in our society that have come under criticism for its treatment of women, the most frequent target has been higher education.

I could tell you of women who earn less than the equally qualified men they work alongside. I can tell you of some women who have received raises of $1,000, $6,000, $10,000, and $13,000 when their institutions were required, under the Executive order, to examine their salaries.

I could tell you of women who in a time of budget cuts, are terminated because they are "married and don't need the job." I could tell you, despite the changes in the law, of lives that have been damaged, and careers that have been stunted.

The stories of discrimination against women in academia have been documented all too often, and most notably in the 1970 hearings heard before this committee.

Let me summarize how affirmative action works.

Executive Order 11246 as amended by Executive Order 11375 covers only those institutions which hold Federal contracts. It prohibits discrimination in employment. It is not law, but a series of rules and regulations which contractors agree to follow when they voluntarily accept a Federal contract.

The main provision of the Executive order is that the contractor have a written plan of affirmative action to "remedy the effects of past discrimination" and to prevent the continuation of current discrimination.

The Department of Labor is responsible for all policy matters under the Executive order; the Department of Health, Education, and Welfare, however, does the actual review and enforcement in universities and colleges.

Institutions which voluntarily agree to provide a service to the Government by way of a contract, are required to undertake affirmative action, regardless of whether or not there has been a finding of discrimination. Such action includes, but is not limited to numerical goals. In contrast, moneys having the purpose of assisting the institution—rather than providing a service to the Government—carry no affirmative action requirement.

Under other Federal laws, affirmative action can be required but only after a finding of discrimination. The basic body of legal principles applying to employment discrimination have been developed in title VII litigation and in cases involving the fifth and 14th amendments of the Constitution.

Thus, institutions can become involved with affirmative action in a variety of ways.

An institution can voluntarily on its own decide to develop a plan. Second, an institution which voluntarily agrees to accept a Government contract is required to develop affirmative action plans including numerical goals.

A third way is that an institution charged with discrimination under title VII, the 14th and fifth amendments, title IX and possibly the Civil Rights Act of 1966 and 1971 may also be required to develop an affirmative action plan as a result of conciliation or as private settlement of a suit or charge brought under those acts.

The fourth way is directly through the courts: If conciliation or private settlement of a suit has failed, the court may order numerical goals.

The legal precedents and concepts of affirmative action and numerical goals are not based on an "industrial" model, but derive from statutes, legislative histories, judicial decisions, the principal of equity, and the Constitution.

Civil rights legislation and court decisions are intimately related to the concept of equty: "setting things right." This is the guiding principle that underlies numerical goals.

The Supreme Court has stated that the Court:

> May order such affirmative relief as may be appropriate. [It] has not merely the power, but the duty to render a decree which so far as possible [will] eliminate the discriminatory effects of the past as well as bar like discrimination in the future. (*Louisiana* v. *United States*, 380 U.S. 145 (1965).)

The opponents of affirmative action often use the term loosely and sometimes erroneously to describe a variety of actions. Broadly speaking, affirmative action are efforts aimed to end discrimination and to remedy the effects of past discrimination.

It includes a great many activities which are not controversial, such as notifying women's and minority groups about job openings; advertising job openings rather than relying on word-of-mouth notification; developing recruiting procedures aimed at women and minorities as well as at other qualified applicants, et cetera.

Of all the areas involved in affirmative action, the concept of numerical goals and timetables is perhaps the most controversial. Numerical goals are often confused with quotas.

However, the Government and the courts have made a clear distinction between the two: goals are legal; quotas clearly violate the Constitution and numerous Federal statutes. Quotas keep people out; goals are targets for inclusion of people previously excluded. Goals are an attempt to estimate what the employer's work force would look like if there were no illegal discrimination based on race or sex.

Goals are alined with the number of percentage of qualified women and minorities available and not in terms of their general representation in the population.

Under the Executive order, the institution does its own analysis of its work force and determines if their is underutilization of women and/or minorities. For example, women receive about 23 percent of the doctorates awarded in psychology, and studies indicate that 91 percent of women with doctorates work.

Thus, if there were no women, or substantially less than 23 percent women, in the department of psychology, underutilization would exist.

Underutilization, under existing case law, raises a presumption of discrimination under the Executive order and title VII. When statistical evidence indicates that there has been a pattern of discrimination, the burden of proof is then shifted to the employer, who must then demonstrate that there is and has been no discrimination, that the job criteria are indeed job related and that employment practices do not and have not had a discriminatory effect.

Goals have been upheld in the courts as relief for a substantiated pattern of discrimination.

The courts have indicated that affirmative action in employment is legal and does not constitute preference when undertaken to remedy past discriminatory practices. Indeed, preference is clearly illegal under the Executive order, title VII, and all other laws requiring nondiscrimination. No institution is required to hire women or minorities on the basis of sexual or racial preference. Affirmative action is not aimed at creating preference but at ending the preference for white males which has always existed in academia.

What the Executive order and title VII do require is the obligation of fair recruiting and hiring. If an institution fails to meet the goals, it then has to show that it made a good-faith effort to recruit, hire, and promote qualified women and minorities, and it has to be able to produce records documenting those efforts.

For example, the department head may show that he or she has contacted women's groups, such as the women's caucuses relevant to the discipline, has contacted individual women scholars for referral of candidates, has advertised openly, et cetera.

If, after doing all this, it turns out that all women were poorly qualified, and the man hired was indeed the best-qualified applicant, the employer can document a good-faith effort an affirmative action and thus can justify the decision to hire the white male. If so, the employer has discharged the obligation under Executive order; the obligation to meet the goal is not absolute.

There is no requirement whatsoever that would force academicians to hire lesser qualified women or minorities. If the best qualified person is white and male, then that person can be hired.

In some instances, the courts have imposed a kind of limited preference, more stringent numerical goals than those required by institutions under the Executive order.

Court-ordered goals have occurred only in public employment and individual settings and not in academia. The difference between court-ordered goals and those required under the Executive ordered are critical. Under the Executive order, goals are set by the institution after it does its own analysis.

In a court situation the Federal Government does the analysis and sets the goal. Under the Executive order, the best qualified person may be hired. Only in a court situation can a lesser qualified person be hired.

This limited preference has been allowed in our courts only after a finding of discrimination and for a limited time only.

The affirmative action requirements that institutions voluntarily assume when they accept a contract, however, do not in any way allow or compel institutions to give preference to the lesser qualified person on the basis of race, color, national origin, and sex.

Is preference required by law? Is preference being given to women and minorities in academia?

Recently there have been substantial questions raised about affirmative action and its implications for academia.

Richard Lester's report for the Carnegie Commission on Higher Education, and which, incidentally, the commission does not endorse, is typical of the objections raised.

Lester claims that institutions are being "forced" to hire less qualified women and minorities, and that innumerable institutions are giving sexual and racial preference in hiring.

He gives no data whatsoever to support this claim.

Any institution that gives preference in hiring on the basis of sex or race or ethnic origin is violating the law.

Those that claim that they have been forced to give preference to lesser qualified women and minorities had sadly misunderstood the law and their rights under it.

The data concerning the increase in the hiring of women and minorities in academia simply do not uphold the academic myth that women and minorities are being hired in any great numbers by the academic community.

Many institutions after a year or two of affirmative action programs report a drop in women faculty, even though the number and percentage of male faculty increased during that period.

Studies conducted within particular disciplines show a similar pattern. The fear that unqualified women are invading the tenured ranks seems to have little basis in fact.

For example, of nearly 200 institutions with graduate programs in chemistry—which is virtually all of the institutions which have such programs—between 1971 and 1973, the increase in the number of women at the full professionship level was exactly one. At the associate professor level, a net gain of seven for the entire country was reported.

While it is true that the pool of women chemists is not very deep, there have been approximately 1,500 women who received Ph. D.'s in chemistry since 1960. Were there really only eight that were qualified in the entire country to become associate or full professors in a 2-year period?

It is of course true that in a time of restricted budgets and a contracted economy it is harder for anyone, male or female, to find academic employment, but that is not reverse discrimination.

Some of the complaints have been specious; several white men have complained of reverse discrimination simply because a woman was hired and they were not.

On occasion, some administrators have used affirmative action as an excuse for turning down applicants they did not want to hire. One department head at a large western university wrote four of the five applicants for a position that he could not hire them because HEW insisted he hire a woman or minority person. However, the fifth candidate, the one who got the job, was neither female or minority; it was a white male. Needless to say, practices such as this violate the law, as well as generating inaccurate complaints of reverse discrimination.

On the other hand, some complaints of reverse discrimination have been justified. Some administrators have misunderstood the Federal requirements and have erroneously believed that only women and minorities, including minority women, could be hired.

HEW has played a major role in such misconceptions, and criticism of HEW for inefficiency, incompetency and inconsistent interpretations is more than justified.

However, to confuse the incompetence of HEW with defects in the law itself would be tragic. It would be like saying that because some police are inefficient and incompetent, we should therefore abolish the laws that they are supposed to enforce.

No one wants the Government to watch over their shoulder, but on the other hand, it is difficult to justify why academia alone should be exempt from the same rules and regulations that apply to every other industry in the country.

Any attempt to exempt academia from the Federal regulations and statutes that prohibit discrimination would deprive women and minority faculty of the fundamental civil rights now enjoyed by all citizens of this country. It would be the first step backward in civil rights legislation, and it would set a dangerous precedent for other segments of society seeking exemption from these laws.

Administrators are understandably concerned about Federal "interference" in hiring and promotion decisions. If you have never had to justify a hiring or promotion decision, the threat of having to put it in writing can be quite upsetting.

On the other hand, if an administrator cannot justify a decision, then either someone is in the wrong job or getting the wrong salary, or else you have a very poor administrator.

Now, instead of being able to justify a candidate merely by saying, "Dr. X is a fine fellow with a good reputation who has published a good deal," department heads will have to demonstrate that the candidate is the very best person recruited from the largest possible pool, a pool which will include qualified women or minorities. The demands of affirmative action, far from diminishing academic quality, are likely to increase it by requiring that hiring and promotion policies be truly based on merit without discrimination. The Government is not asking that the merit system be abolished, but only that it be opened to a larger pool of qualified persons.

HEW, incidentally, does not set criteria for hiring and promotion; rightfully, that is a prerogative of the institution and its departments. What the Government does ask is that the criteria be related to the job, and that institutions specify what the criteria are, and how they are evaluated.

No one is questioning the right and responsibility of the tenured faculty to recommend new appointments, reappointments, promotions, and salary increases. The Government does not disturb this arrangement other than to ask that the persons making decisions be able to justify that those decisions were indeed made on the basis of quality and individual merit, and not based on any discriminatory factors.

The justification of such decisions should not hamper the governance and decisionmaking traditions of academia; indeed, it is far more likely to improve the quality of such decisions.

Some people argue the Executive order will destroy "academic freedom." Academic freedom has traditionally meant the right to publish, to teach, and work with controversial ideas both in and out of the classroom. Academic freedom has never meant the denial of equal opportunity. How does it violate academic freedom to ask an end to preferences that have always existed: the preference for males, the preference for members of the "old boy" club?

Many persons feel that the principles developed by the courts should not be applied to academia. While it is indeed true that academia is unique in many ways, it is nevertheless difficult to justify that employment in academia—other than in its decentralization—is markedly different from any other professional employment.

If the principles developed under our statutes and constitution are not applicable to academia, then what indeed would apply? Certainly the time-honored academic principle of hiring the best qualified on the basis of merit is not threatened by regulations which require exactly that: hiring the best qualified person on the basis of merit.

Shall we exempt institutions from having to justify a hiring decision? Shall we exempt academic institutions from having criteria that are related to the job at hand and are not biased? Shall we exempt institutions from Executive order requirements to do a self-study to uncover discrimination?

There are many persons who are now promulgating binding arbitration as a way of handling academic discrimination. Such a procedure would have disastrous effects on the rights of women and minorities, for typically, arbitration is not concerned with the principles of redress of grievances and inequities, but with working out a compromise position between two adversaries. The rights of the individual and due process are not essential to arbitration procedures; arbitrators are not required to follow Federal standards or court derived principles concerning discrimination.

Nor is it clear how the arbitration process would be better than the conciliation process already available under title VII. The Equal Employment Opportunity Commission requires that all complaints, upon a finding of discrimination, be conciliated. Should either party be unhappy with the conciliation proceedings, the courts are available.

In contrast, any kind of binding arbitration would almost wholly bypass our court system, and would probably rule out all class complaints as well as complaints concerning patterns of discrimination.

The mediation-arbitration procedure would create a separate class of citizens; those with discrimination complaints in academia would have one set of remedies and the rest of the country would have another.

In effect, academic women and minorities, as well as academic men claiming reverse discrimination, would have less protection under arbitration than they do now. There would be no right of appeal nor any body of previous decisions to fall back upon.

Moreover, as well as individuals giving up their statutory rights, arbitration might also conflict with collective bargaining procedures: individuals who were involved in union contracts would have to choose between their own required arbitration procedures and those set up for discrimination problems.

Any type of binding arbitration procedure written into law to cover academics could open up a new series of court cases involving its relationship to title IX of the Educational Amendments of 1972, title VII of the Civil Rights Act, the Equal Pay Act, Executive Order 11246, the Civil Rights Acts of 1866 and 1871—sections 1981, 1983 and 1985—the 5th and 14th amendments.

Would the rights of individuals under those acts be suspended? Would women and minorities choosing an academic career have less or different rights from citizens choosing other types of employment?

In summary, affirmative action is coming under a good deal of criticism, partly because it has been badly administered, and partly because some administrators have misunderstood the Federal requirements. It would be tragic for the rights of citizens in this country if we confuse poor administration with imperfections in the law itself.

As a Jewish woman I am concerned and dismayed at the opposition to affirmation action that many Jewish groups have given. I want to point out that many Jewish women feel that these groups are concerned about Jewish men and, and they are not speaking for the Jewish women in academia who suffer far more in academia because of their sex than their religion.

Despite all the complaints and criticisms, it is interesting to note that not one institution has ever had funds withdrawn or terminated because of discrimination. Not one institution has ever had new contracts delayed because of discrimination, although some institutions have had delays because of a lack of an affirmative action plan. Not one institution has ever requested a hearing under the Executive order. Not one institution has ever had funds terminated, withdrawn, or delayed because of its failure to meet numerical goals. Not one charge of a pattern of discrimination filed with HEW has ever been refuted.

The academic community is one of the most powerful in this country—not because of money or direct power, but because it is responsible for training the youth and leaders of America.

If women and minorities are to have the birthright that is that of their white brothers they must have the opportunity to partake in the fruits of higher education as students, as staff, as faculty, as administrators. To weaken any of the laws that protect them from discrimination, particularly those that affect education, would be a serious abrogation and denial of the rights of women and minorities.

The legislation that prohibits discrimination on the campus is very new. We had all hoped that with the passage of these laws a new era had begun. But already, within a few short years the backlash has begun, and attempts to weaken existing laws and regulations are well underway.

Should any specific legislation be introduced which would in any way abrogate their current rights in academia, I would hope that this committee would invite testimony from national women's groups as well as those on the campus before such legislation was voted upon.

Women are the fastest growing, and potentially the largest advocacy group on the campus, and indeed, in the Nation. No longer will they weep if they are denied the rights that are those of their brothers. For women have something else to do. They are learning the politics of change. They are learning that the hand that rocks the cradle can indeed rock the boat. And the campus and the Nation will never be the same again.

Mr. O'Hara. Thank you, Mrs. Sandler.

I gather it would be a fair summary of your testimony to say that though you don't advocate reverse discrimination, you deny that it is occurring.

Ms. Sandler. Yes; there is very little of it compared to "real" discrimination. Reverse discrimination under our current laws and statutes is illegal in employment.

In terms of preference or reverse discrimiation involving students, it is not clear whether it is illegal. We had the DeFunis case which came to the Supreme Court and that was declared moot.

Mr. O'Hara. You say that if it had occurred it is only in a very few cases where administrators have misunderstood the application of affirmative action and so on?

Ms. Sandler. Yes.

Mr. O'Hara. Then you would have no objection to carefully worded legislation by this committee to make sure that such reverse discrimination as may have occurred can be eliminated?

Ms. Sandler. I would see no need for such additional legislation. I would think what may be more necessary is that HEW be given money and staff and a thorough shaking up so they can enforce the regulations that they are supposed to. They have already contacted institutions where cases of reverse discrimination occurred and said this was illegal.

I would be concerned about statutory provision in the sense that to some degree some limited preference is allowed in the courts.

I would be worried about disturbing the rights of the courts in the case of extreme discrimination to allow a limited amount of preference in those very limited instances.

Mr. O'Hara. In other words, you think there are circumstances under which preference can be justified on the basis of sex?

Ms. Sandler. Our courts have upheld a limited kind of preference, but those have been only upon a finding of discrimination. For example, the "X" police department has never hired blacks though 50 percent of the population is black. A court in that instance might impose a goal such as ratio hiring for a very limited time. There is another real constraint on that goal that says only qualified persons can be hired.

There is no compulsion to hire unqualified persons. That kind of goal has been upheld in the courts. The few goals that the courts have overturned occurred when there was no provision that qualified persons be hired.

Mr. O'Hara. I am not asking you what the courts have done. I am asking you what your view is of the matter. Do you believe that preference on the basis of race or sex is justified under those circumstances you described?

Ms. Sandler. In those very limited instances for a limited amount of time and under court supervision, yes. The Supreme Court has not ruled directly on that issue but it has denied certiorari to a number of cases. It hasn't ruled directly on the issue itself.

Mr. O'Hara. You don't see any significance to denial of certiorari?

Ms. Sandler. I am not sure what the Court thinks when they deny cert; I always feel better when they make a decision I can read.

Mr. O'Hara. The fact that they deny certiorari may mean one of a number of things.

Ms. Sandler. Yes. I think it is important to point out for the record that no educational institution has ever been ordered by a court to have numerical goals or limited preference. It is probably unlikely a court in that instance would order that kind of numerical goal.

Mr. O'Hara. In response to your testimony, let me suggest first I think it is a mistake to order preference on the basis of race or sex in a situation, even in a situation where a pattern of discrimination has been found because I think the more appropriate order—I would disagree with the court decisions to this extent—the more appropriate order would be the adoption of a hiring system that ignored racial or sex factors.

Ms. Sandler. This is exactly what the courts in essence has said. What they have said, though, is, "OK for the next 10 positions, half of those will be reserved for blacks, but from then on all hiring will be on a racially neutral basis." They allowed these in very limited instances and not with any great numbers.

I think the courts may allow this partly for symbolic reasons. It has been allowed in cases where the discrimination has been extremely gross. I am thinking of some of the police departments where minorities have not been hired at all. In that kind of instance the courts have felt it would be necessary to allow a small amount of limited preference for a limited time.

Mr. O'Hara. The distinction between goals and quotas, while you make it very clear—certainly the distinction you make is a valid one—I suspect in practice it doesn't work out to be a great deal different.

If the employer knows or suspects that he will be called down to justify hiring decisions that don't lead him toward a numerical goal and that he will not be called upon to justify decisions that do lead towards numerical goals, many employers—I think wrongfully—find it the easier way to sacrifice someone else's rights in order to avoid trouble for themselves.

It really doesn't matter much to the hiring authority if somebody who doesn't comply with the hiring goal is denied the job. It doesn't cost the personnel director anything. His job is still secure. I think he is more concerned about his job than he is about the applicant's job.

So, it is the easier way. Once they have the numerical goals before this, the easy way is to do whatever they have to represent those goals. Very few would stand up to it.

Ms. SANDLER. I think what you say can happen. I think the way to deal with it is that we need to be sure that people who are making hiring decisions know they are violating the law and are subject to penalty if they do this.

In academia I have every faith—I don't always have faith in my academic brethren—but I do have faith that they have the good sense to know that they can find qualified people to hire people on the basis of qualifications.

I can't quite see people saying, well, I will hire one woman and one black to get HEW off my back when they know that is clearly illegal. Many of them are simply unaware of the illegalities of actions like that.

Mr. O'HARA. I guess you have more faith in them than I do.

Ms. SANDLER. I have faith only if they knew that it was illegal and that there were penalties for violation. The difficulty I find is that administrators and presidents generally know that reverse discrimination is illegal, but the department heads very often don't. Many of the faculty who serve on academic research committees have absolutely no idea of what the Executive order requires, what title VII requires, and what it allows them and what it forbids.

I suspect if we had more education in the educational institutions on these issues we would be better off.

Mr. O'HARA. I am sure that is always the case. We very much appreciate your analysis of just how the various laws and Executive orders applied to institutions of higher education. I think it was a very well done, understandable brief analysis of the situation and I appreciate that

Ms. Sandler, I would like to talk to you longer but I have to go to the Rules Committee sometime this morning to testify on a matter pending before the committee. It is very difficult to round up members of the subcommittee. They have other matters, too.

will have to move on, but thank you very much.

Ms. SANDLER. Thank you very much.

[The complete statement referred to follows:]

PREPARED STATEMENT OF BERNICE SANDLER, DIRECTOR, PROJECT ON THE STATUS AND EDUCATION OF WOMEN, ASSOCIATION OF AMERICAN COLLEGES

I am Dr. Bernice Sandler, Executive Associate and Director of the Project on the Status and Education of Women at the Association of American Colleges. Formerly I was head of the Action Committee of the Women's Equity Action League (WEAL) which was instrumental in bringing about federal enforcement of Executive Order 11246 regarding sex discrimination in universities and colleges. I serve on the Board of numerous women's organizations, including WEAL, and also served as a member of the Advisory Committee on the Economic Role of Women to the President's Council of Economic Advisors. In 1970 I was an Education Specialist on the staff of this Sub-Committee, where I worked on the hearings on sex discrimination that laid the groundwork for Title IX and other legislation. I have also taught at the University of Maryland, and have testified before numerous Congressional Committees concerning sex discrimination in higher education.

Until very recently, sex discrimination on the campus whether against faculty, staff, or students was largely unnoticed, unchallenged and unchecked. Indeed, such discrimination against most women in the academic community was legal; only an Executive Order forbidding discrimination in employment by federal contractors applied: educational institutions without federal contracts could legally discriminate against faculty women and students. Prior to 1970, however, the Executive Order was not enforced with regard to sex or racial discrimination in universities. *The 92nd Congress*, in a little-noticed legislative explosion, *articulated a national policy to end sex discrimination on the campus.* Title VII of the Civil Rights Act of 1964, which forbids discrimination in employment, was extended to cover *all* educational institutions whether or not they receive federal monies; the Equal Pay Act was extended to cover all administrative, executive and professional employees, so that faculty are now covered; and Title IX of the Education Amendments Act of 1972 was enacted to forbid sex discrimination against students *and* employees in federally assisted education programs. There was virtually no opposition to the passage of these laws by either the educational community or the public at large. Discrimination, once only a philosophical or moral issue, is now a legal issue as well. These laws are not merely employment laws; they are *civil rights laws* with a different legislative and judicial history.

Academics have been puzzled and somewhat bewildered by the impact of these new laws. Prior to this, many institutions holding federal contracts had already felt the sting of the federal government under Executive Order 11246 as amended, which required all federal contractors to end discrimination in employment and to have a written plan of affirmative action. The application of the Executive Order coupled with the new legislation[1] has raised new questions and concerns within the academic community as to how federal law impacts upon the traditional employment practices of academia. *More charges of sex discrimination have been filed against institutions of higher learning than against any other industry in the country.* More than 500 institutions have been charged under the Executive Order 11246, about 1600 have been charged under Title VII and perhaps as many as a thousand under the Equal Pay Act.

Of all the areas in our society that have come under criticism for its treatment of women, the most frequent target has been higher education. I do not want to imply that discrimination in education is worse than the rest of society, but certainly the anger and discontent of women is sharpest in academia. Discrimination in academia is so widespread that many persons say it is a national scandal. I could tell you of women who earn less than the equally qualified men they work alongside. I can tell you of some women who have received raises of $1,000, $6,000, $10,000 and $13,000 when their institutions were required, under the Executive Order, to examine their salaries. I could tell you of women who in a time of budget cuts are terminated because they are "married and don't need the job." I could tell you, despite the changes in the law, of lives that have been damaged, and careers that have been stunted.

Sex discrimination on the campus is not a myth; it is real, and it hurts our nation by depriving it of the resources of half of our talented persons, those who were born female. The stories of discrimination against women in academia have been documented all too often, and most notably in the 1970 hearings heard before this Committee.

The problems of academia and sex discriminaiton, however, have not been solved with the passage of laws that those hearings spearheaded. Hearings held just a few months ago before a Committee of the California legislature documents that the same massive pattern of discrimination against women still exists. Not enough time has yet elapsed, and too often, the laws have been unenforced, or enforced badly. But without this legislation, there would have been little change, if any. When the 1970 hearings were held, not one member of the educational establishment accepted the offer to testify. "There is no sex discrimination on the campus," they said, "and besides, it's not a problem."

---

[1] A chart entitled "Federal Laws and Regulations Concerning Sex Discrimination in Educational Institutions" prepared by the Project on the Status and Education of Women, Association of American Colleges, is available at no cost from the Office for Civil Rights, Department of Health, Education and Welfare, Washington, D.C. 20201.

Today, four years later, there is indeed acknowledgment of the problem, and institutions are slowly but surely beginning to respond. But all of the responses have not been positive; there is a good deal of resistance to change and backlash. Let me summarize briefly the legislation that covers discrimination against employees in education, particularly in terms of affirmative action.

EXECUTIVE ORDER 11246 AS AMENDED BY EXECUTIVE ORDER 11375

The Executive Order covers *only* those institutions which hold federal contracts. It prohibits discrimination in employment. It is not law, but a series of rules and regulations which contractors *agree* to follow when they accept a federal contract. Its main provision is that the contractor must have a written plan of affirmative action to "remedy the effects of past discrimination" and to prevent the continuation of current discrimination. The Department of Labor through its Office of Federal Contract Compliance is responsible for all policy matters under the Executive Order; the Department of Health, Education and Welfare, however, does the actual review and enforcement in universities and colleges.

Institutions which *voluntarily* agree to provide a service to the government by way of a contract, are required to undertake affirmative action, regardless of whether or not there has been a finding of discrimination. Such action includes, but is not limited to numerical goals. (In contrast, monies having the purpose of *assisting the institution*—rather than *providing a service* to the government—carry no affirmative action requirement.)

Should an institution fail to follow the requirements of the Executive Order, contracts can be delayed, suspended, or terminated.

THE EQUAL PAY ACT OF 1963, AS AMENDED BY TITLE IX OF THE EDUCATION AMENDMENTS OF 1972

In the Educational Amendments Act of 1972 there is a little-noted section that extends the coverage of the Equal Pay Act of 1963 to executive, administrative and professional employees, including all faculty. It is enforced by the Wage and Hour Division of the Employment Standards Administration of the Department of Labor. Like the Executive Order, but unlike Title VII, reviews can be conducted without prior complaint. The Equal Pay Act was the first sex discrimination legislation enacted and has been successful in getting non-professional women *millions of dollars* in back pay.

After a review is conducted, if a violation is found, the employer is asked to settle on the spot, i.e., raise the wages and pay back pay to the underpaid workers. Should the employer refuse (and most don't, as 95% of the cases are settled without recourse to litigation), the Department of Labor is authorized to go to court. No affirmative action is required other than back pay.

TITLE IX OF THE EDUCATION AMENDMENTS OF 1972 (HIGHER EDUCATION ACT)

Title IX forbids discrimination on the basis of sex in all federally assisted education programs. Both students *and* employees are covered. All institutions, whether public or private, that receive federal monies by way of a grant, loan or contract are covered. Title IX is patterned after Title VI of the Civil Rights Act of 1964 which forbids discrimination on the basis of race, color and national origin in all federally assisted programs. The Department of Health, Education and Welfare is the enforcement agency.

Affirmative action is *not* required but can be imposed after a finding of discrimination.

TITLE VII OF THE CIVIL RIGHTS ACT OF 1964, AS AMENDED BY THE EQUAL EMPLOYMENT OPPORTUNITY ACT OF 1972

Title VII was amended on March 24, 1972, to cover educational institutions and forbids discrimination on the basis of race, color, national origin, religion and sex in employment by unions and by employers. It applies to all institutions, public or private, whether or not they receive any federal funds. Title VII is enforced by the Equal Employment Opportunity Commission, which is appointed by the President. However, unlike the Executive Order, no affirmative action is required; employers are required merely to note discrimination in employment. A conciliation agreement or court order *may* require affirmative action, but this would be *after* a finding of discrimination. Should conciliation fail, the Equal Employment Opportunity Commission can take an employer to court.

The basic body of legal principles applying to employment discrimination have been developed in Title VII litigation and in cases involving the Fifth and Fourteenth Amendments of the Constitution.

WHEN IS AFFIRMATIVE ACTION REQUIRED?

Institutions can become involved with affirmative action in any of the following manners:

1. Any institution can voluntarily develop an affirmative action plan.
2. Institutions which voluntarily accept a government contract are required to develop affirmative action plans, including numerical goals.
3. An institution which has been charged with discrimination under Title VII, the Fourteenth Amendment, the Fifth Amendment, Title IX, and possibly the Civil Rights Acts of 1866 and 1871, may be required to develop affirmative action procedures as a result of conciliation or as a private settlement of a suit under these laws. Numerical goals may be included.
4. If conciliation or private settlement of a suit has failed, the court may impose affirmative action requirements, including numerical goals.

DISCRIMINATORY PRACTICES AND POLICIES: A VIEW FROM THE COURTS

Despite some overlapping coverage, the principles utilized by the separate federal agencies to determine policies regarding discrimination are remarkably similar. EEOC, the Department of Labor and HEW continually examine court decisions concerning discrimination and use these decisions as a solid base for determining policy.

Many of the issues now being debated somewhat ex post facto in the Halls of Ivy have already been decided in the courts.

Court decisions that were previously applicable to discrimination in nonacademic settings now extend to the educational world. Most of these decisions have occurred in cases involving race, but the principles essentially extend to other minority groups, including women.

Thus the policies of affirmative action and numerical goals were not "diabolical" plans developed "conspiratorily" by HEW and other federal agencies. *These concepts and precedents,* however, *are not based on an "industrial" model, but derive from statutes, legislative histories, judicial decisions, the principal of equity, and the Constitution.*

Civil rights legislation and court decisions are intimately related to the concept of *equity:* "setting things right." This is the guiding principle that underlies numerical goals. The Supreme Court has stated that the Court:

> . . . may order such affirmative relief as may be appropriate. [It] has not merely the power, but the *duty* to render a decree which so far as possible [will] eliminate the discriminatory effects of the past as well as bar like discrimination in the future. [*Louisiana* v. *United States,* 380 U.S. 145 (1965). Emphasis added.

The opponents of affirmative action often use the term loosely and sometimes erroneously to describe a variety of actions. Broadly speaking, affirmative actions are efforts aimed to end discrimination and to remedy the effects of past discrimination. It includes a great many activities which are not controversial, such as notifying women's and minority groups about job openings; advertising job openings rather than relying on word-of-mouth notification; developing recruiting procedures aimed at women and minorities as well as at other qualified applicants, etc.

Of all the areas involved in affirmative action, the concept of numerical goals and timetables is perhaps the most controversial. Numerical goals are often confused with quotas; the terms are often erroneously used interchangeable. However, the government and the courts have made a clear distinction between the two: goals are legal; quotas clearly violate the Constitution and numerous federal statutes. Quota systems keep people out; goals are *targets* for inclusion of people previously excluded. *Goals are an attempt to estimate what the employer's work force would look like if there was no illegal discrimination based on race or sex.* Goals are aligned, with the number or percentage of qualified women and minorities available and *not* in terms of their general representation in the population.

Under the Executive Order, the institution does its *own* analysis of its work force and determines if there is underutilization of women and/or minorities.

For example, women receive about 23% of the doctorates awarded in psychology, and studies indicate that 91% of women with doctorates work. Furthermore, approximately 23% of the psychologists listed with the National Register of Scientific and Technological Personnel are female. Thus if there were no women or substantially less than 23% women in a department of psychology, "underultilization" would exist. Such a presumption, based on statistical analysis, has been upheld in the courts. Indeed, statistics such as these can be used as *prima facie* evidence of discrimination. "Statistics often tell much, and the courts listen . . ." [*States of Alabama* v. *United States*, 304 F. 2d 853 (5th Circuit, 1962), *aff'd mem.*, 371 U.S. 37 (1962)].[2]

The courts have not hesitated to use statistics both as a measure of discrimination and as a measure of compliance. Institutions cannot rebut statistical evidence on the basis that no women or minorities applied. (An institution may have a reputation as discriminatory, and that may have had a "chilling" effect on employment applications.[3] Underutilization, under existing case law, raises a presumption of discrimination under the Executive Order and Title VII. When statistical evidence indicates that there has been a pattern of discrimination, the burden of proof is then shifted to the employer, who must then demonstrate that there is and has been no discrimination, that the job criteria are indeed job-related and that employment practices do not and have not had a discriminatory effect.

Under the Executive Order, after an institution does its own analysis it sets its own goals, based on that analysis and subject to approval by HEW. Under Title VII, when a charge has been filed, EEOC does the analysis, and EEOC and/or the courts may set a goal upon a finding of discrimination.

Goals have been upheld in the courts as relief for a substantiated *pattern* of discrimination.[4] The aim is not punitive; no one is required to be fired. Goals are simply an attempt to remedy the continued effect of discrimination in the present and to give relief to a specific class that has been discriminated against in the past.

The goal is tailor-made to a specific situation, in terms of anticipated employee turnover rate, new vacancies, promotion and upgrading, and the availability of qualified women and minorities. The goal varies for different job classifications; it could be as general as one for "psychologists" or it could be more specific, such as one for "clinical psychologists." It will obviously vary for different job classifications; and within institutions, it will vary from department to department.

GOALS AND PREFERENTIAL TREATMENT

Many people believe that goals and qaotas are identical and that goals require preferential treatment. However, the courts have indicated that affirmative action in employment is legal and does not constitute preference when undertaken to remedy past discriminatory practices. Indeed, preference is clearly illegal under the Executive Order, Title VII [see section 703(j)], and all other laws requiring non-discrimination. *No institution is required to hire women or minorities on the basis of sexual or racial preference.* To do so would clearly be illegal. Affirmative action is not aimed at creating preference but at *ending* the preference for white males which has always existed in academia.

What the Executive Order and Title VII do require is the *obligation of fair recruiting and hiring.* If an institution fails to meet the goals, it then has to show that it made a good faith effort to recruit, hire and promote qualified women and minorities, and it has to be able to produce records documenting those efforts. For example, the Department Head may show that he or she has contacted women's groups (such as the women's caucuses relevant to the discipline), has contacted individual women scholars for referral of candidates, has included in letters to colleagues and in job advertisements statements like

[4] For a lengthy but only partial listing of cases, see *Technical Comment #1*, International Association of Official Human Rights Agencies. 1625 K St., N.W., Washington, D.C. 20006, September 7, 1972. When appealed to the Supreme Court, the Court has let these decisions stand by denying certiorari.

"women and minorities, including minority women, are welcome to apply" and has also evaluated those already in the department who might qualify for the opening. If, after doing all this, it turns out that all the women were poorly qualified, and the man hired was indeed the best qualified applicant, the employer can document a good faith effort at affirmative action and thus can justify the decision to hire the white male. If so, the employer has discharged the obligation under Executive Order; *the obligation to meet the goal is not absolute.*

There is no requirement whatsoever that would force academicians to hire lesser qualified women or minorities. If the best qualified person is white and male, then that person can be hired. What the employer must be able to demonstrate is three-fold:

1. A genuine good faith effort to recruit women and minorities (good faith does *not* mean calling one's white male colleague, asking if he knows a good *man*, and then after the hiring is completed, saying, "Certainly I'd have been glad to hire a 'qualified' woman or minority person if I could have found one. Unfortunately, none applied.");
2. Specification of job-related objective criteria, *before* the hiring process. The criteria for professional jobs are often complex and difficult to assess; nevertheless, they are subject to the same requirements as other jobs. Subjective, intuitive judgments are not acceptable criteria for hiring. For example, the courts have already held that promotional policies for executives are subject to standards of objectivity and must be job related.[5]
3. Equal application of criteria. Whatever standards or criteria are set for white men must be applied equally to women and minorities.

In some instances, the *courts* have imposed a kind of limited preference—more stringent numerical goals than those required by institutions under the Executive Order. Court ordered goals have occurred only in public employment and industrial settings, and not in academia.

The differences between court ordered goals and those required under the Executive Order are critical:

1. Under the Executive Order, goals are set *by the institution*, after it does its own analysis. In a court situation, the federal government does the analysis and sets the goal.

2. Under the Executive Order, the *best-qualified* person may be hired. *Only in a court* situation, can a lesser qualified person be hired. This limited preference has been allowed in 6 courts *only* after a finding of discrimination, and for a limited time only. The affirmative action requirements that institutions *voluntarily* assume when they accept a contract, however, do not in any way *allow or compel* institutions to give preference to lesser qualified persons on the basis of race, color, national origin or sex.

In the few cases where goals have been overturned by the courts,[6] it was because the goal was not a goal but a quota, and because there was no provision to insure that qualified persons were hired.

IS PREFERENCE REQUIRED BY LAW? IS PREFERENCE BEING GIVEN TO WOMEN AND MINORITIES IN ACADEMIA?

Recently there have been substantial questions raised about affirmative action and its implications for academia. Richard Lester's Report for the Carnegie Commission on Higher Education[7] (and which, incidentally, the Commission does *not* endorse) is typical of the objections raised.

Lester claims that institutions are being "forced" to hire less qualified women and minorities, and that institutions are giving sexual and racial preference in hiring. He gives no data whatsoever to support this claim.

Any institution that gives preference in hiring on the basis of sex or race or ethnic origin is violating the law. Those that claim that they have been *forced* to give preference to lesser qualified women and minorities have sadly misunderstood the law and their rights under it.

[5] *Marquez v. Ford Motor Co.*, Omaha District Sales Office, 440 F. 2d 1157 (8th Cir. 1971).

[6] See, e.g., the 3rd Circuit decision overturning part of the order by the United States District Court in the Eastern District of Pennsylvania involving the hiring of policemen. *Commonwealth of Philadelphia v. O'Neill*, 5 EPD 1974: "This order does not, certainly on its face, limit the pool from which applicants are to be chosen to those necessarily qualified to be policemen."

[7] *Antibias Regulations of Universities*, by Richard Lester, McGraw-Hill, 1974.

The data concerning the increase in the hiring of women and minorities in academia simply do not uphold the academic myth that women and minorities are being hired in any great numbers by the academic community. Lester himself quotes the ACE study which reports that over the five year period from 1968 to 1973, minority faculty employment increased .7% to 2.9% of the total faculty, and women increased all of .9%, from 19.1 to 20% of the total faculty. Many institutions after a year or two of affirmative action programs report a *drop* in women faculty, even though the number and percentage of male faculty increased during that period.

The National Academy of Sciences reports that the unemployment of women with doctorates in science, engineering and social sciences is more than four times as high as the unemployment rate of their male colleagues: 3.9% compared to .9%.[8] A study at the University of Michigan[9] of recent doctoral recipients showed that women doctorates were unemployed or under-employed at three times the rate of their male counterparts. In the biological and medical sciences, about 50% of the men who were in teaching institutions were in schools regarded as comparable to the University of Michigan; for the women, only 16% were comparably placed.

Similar studies conducted within particular disciplines show the same pattern. The fear that unqualified women are invading the tenured ranks seems to have little basis in fact. Of nearly 200 institutions[10] with graduate programs in chemistry (which is virtually all of the institutions which have such programs), between 1971 and 1973, the increase in the number of women at the full professorship level was exactly *one*. At the associate professor level, a net gain of seven was reported. While it is true that the pool of women chemists is not very deep, there have been approximately *1,500* women who received Ph.D.'s in chemistry since 1960. Were there really only eight that were qualified to become associate or full professors in a two-year period? Somehow, women who are qualified to receive Ph.D.'s at our major institutions are "unqualified" to teach at those same institutions.

While it is true that academic hiring has indeed slowed down, many institutions are still increasing their faculty, although at a far slower rate than previously. But few women and minorities are being hired, and when they are hired it is almost always at the lower ranks. The University of Minnesota, for example, reported that about half of its increase in academic staff consisted of white males. The women and minorities were hired in *low* positions, part-time, one year contracts, instructorships and the like. Only *three* of the fifty-three associate professor appointments were to women, and all three were either part-time or visiting appointments.

Lester's argument that academic quality will decrease is partly based on an inaccurate reading of Revised Order #4 of the Executive Order 11246. He quotes from the Order as follows: "Neither minority nor female employees should be required to possess higher qualifications than those of the lowest qualified incumbent.[11] He neglects to mention, however, that this is *not a requirement* of Revised Order #4 but *merely a suggestion*. More importantly, he does not mention that HEW has stated innumerable times that the particular suggestion does *not* apply to academic positions.

Some academicians argue that the government only looks at *job content* and not at individual contributions and qualifications. For example, Lester claims the Equal Pay Act makes job content the controlling factor, and thus it "is difficult to apply to variations in the quality of intellectual performance and creativity." [12] If that were true, of course academia would suffer. Fortunately, however, the good professor is in error again.[13] The Equal Pay Act, Title VII and the Executive

[11] Lester, p. 27, 99.

[12] Lester, p. 130.

[13] Numerous technical errors abound in his book. For example, Lester is in error when he talks about the *five* years of academic experience with affirmative action when in fact the Executive Order has only been enforced for *four* years. (The first antibias investigation occurred in the spring of 1970, making a total of *four* years between the first investigation and the publication of Lester's book in mid-1974.) Several dates and laws are incorrectly stated.

Order all specifically *allow differences in pay and rank to be based on seniority and merit*, provided that the seniority and merit systems are not based on sex or any other impermissable classification.

The myth is that reverse discrimination is endemic, and that white males are having difficulty because preference is being given to women and minorities. It is of course true that in a time of restricted budgets and a contracted economy it is harder for *anyone*, male or female, to find academic employment, but that is *not* reverse discrimination.

Some of the complaints have been specious; several white men have complained of reverse discrimination simply because a woman was hired and they were not. The mere hiring of a woman, no matter how qualified, is assumed by some to be *prima facie* evidence of "reverse discrimination." In fact, the few women that have been hired have generally been superbly qualified. Our Project has seen no date to confirm, nor does Lester or anyone else offer data indicating that institutions have given preference in any large way on the basis of race or sex and indeed hired unqualified or lesser qualified women and minorities. Such preference, if it existed, would violate the law.

On occasion, some administrators have used affirmative action as an excuse for turning down applicants they did not want to hire. One department head at a large Western university wrote four of the five applicants for a position that he could not hire them because HEW "insisted" he hire a woman or minority. However, the fifth candidate—the one who got the job—was neither female nor minority; it was a white male. Needless to say, practices such as this violate the law, as well as generating inaccurate complaints of reverse discrimination.

Academics are not worried about women wanting good jobs *outside* of academia. They are worried about competing with women for the same jobs that they want. Women, like minorities, are an economic threat to white males. As more women and minorities are treated more fairly, white males will have to compete with them for the limited number of jobs. Some of these men who would have been hired if women and minorities were kept out, will now be turned down because they were not as well qualified as the women and minorities hired. But that isnot reverse discrimination.

On the other hand, some complaints of reverse discrimination have been justified. Some administrators have misunderstood the federal requirements and have erroneously believed that only women and minorities, including minority women, could be hired. HEW has played a major role in such misconceptions, and criticism of HEW for inefficiency, incompetancy and inconsistent interpretations is more than justified.

However, to confuse the incompetance of HEW with defects in the law itself would be tragic. It would be like saying that because *some* police are inefficient and incompetant, we should therefore abolish the laws they are supposed to enforce. Too often, there has been a vast difference between what the law actually requires and the lack of clear policies at HEW.

Certainly HEW's OCR has been one of the worst-run agencies in the government. The Women's Equity Action League (WEAL) and several other women's groups are planning to sue HEW for its poor enforcement. Also, the General Accounting Office (GAO), the investigative arm of the Congress, is currently reviewing OCR's activities.

What some administrators object to most is the federal interference with the "traditional" methods of employment decisions in academia. No one wants the government to watch over their shoulder; but, on the other hand, it is difficult to ju[illegible] why academia alone should be exempt from the same rules and regulations that apply to every other industry in the country.

Any attempt to exempt academia from the federal regulations and statutes that prohibit discrimination would deprive women and minority faculty of the fundamental civil rights now enjoyed by all citizens of this country. It would be the first step backward in civil rights legislation, and it would set a dangerous precedent for other segments of society seeking exemption from these laws. Moreover, the Congress specifically rejected the notion that academic institutions should be treated separately from the rest of the country when it amended in 1972, Title VII of the Civil Rights Act of 1964 by deleting the exemption for educational institutions.

Administrators are understandably concerned about Federal "interference" in hiring and promotion decisions. If you have never had to justify a hiring or promotion decision, the threat of having to put it in writing can be quite upsetting. On the other hand, if an administrator or committee *cannot* justify a decision, then either someone is in the wrong job or getting the wrong salary, or else you have a very poor administrator or committee. Despite claims of an objective merit system, academic judgments in the past have too often been intuitive and subjective. Now instead of being able to justify a candidate merely by saying, "Dr. X is a fine fellow with a good reputation who has published a good deal," department heads will have to develop specific, objective criteria and be able to demonstrate that the candidate is the *very best* person recruited from the largest possible pool, a pool which will include qualified women and minorities. The demands of affirmative action, far from diminishing academic quality, are likely to *increase* it by requiring that hiring and promotion policies be truly based on merit without discrimination.

Institutions are upset because they have generally relied on the "old boy" method of recruiting and hiring—the vast informal network of old school chums, colleagues and drinking buddies, etc.—a network to which women and minorities rarely have access. The merit system has always been a closed merit system, for large portions of the available, qualified pool have been excluded. The government is not asking that the merit system be abolished, but only that it be opened to a larger pool of qualified persons. To recruit in a different manner means change, and change is never easy, particularly if it means women and minorities coming in to challenge the power base.

HEW, incidentally, *does not set criteria* for hiring and promotion; rightfully, that is a prerogative of the institution and its departments. What the government does ask is that the criteria be related to the job, and that institutions specify what the criteria are and how they are evaluated.

No one is questioning the right and responsibility of the tenured faculty to recommend new appointments, reappointments, promotions and salary increases. The government does not disturb this arrangement other than to ask that the persons making decisions be able to *justify* that those decisions were indeed made on the basis of quality and individual merit, and not based on any discriminatory factors. The justification of such decisions should not hamper the governance and decision making traditions of academia; indeed it is far more likely to improve the quality of such decisions.

Just as there are those in the private sector of the economy who argue that federal prohibitions against discrimination will destroy the "free enterprise system," there are those in the academic sector who argue that the same federal prohibitions will destroy "academic freedom." Yet academic freedom has traditionally meant the right to publish, to teach and work with controversial ideas both in and out of the classroom. Academic freedom has never meant the denial of equal opportunity. How does it violate academic freedom to ask an end to preferences that have always existed: the preference of males, the preference for members of the "old boy" club? In one sense, the words "academic freedom" have become a smokescreen to obscure the basic issues. Women's groups claim that the term is analogous to the cry of "states' rights" and "quality education."

Many persons feel that the principles developed by the courts in industrial settings should not be applied to academia. While it is indeed true that academia is unique in many ways, it is indeed difficult to justify that employment in academia—other than in its decentralization—is markedly different from any other professional employment. Certainly hospital clinics, law firms, top management in industry, etc. also want to hire the best qualified persons judged on the basis of professional competence. If the principles developed under our statutes and constitution are not applicable to academia, then what indeed would apply? Certainly the time-honored academic principle of hiring the *best* qualified on the basis of merit is not threatened by regulations which require exactly that: hiring the best qualified person on the basis of merit. Shall we exempt institutions from having to justify a hiring decision? Shall we exempt academic institutions from having criteria that are related to the job at hand and are not biased? Shall we exempt institutions from Executive Order requirements to do a self-study to uncover discrimination?

THE DANGERS OF ARBITRATION AS A PROPOSED SOLUTION

There are many persons, who are now promulgating binding arbitration as a way of handling academic discrimination. Such a procedure would have disastrous effects on the rights of women and minorities, for typically, arbitration is not concerned with the principles of redress of grievances or inequities, but with working out a compromise position between two adversaries. The rights of the individual and due process are not essential to arbitration procedures; arbitrators are not required to follow federal standards or court derived principles in working out solutions. Thus an arbitration panel would not need to follow the definition of discrimination articulated by the Supreme Court in *Griggs* v. *Duke Power Co.*, 401 U.S. 424 (1971). How would remedies be determined if the concept of equity is abandoned? What would be the standard of proof if there is no body of past decisions to fall back upon? Constitutional due process which is now assured in all forums involving discrimination would not be assured under arbitration. If, on the other hand, such concepts were incorporated by law, into a binding arbitration process, then it is not clear how the arbitration process would be better than the conciliation process already available under Title VII. The Equal Employment Opportunity Commission requires that all complaints, upon a finding of discrimination, be conciliated. Should either party be unhappy with the conciliation proceedings, the courts are available. In contrast, any kind of binding arbitration would almost wholly bypass our court system, and would probably rule out all class complaints and complaints concerning *patterns* of discrimination.

Although Lester's proposal for binding arbitration would allow the complainant to insist that the mediator or arbitrator have the same power to levy remedies as a federal or state agency or the courts, he is not in favor of using court-developed principles in the mediation: the procedures and decisions would be "more flexible and better adapted" to the circumstances than decisions "based on precedents developed in previous cases on the basis of industrial employment." Thus the "principles" utilized by the mediator-arbitrator would not be those that have been developed by our courts. New principles would have to be developed, and there is no assurance as to what direction these might go.

If the mediation-arbitration procedure was required of all academic discrimination complaints, it might well create a separate class of citizens: those with discrimination complaints in academia would have one set of procedures, and the rest of the country would have another. In effect, academic women and minorities, as well as academic men claiming reverse discrimination, would have *less* protection under arbitration than they do now. There would be *no right of appeal* nor *any body of previous decisions to fall back upon*. Moreover, unless the procedure was required *by law*, it might not be binding on women and minorities, for as the Supreme Court recently ruled in *Alexander* v. *Gardner-Denver Co.*, —— U.S. —— (1974), a union contract requiring arbitration does *not* bar an employee from using Title VII machinery. Employees are not prohibited from filing charges of discrimination against their employer (or union) *even if an arbitrator has rejected their claim*. Thus, an employee is not bound to use the contract grievance machinery in instances involving discrimination, nor is the employee (in contrast to the employer) bound by an adverse findings of an arbitrator. Justice Powell, who delivered the unanimous decision, stated that while the arbitrators' opinion may be entitled to some weight as evidence in the worker's Title VII claim, it was the federal courts and not the arbitrator that would have the last word.

Whether universities would agree to a procedure that is binding upon them but not on the grievant is questionable. Unless the grievant felt that he or she would get fairer treatment from the panel than from the courts, there might be little incentive to use it, particularly if the principles on which it would base its decision are unknown and likely not to be as beneficial (from the grievant's standpoint) as those that could be obtained by EEOC and the courts. While there might be economic incentives for a grievant to use the panel in preference to taking one's own suit to court, grievants now have the option of allowing EEOC to handle the complaint, with its power of requesting an injunction and using its own attorneys at no expense to the grievant in a court case. The large backlog in EEOC cases, however, might make the panel more attractive in terms of no backlog. (However, with 1,600 institutions charged under EEOC between 1972–1974, the panel might quickly run into the same backlog problem.)

Moreover, as well as individuals giving up their statutory rights, arbitration might also conflict with collective bargaining procedures: individuals who were involved in union contracts would have to choose between their own required arbitration procedures and those set up for discrimination problems, or perhaps a person who simultaneously claimed discrimination *and* violation of union procedures would have two sets of arbitration proceedings to follow.

Among the advantages Lester sees for the arbitration process is that lawyers are less likely to be involved and also that the confidentiality of records would be maintained. If the panel had any teeth, such as the power to grant tenure or back pay as a remedy, it is highly doubtful that either party would care to present their case without legal aid. Moreover, the issue of confidentiality, while understandably of great concern to institutions, is perhaps somewhat of a red herring. EEOC, under Title VII, is prohibited *by law* from releasing any information whatsoever concerning any case before them, including the names of either party to the complaint.[14] Should the case go to court, records can be made public, although either side could ask that the records be heard *in camera*. The Equal Pay Act is enforced with similar requirements of confidentiality; names and records are not released unless the case goes to court. Although the Executive Order has no such restrictions, HEW will not release any confidential records concerning individuals and is allowed to withhold these records under the Freedom of Information Act.

Institutions cannot on their won withhold such records from any government enforcement agency,[15] but these records as mentioned above are indeed protected from public scrutiny.

Any type of binding arbitration procedure written into law to cover academics could open up a new series of court cases involving its relationship to Title IX, Title VII, The Equal Pay Act, Executive Order 11246, the Civil Rights Acts of 1866 and 1871 (Sections 1981, 1983 and 1985), the Fifth and Fourteenth Amendments. Would the rights of individuals under these acts be suspended? Would women and minorities choosing an academic career have *less* or *different* rights from citizens choosing other types of employment?

CONCLUSION

In summary, affirmative action is coming under a good deal of criticism, partly because it has been badly administered, and partly because some administrators have misunderstood the federal requirements. It would be tragic for the rights of citizens in this country if we confuse poor administration with imperfections in the law itself.

Yet at the same time that many people are critical of HEW as being inconsistent and unable to understand academia, the same persons are recommending that there be only one single agency to deal with discrimination in academia and that that agency be HEW. Some women's groups interpret this as an indication that institutions would prefer HEW because it is most likely to be the weakest of all the enforcement agencies. Whether this is true or not is unclear; however, of all the agencies involved, HEW is most prone to respond to pressure from academic institutions, so women's groups are somewhat concerned about the rights of individuals in those circumstances. It is also important to note in this connection that the Congress in 1972 rejected the notion of any single mammoth enforcement agency for all discrimination complaints.[16] A *single* enforcement agency would likely be far more rigid in requirements for institutions than is currently the case.

Moreover, the basic policies of the several agencies are remarkably similar: there are no conflicts, although the EEOC is somewhat stricter in its guidelines than those of the Departments of Labor and HEW in terms of pensions and maternity leave. However, any institution conforming to EEOC guidelines will be in compliance with those of the other departments.

Data collection is gradually being unified, with the preparation of the new EEOC 6 form for educational institutions. Despite complaints, the collection of data is one of the unexpected benefits of government regulation: for the first time many institutions are collecting data that is not only necessary for affirmative action but is essential for effective fiscal planning and management. (For example, one of the most prestigious institutions in New York could not provide a simple list of all its personnel when asked to do so by HEW.) Such data, although sometimes expensive to collect initially, will repay its costs[17] as a result of better evaluation and planning on the part of institutions.

Despite all the complaints and criticisms, it is interesting to note that *not one institution has ever had funds withdrawn or terminated because of dis-*

---

[14] The parties of the complaint, however, are not bound by this requirement.

[15] *EEOC v. University of New Mexico*, 7 EPD 9118, (D.C., N.M., November 2, 1973).

[16] The charge that the Executive Order has no Congressional approval is somewhat specious; the Congress has specifically *authorized* the budgets for various federal agencies to enforce the Executive Order.

[17] According to testimony before this Committee, the University of California at Berkeley will spend $3 million on affirmative action this coming year. The New York Times (Sept. 15, 1974) reports that Berkeley's budget for the year is $493 million. Thus, the amount spent on affirmative action represents 6/10 of 1% of the total budget for that campus.

criminaion. Not one institution has ever had new contracts delayed because of discrimination, although some institutions have had delays because of a lack of an affirmative action plan. *Not one institution has ever requested a hearing* under the Executive Order. *Not one institution has ever had funds terminated, withdrawn, or delayed because of its failure to meet numerical goals. Not one charge of a pattern of discrimination filed with HEW has ever been refuted.*

The academic community is one of the most powerful in this country—not because of money or direct power, but because it is responsible for training the youth and leaders of America. If women and minorities are to have the birthright that is that of their white brothers they must have the opportunity to partake in the fruits of higher education as students, as staff, as faculty, as administrators. To weaken *any* of the laws that protect them from discrimination, particularly those that affect education, would be a serious abrogation and denial of the rights of women and minorities.

The legislation that prohibits discrimination on the campus is very new. We had all hoped that with the passage of these laws that prohibited discrimination on the campus a new era had begun. But already, within a few short years the backlash has begun and attempts to weaken existing laws and regulations are well underway. Should any specific legislation be introduced which would in any way abrogate their current rights in academia, I would hope that this Committee would invite testimony from national women's groups as well as those on the campus *before* such legislation was voted upon. Women are the fastest growing, and potentially the largest advocacy group on the campus, and indeed, in the nation. No longer will they weep if they are denied the rights that are those of their brothers. For women have something else to do. They are learning the politics of change. They are learning that the hand that rocks the cradle can indeed rock the boat. And the campus, and the nation, will never be the same again.

WOMEN IN HIGHER EDUCATION—A PROGRESS REPORT

(By Bernice Sandler)[1]

Three years ago, if you asked almost any administrator about sex discrimination on his campus (and most administrators are "he's"), the answer you would have gotten would have been something like this: "There is no sex discrimination on our campus; it's not a problem." That was precisely what Rep. Edith Green's Special Subcommittee on Education was told in 1970, when she tried to get someone from the educational establishment to testify on sex discrimination for her massive hearings on the problems of campus women. She was unable to get any male administrator to testify on the subject. Fortunately, women on the campus were not as shy or reticent, as they were able to produce more than 1,200 pages of testimony documenting a massive pattern of discrimination against women faculty, students and staff.

A few months before the hearings began, a little known and small women's civil rights group, the Women's Equity Action League (WEAL), had begun a massive campaign to end campus sex discrimination. At that time, there were no laws whatsoever that prohibited sex discrimination against women students or women faculty. The only thing that applied was a little noticed Executive Order (11246, as amended) that prohibited all Federal contractors from discriminating in employment on the basis of race, color, religion, national origin and sex. It had been used mainly for minority blue collar workers in the construction industry; it had not been applied to universities and colleges nor in regard to sex discrimination. More than 500 charges of a pattern of discrimination have now been filed by WEAL and other groups. Not one of these charges investigated by HEW has yet been refuted. Reports show some of our finest institutions were accused. Certainly, of all the areas in our society that have come under criticism for their treatment of women, the most frequent target has been higher education. Perhaps because education holds out the promise of equality and equal opportunity, women on the campuses of this country are most angry. They have discovered that the promise for them is broken, and that the myth of equality is just that. They were told that education is a woman's field, and they have now seen study after study, report after report which clearly indicate that women are second class citizens on the campus.

---

[1] Bernice Sandler has been director of the Project on the Status and Education of Women, Association of American Colleges, since 1971. A psychologist, she has served on the boards of women's action groups and was education specialist for the House Special Subcommittee on Education, deputy director of HEW's Women's Action Program, and a consultant to the Department of Labor.

Despite the academic myth that things have been getting better for women, the position of women on the campus is not very different from what it was 20 or 30 years ago, and in some ways it is worse. The percentage of women graduate students is smaller *now* than it was in 1930. Expansion of faculty in the postwar period was largely one of male expansion: The proportion of women faculty has dropped continuously over the past 100 years, from a third of the positions in 1870 to less than a fourth today. In many of the most prestigious institutions, women faculty are less than 10 percent. Likewise, many institutions have a lower proportion of women faculty now than they did in 1930. Even worse, at least one very prestigious institution has a lower proportion of women on its faculty today than it did in 1899!

WHAT HAPPENS TO WOMEN ON CAMPUS

The pattern of discrimination on the campus mirrors that of the rest of society. Women are far more likely to be hired by lower paying, less well known institutions and when they are hired, they are likely to be promoted far more slowly than men. The higher the rank, the fewer the women. Women are 43 percent of the instructors, 23 percent of the assistant professors, 15 percent of the associate professors, 9 percent of the full professors and very few of the departmental chairmen. Study after study has documented the fact that women with the same qualifications as men are hired less frequently and receive less pay than their male colleagues. Ninety percent of the men with doctorates and 20 years of experience will be full professors; for women with identical qualifications, barely half will attain that rank.

SALARY DIFFERENCES

Salary differences are the rule rather than the exception. At one western state university, for example, women earned an average of 15 to 20 percent less than their male colleagues. At some others the difference is far greater. Sometimes it is said that women receive less pay and do not get promoted simply because they are not as well qualified; studies indicate this is not true. However, because of government pressure, many institutions have begun to examine women's salaries, and in virtually every case, salaries of women faculty and staff have been substantially raised. For example, the University of Wisconsin gave 870 women "equity adjustment increases" ranging from $20 to over $6,000. The University of Nebraska raised the salaries of 289 women employees at a cost of some $400,000 and the University of South Florida has given salary increases totaling $151,000 to 100 women.

I could tell you of women who have been temporary employees, without fringe benefits or chance of promotion, for more than 10 years; of women who have been assistant professors for more than 20 years, even of women who have worked for years with no pay at all. I can tell you of women students who are told that what their department is looking for is "bright young men." I can tell you of students who entered undergraduate work with hopes of becoming physicians and who settled for medical technician, of others, who wanted to become scientists but who teach high school science instead, because professors tell them that these are not suitable fields for women. I can tell you of professors who still feel that "women shouldn't be professionals," and who believe that education is wasted on women, despite the fact that the more education a women has the more likely she is to work, and despite the fact that 91 percent of women with doctorates work.

THE "QUALIFIED WOMAN" MYTH

I could tell you of the myth of the shortage of "qualified women." Of course, if there were no discrimination in admissions, there would be more women on the campus. But still, on too many campuses, women are not hired in any number approaching the actual number of doctorates awarded to women by those institutions. Let me give you an example. In 1970–71 the percentage of women faculty in psychology at Columbia University was zero percent, despite the fact that Columbia awarded about 36 percent of its doctorates in psychology to women. Many other similar statistics at other universities could be mentioned.

WOMEN IN ADMINISTRATION

In administration, women are virtually nonexistent. Few women head departments other than the strictly "female" fields such as home economics and nursing.

The number and percentage of women in administrative positions are less now than they were 25 or even 10 years ago. Of the 50 largest academic libraries, only one is headed by a woman. Women college presidents are decreasing; even women's colleges openly look for male presidents. If you know any young woman who would like to be a college president—and why shouldn't a young woman aim for this?—the best advice would be "get thee to a nunnery," for almost all of the women presidents are at the Catholic institutions. In fact, if it were not for the Sisters, the number of women college presidents would be *less than the number of whooping cranes*. Less than one percent of our college presidents are women; perhaps we ought to declare women presidents an endangered species.

POLICIES AND PRACTICES

Academic policies are often discriminatory in their effect. Nepotism rules—written or unwritten—almost always limit the wife's ability to hold a comparable job at the same institution as her husband. Often the rules are circumvented to allow her to be hired but at a lower rate of pay, with no possibility of tenure and often with no fringe benefits. Recently, Stanford, Oberlin and the Universities of Michigan, Maine and Minnesota have revised or abolished their nepotism rules so that husbands and wives can work in the same institution and in the same department, provided that both meet the standards of employment and that neither is involved in making employment decisions about the other. Nepotism rules which have the effect of keeping women out of faculty jobs violate the law but still exist.

Fringe benefits also penalize women. On some campuses, *wives* of faculty members can get maternity coverage on their health insurance, but women *faculty* members cannot get the same benefit. In other places, women cannot use sick leave for childbirth, nor do they retain their job if they leave for childbirth or childrearing, even for a short period. (Young men often spend two years away from *their* jobs in military service.) Title VII and the Executive Order require maternity leave for childbirth and childrearing.

Similarly, TIAA and other retirement benefits, based on actuarial tables, pay women less (about 10–16 percent) even though they have contributed the same amount as the men they have worked with. The rationale is that women live longer. However, the mortality gap between whites and blacks is far greater than that between men and women, yet we would all be up in arms if insurance companies were to have differential benefits based on race. Such differential benefits are a violation of Title VII.

Women on part-time appointments are often not considered eligible for full-time appointments, even though they may be as well or better qualified than the males who hold those positions. Part-time female faculty are not eligible for tenure in most schools, although men who work part-time in *two* departments may be given a different title, a *joint appointment*, carrying the salary and status of a full-time employee.

A few schools (Harvard, Princeton and Stanford, for example) have recently changed their policy: Part-time faculty can ascend the tenure ladder, albeit at a slower rate. Curiously enough, many schools have a substantial portion of part-time faculty in the law and medical schools, with tenure and prorated salaries for these males.

On some campuses, there is no way for a woman to fight through university or college channels if she feels she has been discriminated against on the basis of sex. Numerous women who have been actively fighting sex discrimination have lost their jobs and literally have no means of redress on the campus.

Most hiring at the professional level occurs by word-of-mouth recruiting. Women call this the "old boy network" whereby a man asks a male colleague, "Charlie, do you know a good man for the job?" Charlie does indeed know a good person for the job, and he is almost always white and male. Women and minorities are outside this informal network of old school chums, drinking buddies, etc. The merit system has always been a *closed* merit system, for large portions of the available qualified pool are excluded.

A word-of-mouth recruiting system that excludes large portions of the available pool is a violation of the law. The 1971 Griggs decisions, with the majority opinion written by Chief Justice Burger, enunciates the principle that any policy or practice which is *fair on its face yet cannot be justified by business necessity*, and which *has a disproportionate effect on a protected class*, e.g., women and minorities, is discriminatory. Title VII and the Executive Order impose a *duty* of fair recruitment upon the employer.

CRITERIA FOR HIRING AND PROMOTION

Formerly, employers in universities and colleges have never had to specify criteria for hiring and promotion. Federal law now requires that institutions, like all employers, develop objective, job related criteria. The govenment can ask why Mr. X is a full professor and Ms. Y is only a lecturer, particularly when X has not published since he rewrote his thesis and is a terror to the students, while Ms. Y has a string of publications and is continually given the "best teacher" award, etc. The government will not set criteria for hiring and promotion; rightfully the institution and/or department heads should do this. What the government *does* ask is why someone was hired or not hired, and what the criteria were. Administrators who have previously justified hiring decisions on a very limited basis ("He has a Ph.D. from Harvard and is a well known respected scholar"), are understandably upset when asked for more specific criteria. Admittedly, professional employment decisions are complex but they are not exempt from law. The courts have ruled in Title VII cases that subjective opinion of supervisors is not sufficient; positive empirical or objective job related criteria are necessary.

Too often in academia, when criteria have been spelled out they have been hand-tailored to a particular candidate *after* a preliminary and unofficial decision to hire has been made. Thus, if John Doe's specialty is some abstruse area and the department wants to hire him, the department then *ex post facto* "needs" someone in that particular area. Others who then apply for that opening cannot meet the criteria specifically tailored for the preselected individual.

DISCRIMINATION AGAINST STUDENTS

Until the June 1972 passage of Title IX of the Education Amendments Act, discrimination against students on the basis of sex was legal. Such discrimination in all federally assisted education programs is now forbidden. Although all private undergraduate institutions are exempt from the admissions provisions of Title IX, those institutions are *not* exempt from the antidiscrimination provisions concerning students once they are admitted.

Girls need higher grades and higher test scores to get into many colleges. Although the percentage of women undergraduates has increased since the 1950s to 42 percent, it is still *less* than the percentage of women undergraduates in 1920, when women were 47 percent of the undergraduates, or in 1899, when 53 percent of all undergraduate degrees went to women. Many institutions maintain artificial quotas such as 2½ men to every woman, or 60 percent men and 40 percent women.

The proportion of boys who make it to college despite high school grades of C or lower is double that for girls, 40 percent to 20 percent. At the undergraduate level the exceptionally gifted woman will not face very much discrimination in admission. But since most students are not exceptionally gifted, and indeed more students are in the "low ability" group, it is clear that many women are discriminated against in admission.

"We'd love to have more girls but we just don't have the room for them" is a common remark. Yet dormitories, like hotels, apartments and houses, are not built any differently for one sex or the other. Women's groups note that some institutions claiming dormitory shortages do not sanction women students living off campus, although men students may.

On too many campuses, women students are treated differently, with far more restrictions regarding hours and freedom to live off campus. Gynecological services are not available to women students, although urological services are for men. Many students are denied leave for pregnancy and childbirth. Honorary societies are often segregated by sex, with the men's honoraries being far more prestigious than the women's.

Many young women are actively or subtly discouraged from considering serious academic or professional endeavor. Professors are not exempt from believing erroneous stereotyped notions about women students. Women are sometimes denied admission to graduate school because of logic like this: "If she's *not* married, she'll get married. If she *is* married, then she'll probably have children. If she has children, she can't possibly be committed to study. If her children are older, then she's too old to begin training, and what a pity it is that she didn't start sooner."

Supposedly, education is wasted on women, for they marry and give up their careers. Yet the truth is that 70 percent of women college graduates work. The average working woman today is married. More than half the mothers of school age children work. Women are nearly half of the labor force, about 40 percent. At age 35, women with husbands can expect to work fully 24 years. At the same age, 35, women who are widowed, separated or divorced have a worklife expectancy of 28 years.

Many of the most ardent supporters of civil rights for blacks, Indians, Spanish-speaking Americans and other minorities simply do not view sex discrimination as "real" discrimination. They fail to notice that half of each minority group are women. Too often helping minorities has meant helping minority males only, and helping women has meant white women only. It helps minority women little to say that the reason we keep them out of a program is not because of their race but just because of their sex.

SOME GOOD NEWS

All of this, of course, is the bad news. Now let me give you some of the good news.

Since 1970, there has been a legislative explosion, as Congress recognized the necessity to end sex discrimination in education. Title VII of the Civil Rights Act of 1964, which covers employment, was amended in March 1972 to cover all educational institutions, public or private, regardless of whether or not they receive Federal monies. Title VI of the same Act prohibits discrimination against the beneficiaries, e.g. students, in federally assisted programs, but it only applies to discrimination on the basis of race, color and national origin, not sex; however, with the June 1972 passage of the Education Amendments Act, Title IX now prohibits discrimination on the basis of sex in all federally assisted education programs.

Congress also extended the Equal Pay Act to cover executive, administrative and professional women (e.g. faculty) in June 1972, and in October 1972 sex discrimination was added to the jurisdiction of the U.S. Commission on Civil Rights. However, although Congress now has clearly mandated a national policy against sex discrimination on the campus, it still exists.

On campus after campus, women students, staff and faculty are banding together to examine their status. One of the most interesting aspects of the women's movement is that there is a good deal of interchange and working together between diverse kinds of people. I have seen older conservative women working with young radicals on women's issues, white women with minority women, secretaries with Ph.D.s—for the women's movement cuts across class, race and social lines. This cross-fertilization of ideas has given added strength, flexibility and breadth to women's groups. More and more women are becoming aware of the discrimination they face on campus, and they are pressing actively for change, using the law to its fullest extent. Besides the charges filed with HEW, women have begun to use the courts. Some of these suits may involve millions of dollars in damages and back pay. At the same time women are also filing charges with the Equal Employment Opportunity Commission which enforces Title VII and are calling in the Equal Pay Division of the Department of Labor.

Equally important is the fact that some men on the campus have finally recognized sex discrimination as a legitimate problem of academia. We are getting a good deal more lip service than we ever did and, of course, recognition of the problem is indeed the very first step in solving it. Sometimes we even get tokenism, which may lead to more genuine affirmative action.

As to the kinds of progress that have taken place on the campus as a result of pressure from women's groups and from government, it is somewhat difficult to assess. Many institutions now have some sort of committee on the status of women which is examining and compiling data on the problems that exist. They are evaluating virtually every policy on the campus for its impact on women and are making recommendations.

Government enforcement, however, has been slow. There is an enormous backlog of cases with HEW and with the Equal Employment Opportunity Commission HEW particularly has often been accused of incompetence and inefficiency. Occasionally new contracts have been delayed when an affirmative action plan has been inadequate, but HEW has never used its power to withhold funds from an institution when the institution has been found to discriminate. Negotiations have often dragged on for years.

WOMEN TERMINATED AT FASTER RATE

Despite a good deal of affirmative recruiting on the campus, the position of women does not seem to have improved noticeably. What has happened has been spotty. The general contraction of academic hiring due to budgetary constraints has undoubtedly played a role in that there are fewer new positions available. On some campuses, the number and percentage of women has actually dropped in the last year or two, despite affirmative action, and the number and percentage of men has increased. Women are apparently being terminated at a faster rate than men, partly because having been denied tenure in the past, they are most vulnerable to budget cuts. It is of course illegal to perpetuate the current effects of past discrimination, but too many department heads and faculty committees are simply unaware of the law and its implications. Moreover, retaliation against women who do file (or even raise the question of discrimination) is not unusual; even faculty husbands have been told to get their wives to "shut up" if the husband wants to be promoted. Numerous women who have taken an active part in the struggle against discrimination have lost their jobs.

A few institutions, such as Wesleyan University in Connecticut, have vigorously recruited *and* hired a substantial number of women, but on many campuses the hiring of a woman has taken place mainly in some departments that never had a woman before, such as the psychology department at University of California at Berkeley, which hired two women last year, the first since 1924. In some schools promotions for women are beginning to occur. Many departments are "recruiting" women in order to fulfill their affirmative action requirements; many women are being interviewed, but few are hired. Many departments are going through the motions without a genuine effort to hire fairly.

Hardest of all to change will be the *attitudes* toward women. Academic myths, like other myths, die slowly. There are indeed many men on the campuses who are fair-minded and sympathetic, but there are also some who cannot or will not relate to women as equal colleagues. We are going to see more polarization on the campus, and the backlash will get worse. Every time a woman gets hired, it does mean that some man is not getting hired.

If I have painted a somewhat discouraging picture, it is because the road ahead is far from easy, and there is much that needs to be done. We are talking about a profound social change on our campuses—nothing less than the full integration of women at all levels of the institution and a revision of policies and practices that have a negative impact on women. We are talking about changing an institution that is still rooted in a history going back to medieval days.

For the first time we have laws and a national policy to end discrimination on the campus. The laws alone are extremely helpful, but they are not enough. We are talking also about changing attitudes and myths—myths such as "all women belong at home," despite the fact that they are leaving it in droves.

For the first time, women themselves are organizing on the campus and pressing for change. Women are actively challenging policies and practices that hurt women and, indeed, often hurt men too, for they also have been hurt—perhaps in different ways—by the same rigid social stereotypes that limit the opportunities of both sexes.

The potential for humanizing the university is enormous; women are the fastest growing and potentially the largest advocacy group on the campus. Change comes slowly, too slowly, and is both hard and exhilirating. It will not come simply because it is right or long overdue, or because the law says it must be done. It will come because women take an active role in pointing out inequities and in pressing for change.

We will need compassion for those women who act with impatience borne out of bitterness and despair; for those who tell us there is not discrimination and who cannot yet reach out to help their sisters; and for those men who tell us their wives are "perfectly happy." The women's movement is not going to go away, because too many women care, and because so many men care too. For what women have learned is that the hand that rocks the cradle can indeed rock the boat.

SEX DISCRIMINATION, EDUCATIONAL INSTITUTIONS, AND THE LAW: A NEW ISSUE ON CAMPUS

(By Bernice Sandler)

One of the most remarkable, but little noted, achievements of the 92nd Congress during 1971–72 was the shaping of a new national policy to end sex discrimination in all educational institutions at all levels, including students, staff and faculty, from nursery school to post graduate education.

The speed with which the Congress extended Title VII of the Civil Rights Act of 1964 to include all educational institutions;[1]—amended the Equal Pay Act of 1963 to cover executive, administrative and professional employment;[2]—amended the Public Health Service Act to cover admissions to all health profession training programs;[3]—enacted Title IX of the Education Amendments Act of 1972 to cover all phases of student treatment,—including admissions[4]; and added sex discrimination to the jurisdiction of the United States Commission on Civil Rights[5]—indicates that Congress was acutely aware of discrimination against females in our educational institutions. There was virtually no opposition to the passage of these laws by either the educational community or the public at large. Sex discrimination, once only a philosophical or moral issue, is now a legal issue as well. These laws are not merely employment laws; they are civil rights laws with a different legislative and judicial history.

EXECUTIVE ORDER 11246 AS AMENDED BY 11375

7. The definition of "contract" is very broad and is interpreted to cover all government contracts (even if nominally entitled "grants") which involve a benefit to the federal government.

8. As of January 19, 1973, all covered educational institutions, both public and private, must have *written* affirmative action plans.

TITLE VIII OF THE CIVIL RIGHTS ACT OF 1964 AS AMENDED BY THE EQUAL EMPLOYMENT OPPORTUNITY ACT

9. In certain states that have fair employment laws with prohibitions similar to those of Title VIII, EEOC automatically defers investigations of charges to the state agency for 60 days. (At the end of this period, EEOC will handle the charges unless the state is actively pursuing the case. About 85 per cent of deferred cases return to EEOC for processing after deferral.)

10. Due to an ambiguity in the law as it relates to public institutions, it is not yet clear whether EEOC *or* the Attorney General will file suit in all situations which involve public institutions.

EQUAL PAY ACT OF 1963 AS AMENDED BY THE EDUCATION AMENDMENTS OF 1972—HIGHER EDUCATION ACT

11. Over 95 per cent of all Equal Pay Act investigations are resolved through voluntary compliance.

12. Unless court action is necessary, the name of the parties need not be revealed. The identity of a complaint or a person furnishing information is never revealed without that person's knowledge and consent.

TITLE IX OF THE EDUCATION AMENDMENTS OF 1972—HIGHER EDUCATION ACT

(Minority women are also protected from discrimination on the basis of their race or color by Title VI of the Civil Rights Act of 1964.)

13. Final regulations and guidelines for Title IX of the Education Amendments of 1972 have not yet been published. This chart includes information which is

---

[1] Pub. L. No. 92–261 § 2. 86 Stat. 103. *amending* 42 U.S.C. § 2000e–1 (1970).

[2] Pub. L. No. 92–318, Title IX. § 906(b)(1), 86 Stat. 373, June 23, 1972.

[3] Pub. L. No. 92–157 § 110, 85 Stat. 431, *amending* 42 U.S.C.A. § 295h–9.

[4] Pub. L. No. 92–318, Title IX, § 901, 86 Stat. 373, June 23, 1972. Private undergraduate institutions and public single-sex schools are exempt from the non-discriminatory admissions provisions. However there can be no discrimination on the basis of sex against students in such institutions once they have been admitted.

[5] Pub. L. No. 92–496, § 3, 86 Stat. 813, *amending* 42 U.S.C.A. § 1975c (a) (1957).

explicitly stated in the law, as well as how the law is likely to be interpreted in light of other precedents and developments.

14. The sex discrimination provision of Title IX is patterned after Title VI of the Civil Rights Act of 1964, which forbids discrimination on the basis of race, color and national origin in all federally assisted programs. By specific exemption, the prohibitions of Title VI do not cover employment practices (except where the primary objective of the federal aid is to provide employment). However, there is no similar exemption for employment in Title IX.

15. Title IX states that: "No person . . . shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving federal financial assistance. . . "

16. The following are exempted from the *admissions* provision:

Private undergraduate institutions.

Elementary and secondary schools other than vocational schools.

Single-sex public undergraduate institutions. (If public single-sex undergraduate institutions decide to admit both sexes, they will have 7 years to admit female and male students on a nondiscriminatory basis, provided their plans are approved by the Commissioner of Education.)

Note 1. *These exemptions apply to admissions only.* Such institutions are still subject to all other anti-discrimination provisions of the Act.

Note 2. Single-sex professional, graduate and vocational schools at all levels have until July, 1979, to achieve nondiscriminatory admissions, provided their plans are approved by the Commissioner of Education.

17. Under Title VI of the 1964 Civil Rights Act, which Title IX of the Education Amendments closely parallels, federal agencies which extend aid to educational institutions have delegated their enforcement powers to HEW. A similar delegation of enforcement power is expected under Title IX.

TITLE VII & TITLE VIII OF THE PUBLIC HEALTH SERVICE ACT AS AMENDED BY THE COMPREHENSIVE HEALTH MANPOWER ACT & THE NURSE TRAINING AMENDMENTS ACT OF 1971

18. Final regulations and guidelines for Title VII and VIII of the Public Health Service Act have not yet been published. This chart includes information which is explicitly stated in the law, as well as how the law is likely to be interpreted in light of other precedents and developments.

19. Schools of medicine, osteopathy, dentistry, veterinary medicine, optometry, pharmacy, podiatry, public health, allied public health personnel and nursing are specifically mentioned in Titles VII and VIII. Regulations issued June 1, 1972, by the Secretary of HEW specify that *all* entities applying for awards under Titles VII or VIII are subject to the nondiscrimination requirements of the act.

20. HEW regulations state: "Nondiscrimination in admission to a training program includes nondiscrimination in all practices relating to applicants to and students in the program; nondiscrimination in the enjoyment of every right, privilege and opportunity secured by admission to the program; and nondiscrimination in all employment practices relating to employees working directly with applicants to or students in the program."

FEDERAL LAWS[1] AND REGULATIONS CONCERNING SEX DISCRIMINATION IN EDUCATIONAL INSTITUTIONS,[2] OCTOBER 1972

[Compiled by Project on the Status and Education of Women, Association of American Colleges]

	Executive Order 11246 as amended by 11375	Title VII of the Civil Rights Act of 1964 as amended by the Equal Employment Opportunity Act of 1972	Equal Pay Act of 1963 as amended by the Education Amendments of 1972 (Higher Education Act)	Title IX of the Education Amendments of 1972 (Higher Education Act)[13]	Title VII (sec. 799A) and Title VIII (sec. 845) of the Public Health Service Act as amended by the Comprehensive Health Manpower Act and the Nurse Training Amendments Act of 1971[18]
Effective date	Oct. 13, 1968	March 24, 1972 (July 1965 for nonprofessional workers.) (Institutions with 15–24 employees are not covered until March 24, 1973.)	July 1, 1972 (June, 1964, for nonprofessional workers.)	July 1, 1972 (Admissions provisions effective July 1, 1973.)	Nov. 18, 1971.
Which institutions are covered	All institutions with federal contracts of over $10,000[7]	All institutions with 15 or more employees.	All institutions	All institutions receiving federal monies by way of a grant, loan or contract (other than a contract of insurance or guaranty).	All institutions receiving or benefiting from a grant, loan guarantee, or interest subsidy to health personnel training programs or receiving a contract under Title VII or VIII the Public Health Service Act.[19]
prohibited[3]	Discrimination in employment (including hiring, upgrading, salaries, fringe benefits, training, and other conditions of employment) on the basis of race, color, religion, national origin or sex. Covers all employees.	Discrimination in employment (including hiring, upgrading, salaries, fringe benefits, training and other conditions of employment) on the basis of race, color, religion, national origin or sex. Covers all employees.	Discrimination in salaries (including almost all fringe benefits) on the basis of sex. Covers all employees.	Discrimination against students or others[14] on the basis of sex.[15]	Discrimination in admission of students on the basis of sex and against some employees[20]
Exemptions from coverage	None	Religious institutions are exempt with respect to the employment of individuals of a particular religion or religious order (including those limited to one sex) to perform work for that institution. (Such institutions are not exempt from the prohibition of discrimination based on sex, color and national origin).	None	Religious institutions are exempt if the application of the [illegible] discrimination provisions are not consistent with the religious tenets of such organizations. Military schools are exempt if their primary purpose is to train individuals for the military services of the United States or the merchant marine. Discrimination only in vocational institutions in admissions[16] is prohibited (including vocational high schools), graduate and professional institutions, and public undergraduate coeducational institutions.	None.

Who enforces the provisions	Office of Federal Contract Compliance (OFCC) of the Department of Labor has policy responsibility and oversees federal agency enforcement programs. OFCC has designated HEW as the compliance agency responsible for all contracts with educational institutions. HEW's Office for Civil Rights (Division of Higher Education) conducts of the reviews and investigations.	Equal Employment Opportunity Commission (EEOC).	Wage and Hour Division of the Employment Standards Administration of the Department of Labor.	Federal departments and agencies which are empowered to extend financial aid to educational programs and activities. HEW's Office for Civil Rights (Division of Higher Education) is expected to have primary enforcement powers to conduct the reviews and investigations.[17]	HEW's Office for Civil Rights (Division of Higher Education) conducts the reviews and investigations.
How is a complaint made	By the letter to OFCC or Secretary of HEW.	By a sworn complaint form, obtainable from EEOC.	By letter, telephone call, or in person, to the nearest Wage and Hour Division office.	Procedure not yet specified. A letter to Secretary of HEW is acceptable.	Procedure not yet specified. A letter to Secretary of HEW is acceptable.
Can complaints of a pattern of discrimination be made as well as individual complaints?	Yes. However, individual complaints are referred to EEOC.	Yes	Yes	Yes	Yes.
Who can make a complaint [4]	Individuals and/or organizations on own behalf or on behalf of aggrieved employee(s) or applicant(s).	Individuals and/or organizations on own behalf or on behalf of aggrieved employee(s) or applicant(s). Members of the commission may also file charges.	Individuals and/or organizations on own behalf or on behalf of aggrieved employee(s).	Individuals and/or organizations on own behalf or on behalf of aggrieved party.	Individuals and/or organizations on own behalf or on behalf of aggrieved party.
Time limit for filing complaints [5]	180 days	180 days	No official limit, but recovery of back wages is limited by statute of limitations to 2 years for a nonwillful violation and 3 years for a willful violation.	Procedure not yet determined	Procedure not yet determined.
Can investigations be made without complaints.	Yes. Government can conduct periodic reviews without a reported violation, as well as in response to complaints. Preaward reviews are mandatory for contracts over $1,000,000.	No. Government can conduct investigations only if charges have been filed.	Yes. Government can conduct periodic reviews without a reported violation as well as in response to complaints.	Yes. Government can conduct periodic reviews without a reported violation, as well as in response to complaints.	Yes. Government can conduct periodic reviews without a reported violation, as well as in response to complaints.
Can the entire institution be reviewed.	Yes. HEW may investigate part or all of an institution.	Yes. EEOC may investigate part or all of an establishment.	Yes. Usually the Wage-Hour Division reviews the entire establishment.	Yes. HEW may investigate those parts of an institution which receive federal assistance (as well as other parts of the institution related to the program, whether or not they receive direct Federal assistance). If the institution receives general institutional aid, the entire institution may be reviewed.	Yes. HEW may investigate those parts of an institution which receive Federal assistance under title VII and VIII (as well as other parts of the institution related to the program, whether or not they receive assistance under these titles).

Footnotes at end of table.

FEDERAL LAWS[1] AND REGULATIONS CONCERNING SEX DISCRIMINATION IN EDUCATIONAL INSTITUTIONS,[2] OCTOBER 1972—Continued

[Compiled by Project on the Status and Education of Women, Association of American Colleges]

	Executive Order 11246 as amended by 11375	Title VII of the Civil Rights Act of 1964 as amended by the Equal Employment Opportunity Act of 1972	Equal Pay Act of 1963 as amended by the Education Amendments of 1972 (Higher Education Act)	Title IX of the Education Amendments of 1972 (Higher Education Act)[13]	Title VII (sec. 799A) and Title VIII (sec. 845) of the Public Health Service Act as amended by the Comprehensive Health Manpower Act and the Nurse Training Amendments Act of 1971[14]
Recordkeeping requirements and Government access to records.	Institution must keep and preserve specified records relevant to the determination of whether violations have occurred. Government is empowered to review all relevant records.	Institution must keep and preserve specified records relevant to the determination of whether violations have occurred. Government is empowered to review all relevant records.	Institution must keep and preserve specified records relevant to the determination of whether violations have occurred. Government is empowered to review all relevant records.	Institution must keep and preserve specified records relevant to the determination of whether violations have occurred. Government is empowered to review all relevant records.	Institution must keep and preserve specified records relevant to the determination of whether violations have occurred. Government is empowered to review all relevant records.
Enforcement power and sanctions..	Government may delay new contracts, revoke current contracts, and debar institutions from eligibility for future contracts.	If attempts at conciliation fail, EEOC or the U.S. Attorney General may file suit.[10] Aggrieved individuals may also initiate suits. Court may enjoin respondent from engaging in unlawful behavior, order appropriate affirmative action, order reinstatement of employees, and award back pay.	If voluntary compliance fails,[11] Secretary of Labor may file suit. Aggrieved individuals may initiate suits when Department of Labor has not done so. Court may enjoin respondent from engaging in unlawful behavior, and order salary raises, back pay and assess interest.	Government may delay new awards, revoke current awards, and debar institution from eligibility for future awards. Department of Justice may also bring suit at HEW's request.	Government may delay new awards, revoke current awards, and debar institution from eligibility for future awards. Department of Justice may also bring suit at HEW's request.
Can back pay be awarded[8]........	Yes. HEW will seek back pay only for employees who were not previously protected by other laws allowing back pay.	Yes. For up to two years prior to filing charges with EEOC.	Yes. For up to two years for a nonwillful violation and three years for a willful violation.	Probably, to the extent that employees are covered	Probably, to the extent that employees are covered.
Affirmative action requirements (There are no restrictions against action which is nonpreferential).	Affirmative action plans (including numerical goals and timetables) are required of all contractors with contracts of $50,000 or more and 50 or more employees[9].	Affirmative action is not required unless charges have been filed, in which case it may be included in conciliation agreement or be ordered by the court.	Affirmative action, other than salary increases and back pay, is not required.	Affirmative action may be required after discrimination is found.	Affirmative action may be required after discrimination is found.
Coverage of labor organizations...	Any agreement the contractor may have with a labor organization can not be in conflict with the contractor's affirmative action commitment.	Labor organizations are subject to the same requirements and sanctions as employers.	Labor organizations are prohibited from causing or attempting to cause an employer to discriminate on the basis of sex. Complaints may be made and suits brought against these organizations.	Procedure not yet clear. Any agreement the institution may have with a labor organization can not be in conflict with the nondiscrimination provisions of the legislation.	Procedure not yet clear. Any agreement the institution may have with a labor organization can not be in conflict with the nondiscrimination provisions of the legislation.

Is harassment prohibited	Institutions are prohibited from discharging or discriminating against any employee or applicant for employment because he/she has made a complaint, assisted with an investigation or instituted proceedings.	Institutions are prohibited from discharging or discriminating against any employee or applicant for employment because he/she has made a complaint, assisted with an investigation or instituted proceedings.	Institutions are prohibited from discharging or discriminating against any employee because he/she has made a complaint, assisted with an investigation or instituted proceedings.	Institutions will be prohibited from discharging or discriminating against any participant or potential participant because he/she has made a complaint, assisted with an investigation or instituted proceedings.	Institutions will be prohibited from discharging or discriminating against any participant or potential participant because he/she has made a complaint, assisted with an investigation or instituted proceedings.
Notification of complaints	Notification of complaints has been erratic in the past. HEW is proposing notifying institutions of complaints within 10 days. HEW notifies institutions a few weeks prior to investigation.	EEOC notifies institutions of complaints within 10 days.	Complaint procedure is very informal. Employer under review may or may not know that a violation has been reported.	Procedure not yet determined	Procedure not yet determined.
Confidentiality of names	Individual complainant's name is usually given to the institution. Investigation findings are kept confidential by Government, but can be revealed by the institution. Policy concerning Government disclosure concerning investigations and complaints has not yet been issued. The aggrieved party and respondent are not bound by the confidentiality requirement.	Individual complainant's name is divulged when an investigation is made. Charges are not made public by EEOC, nor can any of its efforts during the conciliation process be made public by the Commission or its employees. If court action becomes necessary, the identity of the parties involved becomes a matter of public record. The aggrieved party and respondent are not bound by the confidentiality requirement.	The identity of a complainant, as well as the employer (and union, if involved), is kept in strict confidence.[12] If court action becomes necessary, the identity of the parties involved becomes a matter of public record. The aggrieved party and respondent are not bound by the confidentiality requirement.	Identity of complainant is kept confidential if possible. If court action becomes necessary, the identity of the parties involved becomes a matter of public record. The aggrieved party and respondent are not bound by the confidentiality requirement. ---

[1] State employment and/or human relations laws may also apply to educational institutions. The Equal Rights Amendment to the U.S. Constitution, passed by the Congress and now in the process of ratification would, when ratified, forbid discrimination in publicly supported schools at all levels, including students and faculty.

[2] Unless otherwise specified, "institution" includes public and private colleges and universities, elementary and secondary schools, and preschools.

[3] A bona fide seniority or merit system is permitted under all legislation, provided the system is not discriminatory on the basis of sex or any other prohibited ground.

[4] There are no restrictions against making a complaint under more than one anti-discrimination law at the same time.

[5] This time limit refers to the time between an alleged discriminatory act and when a complaint is made. In general, however, the time limit is interpreted liberally when a continuing practice of discrimination is being challenged, rather than a single, isolated discrimnatory act.

[6] Back pay cannot be awarded prior to the effective date of the legislation.

Academics have been puzzled and somewhat bewildered by the impact of these new laws. Prior to this, many institutions holding federal contracts had already felt the sting of the federal government under Executive Order 11246 as amended, which requires all federal contractors to end discrimination in employment and to have a written plan of affirmative action. This order, coupled with the new legislation, has raised new questions and concerns as the academic community seeks to understand the implications of federal law and regulations. The chart details these laws and regulations.

EXECUTIVE ORDER 11246 AS AMENDED BY EXECUTIVE ORDER 11375

The Executive Order covers only those institutions which hold federal contracts. It prohibits discrimination in employment, and does not cover students, except insofar as they are employed by the institution. The Executive Order is not law, but a series of rules and regulations which contractors agree to follow when they accept a federal contract. Its main provision is that the contractor must have a written plan of affirmative action[6] to "remedy the effects of past discrimination" and to prevent the continuation of current discrimination. It is not enough to agree to cease discriminating. Employers who do not have a written plan (or who fail to follow it) may lose their federal contracts. The Department of Labor through its Office of Federal Contract Compliance is responsible for all policy matters under the Executive Order; the Department of Health, Education and Welfare, however, does the actual review and enforcement in universities and colleges.

Revised Order No. 4 details the requirements for affirmative action plans. As a minimum, institutions must do the following:

1. develop a data base on all job classifications;
2. have a policy statement forbidding discrimination;
3. appoint an individual to be in charge of the program;
4. examine recruiting, hiring, promotion policies, salaries and all other conditions of employment;
5. identify areas of under-utilization and develop specific plans to overcome these areas;
6. develop numerical goals and timetables.

Affirmative action and the issue of numerical goals are controversial. Affirmative action is not only required by federal contractors, but can also be required under Title VII of the Civil Rights Act of 1964 if a finding of discrimination has been made. The United States Commission on Civil Rights has defined affirmative action to be: ". . . steps taken to remedy the grossly disparate staffing and recruitment patterns that are the present consequence of past discrimination and to prevent the occurrence of employment discrimination in the future."[7]

Plans must be based on an analysis of all conditions of employment: policies and practices affecting (but not limited to) recruiting, hiring, job classification, salaries, fringe benefits, promotion, terminations, etc. All job classifications for all employees must be analyzed by race, sex, and ethnicity by organizational unit and pay grade. Where underutilization occurs, numerical goals must be developed.

Numerical goals are often confused with quotas; the terms are often erroneously used interchangeably. However, the government and the courts have made a clear distinction between the two: goals are legal; quotas clearly violate the Constitution and numerous federal statutes. Quota systems keep people out; goals are targets for inclusion of people previously excluded. Goals are an attempt to estimate what the employer's work force would look like if no illegal discrimination based on race or sex had ever existed. The institution develops the goals when "underutilization" occurs, and they are aligned with the number or percentage of qualified women and minorities available, not in terms of general representation in the population. If an employer fails to meet the goals, he[8] then has to show that he made a good faith effort to recruit, hire and promote women, and has to produce records documenting those efforts. For example, the Department Chairperson may show that he or she has contacted women's groups (such as the women's caucuses relevant to the discipline), has contacted individual women scholars for referral of candidates, has included in letters to colleagues and in job advertisements statements like "women and minorities, including minority women, are welcome to apply" and has also evaluated the women already in the department who might qualify for the opening. If after doing all this it turns out that all the women who were considered were poorly qualified and the man hired was indeed the best qualified applicant, the employer can document a good faith effort at affirmative action and thus can justify his decision to hire the white male. If so, the employer has discharged his obligation under Executive Order; the obligation to meet the goal is not absolute.

---

[6] Contractors with $50,000 worth of contracts and 50 employees must have a written affirmative action plan. Public institutions were previously exempted from the requirement of having a written plan; in January 1973, that exemption was deleted.

[7] *Statement of Affirmative Action for Equal Employment Opportunities by the United States Commission on Civil Rights*, U.S. Commission on Civil Rights, p. 14 (1973).

[8] In most instances, the academic employer is a "he."

There is no requirement whatsoever that would force academicians to hire lesser qualified women or minorities.[9] If the best qualified person is white and male, then that person can be hired. What the employer must be able to demonstrate is three-fold:

1. A genuine good faith effort to recruit women and minorities (Good faith does *not* mean calling one's white male colleague, asking if he knows a good man, and then after the hiring is completed, saying, "Certainly I'd have been glad to hire a qualified woman or minority person if I could have found one. Unfortunately, none applied.")

2. Specification of job-related objective criteria, before the hiring process. The criteria for professional jobs are often complex and difficult to assess; nevertheless, they are subject to the same requirements as other jobs. Subjective, intuitive judgments are not acceptable criteria. For example, the courts have held that promotional policies for executives are subject to standards of objectivity and must be job related.[10]

3. Equal application of criteria. Whatever standards or criteria are set for white men must be applied equally to women and minorities.

AUTONOMY AND "PREFERENCE"

Some administrators claim that an institution's autonomy is threatened by having numerical goals, and that acedemic freedom will be violated because they will be "forced" to give "preference" to unqualified women and minorities. Traditionally, academic freedom has meant the right to publish, to teach and to work with controversial ideas. The aim of numerical goals is not to give preference, but to end preference, the existing preference for males, the existing preference for members of the "old boy" club. Academia has traditionally operated with an unwritten, but functionally effective "affirmative action" plan for white males. That preference system is now illegal. In one sense, the words "academic freedom" have become a rallying cry and smokescreen to obscure basic issues. Some women's groups claim that they are analogous to the cry of "states rights" and "quality education."

Academia has generally relied on the "old boy" method of recruiting and hiring the vast, informal network of old school chums, colleagues, drinking buddies, etc.—a network to which women and minorities rarely have had access. The merit system has always been a closed merit system, for large portions of the available qualified pool have been excluded. The government is not asking that the merit system be abolished, but only that it be opened up to a larger pool of qualified persons. To recruit in a different manner means additional work and effort, and more importantly, it means change. Change is never easy, particularly when it is perceived as a threat to the power base.

Employers in academic institutions have never had to specify criteria for hiring and promotion. Now, when evidence of discrimination is found, the government is asking for an explanation why Mr. X is a full professor and Ms. Y is only a lecturer but has been continually awarded the "best teacher" award, and has a string of publications, awards, etc.[11] The government does not set the criteria for hiring and promotion; rightfully, academic freedom would be violated if the government attempted to do so. Institutions and/or department heads should develop their own criteria. What the government does ask is *why* someone was hired or not hired; and are the criteria objective and job related. Some administrators who have never had to specify criteria understandably feel threatened when asked to do this, however, an administrator who cannot justify an employment decision is very likely either to have made a wrong decision or is an incompetent administrator.

It is quite likely that universities, under numerical goals and affirmative action, will find that the quality of academic appointments will actually improve.[12]

---

[9] There often is a covert assumption that women and minorities are by definition "not qualified."

[10] Marquez v. Ford Motor Co., Omaha District Sales Office, 440 F. 2d 1157 (8th Cir. 1971).

[11] This example is based on an actual incident in an HEW review. The source is confidential.

[12] Women's groups contend that most of the deadwood that exists on the campus is predominantly white and male.

Despite claims of an unbiased and "glorious" objective merit system, academic judgments have too often been intuitive and subjective. Now, instead of being able to justify a candidate merely by saying "he's a well known and respected scholar," department heads will not only have to develop specific criteria, but will have to be able to demonstrate that the candidate is the very best person recruited from the largest pool possible, one which will include qualified women and minorities.

Some institutions mistakenly feel that they are now forced to hire women and minorities in order to "get HEW off their back." Decisions based on such a gross misinterpretation of the law are tragic. If institutions give preference to a less qualified woman or minority person over a better qualified white male, then such institutions are violating the very laws and regulations they are seeking to observe because such preferences are clearly prohibited by law. Institutions cannot discriminate against qualified members of any group based on race, color, religion,[13] national origin or sex and this includes discrimination against white males.

What is not at stake is the hiring of lesser qualified persons or "reverse discrimination" but rather a very real economic threat is present: for every woman or minority person that is hired, it means that one less white male is hired. If more women are paid commensurately with their positions then some men may get raises more slowly or perhaps not at all. It will be harder for qualified white males to get jobs when they compete with qualified women or minorities, but it cannot be termed "reverse discrimination."

TITLE VII OF THE CIVIL RIGHTS ACT OF 1964

Title VII was amended on March 24, 1972, to cover educational institutions and forbids discrimination in employment and applies to all institutions, public or private, whether or not they receive any federal funds. Title VII is enforced by the Equal Employment Opportunity Commission, which is appointed by the President. Like the Executive Order, individual charges, as well as charges of a pattern of discrimination, can be filed. However, unlike the Executive Order, no affirmative action is required; employers are required merely to not discriminate in employment. A conciliation agreement or court order *may* require affirmative action, but this would be after charges are filed. Unlike under the Executive Order, Title VII investigations will generally be conducted only if charges have been filed.

Should conciliation fail, the Equal Employment Opportunity Commission can take an employer to court.[14] This new provision strengthens EEOC's position and should speed up the conciliation process considerably. Currently, EEOC has a backlog of several thousand cases, and it sometimes takes a year or two before an investigation is started. (HEW is also backlogged and a similar time may elapse before a case is investigated.) Recently HEW and EEOC agreed that all individual cases filed with HEW under the Executive Order after March 24, 1972, will be forwarded to EEOC for investigation and action.

EEOC's sex discrimination guidelines issued on April 5, 1972, are in many ways similar to those issued by the Office of Federal Contract Compliance and HEW, but have stricter provisions in some instances. For example, EEOC requires that the part of maternity leave where a woman is temporarily disabled and cannot work for medical reasons (*i.e.*, childbirth and complications of pregnancy, in contrast to childrearing) must be treated like any other temporary disability such as heart attack, gall bladder or prostate surgery. The same guidelines call for equal benefits, including retirement benefits. The TIAA retirement plans to which many institutions subscribe, and which now give women who have made identical contributions lower monthly retirement benefits than men are in violation of EEOC's guidelines.

Title VII also contains an exemption called a "bona fide occupational qualification." ("b.f.o.q.") whereby an employer may legally limit particular jobs to one sex. The courts have interpreted this very narrowly; *e.g.*, actress, lingerie fitter and restroom attendant. In one case involving a woman who was refused a job because she had a preschool child, the Court held that being a mother of a preschooler was not a bona fide occupational qualification, and that the employer would have to prove that all or substantially all women with preschool children could not do the job.[15]

---

[13] However, Title VII of the Civil Rights Act allows *religious* institutions to give preference to members of their religion in employment. 42 U.S.C. § 2000e–1 (1970).

[14] *Supra*, note 5.

[15] Phillips v. Martin-Marietta Corp., 400 U.S. 542 (1971). Although the woman involved was a white woman, the NAACP took on the case because they saw the implications for black women as well.

THE EQUAL PAY ACT OF 1963

In the Educational Amendments Act of 1972 there is a little noted section that extends the coverage of the Equity Pay Act of 1963 to executive, administrative and professional employees, including all faculty.[16] Unequal pay on the basis of sex is also forbidden by the Executive Order and by Title VII; the Equal Pay Act takes on unique importance because its procedures differ markedly from those of the Executive Order and Title VII. First, it is enforced by the Wage and Hour Division of the Employment Standards Administration of the Department of Labor and like the Executive Order, but unlike Title VII, reviews can be conducted without prior complaint. The Equal Pay Act was the first sex discrimination legislation enacted and has been successful in getting women millions of dollars in back pay.

One of the major advantages for complainants under the Equal Pay Act is that the complaint procedure is very informal; unlike Title VII, which requires a notarized complaint, the Wage and Hour Division will investigate an establishment on the basis of a letter or even a telephone call. Unlike Title VII and the Executive Order, where generally the individual complainant's name is revealed to the employer, the complainant's name is not revealed to the employer under the Equal Pay Act. In fact, an employer may not even know that this establishment has been reported and when a review is conducted, it is almost always of the entire establishment. (Occasionally, this is true of EEOC investigations, and is also true of pattern and practice reviews under the Executive Order.) After a review is conducted, if a violation is found, the employer is asked to settle on the spot—*i.e.,* raise the wages and pay backpay to the underpaid workers (the statute of limitations is two years for a non-willful violation, three years for a willful violation). Should the employer refuse (and most don't as 95% of the cases are settled without recourse to litigation), the Department of Labor is authorized to go to court. Often employers settle not only because they are clearly in violation of the law, but, in addition, court cases involve public disclosure of the findings and if the case is settled without litigation, the employer's name is not revealed publicly. Currently, there is little backlog in equal pay cases, although this is expected to change as word reaches women in academic circles.

DISCRIMINATION AGAINST STUDENTS

The Comprehensive Manpower Act of October 1971 (amending the Public Health Service Act) was the first law to affect sex discrimination against students. It forbids discriminatory admissions to schools of medicine, veterinary medicine, pharmacy, optometry, dentistry, and other health professions such as medical technician, X-ray technician, etc. Similar provisions in the Nurse Training Amendments Act will also help men gain access to nursing programs. Title IX of the Educational Amendments of 1972[17] (Higher Education Act) is more extensive. It's basic provision is: "No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal Financial assistance. . . ."[18] These sex discrimination provisions are patterned after Title VI[19] of the Civil Rights Act which forbids discrimination on the basis of race, color, and national origin in all federally assisted programs.

All institutions[20] whether public or private, that receive federal monies by way of a grant, loan, or contract (other than a contract of insurance or guaranty) are covered. There is an admissions exemption for private undergraduate colleges (as well as a single sex public undergraduate institutions) but these institutions are not exempt from the prohibitions forbidding other kinds of discrimination against students because of sex. Discrimination in admissions is specifically prohibited in vocational institutions, professional and graduate institutions and all public undergraduate co-educational institutions and also forbids discriminatory practices in athletics, financial aid, parietal rules, etc.

Individuals and organizations can challenge any discriminatory practice in a federal program or activity by writing the Secretary of HEW, being assured that during the review process, names of complainants are kept confidential, if possible. If violations are found, informal conciliation and persuasion are first used to eliminate the discriminatory practices and should this fail, formal hearings are then conducted and then federal assistance can be terminated. HEW's Office for Civil Rights will be the enforcement agency for these provisions. Implementing regulations will detail the procedures for the Act.[21]

---

[16] *Supra,* note 2.

[17] *Id.*

[18] *Id.*

[19] Title VI, however, specifically exempts employment from coverage. Title IX has no such exemption. Discrimination against employees on the basis of sex is therefore covered by Title IX.

[20] Including preschools, elementary and secondary schools.

SIMULTANEOUS FILING

The application of the Equal Pay Act and Title VII to faculty, as well as Title IX to employees and students, is, of course, very new. Some women's groups have begun to file complaints under Equal Pay, Title VII, the Executive Order, and Title IX simultaneously. At this point, under the Executive Order alone, the number of sex discrimination complaints against universities and colleges exceeds that of those filed by all minorities.

COURT DECISIONS

Despite some overlapping coverage, the principles utilized by the separate federal agencies to determine policies regarding discrimination are similar. The Office of Federal Contract Compliance, as well as the other agencies, continually examine court decisions concerning discrimination, and use these decisions as a solid base for determining policy.[22]

Many of the issues now being debated, somewhat ex post facto in the Halls of Ivy, have already been decided in the courts.

Court decisions that were previously applicable to discrimination in nonacademic settings now extend to the educatonal world. Most of these decisions have occurred in cases involving race, but the principles essentially extend to other minority groups, including women. Among those likely to have the most impact, are the following:

The existence of intent to discriminate is irrelevant: The effect of a policy or practice is what counts, rather than intent, or lack of intent.[23] (Even the best intentioned may often unknowingly act in a discriminatory manner.)

Statistics can be used to document a pattern of discrimination: Indeed, statistics can be used as *prima facie* evidence of discriminaton. "Statistics often tell much, and courts listen . . ."[24] The courts have not hesitated to use statistics both as a measure of discrimination and as a measure of compliance. Institutions cannot rebut statistical evidence on the basis that no women or minorities applied. (An institution may have a reputation as discriminatory, and that may have had a "chilling" effect on employment applications.)[25] When statistical evidence indicates that there has been a pattern of discrimination, the burden of proof is then shifted to the employer who must then demonstrate that there is and has been no discrimination,[26] that the job criteria are indeed job-related, and that employment practices do not and have not had a discriminatory effect.

Any individual, including a third party, has standing to raise class allegations, and charge a pattern of discrimination, using statistics as evidence.[27] Persons can make a general allegation of discrimination without having to name names and incidents.[28] The appropriate federal agency then investigates to see if the charges are substantiated.

---

[21] As of August 15, 1973, these regulations had not been issued.

[22] With the exception of maternity and retirement benefits, federal policy is remarkably uniform among the several agencies. Differences in investigative and administrative procedures are far greater and more likely to cause difficulties with regard to institutions. Section 715 of the Equal Employment Act of 1972 created a committee composed of the Secretary of Labor, the Chairman of the Equal Employment Opportunity Commission, the Attorney General, and Chairman of the U.S. Commission on Civil Rights which is authorized to develop "agreements, policies, and procedures designed to maximize effort, promote efficiency and eliminate conflict, competition, duplication and inconsistency . . ."

[28] Graniteville Co., Sibley Div., v. EEOC, 438 F. 2d 32 (4th Cir. 1971).

All hiring and promotion policies must be based on objective, job-related criteria.[29] For example, a promotion policy which is not job-related, and which is implemented by predominantly white males, can be held to be discriminatory.[30] Positive empirical evidence, and not the subjective opinion of supervisors is necessary in order to establish a good defense against a charge of discrimination.[31]

Professional employment is not exempt from the requirement of having objective and job-related criteria.[32] Employers also have a duty of fair recruitment.[33] If an administrator ends up with only white males, when there is a pool of qualified women and minorities available, the institution may well be discriminating and may be called upon to prove that it is not.

Any policy or practice that has an adverse or disparate effect on a protected class (*e.g.*, women and minorities), and cannot be justified by business necessity is considered discriminatory. The United States Supreme Court, with the majority opinion written by Chief Justice Burger, enunciated this principle in the landmark decision in *Griggs v. Duke Power Co.*[34]

The *Griggs* doctrine suggests word-of-mouth hiring as a policy which appears to be fair on its face, but is nevertheless discriminatory in its impact because women and minorities are largely excluded from the "old boy" network. Similarly, policies of nepotism or practices which apply to "spouse" may also appear to be fair in form, but when their effect is predominantly felt by women, they violate the law. Age requirements, and restrictions on part-time employment and on part-time studies will probably come under increasing scrutiny because they also tend to have a disparate effect on women.

Motherhood by itself is not a rational basis for exclusion[35] and marital status must not be considered in employment decisions.[36] Whether a woman is married or not cannot enter into a job decision, unless the same criteria is applied equally to men. A woman cannot be paid less because she is or is not married.

Seniority systems, such as tenure, which have been previously discriminatory, may come under review if they perpetuate the effects of prior discriminatory hiring and promotion practices because they have the effect of "freezing an entire generation".[37] Termination of women who do not have tenure because of prior discrimination may well be illegal.

Attorneys fees are authorized for complainants under Title VII and have also been awarded in at least one HEW case arising under Executive Order 11246 as amended.

Punitive damages have also been awarded in numerous civil rights cases and in at least one case under Title VII.[38]

Back pay can also be awarded under numerous federal laws and regulations[39] prohibiting discrimination and may include interest as well.

Preference of employees for white or male coworkers or supervisors is not relevant for hiring decisions. Such practices might have a disparate effect on women and minorities and would be difficult to justify either as a bona fide occupational qualification or on the basis of business necessity.[40]

Equal pay for equal work does not necessarily mean identical work, but only substantially equal work. Insubstantial differences are to be ignored; what is considered important are the job requirements as a whole[41] and not paying women less simply because they often command a lower market value.[42]

The law does not prohibit bona fide differences in pay based on merit or seniority; however such a system cannot be based on either sex or race.

Numerical goals have been upheld and ordered by the courts in numerous discrimination cases.[43] Individuals must also be considered on the basis of individual capacities and not on the basis of any characteristics attributed to the group.[44] The fact that some or even many women are thought to be unable to do a particular job is not a justification for excluding all women; it is not a justification for a bona fide occupational qualification.

GOALS V. QUOTAS

The courts have clearly distinguished between numerical goals and preference in numerous cases, and have upheld goals as a permissible method of redressing past inequities.[45] Civil rights legislation is intimately related to the equitable concept of "setting things right" which is the guiding principle that underlies numerical goals. The courts ". . . may order such affirmatve relief as may be appropriate. [It] has not merely the power, but the *duty* to render a decree which so far as possible [will] eliminate the discriminatory effects of the past as well as bar like discrimination in the future."[46] (emphasis added)

The courts have consistently established the principle that when the proportion of minorities is less than would be expected on the basis of qualified minority members available, there is a presumption of discrimiantion. The burden is then shifted to the employer to demonstrate that such underutilization is not a product of discrimination.[47] Underutilization, under existing case law, raises a presumption of discrimination under both the Executive Order, Title VII and other legislation.

Goals are set only after there has been a finding of discrimination, and they have been upheld in the courts as relief for a substantiated pattern of discrimination. The aim is not punitive; no one is required to be fired. Goals are simply an attempt to remedy the continued effect of discrimination in the present, and to give relief to a specific class that has been discriminated against in the past.

Under the Executive Order, the contractor does its own self-analysis of underutilization and develops its own goals. In contrast, under Title VII, (as well as in cases under the Fifth or Fourteenth Amendments) it is the government that does the analysis; and upon a finding of discrimination, it is the government and/or the courts which set the numerical or percentage goals. The goal is tailormade to a particular discriminatory situation. If it was not, it would violate the equal protection of white males. The goal is generally developed in terms of anticipated employe turnover rate, rate of new hires, promotion and upgrading, and the availability of qualified women and minorities, not the number of proportion of women and minorities in the population. The numerical goal often varies for different job classifications, and within institutions it could vary from department to department. The courts have also clearly maintained that affirmative action and goals are not preferential treatments when undertaken to remedy past discriminatory practices. They are not totally unsympathetic to the problems of white males (who indeed will probably find it harder now that they must compete with women and minorities) but have felt that the more important concern was for the victims of discrimination: "Adequate protection of Negro[48] rights under Title VII may necessitate . . . some adjustment of the rights of white employees. The Court must be free to deal equitably with conflicting interests of white employees in order to shape remedies that will effectively protect and redress the rights of Negro victims of discrimination."[49]

All of the court cases involving numerical or percentage goals have two things in common: the goals are enacted for a limited time or until they are achieved and do not go on ad infinitum, only until the effect of past discrimination is corrected,[50] and, there is no compunction to hire unqualified persons to fill the goal. In the few cases where goals have been overturned by the courts,[51] it was because the goal was not a goal, but a quota, and because there was no provision to insure that qualified persons were hired.

---

[43] *See* section in this paper on "goals" for a more complete discussion.

[45] For a lengthy, but only partial listing of cases, *see Technical Comment #1*, International Association of Official Human Rights Agencies, 1625 K St., N.W., Washington, D. C. 20006, Sept. 7, 1972. When appealed to the Supreme Court, the Court has let all of these decisions stand by denying certiorari.

[46] Louisiana v. United States, 380 U.S. 145, 154 (1965).

[47] For a list of cases, *see* p. 6, "Statement of Affirmative Action for Equal Employment Opportunities by the United States Commission on Civil Rights," *supra*, note 7.

[48] The same principle applies equally to women and other minority groups.

[49] Vogier v. McCarty, Inc., 451 F. 2d 1236, 1238 (5th Cir. 1971).

[50] Carter v. Gallagher, 452 F. 2d 315 (8th Cir. 1971): "Such a procedure does not constitute a 'quota' system, because as soon as the trial courts' order is fully implemented, all hiring will be on a racially non-discriminatory basis, and it could well be that many more minority persons or less, as compared to the total population at large, over a period of time would apply and qualify for the position." *Id.* at 330–31.

LOOKING AHEAD: INCREASED LITIGATION

Women's groups can be expected to use the courts with increased frequency, particularly with the extension of Title VII to cover educational institutions. About 250 institutions have had charges filed against them under Title VII during the first year of coverage.

The Equal Employment Opportunity Commission can take to court employers who are found to be in violation of Title VII, although in most instances it is expected that employers will probably negotiate out-of-court conciliation agreements. Moreover, Title VII also allows individuals the right to file private suits against employers, thus allowing them to avoid the long delay of an EEOC investigation. The University of Pittsburgh has the dubious distinction of being the first academic institution to have a private lawsuit filed under these provisions with the result that a preliminary injunction has stopped them from firing a woman faculty member.[52]

Under the Executive Order, about 500 institutions have been charged with a pattern and practice of sex discrimination with some of these institutions being simultaneously filed against under Title VII, and about 250 individual cases have also been filed with HEW.

Numerous complaints of unequal pay have been investigated by the Equal Pay Division of the Department of Labor. Because of the anonymity features of Equal Pay enforcement and the informality of the complaint process, it is difficult to determine the number of complaints actually "filed" under the Equal Pay Act, although the number seems close to several hundred. Other cases have been filed under the Fourteenth Amendment and Section 1983 of the Civil Rights Act of 1866. None of these have been settled as yet, but among the institutions being sued are the University of California at Berkeley,[53] the University of Maryland,[54] Florida State University,[55] the University of Pittsburgh[56] and Texas Tech University.[57] Some of these suits involve requests for back pay and damages of more than a million dollars, while numerous others are in preparation, and still others have been filed under various state and local human relations laws.

The Department of Justice may also become involved in cases concerning educational institutions.[58] The Department can take cases direct to the courts and has already done so in non-educational private and public employment cases. They can also act on cases sent directly to them, although most cases reach them via other governmental enforcement agencies. The department can entertain all cases involving patterns and practices of discrimination, as well as individual cases suggesting these features. (In those individual cases which do *not* suggest a pattern, but are isolated instances of discrimination, the Department of Justice can only handle them where the employee is employed by a public institution *and* where the case has been referred to them by EEOC.)

In the years to come, the academic community is likely to be beset by a variety of issues. Although the financial crisis is likely to be the first issue of concern, sex discrimination will in all likelihood be the second largest issue for academic institutions to grapple with. The impact will be enormous, for many of the traditional practices and policies of academia will come under increasing fire for their discriminatory effect on women and minorities. Women are the fastest growing and potentially the largest advocacy group on campus. They are challenging policies and practices, and using the law to its full extent. The hand that rocked that cradle has learned to rock the boat.

[58] The 1972 Amendments to Title VII provide that the authority of the Department of Justice to bring suit against *private* employers will be transferred to EEOC after March 24, 1974. However, the Amendments also allow the President to continue that responsibility with the Department of Justice. Whether the transfer will occur is under consideration by the Executive Branch.

APPENDIX I

Implementing Regulations and Guidelines for Laws and Regulations Concerning Sex Discrimination in Educational Institutions

Executive Order 11246 as amended by 11375 (write to: Office for Civil Rights, Division of Higher Education, Department of HEW, Washington, D.C. 20201, or Office of Federal Contract Compliance, Employment Standards Administration, Department of Labor, Washington, D.C. 20210, or Regional HEW or DOL Office)

Sex Discrimination Guidelines (June 1970)
Revised Order No. 4 (December 1971)
Obligations of Contractors and Subcontractors (May 1968)
HEW Higher Education Guidelines Executive Order 11246 (October 1972)

Title VII of the Civil Rights Act of 1964 as amended by the Equal Employment Opportunity Act of 1972 (write to: Equal Employment Opportunity Commission, 1800 G Street, N.W., Washington, D.C. 20506, or Regional EEOC Office)

Guidelines on Discrimination Because of Sex (April 1972)
Guidelines on Employee Selection Procedures (August 1970)

Equal Pay Act of 1963 as amended by the Education Amendments Act of 1972 (The Equal Pay Act is an amendment to the Fair Labor Standards Act of 1938) (write to: Wage and Hour Division, Employment Standards Administration, Department of Labor, Washington, D.C. 20210, or Field, Area or Regional Wage and Hour Office)

Equal Pay for Equal Work—Interpretative Bulletin 800 (August 1971)
Extension of the Equal Pay Act of 1963—Fact Sheet (September 1972)

Memorandum to Presidents of Institutions of Higher Education Participating in Federal Assistance Programs (August 1972)
(Regulations being drafted)

Title VII (section 799A) and Title VIII (section 845) of the Public Health Service Act as amended by the Comprehensive Health Manpower Act and the Nurse Training Amendments Act of 1971 (write to: Office for Civil Rights Division of Higher Education, Department of HEW, Washington, D.C. 20201, or Regional HEW Office)

HEW Form No. 590—Assurance of Compliance (March 1972)
(Regulations being drafted)

APPENDIX II

Summary of Federal Policy Concerning Twenty-five Affirmative Action Issues in Employment

The following issues are coming up on many campuses. While by no means an exhaustive list, these items are among the major ones faced by administrators, and in most instances, federal laws and regulations apply. Unless otherwise mentioned, both Executive Order 11246 and Title VII of the Civil Rights Act apply.[30] HEW enforces the Executive Order; the Eqaul Employment Opportunity Commission enforces Title VII.

1. *Affimative Action Plans:* Required of all institutions with federal *contracts* totaling $50,000 or more and having 50 or more employees. Revised Order No. 4 details what these plans must cover. Public institutions have previously been exempt from the requirement of having a *written* plan: as of January 19, 1973, all covered institutions, public or private must have written plans.

2. *Numerical Goals and Timetables:* Required of all institutions with federal contracts covered by the Executive Order. President Nixon reaffirmed (August 11, 1972) federal policy which forbids quotas but upholds goals. Such goals are based on the available pool of qualified persons, and in line with anticipated vacancies, and may be projected in terms of percentages or actual number.

The institution *must document* its "good faith" efforts; such as what it did to recruit women and minorities; were they interviewed and what was the decision, etc. The obligation to meet the goal is not absolute; if the best qualified person is white and male, he can be hired, but the institution must be able to document what effort was made to recruit women and minorities, that such candidates were treated fairly, and that the white male was indeed "better qualified."

---

[30] Title IX of the Education Amendments Act of 1972 (Higher Education Act) also covers many of these issues. The regulations for Title IX are expected to parallel other employment legislation and regulations.

The institution sets the criteria, not HEW. The criteria must be applied equally to men and women, whites and blacks, and must not in itself be discriminatory, i.e., criteria which gave preference to people who did their undergraduate work at Ivy League schools would be discriminatory in that women have been denied, until very recently, the opportunity to attend such institutions.

In very limited instances only can preference be given to women and minorities: when there has been a history or pattern of exclusion and/or discrimination, *and* if two candidates are equally qualified, only then can preference be given to the member of the excluded group.

3. *Salary Equalization:* Women and minorities cannot be paid less because of their sex and/or race. Bona fide merit systems are allowed, provided they are not discriminatory on the basis of race or sex. Criteria for raises must be applied equally. Numerous institutions have set aside specific sums for "equity adjustments." Such salary increases are exempt from federal wage controls. The Equal Pay Act also applies.

4. *Back Pay:*

Title VII—allowed up to two years (but not prior to date of coverage—for professional staff: March 24, 1972)

Equal Pay Act—allowed up to two years for a non-willful violation and three years for a willful violation (but not prior to date of coverage—for professional staff: July 1, 1972)

Executive Order—time limit not clear. HEW will seek back pay only for those individuals who were not covered by other laws allowing back pay at the time of violation.

5. *Pensions such as TIAA* which pay women less on a monthly basis because of actuarial differences: Under the Executive Order, employers make *either* equal contributions *or* provide equal benefits. Under the stricter Title VII guidelines (April 5, 1972), *equal benefits must be provided*, regardless of the contribution.

6. *Nepotism:* Under Title VII and the Executive Order *policies* or *practices* which restrict the employment of spouses are prohibited. (A policy which officially applied to *all* spouses but in *practice* applied mainly to wives would be illegal.) Institutions cannot prohibit spouses from working in the same department when both are qualified. To avoid conflict of interest, institutions can prohibit spouses from participating in employment decisions about each other. Such decisions, for example, when one is in a supervisory relationship to the other, can be delegated to someone else or to a committee. (See no. 16, *Marital and Parental Status*, and NOTE at end of paper.)

7. *Maternity Leave:* Both Title VII and the Executive Order apply.

Child*bearing* leave: Institutions are advised to follow the stricter Title VII guidelines which apply to all institutions, regardless of whether or not they receive federal aid. Title VII guidelines require that the part of pregnancy and childbirth when a woman is *physically unable* to work be treated like all other temporary disabilities in terms of sick leave, health insurance and job retention.

Child*rearing* leave: Under HEW guidelines, if leave is available for other personal reasons, it should be available for child*rearing* (when a woman is able to work but chooses not to). Such child*rearing* leave must be available to both sexes.

8. *Internal Grievance Procedures:* HEW does not require this but recommends that there be written procedures whereby individuals who feel aggrieved because of sex or racial discrimination can ask for investigation and if necessary, redress.

9. *Child Care:* Not required by any of the laws but recommended by HEW guidelines. Many women's groups are pressing for such centers to be available to the children of staff, faculty and students.

10. *Recruitment and Hiring:* Under the Executive Order, if current recruiting practices (such as word-of-mouth recruiting) result in a "significantly lower representation" of women and minorities in the applicant pool than would be expected from their availability in the labor force, then new sources of recruiting must be developed. (Minority and women's caucuses and organizations as well as individual women and minority persons are good sources.) Title VII policy is expected to be the same.

HEW requires that standards and criteria should be "reasonably explicit" and be accessible to employees and applicants.

11. *Affirmative Advertising:* All notices of job openings in advertisements, flyers, or letters should indicate that applications from women and minorities are being sought, such as "Women and minorities, including minority women, are welcome to apply." Employers *cannot* state that only members of a particular sex or race will be considered.

12. *Policy Statements:* Under the Executive Order institutions are required to have in writing a policy of non-discrimination in employment. The statement must appear in personnel manuals and be disseminated throughout the campus.

13. *Conditions of Employment, Salaries and Benefits:* Federal regulation and laws require that there be no discrimination in all conditions of employment, including:

recruitment, hiring, lay-off, discharge and recall, inservice training;
opportunities for promotion;
participation in training programs;
wages and salaries;
sick leave time and pay;
vacation time and pay;
overtime work and pay;
medical, hospital, life and accident insurance;
optional and compulsory retirement.

14. *Inbred Hiring:* Policies that forbid departments from hiring their own students upon degree completion decrease the available pool of qualified female applicants and work a particular hardship on married women who may not be mobile. Such policies *may be a violation* of the Executive Order and Title VII and need to be reevaluated.

15. *Search Committees:* HEW recommends that all search committees wherever possible should include women and minorities.

16. *Marital and Parental Status:* (See no. 6, *Nepotism*) Discrimination on the basis of marital status is specifically forbidden by Title VII when such criteria are applied to one sex only. Although not specifically mentioned, criteria concerning parental status would also be a violation if only applied to one sex.

17. *Monitoring and Accountability:* Under the Executive Order, affirmative action plans are required to have a system of accountability and monitoring:

(1) an institution-wide office that maintains records and monitors individual departments and units and reports annually

(2) individual departments and units are required to maintain records of all applicants and hires, as well as records of the efforts made to recruit women. Such records should allow for an ongoing analysis of all employment decisions: recruiting, hiring, promotions and salary increases.

18. *Job Analysis:* Under the Executive Order, *all* job classifications must be reviewed in order to identify "underutilization" of women and minorities. Data should be provided simultaneously on race and sex; i.e., black women, white women, etc.

19. *Minority Women:* In all programs recruiting or promoting minorities and/or women, minority women must not be ignored. Minority women are also protected by legislation prohibiting discrimination on the basis of race.

20. *Part-Time Status:* HEW takes no stand. Women's groups recommend that part-time status be reevaluated. In several institutions, qualified faculty members are able to ascend the tenure ladder in part-time status.

21. *In-Service Training:* Training programs are suggested by HEW. All such programs are required to be open to persons of both sexes and all races.

22. *Work Assignments:* Teaching load, research responsibilities, etc., can not be assigned on the basis of sex or race.

23. *Termination and Reduction in Work Force:* Disparate termination rates for women and minorities are prohibited unless the employer is able to demonstrate reasons unrelated to race, sex, national origin or religion. Lack of seniority cannot be used as a reason for termination when the person(s) laid off has been found to have less seniority because of previous discrimination.

24. *Student Employment:* Discrimination in employment of all staff, including undergraduate and graduate students is prohibited.

25. *Publication of Affirmative Action Plans:* Under the Executive Order, such plans, including numerical goals, must be disclosed other than those parts which would involve confidential information about employees and would constitute a violation of privacy, or would disclose financial information about the institutions.

Mr. O'HARA. Our next witness is Mordeca Jane Pollock representing the National Organiz[illegible]n for Women.

We would very much lik[illegible] hear your testimony.

STATEMENT OF MORDECA JANE POLLOCK, NATIONAL ORGANIZATION FOR WOMEN

Mr. O'HARA. Without objection, your statement will be printed in full at this point in the record.

You may proceed.

Ms. POLLOCK. Thank you.

I am Mordeca Jane Pollock. I am a member of the Employment Compliance Task Force of the National Organization for Women.

I must say and assert that despite the extensive legislation on the books, and despite certain agency programs such as that of the Office for Civil Rights of HEW, discrimination continues to be rampant in American colleges and universities. It continues to be rampant in the United States, but most especially, I think, in our institutions of higher education.

In the past 2 years the position of women has not improved in any significant way except perhaps in admission to law and medical schools, where there has been an improvement I am very happy to say.

The percentage of women on college faculties really has risen less than 1 percent and we witness a sort of academic musical chairs where the proportion of women on college faculties has decreased slightly and the proportion of women on university faculties—that is to say faculties which offer graduate education—has increased slightly.

We see the usual triangular phenomenon with women becoming rarer and rarer as posts become more and more prestigeous. You know that. There hasn't been any real change in the stratosphere. Men still hold 90.2 percent of the full professorships. That is all in the record.

There are a number of problems with affirmative action. First of all, colleges and universities will very often adhere to the letter of the law and they will violate the spirit. Affirmative action people around the country in institutions of higher learning, find ourselves in the somewhat anomalous situation of explaining to the department heads what the laws require of them. We are teaching people how to go through the steps to have legally justified behavior but not to end discrimination.

For example, we see job offers that are clearly not serious. I introduced some testimony on that.

We have also come to advise women who wish to file complaints with HEW to be ready for severe harassment. We are telling people, don't file individual complaints. You will be fired. Your salary will get cut. We have documented time and time again instances of harassment.

Unless a woman is independently wealthy and has an impeccable moral record and nerves of steel, she shouldn't file.

In the days previous, we heard people from institutions of higher education argue that institutions are being forced to hire unqualified and minority members and women. That isn't true. We have also heard that there are no qualified women—this is again untrue.

You set your numerical goals on what is in the work force. You are not asked to bleed a stone. You have heard others testify: there are plenty of qualified women on the scene. We hear university officials tell us that affirmative action endangers quality. Yet, every time HEW or EOC has gone into investigate university practices—we found again and again that universities are evaluating Anglo males at the expense of better qualified minority people or female people.

Another thing we found is that the universities are resisting, I think, what is a reasonable scrutiny of their hiring standards. The hiring standards in most universities—if you are in affirmative action you know this—have not been rationalized or validated.

What is the relationship between publishing 25 articles of four pages each and teaching freshman chemistry? Standards haven't been validated or rationalized. Rarely have they been set out. They certainly haven't been weighted against one another.

What is the relative weight of publications versus teaching performance versus service? (We heard about the industrial model. Dr. Sandler put that myth away.) The problem is not in the law. The problem is not that they endanger the quality of institutions. They don't take away academic freedom. Academic freedom doesn't mean freedom to deprive people of their rights.

The problem is that these affirmative action obligations of university and college contractors must be maintained, must be retained.

If this Congress wishes to aid more Americans in securing their constitutional rights, then not only must we maintain these requirements but make these requirements effective. We have to strengthen their enforcement. That, I think, is where the problem lies.

The problem is not so much in forcing universities to lower their standards. The problem is enforcing the law. The problem is in protecting people's rights, protecting those who have historically been discriminated against. The provisions of the Executive orders and the laws have not been effective simply because the Federal agencies in charge of enforcing them have not imposed real sanctions on offenders, on people who deprive other people of their constitutional rights.

Again, Dr. Sandler spoke of this.

Let's take the example of EEOC, if you will. It has been 2 years now that the EEOC has enforcement powers over private institutions of higher learning. In 2 years EEOC has not taken an institution to court. NOW has again and again gone to EEOC and said please do your job. That is what you are funded and mandated to do. NOW has said why don't you incorporate institutions of higher learing into your tracking system?

I am sure you know the EEOC tracking system establishes and follows very high impact targets for litigation. The system has been very effective. EEOC doesn't seem even seriously to have considered the proposal. It is "researching it." Whatever that means.

There is a very important and potentially precedent setting case under title VII against the University of Pittsburgh Medical School. NOW again has repeatedly urged EEOC to intervene in this. It is Sharon Johnson versus the University of Pittsburgh. EEOC has not responded with action to our requests.

When Congress voted up the amendments to title VII in 1972, Congress made a special point of including institutions of higher education. EEOC isn't doing its clearly mandated job. The legislative history of title VII and its amendments point to this. EEOC owes explanations to this Congress, that funds it.

The Department of Justice has not been much better. That is to say, it has been even worse. Justice has authority under title VII to take people to court. It has never done this, sought to eliminate employment discrimination in an institute of public education.

The HEW Office of Civil Rights makes the other agencies look energetic. HEW has done some terrible things. It lulled colleges into complacency by saying OK, we approve your affirmative action plan. Then 2 months later EEOC came out with a finding of probable cause for sex discrimination.

I think this is an irresponsibility to the people who pay for that agency.

HEW, as you know, has responsibility for enforcing Executive Order 11246. It hasn't yet issued contract compliance regulations. It is supposed to do that. It has an informal set of guidelines but it has no regulations that we published or commented upon.

In 1964, the Civil Rights Act was passed. It has been 10 years since 1964. Still we haven't seen any HEW-issued guidelines on title VI which prohibits discrimination against minority people in educational institutions.

In 1972, title IX of the higher education amendments was passed. It took 2 years before even proposed guidelines were set out. Then HEW declined to take on any complaints under title IX on the grounds that the implementing regulations haven't been issued. Of course they haven't issued the implementing regulations. Their reasoning is circular.

I think you know the General Accounting Office, NOW, other civil rights organizations have presented a lot of evidence to the House Subcommittee on Fiscal Policy, that HEW frequently violates the Executive order, that it is poorly administered.

GAO completed an audit of the Office for Civil Rights in response to Congressman Dellenback's request and found a number of insufficiencies.

I don't know if you heard the horror story of the University of California at Berkeley where for 4 years people aggrieved have been deprived of their rights, people who don't have jobs for the wrong reasons and have not gotten relief. HEW continually backed away from its obligation to enforce Executive orders. All this means the following:

NOW believes that any system that leaves the enforcement of civil rights to HEW is doomed to failure. We believe that civil rights responsibilities of HEW should be removed entirely from the Department and that they be lodged in a separate and independent commission.

We believe that the Commission must have cease-and-desist powers. We believe the Commission's chair must be appointed by the President but not subject to removal from office during a fixed term.

I think it is necessary to provide an office of public counsel in each of several civil rights agencies. They would be similar to the Office of Public Counsel operating within the ICC.

The Office of Public Counsel was established by the Railroad Reorganization Act of 1973 and it provides lawyers for those consumers, for the little person, who want to deal with the Agency.

Universities are large, prestigeous and very powerful corporations. They have no trouble dealing with department heads and in dealing with agencies of the Government.

Aggrieved persons are individuals and generally have a lot of trouble. Sometimes there are civil rights groups but I doubt at this point whether the Civil Rights Groups have as much or have more power than universities.

To sum our position up now opposes any legislation that would subsequently change or weaken in any way current affirmative action requirements.

We advocate the shifting of all HEW civil rights enforcement powers to a separate agency with cease and decease powers and court enforcement authority and we advocate the provision of an office of public counsel within each agency.

Thank you, sir.

Mr. O'Hara. Thank you very much, Mrs. Pollock, we appreciate your testimony.

There seems to be considerable unanimity in the view you expressed that HEW ought to be taken out of the civil rights enforcement bureau. People of all different viewpoints seem to agree on that. They may disagree on what HEW should have been doing but they all agree that it hasn't been doing it, whatever it is.

I was interested in the figures you used showing the number of women on faculties. I think the number of women on faculties, the percentage of women on faculties, has gone up slightly and the number on college faculties as a percentage has gone down slightly.

Have you tried to analyze why in most of the cases?

Ms. Pollock. I think what is happening is there is a shifting around of the same personnel.

Mr. O'Hara. Better endowed and stronger financially institutions have been able to hire them away.

Ms. Pollock. I think you are right. I think that is the case. There has been a trivial improvement but I don't think it is significant. I think we could have done much better given the pool or women, say, coming out of very prestigeous graduate universities.

Mr. O'Hara. Do you have any figures on the faculty new hires during the recent period?

Ms. **Pollock.** Not with me. I probably have it in my office.

Mr. **O'Hara.** Do you have any recollection or general notion of what that shows in terms of——

Ms. **Pollock.** Yes. It doesn't show any substantial improvement. Also, this is, as you know, a tight year for academies because they have been feeling the economic squeeze for a while.

I will tell you the best thing to do, the minute I get back to the office I will mail you down the figures if that is amenable.

Mr. **O'Hara.** This will be fine. Without objection, they will be entered into the record following your testimony.

What has been your experience with pay differentials?

Ms. **Pollock.** My experience with pay differentials has been painful.

Mr. **O'Hara.** How about the enforcement?

Ms. **Pollock.** Let's define some terms. First there is university faculty, teaching and nonteaching. Nonteaching would be, say, postdoctoral fellows in the sciences, who have a training period. Then on the staff side there are nonexempt and exempt jobs. Nonexempt are, roughly, nonprofessional people.

The Department of Labor has been fairly efficient about the nonexempt jobs because they are easy to classify. Where labor has been hesitant to step in, and the courts, is in the difficult analysis of faculty salary differentials and of professional salary differentials. We recently studied these differentials at my own university.

They show exempt categories and in some faculty categories, that there were differences in pay. There are inequities in salary, certainly on the faculty side and certainly on the professional side. They vary. The courts have been hesitant to come in and are just beginning to come in. Agencies have been hesitant to come in for good or not so good reasons.

Hopefully they will in the next year. It would be a good idea if they did.

Mr. **O'Hara.** Thank you very much, Mrs. Pollock, for your testimony.

Ms. **Pollock.** Thank you.

[The statement referred to follows:]

PREPARED STATEMENT OF MORDECA JANE POLLOCK, EMPLOYMENT COMPLIANCE TASK FORCE, EDUCATION DIVISION, NATIONAL ORGANIZATION FOR WOMEN

Good morning. I am Mordeca Jane Pollock of the Employment Compliance Task Force, Education Division, of the National Organization for Women (NOW). For purposes of identification only, I have been a faculty member of Brandeis University since 1967 and for the past year that University's affirmative action coordinator in charge of developing and implementing its affirmative action program.

NOW is a national civil rights organization, composed of more than 50,000 women and men, working in more than 500 chapters in all 50 States to bring women into the full mainstream of American society. One of our national goals is the elimination of discrimination against women and girls in educational opportunities. NOW has supported and lobbied extensively for the passage of the 1972 Amendments to Title VII of the 1964 Civil Rights Act, which extended that statute's coverage to educational institutions, as well as Title IX of the Education Amendments of 1972, and the Women's Educational Equality Act.

As testimony before this Subcommittee has already indicated, colleges and universities today are subject to a number of civil rights laws and orders mandating the elimination of most forms of discrimination based on sex, race, and national origin. Under these provisions, Federal agencies now possess many of the enforcement tools required to ensure that postsecondary institutions put an end to traditional patterns of favoritism for white males. These civil rights provisions reflect a strong public policy against discrimination in our nation's educational institutions. Despite extensive legislation and executive agency programs, however, discrimination continues to be rampant in America's schools, especially in institutions of higher education.

The position of women on college and university campuses has not improved significantly in any aspect of university life, except perhaps in admissions to law and medical schools. Since Executive Order 11246 was amended in 1969 to bar sex discrimination in employment, the percentage of women on college faculties has risen less than one percent. In 1973, men still held 90.2 percent of the full professorships and 83.7 percent of the associate professorships, while women were concentrated in the lowest teaching positions. While the proportion of women on university faculties has risen slightly, the proportion of women on college faculties has actually declined. It is clear that affirmative action has not worked.

Too often, college and university officials purport to carry out affirmative action by adhering to some of the requirements of the law while at the same time violating its spirit. For example, reports from universities have cited numerous examples in which recruitment files have been padded with resumes of obviously overqualified or underqualified women with no interest in the position. One woman told of receiving a rejection letter for a position for which she never applied. An associate professor was offered a job as an assistant professor, at a salary cut of $5,000 a year. Another woman, a dean at an extremely prestigious university, has received several job offers for positions as dean at smaller, less presitgious colleges. It is difficult to believe that any of these were serious job offers. It is more likely that they were made to present the appearance of affirmative action compliance.

Punitive institutional action against those who have asserted their rights by filing complaints has been fast and forceful. Academic women have learned that attempts to make the law work for them are likely to have a disastrous effect on their own careers. They can expect to be fired, blackballed, denied tenure, given inferior teaching assignments, or subjected to a variety of lesser harassment techniques. Shortly after Executive order became applicable to her university, one professor filed a complaint alleging dual salary standards for men and women. When the university was informed of her action, it revoked her husband's tenure and reduced his teaching load to a part-time level. Another woman filed a complaint shortly before she went on a paid leave of absence. In the middle of her leave, her salary was summarily reduced to half its former amount, from $10,000 to $5,000. In several instances, complainants have been removed from positions on important university or departmental committees. All this and more have led women's rights organizations to advise women not to file complaints with HEW.

The Committee has heard several witnesses argue that the civil rights laws and orders affecting postsecondary education have worked and that favoritism to white males has stopped. Opponents of affirmative action argue—and spuriously—that institutions are now being forced to favor underqualified women and minority males.

Let us look at the hard facts. While HEW may have found that white males were subjected to discrimination in fewer than 10 instances, that same agency in conducting *one* compliance review found approximately 50 instances of discrimination against women, many of whom had not filed complaints. The instances of alleged reverse discrimination are, thus, by comparison so miniscule as to be statistically insignificant.

The Committee has also heard protestations that affirmative action goals are being imposed as quotas. Consequently, universities claim that they must hire underqualified persons, that they must lower quality. As HEW and EEOC have repeated time and again, goals are not quotas but numerical objectives by which good faith effort may be measured, along with numerous other factors. The use of goals has been long recognized by the corporate community as a sound management technique, and the same principles apply to personnel management in institutions of higher education.

But even if universities and colleges had to fill those imaginary quotas you have heard so much about, postsecondary institutions would not have to hire unqualified women. As Betty Vetter, Commissioner of the Scientific Manpower Commission, has already testified before this Committee, the notion that qualified female academicians do not exist is a myth. Fewer women than men have traditionally been trained for academic positions, but substantial numbers of highly qualified but underutilized women can be found both on campus and off. A study by the College Art Association last year, for example, showed that while women were concentrated in the lowest ranks of the college art departments, they were on the average more highly trained than their male colleagues: 30.4 percent of the women, but only 24.7 percent of the men had Ph.D.'s.

We hear university officials express deep concern that affirmative action endangers quality. In the tiny number of cases in which the practices of postsecondary institutions have been scrutinized by EEOC or HEW, the facts have shown that the standard university practice has been to elevate white males at the expense of equally or better qualified candidates whose sex, ethnicity, or race did not qualify them for membership in the "old boy" network.

The majority of persons working in university compliance will tell us that faculty hiring and promotion practices have never been accountable to careful, measurable standards of merit or quality. Nor have measurable peer standards (such as number of publications) been assigned relative weights. Universities have urgently resisted scrutiny of their selection standards, primarily because such standards have not been rationalized, validated, or applied evenhandedly.

Another claim we have heard is that the policy of affirmative action is based on an industrial model and thus not appropriate to institutions of higher learning. Even assuming that the first claim is true—a view to which NOW does not subscribe—universities' personnel systems have grown to be very much like those existing in private industry. Second, the federal courts have already applied many of the precepts of affirmative action to educational institutions in cases challenging teacher selection procedures which operate to exclude minorities.

Finally, preference for female and minority candidates does have a place when two candidates possess equal qualifications which have been validated as necessary to the job and when past discrimination has produced an underrepresentation of women and minorities. White males should no longer receive preference on the basis of unvalidated qualifications which proportionately fewer minority males and women have had the opportunity to acquire. Affirmative action is based on the legally upheld view that a benign practice neutral on its face but discriminatory in effect, tends to perpetuate the *status quo ante* indefinitely.

It is NOW's position that the affirmative action obligations of university and college contractors must be retained. If the Congress wishes to help more than half of all Americans secure their Constitutional rights, affirmative action requirements not only must be retained, but they must be made effective by strengthening their enforcement.

Patterns of employment in postsecondary institutions prove that civil rights enforcement efforts have not been effective. The fault does not necessarily lie in the statutes and orders themselves. These provisions have not had the effect intended because Federal agencies responsible for their enforcement have failed to impose sanctions on offenders, in the face of serious violations, or to seek relief for discriminatees through the courts.

Let us take the example of the Equal Employment Opportunity Commission. For two years now, the EEOC has had enforcement powers over private institutions of higher learning. EEOC has determined that there is probable cause to believe that certain of these institutions have committed illegal discriminatory practices. In two years, however, EEOC has not taken one such institution to court. NOW has again and again proposed to the Chairman of EEOC and members of his staff that the Commission do its job; that the commission incorporate private colleges and universities into its tracking system. The tracking system was established to select high impact targets for litigation.

To our knowledge, EEOC has not seriously considered this proposal. Instead, as Chairman Powell has already indicated to this Committee, EEOC is "researching" special problems presented by educational institutions. NOW seriously questions to what extent EEOC has committed resources to such research and what findings have resulted.

In addition, NOW has repeatedly urged EEOC to intervene in a potentially precedential Title VII action against the University of Pittsburgh. But NOW's reiterated requests have not produced any action.

Congress made a special point of including educational institutions in the 1972 amendments to Title VII. NOW submits that EEOC owes Congress an explanation for its failure to use virtually any of its appropriations to carry out the intent of Congress.

The Department of Justice has been just as reluctant to assume its civil rights responsibilities in higher education. Never has Justice used its authority under

Title VII to eliminate employment discrimination at a public institution of education. Justice's inaction continues while hundreds of charges against universities pile up in EEOC's backlog.

But the inertia of EEOC and the Department of Justice has been far less harmful to women and minorities than the persistence with which HEW has lured colleges and universities into complacency by approving affirmative action plans which do not comply with Executive order regulations. This pattern of negative re-enforcement has been accompanied by the agency's failure to inform these institutions of their civil rights obligations.

For example, HEW has had responsibility for enforcing Executive Order 11246 since 1969. As of September 1974, however, it has still not issued contract compliance regulations, as it is required to do by the Secretary of Labor's regulations implementing the Executive order. Instead, HEW released in 1972 an informal set of guidelines, which were not published for comment pursuant to the Administrative Procedures Act and which fail to specify clearly to colleges and universities the extent and scope of their legal obligations. Further, it has been 10 years since Title VI of the 1964 Civil Rights Act was passed, yet HEW has never issued guidelines on the application of this statute to such critical issues as student admission policies. It was not until after two years following the passage of the 1972 Higher Education Amendments that HEW proposed guidelines on Title IX. HEW has declined to investigate complaints lodged against educational institutions under Title IX on the grounds that the implementing regulations have not been finalized. By the time the Title IX regulations are finalized, the law will be at least three years old.

HEW's failure to issue adequate regulations, or any regulations at all, is only the tip of the iceberg. Its compliance review procedures, both of employment practices and student services, have been wholly inadequate. The General Accounting Office, NOW, and other civil rights organizations in 1973 and 1974 have presented much evidence to the Subcommittee on Fiscal Policy of the Joint Economic Committee showing that HEW has frequently violated the Executive order and that it is generally ineffective as an administrative agency. In addition, the GAO recently completed a special audit of HEW's Office for Civil Rights in response to a request from Congressman Dellums, which NOW understands found a number of extreme deficiencies. NOW recommends that this report, as well as previous testimony before other committees, be considered by this Committee in the context of the current hearings.

HEW has repeatedly neglected to initiate enforcement proceedings when it has found violations by colleges and universities of the Executive order. Instead, it has routinely elected to pursue protracted negotiations, which sometimes last several years, and which ultimately lead to no relief for victims of discrimination.

The history of HEW's handling of the compliance status of the University of California at Berkeley is typical of the agency's contract compliance program. In 1970 and 1971, class action sex discrimination complaints were filed by numerous individual women and several organizations alleging sex discrimination on the Berkeley campus. More than a year after the first complaint was filed, HEW attempted to conduct a compliance review and investigation but was unable to do so because the University refused HEW access to its files. Such refusal is in violation of the Executive order, but HEW nevertheless took no enforcement action. Finally, in 1972, HEW conducted a compliance review and found extensive evidence of discrimination on that campus. Instead of initiating sanction proceedings, as Executive order regulations require, HEW simply requested the University to develop another affirmative action plan. Throughout 1973, despite extensive technical assistance from HEW, Berkeley did not produce a legally sufficient plan. Finally, in 1974, four years after the class action complaints were initiated, HEW agreed to approve Berkeley's compliance status in exchange for a commitment from the University to begin compiling information necessary for the development of an acceptable plan, to be submitted by the end of this month. In the interim, women employed on the Berkeley campus having lost all hope in HEW, in 1972 filed a class action lawsuit; this case, however, has not yet gone to trial because the Federal District Judge, relying on statements made by Berkeley and HEW officials, has delayed the proceedings on the grounds that the lawsuit would be mooted by an affirmative action plan. Yet the agreement between HEW and Berkeley does not provide that the upcoming version of the University's plan include any provision for the resolution of complaints. The Berkeley case is only one example of HEW's failure to provide relief to persons whom it identifies as victims of discrimination.

While the entire contract compliance program under the Executive order is susceptible to serious criticism for its ineffectiveness in securing equal employment, HEW's performance has been one of the worst of all 16 compliance agencies. Ultimately, the responsibility rests with the Secretary of Labor to ensure that the agencies delegated authority under the Order are doing their jobs. But the Labor Department has done nothing to oversee HEW's performance.

In view of all of the evidence presented to Congress over the past years, NOW believes that only one conclusion can be reached: HEW's record in civil rights enforcement has been appallingly deficient. Any system which leaves in the hands of HEW the enforcement of these rights will continue to fail. NOW recommends that civil rights responsibilities be removed entirely from HEW and lodged in a separate Commission. Furthermore, this Commission should have court enforcement authority and cease and desist powers if it is to be effective. The Commission's Chair should be appointed for a fixed term and not subject to removal from that position by the President.

Legislation should also be enacted to provide an office of public counsel in each civil rights agency, similar to the office now operating within the Interstate Commerce Commission. Established by the Railroad Reorganization Act of 1973, ICC's Office of Public Counsel provides lawyers to represent consumers in agency proceedings and planning. A civil rights office of public counsel could represent the concerns of victims of discrimination in proceedings involving individual complaints as well as general rulemakings. We have found that large employers, including colleges and universities, are well able to communicate their concerns regularly to the heads of federal agencies. Individual complainants, on the other hand, rarely receive a timely acknowledgement of their complaints.

In short, civil rights provisions, many of which have been in force for nearly a decade, have not brought relief to racial and ethnic minorities or to women in postsecondary institutions. If colleges and universities demonstrated stiff resistance to eliminating discrimination, with whatever spurious reasons they have put forth, Federal enforcement agencies have behaved with indifference and lethargy.

NOW opposes any legislation that would substantially change or weaken in any way current affirmative action requirements. We advocate the shifting of all HEW's civil rights enforcement powers to a separate agency, with cease and desist powers and court enforcement authority. In addition, we advocate the provision for an office of public counsel within each civil rights agency.

Mr. O'HARA. Our next witness will be Dr. Norma Raffel, Women's Equity Action League.

Dr. Raffel.

STATEMENT OF NORMA RAFFEL, WOMEN'S EQUITY ACTION LEAGUE

Ms. RAFFEL. I am Dr. Norma Raffel, head of the Higher Education Committee of the Women's Equity Action League—WEAL.

WEAL is a national voluntary organization which promotes equality in education and employment through legislation, litigation, and by pressing for full enforcement of existing antidiscrimination laws on behalf of women.

Formerly I was the national president of WEAL. I am also a member of the Pennsylvania Commission on the Status of Women and serve as their resource person on education. I served on the Pennsylvania Department of Education's Equal Educational Opportunity in Higher Education Task Force.

Also, I have taught courses in the biological sciences at Goucher College and the Pennsylvania State University.

I have been spokesperson for the women at the Pennsylvania State University in presenting information on their behalf to HEW's Office for Civil Rights during the compliance review at the university.

Since then I have attempted to expedite the activities of HEW/OCR so that an affirmative action plan will be developed and it will be monitored.

I would like to take parts of my written statement.

Mr. O'HARA. Without objection, the complete statement will be entered in the record in full.

Ms. RAFFEL. Until 1970 when the Women's Equity Action League filed the first sex discrimination complaint against educational institutions under Executive Order 11246 as amended, the issue of discrimination against women in the academic community was largely ignored.

Some persons say there is no discrimination at all. I have dealt with that in my written statement.

Some persons say that women, with few exceptions, cannot qualify for upper level faculty positions. How then can we account for the study which shows that the average woman doctorate is academically superior to the average male doctorate?

Some academicians say that they would hire qualified women if they were available. The number of women receiving doctorates give at least a partial indication of the numbers available.

Few institutions hire even half the number of women doctorates available at any but the lowest level. Their unemployment rates also suggest that women are available. In 1973 women with doctorates in science, engineering, and social sciences have an unemployment rate four times higher than men with doctorates in the same areas.

Many male academicians would at least hire, if not promote, superwomen. But alas, there are few superwomen just as there are few supermen in academia.

Many universities hire the average male doctorate. but deem the average female doctorate unqualified.

The insensitivity to existing inequities is illustrated by the distinguished male professor who said that he had been searching for qualified women to fill a faculty position for 15 years but he could not find one qualified.

When it was suggested that he submit a written report of why the women applicants were not qualified, he became enraged and left the room.

The fact is that there is discrimination against women in education. It was voluminously documented in Representative Edith Green's hearings before the Special Subcommittee on Education in 1970. Since then, additional studies and investigations at the State and Federal level have substantiated the charge of discrimination against women in the educational community. How, then, do we resolve this problem?

Although some discrimination today is manifested in conscious, overt acts, most employment discrimination persists in old employment practices, that is, soliciting candidates for a job from friends and making arbitrary employment decisions based on assumed characteristics of a group.

In order to eliminate the discriminatory effects of employment practices an analysis of such practices and their effect on underutilized groups would have to be made. Then appropriate remedial actions must be taken if discrimination is to be eliminated. These specific, positive remedial actions are called affirmative action.

Without it discrimination resulting from regular employment practices continues. Benigh neutrality or simply forbidding discrimination is not enough. This was recognized in the Presidential Executive orders from 1961 through 1967 which required Government contractors to take result-oriented affirmative action to eliminate job discrimination.

The present Executive Order 11246 as amended also requires affirmative action. There is a consistent trend in the courts to uphold affirmative action, including goals and timetables to overcome the effects of past discrimination.

Affirmative action is necessary to eliminate past and present employment practices which perpetuate unequal opportunities. Affirmative action is result-oriented. The finest plans are meaningless unless there is a measurable improvement in the numbers of underutilized persons.

Coping with affirmative action is relatively new to educational institutions. They seem to be going through the same apprehension that most groups experience when they have to deal with a new situation in which they don't see immediate benefits for themselves.

It is astounding to me that with all of the brains and talent at the disposal of educational institutions, more of them have not been able to produce acceptable, affirmative action plans. It is disappointing that educational administrators often seek to meet only the minimum legal requirements. If educational institutions would tackle discrimination with the same ingenuity and enthusiasm that they have used to attract Federal funds, there would be many more acceptable affirmative action plans and a greater increase in the hiring and promotion of minorities and women.

Instead, educational institutions are spending a great deal of time and effort resisting the requirements applied to all other Federal contractors.

For the first time in academia, hiring, promotion, and salary practices are being examined by outside groups. It is only natural for people to feel threatened when they are first asked to justify their judgments. Uniform policies must be developed and so must specific criteria for positions.

Policies must be applied in a consistent manner. One administrator at a large university said to me recently that although affirmative action had not resulted in much of an increase in the number of underutilized persons, the personnel practices were certainly improved.

Some persons suggest that goals and timetables are not suitable for educational institutions. They overlook the fact that goals are targets, not quotas. There is no penalty for not meeting a goal if good faith efforts are made. The determination of a numerical goal causes the persons involved to analyze the situation to see if there is underutilization and what can be done to remedy it. The determination of numerical goals and timetables take into account such factors as anticipated new vacancies, promotions, and the availability of qualified persons.

Preferential hiring of underutilized persons is not required. Unqualified persons do not have to be hired to meet a goal.

What has caused educators some concern is that they now must enumerate qualifications for positions. While it may be more complex to determine job qualifications for a professor than it is for a cab driver, it is no different from hiring any other professional person.

The attorney hired by a corporation, the physician hired by a hospital, and the professor hired by a university are all subject to similar considerations when being hired and promoted as professionals.

Corporations, hospitals, and universities all have a great deal at stake when they hire their professional personnel. Their future reputations and excellence may well be affected. If businesses and health facilities can recruit and promote their professionals successfully under affirmative action procedures, there is every reason to believe educational institutions can too.

Requesting separate rules for the academic community is a natural reaction, as they finally come to grips with the establishment of new procedures and practices. It is far easier to continue in the same old way. However, separate rules are not appropriate for educational institutions. All phases of the employment would would want a special classification because they all perceive particular problems in their own spheres.

There is nothing mystical about a good professor any more than there is about a good physician. If an outstanding teacher-scholar is needed, those qualities can be enumerated and objectively evaluated.

If certain job-related personal characteristics are desirable—they can be stated. Only then will discriminatory judgments; that is, "a woman would interfere with the right social mix," or "a woman's place in science is washing dishes or being a technician," or "I won't hire women, they are too emotional"—be eliminated from employment decisions.

Further, any special treatment for education would create a separate class of second-class citizens for women and minorities in the academic community. It would deprive underutilized persons in education of the same rights and remedies in employment afforded such persons in all other aspects of society.

There can be no exceptions made for any groups when it comes to affirmative action, which includes goals and timetables. Instead, Congress should be concerned that the requirements of Federal laws and regulations are vigorously enforced. Women's groups certainly are not satisfied with the progress made in enforcing these laws and regulations.

The reluctance of HEW/OCR to use its enforcement powers and rely on voluntary compliance has caused an inordinate delay in achieving an equal opportunity for women in education. In over 3 years there have been nearly 200 universities and colleges investigated.

However, during this time less than 20 affirmative action plans have been accepted by HEW/OCR. From May 1973 to June 1974 only 30 plans were evaluated, some accepted, some rejected.

There are, as of July 1, 1974, 201 affirmative action plans in the regional offices waiting to be evaluated. At that rate, it will take almost 7 years to eliminate the backlog.

Thus far, universities have had Federal contracts delayed not because they have been deficient in the implementation of affirmative action plans, but because they have not even developed acceptable affirmative action plans.

There is great concern among women's groups that the Office for Civil Rights is not committed to the enforcement of Executive Order

11246, as amended. As an illustration I have given Mr. Buell of the staff a copy of the memo of HEW's Assistant General Counsel for Civil Rights to the HEW General Counsel which was intended for the Secretary.

This memo describes the background of the HEW compliance review of the University of California, Berkeley, describing the weak legal position of HEW if they didn't issue a show cause notice to the university after a protracted period of negotiations and extensive technical assistance which resulted in an unacceptable affirmative action plan.

It describes the problem of renewing the university's eligibility for new Federal contracts at that time in view of the Department of Labor Regulations.

This legal memo was buried by the General Counsel. A show cause notice was not issued and the university became eligible for new contracts, regulations, notwithstanding.

Such actions call into question the intentions of HEW regarding equal employment opportunity in education.

Whether due to mismanagement or high level policy decisions, the inadequacies of HEW's enforcement of Executive Order 11246, as amended, are apparent. There is little reason to believe that the enforcement of title IX will be any better.

Because there are difficulties in enforcement and resistance from educational institutions does not mean that educational institutions should be relieved of their responsibilities for developing and implementing effective affirmative action plans.

Instead, they should be prime examples in overcoming discrimination and providing equal opportunity that is required morally and legally by the rest of society.

Mr. O'Hara. Dr. Raffel, it has been suggested to this subcommittee that the numerical goals that institutions of higher education have been required to set in their affirmative action plans have in some instances resulted in a preference in employment being given to women or to racial minorities because of the university's commitment to achieve a particular numerical goal.

If that is indeed the case, would you believe that such preference could have been justified?

Ms. Raffel. No; I think, as I said, preference is not required.

Mr. O'Hara. But it is not forbidden. Maybe it is forbidden but in any event, people claim it is going on.

Ms. Raffel. I find it very difficult to believe, having dealt with university administrators somewhat and have dealt with HEW, that there has to be this continuing confusion on the issue of goals and timetables.

There are qualified women and when they are in the applicant pool, they are there. You don't have to hire underqualified people. I don't believe it is necessary. In a situation, I recall, there was a department that had 64 members and there were no women. Yet 20 percent of the Ph. D.'s in that particular science were received by women. When they had 10 people all equally qualified they selected the woman out of that 10. That does not mean she was less qualified or underqualified.

As is happening now with the job situation, you may get 10 or 20 people who are fairly equally qualified for a job. If there is underutilization in the department, I would suggest they take a very careful look at that woman who is equally qualified with the men when selecting candidates.

Mr. O'HARA. Then you would say that a preference could not be justified to select, under the particular circumstances you described, to select a less qualified woman but that it would be all right to use a preference to select an equally qualified woman.

Is that a fair summary?

Ms. RAFFEL. I would think that would be justified. She would be equally qualified. I think preferential hiring on the basis of sex is not necessary. The woman getting a Ph. D. is qualified as much as a man getting it. I don't think we have to continually discuss this business of being underqualified.

Mr. O'HARA. I agree with you. I don't think it is necessary. I think there are indeed a great many very well qualified women who are available for a position on some university faculty and I don't see why any preferential hiring should be necessary to eliminate discrimination against women.

Mr. BIAGGI. I think it is fair to say you wouldn't want the woman denied if she is equally qualified.

Mr. O'HARA. I think she would accept a preference for a qualified woman.

Ms. RAFFEL. If there is underutilization of women in the department. This would be a hypothetical situation, if they had 90 percent women in biological science department, and there was a woman equally qualified with a man, I think you have to look at it differently.

The fact of the matter is that in most departments women are underutilized. What we are asking for is fair consideration and I believe we can stand on our own merits. As we talk, we seem to think that hiring takes place in a computerlike vacuum, but we all know how hiring goes on. Those who had access to some of the decisionmaking in hiring understand how the pros and cons of applicants are discussed and shift-offs back and forth that take place when considering persons.

Mr. O'HARA. We had a little flak at the University of Michigan a few years ago over a question of who would be promoted. Under the guidelines adopted under the Executive order, there was a provision that said that if you could not, in meeting your goal—you could use qualifications but you could not seek qualifications greater than the least qualified person presently employed at the higher faculty level. There was considerable discussion of that at the time.

Finally a clarification was issued that, well, they didn't really mean that as it applied to university employment.

I would like to get your attitude on that question. If we have a faculty in a particular department where the full professors are all males, where the assistant professors are a mix of male and female, and it comes time to make one of them a full professor, if the best qualified were a male but at least one of the females was as well qualified as the least qualified full professor, what would be your attitude toward that promotion?

Ms. RAFFEL. Well, I would have to take many things into consideration as I am sure anybody would in a case like that.

I can think of physics as an example. If you had a gentleman ready to retire who is a full professor and he had received that professorship on a master's degree, I would have to look at that kind of a situation a little differently than if everyone had the Ph. D. degree.

I think there are situations like that. That is where the problem comes in. If they all had the Ph. D. degree and the people considered for promotion all had their Ph. D. degrees and all had a research record, I would want to examine the criteria for promotion very carefully. These decisions are often subjective. For example, how many papers are published? I have had the opportunity to know administrators making employment decisions who flip through papers and evaluate it by the number of charts, not what is the quality of the research. They don't read each paper the person has published.

Mr. O'Hara. They do a lot of their grading that way, too.

Ms. Raffel. If they are in a hurry perhaps. You know, what we are saying is it is very subjective. How much better is one journal than another? These things are not always foremost in their minds. I would sit there and question very hard just what the criteria are. If you want a particular person promoted you can have a job description to fit him. That is the kind of thing we want to look at carefully.

That takes, of course, an experienced reviewer because these things are going on today and are not recognized.

Mr. O'Hara. Well, I thank you for your testimony.

Mr. Biaggi.

Mr. Biaggi. I am continually plagued by the spectre of what can be seen down the road. Accepting the premise that everyone is entitled to equal opportunity, which I concur with wholeheartedly, then we look to the affirmative action concept and its implication and how it affects everybody. Not simply sex differences or minorities, because the question that arises is what we regard as a minority. How it affects everybody.

The testimony we heard here and in my own personal travels finds everybody wanting a piece of the action. With equal claim and justification. On the basis that equal opportunity should be provided for all.

This morning we are talking in terms of sex discrimination. On an earlier occasion we spoke in terms of black discrimination. Spanish. Italian. Jewish. Irish. French. If you make a determination—if you are going to accept this concept, I can see an almost impossible situation developing.

This concerns the implementation of that principle. You would be advocating a woman within the same area, equally qualified women within the same area of 10 to 20 professors, you might have a Frenchman—an American of French origin.

You don't have an American with French origin on the whole staff. His position would be as strong as the advocate of the woman. You may have a black American. In that group you don't have a black head of a department. His position would be just as strong.

How do you make the delineation? Always assuming candidates are equally qualified.

Ms. Raffel. Being equally qualified is the first premise. Then I believe it is a decision that has to be made within the individual situation. Now, if it were a French department and the woman was an American, but the man was born and lived in France, they wouldn't be equally qualified because that person would naturally have an edge.

Mr. Biaggi. You have given us the edge. Let's deal with the premise for equality.

Ms. Raffel. In any case, it is not only women but any group. The idea is that we all be considered on the basis of our merit. Where there are underutilized people, have a good look at them, whether they are black or Indian or women, and see how they fit in. But the thing is not to give the preference automatically to white men all the time.

Mr. Biaggi. Let's stay with that. I don't think automatic is the word.

Ms. Raffel. Until 1970 it was operative.

Mr. Biaggi. Well, the way it is constructed today, for the most part that is what will be considered. Exactly what you have today; is that right? White male predominant.

Ms. Raffel. Yes.

Mr. Biaggi. OK. You are a white male of Irish origin. There isn't one in the school in an executive capacity. How does he fit compared to the advocate of the woman? If you pick him are you discriminating against a woman?

Ms. Raffel. If women are underutilized——

Mr. Biaggi. They are both underutilized. There wasn't one in the school of Irish origin.

Ms. Raffel. You can take any set goals for them if they are underutilized.

Mr. Biaggi. Let's stay with that. What you are saying then is we shouldn't take every group of the underutilized. Just pick a few groups if they are underutilized and cast the other groups aside.

Ms. Raffel. No, I wasn't saying that. All people need to be included. What you are asking me to do is make a judgment which would——

Mr. Biaggi. Explore it a bit, thinking out loud.

Ms. Raffel [continuing]. Which would depend really on the situation. We are talking about all equally qualified people. What we are advocating is to put women in the pool to be seriously considered with other equally qualified persons.

Mr. Biaggi. I couldn't agree with you more.

Ms. Raffel. How do we make that choice between a woman and a man who has Irish origin—I suspect he has not been underutilized in the total sense that he has been denied equal opportunity in educational institutions recently.

So I would put him in the category with the white male unless there was a good reason that that person would be exceptionally beneficial to the program.

Mr. Biaggi. Not simply because he is Irish but we are talking about consideration. Groups of Americans. Female Americans, Irish——

Ms. Raffel. Fifty-one percent of the population are women and they have been excluded and they do need equality.

Mr. Biaggi. You are talking in terms of principles. Is it less applicable to one injustice?

Ms. Raffel. No.

Mr. Biaggi. I would like to talk in terms of goals—I think the chairman addressed himself to it earlier—the practical effect of goals in the light of the Government's position under equal opportunity is to establish a target, a quota. That is the practical effect. My experience with the administrations of most universities is that they quiver when the Government is interested and they commit themselves to the principle but in the implementation of the principle they in fact go out of their way, sometimes appointing underqualified. But the net effect of the goal is a quota. That is our practical experience.

Ms. **Raffel.** Sir, I can't understand why if it is a goal, and if you don't meet the goal there is no penalty, as long as you are using the procedures and practices that are approved to try to include minorities and women—why do administrators get that way about goals? The problem is with them, not with the law and not with those enforcing the law. I think being educators with all that education, they can be convinced and see clearly what it is actually we are asking for. My own personal experience has been that they aren't falling over backwards to meet those goals. They are falling over backwards to justify why they don't have to have them.

Mr. **Biaggi.** Our experience is contrary. I happen to agree with you. It is the educators who are at fault.

Ms. **Raffel.** We should all work with them carefully and patiently until they understand clearly what a goal is and what it attempts to do, and that they will not be penalized if they don't meet that goal. They grasp all these other concepts so easily. I don't know why they would black out on this point.

Mr. **Biaggi.** Simply frightened.

Ms. **Raffel.** I don't know why. So few Federal funds have ever been withheld. HEW has done so little. I can't imagine that they would give much consideration at all to it any more.

Mr. **Biaggi.** The fact of the matter is many of their goals have been obtained by virtue of this desire to fulfill the commitment.

Ms. **Raffel.** May I say one thing? The increase in women over the past 4 years in education since affirmative action has gone into effect has been one-tenth of 1 percent. That is not very many women hired on faculties. That is hardly enough. If you took the cream of the crop you would still be skimming the cream in your hiring practices and I doubt if there was any dilution of educational excellence by hiring women. I know of many qualified women waiting for opportunities.

Take as an example Dixy Ray, the head of the Atomic Energy Commission, was an assistant professor. Nobody thought of promoting her. She was for at least 12 years an assistant professor and then went to the Atomic Energy Commission. Women are there. Women are qualified. I have difficulty in understanding this idea of being underqualified and dilution of excellence when it comes to academic hiring, particularly because there have been so few hired.

Mr. **Biaggi.** What troubles me is that we have a tendency of suffering from tunnel vision. We narrow our sights to one or two groups where the fact of the matter is we have the total population that is adversely affected and I think the principle of equal opportunity should be applied and applied forcefully to all. That is all.

Ms. **Raffel.** I certainly do, too.

Mr. **Biaggi.** Thank you very much.

Mr. **O'Hara.** Dr. Raffel, thank you very much. I am sure that Dixy Lee Ray is an extremely qualified and capable and conscientious public servant but she was appointed by the same man who appointed

Mrs. Farkus. I don't know that the mere fact of appointment establishes that. In her case, it happens to be the case.

Ms. Raffel. I guess what I was trying to say was the university couldn't recognize she couldn't be anything but an assistant professor for 12 years, which is a long time to be an assistant professor.

When she came to the Government she rose according to her capabilities and is now Chairman of AEC.

Mr. O'Hara. Before calling our next witness I would like to make it clear that it is certainly not my purpose to attempt to establish that women have not been discriminated against in employment in universities and colleges. I am sure they have. The evidence that they have been discriminated against is ample. There is no dispute over that, I don't think. The dispute goes to the question of the best ways to prevent such discrimination now and in the future.

[The full statement follows:]

Prepared Statement of Norma Raffel, Head, Higher Education Committee, Women's Equity Action League

I am Dr. Norma Raffel, Head of the Higher Education Committee of the Women's Equity Action League (WEAL). WEAL is a national voluntary organization which promotes equality in education and employment through legislation, litigation, and by pressing for full enforcement of existing anti-discrimination laws on behalf of women. Formerly I was the National President of WEAL. I am also a member of the Pennsylvania Commission on the Status of Women and serve as their resource person on education. I served on the Pennsylvania Department of Education's Equal Educational Opportunity in Higher Education Task Force. Also, I have taught courses in the Biological Sciences at Goucher College and The Pennsylvania State University. I have been spokesperson for women at The Pennsylvania State University in presenting information on their behalf to HEW's Office for Civil Rights during the compliance review at the University. Since then I have attempted to expedite the activities of HEW/OCR so that an Affirmative Action plan will be developed and it will be monitored.

Until 1970 when the Women's Equity Action League filed the first sex discrimination complaint against educational institutions under Executive Order 11246 as amended, the issue of discrimination against women in the academic community was largely ignored. Until the Executive Order, it was perfectly legal to discriminate against women in academe. WEAL recognized in 1970 that Executive Order 11246, as amended, applied to colleges and universities which held federal contracts and pressed the federal government to enforce the regulations. Its principle requirement is that to be eligible for federal contracts, an Affirmative Action plan to remedy the effects of past discrimination and prevent present discrimination must be developed and implemented. Women on campuses throughout the country used this first tool to provide an equal opportunity in education and collected information to demonstrate pervasive, sustained discrimination. As a result, hundreds of complaints were filed and women hoped they would, at last, be able to work, advance, and be rewarded in education on the basis of their qualifications and ability.

The 92nd Congress acted to prohibit discrimination against women on the campus by extending old laws and enacting new ones. Title VII of the Civil Rights Act of 1964 was amended to include all educational institutions. Congress enacted Title IX of the Education Amendments Act which forbids sex discrimination in any educational program or activity receiving Federal financial assistance. The Education Amendments Act of 1972 extended the coverage of the Equal Pay Act of 1963 to executive, administrative, and professional employees, including college and university faculties. The intent of Congress is clear: women shall have an equal opportunity in all phases of education. Women hope that there will be more progress toward equality of opportunity now that discrimination in the academic community is a legal problem as well as a moral one.

However, there is not room for much optimism. A study by the American Council on Education indicates that Affirmative Action has had little impact on faculty hiring. The report states that over a four year period, from 1968–69 to 1972–73, the percentage of women faculty members increased nine-tenths of one percent, from 19.1 per cent to 20.0 per cent.

Occasionally some person says there is not really discrimination at all, but that the primary reason women are not well represented in all phases of the academic community is "because, on the average, female faculty devote less time and energy to professional development (especially research) than men and more time to home responsibilities."[1] Such statements do not take into account that male faculty members are more likely to have their careers interrupted than are women. A fourth of the men—compared with a fifth of the women—interrupted their academic careers for more than a year because of military or family obligations.[2] Such statements do not take into account that increased home responsibilities due to young children occupy only a small period of time during the total time of career employment and that female Ph. D.'s who are married are twice as likely to be childless as women in the same age group in the general population. They are also likely to have a smaller family if they do have children. Further, about half of the female faculty in universities are not married.[3] The report by the Carnegie Commission on Higher Education, composed largely of men states, "Some married women clearly fall behind because they take time out to have children, but this is by no means the full explanation."[4]

Some persons say that women, with few exceptions, cannot qualify for "upper level" faculty positions.[5] How then can we account for the study which shows that the average woman doctorate is academically superior to the average male doctorate?[6] Some Academicians say that they would hire qualified women if they were available. The number of women receiving doctorates give at least a partial indication of the numbers available. Few institutions hire even half the number of women doctorates available at any but the lowest level. Their unemployment rates also suggest that women are available. In 1973 women with doctorates in science, engineering and social sciences have an unemployment rate four times higher than men with doctorates in the same areas.[7] Many male academicians would at least hire, if not promote, "super women." But alas, there are few "superwomen," just as there are few "super men" in academe. Many universities hire the average male doctorate, but deem the average female doctorate "unqualified." The insensitivity to existing inequities is illustrated by the distinguished male professor who said that he had been searching for qualified women to fill a faculty position for fifteen years but he could not find one qualified. When it was suggested that he submit a written report of why the women applicants were not qualified, he became enraged and left the room.

The fact is that there is discrimination against women in education. It was voluminously documented in Representative Edith Green's Hearings before the Special Subcommittee on Education in 1970. Since then, additional studies and investigations at the state and federal level have substantiated the charge of discrimination against women in the educational community. How, then, do we resolve this problem?

Although some discrimination today is manifested in conscious overt acts, most employment discrimination persists in old employment practices (i.e. soliciting candidates for a job from friends and making arbitrary employment decisions based on assumed characteristics of a group). In order to eliminate the discriminatory effects of employment practices an analysis of such practices and their effect on underutilized groups would have to be made. Then appropriate remedial actions must be taken if discrimination is to be eliminated. These specific positive remedial actions are called Affirmative Action. Without it discrimination resulting from regular employment practices continues. Benigh neutrality or simply forbidding discrimination is not enough. This was recognized in the Presidential Executive Orders from 1961 through 1967 which required government contractors to take result-oriented affirmative action to eliminate job discrimination. The present Executive Order 11246 as amended also requires affirmative action. There is a consistent trend in the courts to uphold affirmative action, including goals and timetables to overcome the effects of past discrimination.[8]

Affirmative Action is necessary to eliminate past and present employment practices which perpetuate unequal opportunities. Affirmative Action is result-oriented. The finest plans are meaningless unless there is a measurable improvement in the numbers of underutilized persons.

Coping with Affirmative Action is relatively new to educational institutions. They seem to be going through the same apprehension that most groups experience when they have to deal with a new situation in which they don't see immediate benefits for themselves. It is astounding to me that with all of the brains and talent at the disposal of educational institutions, more of them have not been able to produce acceptable Affirmative Action plans. It is disappointing that educational administrators often seek to meet only the minimum legal requirements. If educational institutions would tackle discrimination with the same ingenuity and enthusiasm they have used to attract federal funds, there would be many more acceptable Affirmative Action plans and a greater increase in the hiring and promotion of minorities and women.

Instead, educational institutions are spending a great deal of time and effort resisting the requirements applied to all other federal contractors.

For the first time in academe, hiring, promotion, and salary practices are being examined by outside groups. It is only natural for people to feel threatened when they are first asked to justify their judgments. Uniform policies must be developed and so must specific criteria for positions. Policies must be applied in a consistent manner. One administrator at a large university said to me recently that although Affirmative Action had not resulted in much of an increase in the number of underutilized persons, the personnel practices were certainly improved.

Some persons suggest that goals and timetables are not suitable for educational institutions.[9] They overlook the fact that goals are targets, not quotas. There is no penalty for not meeting a goal if "good faith" efforts are made. The determination of a numerical goal causes the persons involved to analyze the situation to see if there is underutilization and what can be done to remedy it. The determination of numerical goals and timetables take into account such factors as anticipated new vacancies, promotions, and the availability of qualified persons. Preferential hiring of underutilized persons is not required. Unqualified persons do not have to be hired to meet a goal.

What has caused educators some concern is that they now must enumerate qualifications for positions. While it may be more complex to determine job qualifications for a professor than it is for a cab driver, it is no different from hiring any other professional person. The attorney hired by a corporation, the physician hired by a hospital, and the professor hired by a university are all subject to similar considerations when being hired and promoted as professionals. Corporations, hospitals, and universities all have a great deal at stake when they hire their professional personnel. Their future reputations and excellence may well be affected. If businesses and health facilities can recruit and promote their professionals successfully under Affirmative Action procedures, there is every reason to believe educational institutions can too.

Requesting separate rules for the academic community is a natural reaction, as they finally come to grips with the establishment of new procedures and practices. It is far easier to continue in the same old way. However, separate rules are not appropriate for educational institutions. All phases of the employment world would want a special classification because they all perceive particular problems in their own spheres. There is nothing mystical about a good professor any more than there is about a good physician. If an outstanding teacher-scholar is needed, those qualities can be enumerated and objectively evaluated. If certain job-related personal characteristics are desirable, they can be stated. Only then will discriminatory judgements (i.e. "a woman would interfere with the right social mix," or "a woman's only place in science is washing dishes or being a technician," or "I won't hire women, they're too emotional") be eliminated from employment decisions. Further, any special treatment for education would create a separate class of second-class citizens for women and minorities in the academic community. It would deprive underutilized persons in education of the same rights and remedies in employment afforded such persons in all other aspects of society.

[9] Richard Lester, *op. cit.*

There can be no exceptions made for any groups when it comes to Affirmative Action, which includes goals and timetables. Instead, Congress should be concerned that the requirements of federal laws and regulations are vigorously enforced. Women's groups certainly are not satisfied with the progress made in enforcing these laws and regulations.

The reluctance HEW/OCR to use its enforcement powers and rely on voluntary compliance has caused an inordinate delay in achieving an equal opportunity for women in education. In over three years there have been nearly two hundred universities and colleges investigated, and none of WEAL's charges of sex discrimination have been refuted. However, during this time less than 20 Affirmative Action plans have been accepted by HEW/OCR. From May, 1973, to June, 1974, only 30 plans were evaluated. There are, as of July 1, 1974, 201 Affirmative Action plans in the regional offices waiting to be evaluated. At that rate, it will take almost 7 years to eliminate the backlog. Thus far, universities have had Federal contracts delayed not because they have been deficient in the implementation of Affirmative Action plans, but because they have not even developed acceptable Affirmative Action plans. Some educational institutions have been allowed over two years and still have not produced an acceptable Affirmative Action plan.

Despite the widespread lack of progress by universities, not once has an educational institution been taken to an administrative hearing. The reason given by HEW/OCR is that the cases are not documented well enough. If this is so, then investigators need their skills improved—they need effective training programs as well as consistent policies. Investigators need to know what information is pertinent and significant and how to obtain it. The present ineptness of investigators has dismayed those persons at the universities who support equal opportunity. More and more university administrators regard HEW/OCR as a "paper tiger" and turn to other priorities.

There is great concern among women's groups that the Office for Civil Rights is not committed to the enforcement of E.O. 11246, as amended. As an illustration I have given Mr. Buell of the staff a copy of the memo of HEW's Assistant General Counsel for Civil Rights to the HEW General Counsel which was intended for the Secretary, but was disregarded by the General Counsel. This memo describes the background of the HEW compliance review of the University of California, Berkeley, describing the weak legal position of HEW if they did not issue a "show cause" notice to the University after a protracted period of negotiations and extensive technical assistance which resulted in an unacceptable Affirmative Action plan. The Department of Labor Regulations (Section 60–2.2) require that a "show cause" notice must be issued in cases where a contractor does not have an acceptable Affirmative Action plan. It describes the problem of renewing the University's eligibility for new Federal contracts at that time in view of the Department of Labor Regulations. This legal memo was "buried" by the General Counsel. A "show cause" notice was not issued and the University became eligible for new contracts, regulations notwithstanding. Such actions call into question the intentions of HEW regarding equal employment opportunity in education.

Whether due to mismanagement or high level policy decisions, the inadequacies of HEW's enforcement of E.O. 11246, as amended, are apparent. There is little reason to believe that the enforcement of Title IX will be any better.

Because there are difficulties in enforcement and resistance from educational institutions does not mean that educational institutions should be relieved of their responsibilities for developing and implementing effective Affirmative Action plans. Instead, they should be prime examples in overcoming discrimination and providing equal opportunity that is required morally and legally by the rest of society.

Mr. O'Hara. Our last witness is Mr. Bernard Kuttner, Anti-Defamation League.

STATEMENT OF BERNARD KUTTNER, CHAIRMAN, NATIONAL DISCRIMINATIONS COMMITTEE, ANTI-DEFAMATION LEAGUE, ACCOMPANIED BY IRA GISSEN, DIRECTOR, DISCRIMINATIONS DEPARTMENT, ADL

Mr. KUTTNER. Thank you, Mr. Chairman.

Mr. Biaggi, I would like to introduce Mr. Ira Gissen who is the director of the Anti-Defamation League's discriminations department and has a long history of service in all levels of the Federal Government as well.

Mr. Chairman, in deference to the hour, I will not read the 18 or 21 pages which we have handed to you. I would like to highlight a couple of cases——

Mr. O'HARA. Let us first obtain unanimous consent that your statement will appear in full in the record.

Mr. KUTTNER. Thank you, Mr. Chairman.

The Anti-Defamation League of B'nai B'rith welcomes this opportunity to offer its experience and views in regard to what the obligations of postsecondary education institutions are and what they should be under the law, the Executive orders and the rules and regulations governing equality of opportunity in education and employment.

The B'nai B'rith, founded in 1843, is the oldest civic service organization of American Jews, which represents a national membership of more than 500,000 men and women and their families.

It is a cardinal goal of the Anti-Defamation League to bring about true equality of opportunity and to eliminate discrimination based on race, religion, national origin, or sex. We have vigorously pressed for legislation and administrative action to ban discrimination in employment, education, housing, and other areas of American life.

But after many years of struggle to bring about meaningful civil rights reform, it became clear by the early 1960's that laws against discrimination, by themselves, were simply not ridding our country of discrimination and its effects.

Part of the difficulty was inherent in the nature of civil rights law enforcement itself. To rely on a case-by-case basis of resolving individual complaints was obviously not sufficient. Many cases are extremely difficult to prove and can drag on for years.

Suffice it to say with the Kennedy and Johnson administrations, and later the last administration, our agency helped promulgate the concept of affirmative action. We urged that employers and educators take positive steps to remove barriers to equal opportunity and welcome those who were previously left out. However, by affirmative action we do not mean preferential treatment in the selection process. ADL has strongly supported the elimination of nonjob related tests and screening measures even before the 1971 Supreme Court decision in *Griggs* v. *Duke Power Co.*, 401 U.S. 424 (1971), that required employers to do so.

Further, the Anti-Defamation League firmly supports the provision of compensatory education and training, retraining, special counseling, and other forms of help to those who have been discriminated against, to help them enter the mainstream of American life. ADL insists that all such programs be administered on an equitable basis.

We recognize that surveys of workforces, student bodies and so on, may be needed to provide data for evaluating compliance with nondiscrimination policies.

However, we continue to urge that questions as to race, color, ethnic group, place of birth, or religion, do not appear on application forms, and that individuals are at no time required to identify themselves by any of these characteristics, except anonymously.

We have reached a point now where the educational institutions, in a perversion of what Congress meant and what the rules and Executive orders mean, require individuals to list on their application forms their race, their sex, their religious origin.

We know, and there are examples here, where, as a result of this kind of perversion of what Congress meant, we say, most respectfully, that people are being kept out—not on the basis of their qualifications but on the basis of where their great-grandfathers may have originated from.

In New Jersey, the State I come from, these kinds of surveys now, until we got into the act, were made a condition of the relicensing of physicians. Physicians were told, and all the healing arts professions were told: we have a new regulation, and you must tell us your race and ethnic group if you want to be relicensed.

Clearly that was never intended by any of the Executive orders. At least we would urge that it should not be. We urge that the equal protection clause demands the elimination of racial barriers, not their creation, in order to satisfy our theory as to how society ought to be organized.

Unfortunately, the pressures to produce such dramatic results in ending "underutilization" or "underrepresentation" of minorities has brought about the widespread distortion of this concept of affirmative action.

Many of those charged with implementing affirmative action in employment and university admissions have forgotten what affirmative action is all about.

ADL is leading the efforts to get affirmative action on the right track again. Our basic rule is simply that in each case, we must make sure that every person, male or female, minority or nonminority, is accorded the same right to be free from discrimination as is every other person.

There must be no discrimination against a member of any group in hiring, promotion, admissions, or any other selective process in which some candidates are chosen and others are rejected. Any such act is illegal, since it violates the laws against discrimination, which prohibit all discrimination without exception.

It simply substitutes a new form of discrimination for an old form of discrimination; the victim has changed, but not the act.

Indeed, the presumed beneficiaries continue to be treated as second class citizens, requiring paternalistic and patronizing consideration as if they are not really qualified for the task or job or promotion but must be given consideration based on extraneous factors such as sex or race.

Worst of all, reverse discrimination is grossly unjust because it makes innocent persons pay a debt owed by a society as a whole. If we allow discrimination supposedly in a "good" cause, there is simply no logical stopping point. And there is no way to implement reverse discrimination on a "fair" basis. We have a moral as well as legal obligation to keep affirmative action working properly—and must not try to help members of one group by hurting innocent members of another.

Beginning in 1972, we have been filing charges of preferential treatment and racial quotas with the Department of Health, Education, and Welfare. The more than 100 "pattern and practice" cases which we reported existing in postsecondary education institutions have injured thousands of victims. Up until the time we began filing complaints, HEW gave no indication that it was at all concerned about its fundamental responsibility to correct the problem which it had helped create. HEW's performance since then has not been much better.

Although many, many documented complaints were brought to their attention in August of 1972, years have gone by and without going through every item in the complaints, no response has been received to a great many, and perfunctory responses have been received to most of the others. At least 34 instances of these kinds of preferential treatment—those dealing with student admissions—have not even been responded to.

This failure to respond, much less to take action to remedy the severe deprivation of equal protection rights imposed by racial quotas in federally funded school admissions, constitutes failure to enforce the clear statutory mandate of title VI of the Civil Rights Act of 1964.

We maintain that under the law, periodic enumerations of work forces or student bodies may be used to evaluate affirmative action policies provided, however, that: (1) questions concerning race, color, ethnicity, place of birth, or religion do not appear on application forms; (2) individuals are at no time required to identify themselves by any of the above; and (3) no records of any individual's race, religion, or ethnic origin are maintained by an employer or educational institution.

HEW's response relating to racial and ethnic data recognizes the possibility that such data can be employed for a discriminatory purpose, but claims that such data is necessary to maintain compliance with nondiscrimination laws.

Putting aside the question of the legality and correctness of this conclusion, we are aware of no guidelines, instructions or direction emanating from HEW which would counsel institutions as to how to collect and maintain this information in the manner least likely to facilitate discrimination and invade privacy.

HEW fails to give specific guidance as to how data is to be collected and prevent misuse. In conclusion on that issue, we charge that HEW is allowing reverse discrimination to continue spreading unchecked in violation of its obligations in the law.

As a result many people are being denied their legal rights and are being deprived of the Government's aid to redress these faults.

If I may, I would like to give you just a couple of the hundreds of examples we have on file on some of the kind of things that are being done.

We have used some of our limited resources to deal directly with several of the postsecondary education institutions on which we have received these hundreds of complaints.

Here is an example of the kind of letter that the admissions committee at the University of Wisconsin medical school sends to out-of-State applicants.

> DEAR STUDENT: Positions in the entering class available to nonresidents are limited to 5 percent of the total number admitted. These few positions are reserved for minority applicants, *e.g.*, Afro-Americans, mainland Puerto Ricans, Mexican Americans and Native Americans, and for applicants to a very limited, specialized program.
>
> Therefore, bulletins will be sent only to applicants that indicate minority status or that indicate an already developed interest in the above-mentioned program.

The Anti-Defamation League got this letter stopped.

This is not an isolated example and once our country, Mr. Chairman, gets to this point where the Americans of Lebanese descent and Armenians and Irish and every other ethnic group who are Americans are told that they shouldn't even get a bulletin, then the concept of America as we have it and worked so hard for, has been totally destroyed.

We received complaints from numerous people who have been excluded from institutions of higher education throughout this country. These are detailed here. I am not going to go into them.

But let me give you one example at the University of Massachusetts. A complaint was sent to me on behalf of two students. One a Jew. The other a Roman Catholic of Italian extraction.

That institution's officials on the upper level didn't even seem to know what the officials on the lower levels were doing, what kind of letters they were sending out to applicants. That was the same story that I might say was given to us in the previous example.

In the University of Massachusetts example I just mentioned, there were 6 openings in the graduate program and there were 300 applicants. The University of Massachusetts' administration spokesman said the human relations department accepted three blacks and three whites and rejected the others. This action was unauthorized, the spokesman said.

Under the prescribed procedure the university graduate school accepts and rejects applicants. The 6 accepted applicants should be put back into the pool of 300 and then the 6 top ones, rated on the basis of ability, should be chosen no matter who they are.

We had a shocking example at Sam Houston State University in Texas. This university had been seeking applicants from Kent State University. In interviewing an outstanding candidate they wrote him a letter as follows after interviewing him and saying he was really outstanding:

> DEAR MR. LAMMERMEIER: I am truly sorry to inform you that it has been unexpectedly necessary to look for a black to fill the position in black studies. Jim Olson was right, and so I am obligated at least to search diligently for such a person. It was nice to meet you. I appreciate your coming down. The members of the department felt that you would do a good job for us, but this unexpected turn of events makes it necessary for me to take another tack. I wish you well in your search for a satisfying post this next year.

The gentleman gave us permission to use his name. This man, highly qualified, wrote us that he is presently employed as a chef in a pancake restaurant. This is the way one individual American ended up because of the perversion of the concept of equal opportunity affirmative action.

The problems with the Equal Employment Opportunity Commission are of larger scope because they affect many more employers. For example, the EEOC recently published a two-volume guidebook entitled "Affirmative Action and Equal Opportunity—A Guidebook for Employers."

The guidebook is replete with serious errors and distortions concerning the subject of numerical goals in hiring, which it confuses with quotas. It starts out by citing numerous court cases which required remedial action: (1) where intentional employment discrimination had existed, or (2) where there was no discriminatory intent but certain personnel practices had a disproportionate disqualifying effect upon female or minority group applicants or employees. It correctly reports that courts in both types of cases have imposed hiring and promotion "goals" to be met by employers as part of the required remedial actions to be taken.

However, it fails to report that such courts have repeatedly expressed their concern over the effect that these "goals" would have upon male and/or nonminority applicants and employees. Nor does it mention that some courts have refused to set such goals, for that very reason.

The guidebook then goes on to state that the "remedial action" necessary to remove all barriers to equal employment opportunity "often requires some kind of special treatment for a period of time," basing this conclusion on the court cases it has cited and summarized.

It then repeats the statement that "specified remedial goals" are "increasingly" being resorted to by the courts and that although title VII bars preferential hiring simply to eliminate racial employment imbalances in relation to population ratios, Federal courts consistently have found numerical goals and timetables to be a justified and necessary remedy and means of eliminating the present effect of past discriminatory practices.

Without going into each and every distortion, suffice it to say that our agency is very disappointed in this guidebook and we feel that it contains numerous inaccuracies.

For example, it alleges that its contents are in accord with Revised Order No. 4's requirements and are necessary for all employers covered by title VII whether or not they are Government contractors.

But actually, the detailed plans set forth in the Guidebook are not legally binding on any employer. Furthermore, many of the provisions in the Guidebook violate the terms of Revised Order No. 4.

That order was issued by the Department of Labor's Office of Federal Contract Compliance (OFCC) to enforce the Presidential Executive Order 11246, which requires Federal contractors to provide equal employment opportunity.

Although Revised Order No. 4 indeed requires numerical goals, it sets forth certain caveats against their misuse, and also recognizes that there are some circumstances where such goals cannot be set.

Suffice it to say the Anti-Defamation League seeks no special favors for anybody while advocating equal opportunity for all Americans.

Thank you very much.

[Mr. Kuttner's prepared statement follows:]

PREPARED STATEMENT OF BERNARD A. KUTTNER, ESQ., CHAIRMAN, NATIONAL DISCRIMINATIONS COMMITTEE, THE ANTI-DEFAMATION LEAGUE OF B'NAI B'RITH

Mr. Chairman and members of the Committee: The Anti-Defamation League of B'nai B'rith welcomes this opportunity to offer its experience and views in regard to what the obligations of post-secondary education institutions are and what they should be under the law, the Executive Orders and the rules and regulations governing equality of opportunity in education and employment.

The B'nai B'rith, founded in 1843, is the oldest civic service organization of American Jews, which represents a national membership of more than 500,000 men and women and their families. The Anti-Defamation League of B'nai B'rith was organized in 1913 as a section of the parent organization to advance good will and proper understanding between Americans and translate into greater effectiveness the ideals of American democracy. It holds that the welfare and security of all persons in the United States are inseparably related to the extension and preservation of equal opportunity for all; that an invasion of the rights of any racial, religious or ethnic group is a threat to the safety of all groups and the individual members thereof.

It is a cardinal goal of the Anti-Defamation League to bring about true equality of opportunity and to eliminate discrimination based on race, religion, national origin or sex. We have vigorously pressed for legislative and administrative action to ban discrimination in employment, education, housing and other areas of American life. But after many years of struggle to bring about meaningful civil rights reform, it became clear by the early 1960's that laws against discrimination, by themselves, were simply not ridding our country of discrimination and its effects.

Part of the difficulty was inherent in the nature of civil rights law enforcement itself. To rely on a case-by-case basis of resolving individual complaints was obviously not sufficient. Many cases are extremely difficult to prove, and can drag on for years. Sometimes, it may simply not be possible to find a complainant, with a really well documented case, who is willing to step forward.

And even where institutions do not discriminate in their policies, the effects of a heritage of discrimination often serve to keep minority group members and women from reaching their full potential. The evil effects of past discriminatory acts frequently persist after the acts themselves have ceased, leaving their marks on their victims. The Anti-Defamation League has always asserted that a just society has an obligation to help undo the evils that flow from discrimination.

To meet this need, we helped promulgate the concept of *affirmative action*. We urged that employers and educators take positive steps to remove barriers to equal opportunity and welcome those who were previously left out. However, by affirmative action we do *not* mean preferential treatment in the selection process. ADL has strongly supported the elimination of non-job related tests and screening measures even before the 1971 Supreme Court decision that required employers to do so.

Further, the Anti-Defamation League firmly supports the provision of compensatory education and training, re-training, special counseling and other forms of help to those who have been discriminated against to help them enter the mainstream of American life. ADL insists that all such programs be administered on an equitable basis.

We recognize that surveys of work forces, student bodies and so on, may be needed to provide data for evaluating compliance with non-discrimination policies. However, we continue to insist that questions as to race, color, ethnic group, place of birth, or religion, do not appear on application forms, and that individuals are at no time required to identify themselves by any of these characteristics, except anonymously.

We continue to remind government civil rights agencies that conformity to affirmative action guidelines should be evaluated in terms of good faith efforts, and not as rigid requirements. And we are always alert to detect abuses of the affirmative action idea and vigorously protest them wherever and whenever they occur. To put it very simply, the reason that we oppose quotas, preferential treatment, the use of proportional representation, and the use of race as an absolute qualification for any position, is that they *deny* equality of opportunity instead of promoting it.

The obstacles that affirmative action seeks to overcome are deeply entrenched. Large scale representation of women and minorities at all levels and all ocupations obviously cannot be achieved immediately. But pressures to accomplish such dramatic results have brought about widespread perversion and distortion of the affirmative action concept. Many of those charged with implementing affirmative action in employment and university admissions have forgotten what affirmative action is all about. ADL is leading the efforts to get affirmative action on the right track again. Our basic rule is simply that in each case, we must make sure that every person, male or female, minority or non-minority, is accorded the same *right to be free from discrimination* as is every other person.

There must be no discrimination against a member of *any* group in hiring, promotion, admissions, or any other selective process in which some candidates are chosen and others are rejected. Any such act is illegal, since it violates the laws against discrimination, which prohibit all discrimination without exception. It simply substitutes a new form of discrimination for an old form of discrimination; the victim has changed, but not the act. Indeed, the presumed beneficiaries continue to be treated as second class citizens, requiring paternalistic and patronizing consideration.

Worst of all, reverse discrimination is grossly unjust because it makes innocent persons pay a debt owed by a society as a whole. If we allow discrimination supposedly in a "good" cause, there is simply no logical stopping point. And there is no way to implement reverse discrimination on a "fair" basis. We have a moral as well as legal obligation to keep affirmative action on the right track by remembering that we cannot possibly—and must not try to—help members of one group by hurting innocent members of another.

It was not so many decades ago that the Anti-Defamation League fought and won a successful "crack the quota" campaign against discrimination in colleges and universities. Today, once again, we find ourselves confronted with the specter of quotas, cloaked in the guise of goals. The theoretical distinction between numerical goals and quotas, while not impossible to define and describe, nevertheless disappears in the marketplace of recruitment and selection. The Jewish community as well as other historically oppressed minorities knows all too well the cruel frustrations that are suffered by the victims of quotas.

Our nation has but recently emerged from a devasting decade in which some of our national leaders told us that we must make war for peace. Is there a strange quirk in their logic that dictates we must now be told that we have to discriminate in order to achieve equal opportunity; that certain groups must be kept out, in order that other groups be let in?

Beginning in 1972, we have been filing charges of preferential treatment and racial quotas with the Department of Health, Education, and Welfare. The more than one hundred pattern and practice cases which we reported existing in post-secondary education institutions have injured thousands of victims. Up until the time we began filing complaints, H.E.W. gave no indication that it was at all concerned about its fundamental responsibility to correct the problem which it had helped create. H.E.W.'s performance since then has not been much better.

The length of time which H.E.W. has taken in replying to the various series of complaints we have submitted, absent other explanations, can only be interpreted as indicating the low priority which the Department accords to problems of reverse discrimination.

Our first series of 33 complaints was submitted in August 1972 and partial replies were received in January and again in April 1973. However, we have yet to receive responses concerning ten of the original August 1972 complaints.

The most recent reply (October 15, 1973) dealt with 19 complaints submitted in December 1972. Why it took ten months to answer these complaints is particularly difficult to understand, since the cases involved no complex questions of law and required no extensive factual investigations. In fact, of the total number of complaints dealt with by H.E.W., in 11 no inquiry whatsoever was conducted, because H.E.W. claimed that the complaint lacked "adequate documentation;" contended that jurisdiction lay in another agency, or argued that the complaint did not deal with what it viewed as legally actionable discrimination.

The August 8, 1972, submission contained ten complaints relating to preferential treatment in admissions to undergraduate, graduate and professional schools. These included numerous documented instances of outright racial and ethnic admission quotas. Five additional instances of preferential treatment in admissions were brought to H.E.W.'s attention in April, and in July 1973 another 18 instances were submitted.

As of today, more than two years after the first complaint of preferential admission was presented to H.E.W., no response of *any* sort has been received by our agencies with respect to these 34 instances of preferential treatment in admissions. This failure to respond, much less to take action to remedy the severe deprivation of equal protection rights imposed by racial quota systems in federally funded school admissions, constitutes failure to enforce the clear statutory mandate of Title VI of the Civil Rights Act of 1964.

In an October 15, 1973 letter to us, H.E.W. repeatedly asserts that the allegations submitted, for the most part based on verbal admissions by college officials of a discriminatory university policy, are "difficult to investigate" or "lack adequate documentation." We believe H.E.W. is applying a double standard with respect to documentation and is requiring reverse discrimination complaints to document their complaints to a degree not expected of other discrimination complainants. We believe that H.E.W. is unfairly requiring those who complain of reverse discrimination to do investigatory work which is properly the role of the government in these instances.

Thus H.E.W. rejects, because "we do not believe that we have been provided with sufficient information upon which to base an inquiry," a complaint that a named hiring official, at a stated time and place, asserted that the complainant "would be seriously considered for the opening . . . if he were a woman or black."

The substance of the remarks clearly indicates a discriminatory policy—the hiring officer is named, the time and place given. One wonders what further information H.E.W. requires. We venture to say that if the intended victim of the discriminatory policy had not been a white male, further inquiry would have been made.

Similarly, H.E.W. contends that where a named hiring officer in an interview with a job applicant states that "the university is under pressure to consider other factors besides qualifications," such a statement is merely "ambiguous" or "unfortunate." H.E.W.'s further conclusion that it is "unable to initiate" an investigation "in the absence of more compelling evidence of discrimination" reflects a certain naivete concerning the code words of reverse discrimination, singularly inappropriate for an Office for Civil Rights specifically assigned the task of investigating such complaints.

In another instance, H.E.W. rejected a complaint based on an allegation that the complainant was passed over in favor of a minority candidate whom the complainant characterized as having "virtually no academic experience" and "little in the way of legitimate graduate work." H.E.W. refused to inquire into the matter because they claimed "such generalizations (as used to characterize the qualifications of the other candidate)" were "insufficient."

However, the classic *prima facie* case of discrimination is proved if the complainant establishes that he was of a particular race; that he was qualified; that he was rejected and that someone else of a different race was subsequently hired. See, e.g., *McDonnell Douglas Corp. v. Green*, 93 S. Ct. 1817, 5 FEP Cases 965 (1973).

In proving discrimination, it has never been an element of the plaintiff's *prima facie* case that the complainant must allege or prove that the person actually hired was less qualified than the complainant. Since the complainant did allege he was passed over in favor of an applicant of a different race, surely it would have been appropriate for H.E.W. to determine whether the complaint's characterization that the recipient of the job was less qualified was correct and whether discrimination had taken place.

H.E.W.'s double standard with respect to inquiries concerning reverse discrimination is shown by their views, noted in their letter, that:

> The colleges are not really rejecting candidates because of their race or sex; they are merely *saying* that they are pursuing a discriminatory policy and in their words, "cast[ing] the role of 'heavy' upon the Federal Government in rejecting candidates for employment."
>
> It would be destructive of affirmative action efforts in educational institutions, which are particularly sensitive to the Federal presence, for H.E.W. to make inquiries concerning complaints of reverse discrimination because these complaints arise principally from these college's efforts to blame "affirmative action" when rejecting applicants.

In view of the Supreme Court's rejection of the factor of intent as an element of proof in employment discrimination cases—*Griggs v. Duke Power Co.*, 401 U.S. 424 (1971)—it is strange to hear a government official claiming that when an employer says he is rejecting an employee because of race or sex, we are not to believe him but must look beyond his words and conclude that the employer really is not applying a discriminatory policy. Assume for the sake of argument, however, that the colleges are, in fact, employing these tactics, i.e., using affirmative action as an excuse for rejecting candidates they would otherwise have rejected on grounds of inadequate qualifications. Surely, it is the task of H.E.W. to preserve the integrity of the affirmative action concept by investigating and making sure that the university officials discontinue this practice where it is in a fact taking place. In our view, affirmative action is in greater danger from a failure to investigate than from "indiscriminate inquiries."

H.E.W. inquiries which may have the consequences of making universities and applicants face up to the realities of present day academic hiring, and discontinue employing affirmative action as a scapegoat, can only have a healthy effect. Let us assume, on the other hand, that they also confirm, as we believe they will, that discriminatory policies are, in fact, being implemented. If as a result of H.E.W.'s inquiries corrective action is taken, the inquiries will be even more salutary.

In case where there are written documents in which university hiring officials actually announce a discriminatory hiring policy, H.E.W. contents itself with a mere admonition to the violator that "much greater care must be exercised in the wording of vacancy announcements" or urges that university administrators be made to "familiarize themselves with the Guidelines." These responses reinforce our impression that a double standard is operating. The merest allegations of discrimination against the "protected" racial, sexual and ethnic minorities, based on evidence less weighty than that presented here, would, we are confident, prompt a full scale inquiry into one employer's hiring practices. Furthermore, findings that discriminatory policies were actually enunciated and minorities turned away on that account would, we are sure, in the usual situation prompt a rigorous and continuing review of the offending university's employment policies. H.E.W.'s treating complaints of reverse discrimination differently is clearly a denial of equal protection of the laws.

In H.E.W.'s response to us, there is no indication that any formal procedure for monitoring the future behavior of the erring hiring officials has been established. When H.E.W. recites that assurances of clarification of university hiring policy have been given, there is no indication that the assurances received from the university are in writing, are taken seriously by the university officials involved and that these officials understand that future errors of this nature will prompt more serious action by H.E.W.

As an organization which has undertaken the responsibility for bringing complaints to the attention of H.E.W., our confidence in this process would be enhanced by some indications that corrective action has in fact been taken by the universities. Such evidence could take the form of written copies to us of the "assurances" given by the offending university officials or of directives issued by the college to university hiring personnel, or participation by our organizations in the proposed "briefing sessions" to be conducted by the university. In the absence of such indications, we feel that we are engaged in a futile exercise.

The exchanges between our agencies and H.E.W. are characterized by a sharp disagreement as to the legality and propriety of the collection of racial and ethnic data in conjunction with monitoring university employment and enrollment for possible civil rights violations. We maintain that under the law, periodic enumerations of work forces or student bodies may be used to evaluate affirmative action policies provided, however, that: (1) questions concerning race, color, ethnicity, place of birth or religion do not appear on application forms; (2) individuals are at no time required to identify themselves by any of the above; and (3) no records of any individual's race, religion or ethnic origin are maintained by an employer or educational institution.

It is our considered view that the relevant statutes and regulations do not and constitutionally could not require that applicants for admission to schools or for employment specify their race or ethnic origin prior to hiring or admission. We recognize that institutions are legally required under the various Executive Orders and regulations to submit racial statistics in gross figures. Nevertheless, in the absence of a judicial or administrative charge or finding of prior discrimination in employment or admission, the risk of misuse of this data is so great, in our view, that a university should not be permitted to maintain individual personnel files relating to rates of pay, promotions and other personnel matters in which employees are identified by race and ethnic origins. And we know of no specific legal requirement that information be retained in this form.

H.E.W.'s response relating to racial and ethnic data recognizes the possibility that such data can be employed for a discriminatory purpose but claims that such data is necessary to maintain compliance with nondiscriminatory laws. Putting aside, for the purposes of this letter, the question of the legality and correctness of this conclusion, we are aware of no guidelines, instructions or direction emanating from H.E.W. which would counsel institutions as to how to collect and maintain this information in the manner least likely to facilitate discrimination and invade privacy.

H.E.W. has set forth specific and detailed guidelines governing every aspect of an educational institution's affirmative action program. Yet, H.E.W. fails to give specific guidance as to how racial and ethnic data is to be collected and maintained to prevent its misuse. This fact reinforces the impression that HEW does not really care if the institution employ this data for the purposes of reverse discrimination or other improper practices.

In conclusion, we find that for all of the foregoing reasons the responses of H.E.W. to date, on the whole, are unsatisfactory, and that H.E.W. is allowing reverse discrimination to continue spreading unchecked, in violation of its obligations under law. As a result many people are being denied their legal rights and—unlike victims of "traditional" kinds of discrimination—are being deprived of Government aid to redress these wrongs.

We have met twice with Secretary Caspar Weinberger and members of his staff. To date, we have been advised of no corrective action being taken on any of the foregoing. On May 23, 1974, we met with top staff of H.E.W.'s Office for Civil Rights to discuss their proposed "Memorandum to College and University Presidents." The purpose of the memorandum was to advise post-secondary education administrators on how to avoid reverse discrimination while promulgating programs of affirmative action. To date, not even that has been published—and another academic year is lost.

On July 5, 1973, the Federal Register published new regulations for H.E.W.'s implementation of Title VI of the Civil Rights Act of 1964. The key provision of Title VI, upon which these regulations are based, states: "No person in the United States shall, on the ground of race, color or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance."

However, under the new regulations (Section 80.3, paragraph b–6) the following statement appears: "Even in the absence of such prior discrimination, a recipient in administering a program may take affirmative action to overcome the effects of conditions which resulted in limiting participation by persons of a particular race, color, or national origin." Further, section 80.5 (j) provides: "Even though an applicant or recipient has never used discriminatory policies, the services and benefits of the program or activity it administers may not in fact be equally available to some racial or nationality groups. In such circumstances, an applicant or recipient may properly give special consideration to race, (etc.) . . ."

Also, in section 80.6 (b) a new sentence is added to require recipients to keep racial and ethnic data in relation to Federally assisted programs. In addition, recipients are admonished (80.6c) that: ". . . asserted consideration of privacy or confidentiality may not operate to bar the Department from requiring recipients to keep such data."

Based upon our experiences with the problems of preferential treatment, reverse discrimination, and the usage of numerical goals as if they were quotas, it is our considered judgment that these provisions will encourage much greater abuses of the law. These regulations serve to contravene the intent of Congress, as stipulated in Title VII of this same Act, which states expressly that, "nothing contained in this Title shall be interpreted to require any employer . . . to grant preferential treatment to any individual or to any group because of the race, color, religion, sex, or national origin of such individual or group on account of an imbalance which may exist with respect to the total number or percentage of persons of any race (etc.) employed . . . in comparison with the total number or percentage of persons of such race, (etc.) . . . in any community, state, section, or other area, or in the available work force of any community, state, section or other area."

We recommend that these provisions be deleted. If not deleted, we alternatively recommend that they be issued with instructions against their usage for preferential treatment, reverse discrimination or implementing numerical goals as if they were quotas.

We further recommend that: (1) questions as to race, color, ethnicity, nativity or religion do not appear on application forms; and (2) individuals are at no time required to identify themselves by any of the foregoing, except anonymously.

We oppose H.E.W.'s advocacy of the invasion of privacy and we oppose H.E.W.'s insistence upon the preferential treatment of select minorities not only as a matter of policy and principle, but also out of deep concern over the damage being done by H.E.W. to individual lives. There are many examples:

We have surveyed college student application forms in several states. The situation in Florida is representative:

Our results were startling. Of the 62 institutions of higher learning in the state, 54 ask questions which would identify applicants as to their ethnic characteristics. Most of them cite the Federal Government or H.E.W. as their authority.

We sent personalized form letters to the presidents of each college which employed application forms asking for ethnic data. The letter pinpointed the questions asked by the particular school and included a strong statement of concern on the part of our office. We also included within the letter our recommendation that a simple tear-off form, attached to the application for admission, could be utilized for the anonymous gathering of ethnic statistics. Thus, where applicable, the schools could successfully comply with government agency requests for ethnic data while still preserving the anonymity of the individual applicant.

We have unearthed new problems which emanate from the gathering of ethnic data on application forms. Of the greatest significance is the phenomenon of by-name lists of students of a particular ethnic category being provided to would-be employers for the purposes of hiring. Thus, while a school's request for an applicant's ethnic identification on an admissions form may, in some cases, play no role in the decision as to acceptability for that school, the information gathered serves the cause of discrimination in hiring two or four years later.

Out of our growing sense of frustration over H.E.W.'s unwillingness to correct the problems it helped to create, we have used our own limited resources to deal directly with several post-secondary education institutions. We cannot enforce nationwide standards, but our results, on an ad hoc basis, have generally been successful.

For example, the Admissions Committee of the University of Wisconsin Medical School has been sending the following letter to out-of-state applicants:

> DEAR STUDENT: Positions in the entering class available to non-residents are limited to 5% of the total number admitted. These few positions are reserved for minority applicants, e.g. Afro Americans, mainland Puerto Ricans, Mexican Americans and Native Americans, and for applicants to a very limited, specialized program. Therefore, bulletins will be sent only to applicants that indicate minority status or that indicate an already developed interest in the above mentioned program.
>
> Sincerely,
>
> STEVEN W. BERKLEY,
> *Admissions Associate.*

The Anti-Defamation League got the letter stopped.

We received three complaints from students trying to enter graduate school at the University of Massachusetts. They reported letters received from the University advising that their applications were rejected because spaces were reserved for minority group applicants.

It is most significant to point out that *although the ADL had received only three complaints regarding the situation, as a result of our action the fact was uncovered that three hundred students had been similarly rejected because of reverse discrimination.* As a result of our action the University created new openings for the rejected students equal in number to those filled under their discriminatory policy.

The newspaper, the "Springfield Republican" in an editorial entitled, "Watergate at U. Mass", commented as follows:

> A small-scale "Watergate" appears to exist at the University of Massachusetts. Officials on upper levels don't seem to know what those on lower levels are doing.
>
> Discrimination against non-minority applicants at the Graduate School's Center for Human Relations is charged by the New England regional office of the Anti-Defamation League.
>
> The charge is that whites are excluded in favor of blacks, because of a "constrictive quota and a commitment to recruit minority students."
>
> Discrimination is discrimination—as unfair when directed against whites as when aimed at non-whites.
>
> However the U Mass incident evidently wasn't sanctioned by top authorities.
>
> At issue are six openings in the graduate program, for which there were about 300 applicants. A U Mass administration spokesman said the Human Relations Department accepted three blacks and three whites and rejected the others. This action was unauthorized, the spokesman said.
>
> Under the prescribed procedure the University Graduate School accepts and rejects applicants.
>
> The six accepted applicants should be put back into the pool of 300, and then the six top-rated, on basis of ability, should be chosen, no matter who they are.

The ADL complaint was filed on behalf of two students, including a Jew and a Roman Catholic of Italian extraction.

H.E.W.'s pervasive pressure for preferential treatment and exclusionary quotas is illustrated in yet another arena of higher education. On May 17, 1974, the Office of Education published regulations governing "Grants for Training in Librarianship". They provided for priorities in the review of proposals, including: "The attraction of minority and/or economically deprived persons into the library field . . . as professionals and paraprofessionals." Accordingly, Queens College of the City University of New York established three fellowships and limited these federally funded grants to minorities exclusively.

H.E.W. has all but totally ignored the extraordinary racial discrimination taking place in the employment of faculty for Afro-American, African and Black Studies. The case at Sam Houston State University is typical. Having sought applicants from Kent State University, it interviewed an outstanding candidate and then wrote to him as follows:

> DEAR MR. LAMMERMEIER: I am truly sorry to inform you that it has become unexpectedly necessary to look for a Black to fill the position in Black Studies. Jim Olson was right, and so I am obligated at least to search diligently for such a person. It was nice to meet you. I appreciate your coming down. The members of the department felt that you would do a good job for us, but this unexpected turn of events makes it necessary for me to take another tack. I wish you well in your search for a satisfying post this next year.
>
> Sincerely,
>
> MARY S. OWEN, *Director.*

On January 6, 1974, Mr. Lammermeier wrote to us as follows:

> I received your letter yesterday requesting permission to use my name and circumstances regarding the reverse discrimination situation with the Department of History at Sam Houston State University in Huntsville, Texas. Please feel free to use whatever you think necessary to describe my case, including my name.
>
> I am still employed as a chef in the Perkins Pancake House in Mentor and will probably work there through next summer. I am presently continuing to pursue all avenues of possible employment, including higher and secondary schools and governmental agencies. As you are probably well aware, the job market in education is extremely tight right now.
>
> Thank you for your continued interest on my behalf. I would be very interested in seeing that forthcoming issue of *Rights.*
>
> Sincerely yours,
>
> PAUL J. LAMMERMEIER.

Other than telephone the University and receive a verbal denial of discrimination, H.E.W. did nothing.

The problems with the Equal Employment Opportunity Commission are of larger scope because they affect many more employers. For example, the E.E.O.C. recently published a two-volume guidebook entitled "Affirmative Action and Equal Opportunity—A Guidebook for Employers."

The Guidebook is replete with serious errors and distortions concerning the subject of numerical goals in hiring, which it confuses with quotas. It starts out by citing numerous court cases which required remedial action: (1) where intentional employment discrimination had existed, or (2) where there was no discriminatory intent but certain personnel practices had a disproportionate disqualifying effect upon female or minority group applicants or employees. It correctly reports that courts in both types of cases have imposed hiring and promotion "goals" to be met by employers as part of the required remedial actions to be taken.

However, it fails to report that such courts have repeatedly expressed their concern over the effect that these "goals" would have upon male and/or nonminority applicants and employees. Nor does it mention that some courts have refused to set such goals, for that very reason.

The Guidebook then goes on to state that the "remedial action" necessary to remove all barriers to equal employment opportunity "often requires some kind of special treatment for a period of time," basing this conclusion on the court cases it has cited and summarized.

It then repeats the statement that "specified remedial goals" are "increasingly" being resorted to by the courts and that

> Although Title VII bars preferential hiring simply to eliminate racial employment imbalances in relation to population ratios, Federal courts consistently have found numerical goals and timetables to be a justified and necessary remedy and means of eliminating the present effect of past discriminatory practices.

The subsection immediately following is entitled "Advantages of Voluntary Affirmative Action to the Employer." It advises employers that "affirmative action will help you avoid expensive legal judgments and sudden disruption of your regular operations and will help you qualify for government contracts." It further states that "It is to your advantage to conduct a thorough self-audit voluntarily to determine possible existence of discriminatory practices and needed remedial action." Thus, this manual clearly implies that there is no difference between court-ordered remedial action, imposed and supervised by an impartial tribunal, and a self-imposed affirmative action program voluntarily engaged in by an employer and supervised by no one other than his own executives. The implication is clear: either employers will impose goals on themselves, or the courts will do so.

This is far more than a blurring of an already indistinct line; it is a fundamental confounding of two entirely separate processes, and can only lead to the institutionalizing of preferential treatment, with employers imposing "do-it-yourself" quotas in hiring and promotion, although their actual prior practices would in fact not be discrimination.

Certainly, it would appear that such is the Commission's intent, for although it strongly urges the use of "numerical goals" in hiring and promotion, and does not use the word "quotas" at all, it fails entirely to mention the distinction often made by Federal equal employment opportunity officials between goals and quotas, and furthermore includes language that seems to suggest that quotas enforced with the utmost rigidity are what it really wants. It thus leaves employers with the impression that court-ordered "goals" (which are avowedly quotas) and an employer's self-imposed goals are one and the same.

The manual also alleges as follows:

> The actions suggested in this Guidebook are in accordance with *Revised Order No. 4* requirements and are necessary for *all* employers covered by Title VII whether or not they are government contractors. (emphasis in original)

Both statements in that sentence are outright falsehoods. The detailed plans set forth in the Guidebook are *not* legally binding on *any* employer. Furthermore, many of the provisions in the Guidebook *violate* the terms of Revised Order No. 4.

That Order was issued by the Department of Labor's Office of Federal Contract Compliance (OFCC) to enforce the Presidential Executive Order 11246, which requires federal contractors to provide equal employment opportunity.

Although Revised Order No. 4 indeed requires numerical goals, it sets forth certain caveats against their misuse, and also recognizes that there are some circumstances where such goals cannot be set. It clearly attempts to differentiate goals from quotas, and forbids their use for discrimination against *any* employee or applicant. None of these safeguards is even mentioned in the Guidebook.

Another major federal document, to which EEOC itself is a signatory, is also not mentioned. The March 23, 1973 Memorandum on Permissible Goals and Timetables in State and Local Government Employment Practices, which is entirely devoted to spelling out the differences between "permissible goals on the one hand and impermissible quotas on the other" is not cited in the Guidebook, and none of the strictures it contains is set forth even in paraphrased form.

What then does the Guidebook say about numerical goals? It seeks to imply that affirmative action goals, rather than being good faith estimates of the results of legitimate and proper affirmative action, as called for in Revised Order No. 4 and the above-cited memorandum are rather specific numbers that must be achieved.

In addressing itself to employers, Affirmative Action is the priority that E.E.O.C. puts forward. But in responding to Congressmen, it presents a different image. Witness this statement in a letter from E.E.O.C.'s Office of Congressional Affairs, addressed to Congressman Edward I. Koch dated August 9, 1974:

> The Equal Employment Opportunity Commission, while actively promoting affirmative action programs which will put the principle of equal employment opportunity into practice, does not have this as its primary function.

In concluding my statement I would like to refer to the United States Supreme Court decision in *Griggs* v. *Duke Power Co.*, which arose under title VII of the Civil Rights Act of 1964. The Supreme Court prohibited Duke Power from using a high school education or intelligence test scores as conditions of employment when neither standard was shown to be significantly related to successful job performance. Both requirements operated to disqualify blacks at a substantially higher rate than white applicants, and the jobs in question formerly had been filled only by white employees as part of a long-standing practice of giving preference to whites.

Despite the long history of discrimination by Duke Power, there is no suggestion in *Griggs* that imposition of a quota would be an appropriate remedy. On the contrary, Mr. Justice Burger stated:

> Congress did not intend by Title VII . . . to guarantee a job to every person regardless of qualifications . . . the Act does not command that any person be hired simply because he was formerly the subject of discrimination, or because he is a member of a minority group. Discriminatory preference for any group, minority or majority, is precisely and only what Congress has proscribed.

Similarly, the Anti-Defamation League seeks no special favors for any group. We advocate equal opportunity for all Americans.

Mr. O'HARA. Thank you very much. I was interested in your case involving the Kent State graduate who is now employed as a chef at the pancake house. One of our witnesses, in defending preferential treatment of minorities in faculty hiring, said, well, you don't have to worry about the white applicants that don't get the job because they will make out fine anyway.

That is part of the rationale, that white males will do—it doesn't matter if they don't get a particular job because there will be another one along in a few minutes.

This experience suggests that that might not be the case.

Mr. KUTTNER. It is absolutely so. Of course, this is only one of the hundreds of examples of individuals who have felt the brunt of this kind of preferential treatment who didn't succeed or who didn't contact some agency fast enough.

We have hundreds of examples of individuals who were severely injured by this kind of thing.

Mr. O'HARA. Mr. Kuttner, I think it would be appropriate for me to reaffirm your statement that your organization was in forefront of activity that led toward the adoption of the civil rights laws of the late fifties and early sixties.

As a Member of Congress at that time who was concerned with the legislation involved, I can testify that your organization was in the forefront of those working for those goals.

I can recall working on a number of cases when persons representing the organization here in Washington in those years and in Detroit back in those years worked very hard. I think you can be proud of the role you played in obtaining enactment of that legislation. I share your dismay over regulations, guidelines and rules that have been adopted contrary, I believe, to anything that was intended in the legislation that was enacted.

Your example of, what happened to that title VII language with respect to how the statute may not be used to require preferential hiring—think how that worked out in actual practice. Such that you suggested maybe we ought to repeal that part of the law. That is a very disturbing example.

I think your statement at the top of page 4 about the effect of so-called reverse discrimination, making innocent persons pay a debt owned by society as a whole is one of the best statements in that paragraph on the problem I have seen.

Mr. Kuttner. Thank you, Mr. Chairman. I might say I agree with you in your remarks in opening this committee that discrimination should be called that, and we don't need fancy adjectives to say where it is coming from, whether it be reverse or forward. It is still the same discrimination. I think it is unfortunate that this has gotten into the language of the kind of concerns that we are all dealing with.

Mr. O'Hara. Thank you.

I feel very strongly about that. It isn't any different. Discrimination is discrimination. It doesn't change a bit whether is it done for a "good" purpose or for a "bad" purpose. That is the problem I think.

We have gotten now to the point where we say, well, discrimination isn't discrimination if it is done for a good purpose such as remedying the effects of past discrimination.

If "A" was discriminated against, or the group of which "A" is a member was discriminated against in the past, then it is OK to discriminate against "B" who is a member of a group that might have been preferred in the past, but it doesn't seem to me the situation is different at all. "B" is being subjected to exactly the kind of unconstitutional, illegal, and immoral discrimination that we tried to stop when it was being directed toward "A." There is just no way of justifying it.

Mr. Kuttner. I certainly concur.

Mr. O'Hara. Mr. Biaggi.

Mr. Biaggi. Thank you, Mr. Chairman.

Thank you for your very substantial statement, Mr. Kuttner. It was very informative.

In connection with the "pancake house" reference you made, I think it is unfortunate, but before we conclude, the question comes to my mind, what recruitment efforts did the Sam Houston State officials make?

I think that is an area. The answer at this point is not important, but I think if a reasonable effort was made to recruit, that is the issue, minorities or other groups who had been heretofore neglected.

Was the candidate's qualifications equal to the others? If it was, it was unfortunate in his rejection.

You make reference to HEW. I have a particular peeve with HEW, not only in this area but other areas that I enunciated here. In connection with bilinguals, HEW unfortunately is laboring under the impression that there is only one segment of its community involved with discrimination or education problems and it is unfortunate because they could hardly remedy the situation if they haven't diagnosed it properly.

I asked a question here in this very room in connection with bilinguals in connection with the number of programs they had for Americans of Italian origin who had language problems.

Despite the fact that we have espoused a course supporting bilingual programs and urged more moneys be appropriated for that program.

First, they don't know. Then when they finally responded there wasn't one single program in the United States.

Going further, there were portions of America where we have pockets of Americans of French origin that have language problems up in areas of New England. The same question was put in that area. There wasn't a single one.

I made some statements in connection with my observations of their attitude then and now to bilingual as far as this is concerned might be charitable if I said they were neglectful. It is the most flagrant discrimination I have seen in Government as a result of bureaucratic attitude and policy.

Their implementation of our law, especially in connection with applications, I recall not too long ago when if one dared ask for a man's race or religion he was subjected to criticism, suit and action, and rightly so.

Then it was completely reversed. Which brings us almost into the position of discrimination. Just by simply doing that, it becomes a very subjective situation and discrimination comes into plan, subtlely or very directly.

Again, I challenge HEW for being the most destructive force and the most difficult obstacle to overcome in fighting this discrimination by creating almost impossible problems. Dealing with goals is a euphemism for quotas.

From a practical point of view that is all it amounts to, although ideologically it shouldn't be. The practical effect of it goes under this present atmosphere that it establishes quotas.

It is something that should be dealt with forthrightly.

What I would like to ask in connection with affirmative action, that itself has taken added significance. No one can quarrel with affirmative action. It is the thing to do. Apparently the organization has done it at the outset. But now it takes on an added meaning. It takes on a meaning that enrages some and is embraced by others.

Affirmative action in my judgment is an eliminating barrier, eliminating discriminatory situations. I think that was the position of your organization.

In your experience, how do you find the principle of affirmative action applied in practical life?

Mr. KUTTNER. Are you asking how would we like to see it applied?

Mr. BIAGGI. No.

Mr. KUTTNER. How do we find it applied? We find, unfortunately, that the concept has been applied not to break down the barriers of discrimination, which is what we would hope would happen so that every American gets an equal opportunity. What we find is that affirmative action has been used improperly to set up a quota system or preferential treatment.

I am sure you are familiar with the case at Queens College where in May of this year the grants in training provided for priorities in the attraction of minority and/or economically deprived persons into the librarian field as professionals and paraprofessionals.

Accordingly Queens College of the City University of New York established three fellowships and limited this federally-funded aid to minorities exclusively. This is a magnificent example in our own bailiwick of how the concept is improperly applied and I think that if we look down the end of the tunnel which you so aptly mentioned earlier, what we see is the use of affirmative actions to set up numerical goals and quotas, keeping some Americans out in an attempt to correct the inequities.

What we see happening is that kind of "affirmative action" that is not really affirmative action. It is a logical conclusion to the kind of concept that you heard from some of the witnesses in this very room.

The logical conclusion is that we are going to get to be a society where the only proper affirmative action, according to these folks, is when you have that number of Congressmen, teachers, musicians, who represent that proportion of the population. We say that in jest, but it is a very serious problem. You are going to need a Jewish lawyer only for Jews, an Armenian will never be elected to Congress. They aren't a big enough proportion of the population. That is what this concept, as perverted as it has been, leads us to: racial quotas, improperly applied.

Mr. Biaggi. It is more than racial. It is ethnic, too.

Mr. Kuttner. I am using the term—and sex.

Mr. Biaggi. That is the point I was talking to Dr. Raffel about earlier. That is the point I am making. I can see further down the road, why every group will be asserting its prerogatives and making its claims, and rightly so, and eventually what we would have in this country is a question of proportion representations in every field. Absent that you have chaos.

But with it you have an impossible situation. What it does ultimately is deprive—it removes incentive and deprives the Nation of the best because they will be boundary quotas. That is inevitable. Call it what you will. Goals, quotas, targets, whatever. If you deal with the needs for each group—that is what I am talking about. That is what is happening. First you start with one and then you start with another and then start with another and every group will be in there making their claim for some of the action, as said earlier. Eventually you will have the country divided into a hundred segments each making a claim in every area.

Mr. Kuttner. I couldn't agree with you more.

Mr. O'Hara. Thank you.

Mr. Kuttner, we have a very serious problem. It is true there has been discrimination. It is true I believe that discrimination continues. You and I would agree that affirmative action programs that go beyond affirmative action to the setting of numerical goals which in practice work out to be quotas is the wrong way to remedy this.

On the other hand, we had witnesses before this committee who have rightly complained that the traditional methods of remedying discrimination, doing it on a case-by-case basis, are ineffective to accomplish the results. So, we are faced with a problem of how do we do justice to everyone under these circumstances?

It is not enough for us simply to say, well, the present system is creating more injustice that it is correcting and therefore we won't permit the administrative agencies to continue doing this sort of thing.

We have to have, I think—we don't have to have but we ought to at the same time try to formulate some effective mechanisms for making sure there is no discrimination.

Now, I would certainly appreciate suggestions on any information that you have now or that comes up in the future that would lead us to that.

Mr. KUTTNER. Well, thank you. We have developed a booklet on this problem of affirmative action and we certainly have made some suggestions. We are actively working to try to make sure that the affirmative action concept should properly be applied so as to do the job and not on the other hand discriminate against anyone.

Mr. O'HARA. I will ask Mr. Buell, the subcommittee counsel, to be in touch with you and obtain any suggestions or information you have on this subject and keep in touch with you. It will be useful to the subcommittee.

Thank you very much.

Mr. KUTTNER. Thank you very much.

Mr. O'HARA. I thank all of you for appearing before this subcommittee and for your assistance in this inquiry.

The subcommittee will now adjourn until tomorrow morning at 9:30 in room 2261 and continue our inquiry.

[Whereupon, at 12:10 p.m., the committee recessed, to reconvene at 9:30 a.m., Friday, September 20, 1974.]

[The following material was submitted for the record.]

Initial Report*

September 16, 1974

AFFIRMATIVE ACTION IN FACULTY EMPLOYMENT UNDER EXECUTIVE ORDER 11246

(By Prof. Jan Vetter, University of California School of Law, Berkeley, Calif.)

INTRODUCTION

Many institutions of higher education hold federal contracts. As government contractors, they fall subject to Executive Order 11246, as amended.[1] The Order requires contractors to assure equal employment opportunity without regard to race, color, religion, sex or national origin in all of the contractor's facilities, not just those involved in performance of a contract. In higher education, as elsewhere, administration of the Executive Order, or contract compliance, program has provoked a good deal of controversy. From within higher education there may be heard angry claims that the program seeks to override traditional standards of academic judgment and impose quotas of minority and women faculty.[2] This charge the Government denies. At the same time, persons interested in improving the position among higher education faculty of minority groups and women criticize the program as ineffective. There may be some truth in both these positions. Indeed, they are not necessarily inconsistent. For a number of reasons the program—at least in higher education, perhaps more generally—lacks clear direction. It may be turned to a number of purposes but exists in danger of losing any particular sense of purpose.

It may seem surprising to find the contract device employed as a reform measure. This use of the government contract, however, is by no means unprecedented. The United States Government is a formidable presence in the American economy. Each year it consumes a substantial fraction of the goods and services the country produces. As sovereign, the Government also makes and enforces laws advancing its conceptions of wise policy. These activities are sometimes connected—the Government uses it power as consumer to achieve its aims as regulator.[3] The antidiscrimination program carried out under Executive Order 11246 represents perhaps the most important contemporary example.

* This report was prepared for consideration by the Committee on Grant and Benefit Programs of the Administrative Conference of the United States. It represents only the views of the author, not necessarily those of the Committee or the Conference. At this point, the report has neither been acted upon nor adopted by the Committee or the Conference. It is not available for publication, quotation or attribution in its present form.

[1] Exec. Order No. 11, 246, 3 C.F.R. 339 (1964–65 Comp.), amended by Exec. Order 11, 375, 3 C.F.R. 320 (1966–70 Comp.), 42 U.S.C. § 2000e (1970).

[2] See, *e.g.*, Seabury, *HEW and the Universities*, COMMENTARY, Feb., 1972, at 38; Shils, *Academic Appointment, University Autonomy and the Federal Government*, 9 MINERVA 161 (1971). For a critical view of the literature critical of the HEW program in higher education see Ezorsky, *The Fight Over University Women*, NEW YORK REVIEW OF BOOKS, May 16, 1974, at 32.

The Order obliges employers contracting with the Government to promise *nondiscrimination* on grounds of race, color, religion, sex or national origin and *affirmative action* to assure equal employment opportunity. If the Government finds that a contractor has breached these obligations, it may terminate existing contracts and declare him ineligible for future contracts, to mention only the more draconian remedies. In the degree to which an employer depends upon government contracts, it may seem, he will try to perform his commitments to nondiscriminaton and affirmative action. Given the Government's wide reach in the marketplace, the argument follows, execution of this strategy should contribute in a major way toward curing discrimination in employment.

Except for a short period around the close of the Second World War, executive orders attacking employment discrimination have been in effect since 1940.[4] Up to the current order at least, they were not conspicuously successful. It is true that one investigator, discovering the existence of the then effective order in 1957, announced the end of discrimination.[5] A successor, observing a flurry of activity carried out under a later order in the early 1960's expressed optimism that the program might prove effective.[6] In retrospect, both statements seem unguarded. Progress clearly depended upon a much more substantial investment than had been committed. In 1965 the present order was promulgated, and the program entered a period of reorganization and expansion. The Labor Department has been given responsibility for administration of the program. The Secretary, pursuant to a delegation contained in Executive Order 11246, has issued a series of detailed regulations. Within the Department, the Office of Federal Contract Compliance implements the Order and regulations. This includes oversight of the work of other agencies designated by the Secretary of Labor as compliance agencies. For higher education, the compliance agency is the Department of Health. Education and Welfare and, within the Department, the Office of Civil Rights (OCR). HEW's Office of Civil Rights in Washington supervises branches in ten regional offices of HEW around the country. It is the activity of OCR and the regional offices which has proved so controversial, stirring a great, but stationary, cloud of dust.

A number of the factors which account for this situation are readily identified. OCR has only a small number of people to deal with a large number of institutions. No one seems to know how many institutions of higher education hold federal contracts, but of a total of approximately 2300 such institutions, one estimate places the number of contractors at 1100. It seems that many institutions have had little or no contact with the program. A great deal of time has been spent in more or less inconclusive battle between OCR and a handful of universities.

The Government employees who work in the program ar poorly trained and seem to have little knowledge or understanding of higher education. Consequently, much time and effort are expended on the job in discovering the intricacies of university organization and academic personnel practices. Compliance review teams gather a great deal of data, but it is not always clear that what is obtained is understood.

The Labor Department's regulations are overgeneralized. The construction industry is treated separately, but otherwise all contractors are lumped together under the same regulations. These regulations clearly have in view a model of industrial employment. They fit the conditions of faculty employment very poorly indeed. Such matters as faculty participation in the management of universities, advanced work in intellectual disciplines and the unique combination of functions manifested in the professorial role find no reflection in the regulations.

Order No. 9001, 3 C.F.R. 1054 (1938–43 Comp.); Exec. Order No. 9346, 3 C.F.R. 1280 (1938–43 Comp.); Exec. Order No. 10, 210, 3 C.F.R. 390 (1949–53 Comp.); Exec. Order No. 10, 227, 3 C.F.R. 739 (1949–53 Comp.); Exec. Order No. 10, 231, 3 C.F.R. 741 (1949–53 Comp.); Exec. Order No. 10, 243, 3 C.F.R. 752 (1949–53 Comp.); Exec. Order No. 10, 281, 3 C.F.R. 781 (1949–53 Comp.); Exec. Order No. 10, 298, 3 C.F.R. 828 (1949–53 Comp.); Exec. Order No. 10, 308, 3 C.F.R. 837 (1949–53 Comp.); Exec. Order No. 10, 479, 3 C.F.R. 961 (1949–53 Comp.); Exec. Order No. 10, 557, 3 C.F.R. 218 (1954–58 Comp.); Exec. Order No. 10, 925, 3 C.F.R. 443 (1959–63 Comp.), 5 U.S.C. § 3301 (1970); Exec. Order No. 11, 246, 3 C.F.R. 339 (1964–65 Comp.), 42 U.S.C. § 2000e (1970); Exec. Order No. 11, 375, 3 C.F.R. 320 (1966–70 Comp.), 42 U.S.C. § 2000e (1970).

[5] Pasley, *The Nondiscrimination Clause in Government Contracts*, 43 Va. L. Rev. 837 (1957) ("It can fairly be said that discrimination by government contractors is now the exception rather than the rule.")

[6] Sovern, Legal Restraints on Racial Discrimination in Employment, ch. 5 (1966).

The sanctions the Government has at its disposal are clumsy and overpotent. Although OCR has requested government agencies not to contract with certain institutions for brief periods of time, it has never moved seriously to debar a university. In order to cut off a contractor, the Government must deny itself the contractor's services, and this the Government may be unwilling to do. Then too, OCR fears the impact such a step would have on the institutions. The university, of course, shares the same sentiment and moves some way to meet OCR's demands. In consequence, the parties negotiate toward a settlement, and such outcomes as are achieved reflect less the standards of the regulations than they do the chances of a bargaining process.

More fundamental than any of these difficulties, in part their cause, is the ambiguous and contradictory character of the regulations themselves, at least in relation to higher education. It is clear neither to OCR nor to institutions of higher education what it is that the regulations require. This helps account for such features of the program as poor administration, inefficiency, improvised solutions and prolonged negotiation.

Although the problems of administering the Executive Order in higher education are serious enough, the program has begun to encounter an additional set of problems created by a variety of antidiscrimination statutes which overlap the Executive Order. There have now come to exist many opportunities for duplicated effort, conflicting results, inconsistent standards and administrative confusion. This makes urgent a more sustained and fruitful effort at coordinating the many arms of federal antidiscrimination regulation than has taken place thus far.

THE EXECUTIVE ORDER PROGRAM—ADMINISTRATION IN HIGHER EDUCATION

Executive Order 11246 is the source of the contract compliance program. It requires that nonexempt[1] government contracts include a so-called equal employment opportunity clause, providing as follows:

"During the performance of this contracts, the contractor agrees as follows:

"(1) The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, or national origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this nondiscrimination clause.

"(2) The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

---

[1] Section 204 of Executive Order No. 11246 provides:

"The Secretary of Labor may, when he deems that special circumstances in the national interest so require, exempt a contracting agency from the requirement of including any or all of the provisions of Section 202 of this Order in any specific contract, subcontract, or purchase order. The Secretary of Labor may, by rule or regulation, also exempt certain classes of contracts, subcontracts, or purchase orders (1) whenever work is to be or has been performed outside the United States and no recruitment of workers within the limits of the United States is involved; (2) for standard commercial supplies or raw materials; (3) involving less than specified amounts of money or specified numbers of workers; or (4) to the extent that they involve subcontracts below a specified tier. The Secretary of Labor may also provide, by rule, regulation, or order, for the exemption of facilities of a contractor which are in all respects separate and distinct from activities of the contractor related to the performance of the contract: *Provided*, That such an exemption will not interfere with or impede the effectuation of the purposes of this Order: And *provided further*, That in the absence of such an exemption all facilities shall be covered by the provisions of this Order."

"(3) The contractor will send each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the agency contracting officer, advising the labor union or workers' representative of the contractor's commitments under Section 202 of Executive Order No. 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

"(4) The contractor will comply with all provisions of Executive Order No. 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

"(5) The contractor will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

"(6) In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be cancelled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order No. 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order No. 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

"(7) The contractor will include the provisions of Paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to Section 204 of Executive Order No. 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as the contracting agency may direct as a means of enforcing such provisions including sanctions for noncompliance: *Provided, however*, that in the event the contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the contracting agency, the contractor may request the United States to enter into such litigation to protect the interests of the United States."[2]

The Order places he Secretary of Labor in charge of the contract compliance program and gives him authority to adopt rules and regulations and issue orders, to require compliance reports from contractors and subcontractors and to provide for hearings for compliance, enforcement or educational purposes.[3] A series of "sanctions and penalties" are specified, including: (1) publication of the names of noncomplying contractors, (2) recommendation to the Justice Department for suit to enforce the provisions of the Order, (3) recommendation to the Justice Department or the Equal Employment Opportunity Commission for institution of proceedings under Title VII of the Civil Rights Act of 1964, (4) recommendation to the Justice Department of criminal proceedings for furnishing false information to the Secretary of Labor or a contracting agency, (5) cancellation, termination or suspension of contracts or portions of contracts for noncompliance, (6) debarment of contractors as eligible bidders on government contracts.[4] (Of this list of possible sanctions, the ones of practical significance in the administration of the program have been those providing for termination and cancellation of contracts and debarment.) Government contractors are divided into two classes—construction and nonconstruction. Institutions of higher education fall in the latter category, and it is the program for nonconstruction contractors that is of concern here.[5] The Order allows the Secretary of Labor to delegate his functions or duties "except authority to promulgate rules and regulations of a general nature."[6] The Secretary has designated the Department of Health, Education, and Welfare as the compliance agency for a number of industries including medical, legal and education services. HEW, therefore, administers the contract compliance program in higher education pursuant to regulations promulgated by the Secretary of Labor.

[4] *Id.* § 209.
[5] Part II of Exec. Order No. 11, 246 deals with nonconstruction contractors, Part III with federally assisted construction contracts.
[6] *Id.* § 401.

The Labor Department has issued a set of regulations (which seem always to be in the process of revision) controlling administration of the program. These are found in 41 CFR Chapter 60 and include: "Obligations of contractors and subcontractors" (41 CFR 60-1), "Affirmative action programs" (41 CFR 60-2), "Employee testing and other selection procedures" (41 CFR 60-3), "Sex discrimination guidelines" (41 CFR 60-20), "Hearing rules for sanction proceedings" (41 CFR 60-30), "Examination and copying of OFCC documents" (41 CFR 60-40), "Guidelines on discrimination because of religion or national origin" (41 CFR 60-50) and "Contractor evaluation procedures for contractors for supplies and services" (41 CFR 60-60). The more important of these in the administration of the program are "Obligations of contractors and subcontractors," "Affirmative action programs," "Employee testing and other selection procedures," "Sex discrimination guidelines" and "Contractor evaluation procedures for nonconstruction contractors."[7]

Much of the regulation on "Obligations of contractors and subcontractors" repeats the provisions of the Executive Order and outlines its requirements at a greater level of detail. Exemptions from the Order are specified.[8] Compliance agencies are instructed to develop programs for administration of the Order.[9] Contractors are required to furnish compliance reports annually and to supply with bids information relevant to a determination of compliance status.[10] Segregated facilities are prohibited.[11] Compliance reviews, consisting of "comprehensive analysis and evaluation" of employment practices as they bear on contractors' obligations for nondiscrimination and affirmative action, are established as a basic tool of the program. The regulation further provides that no contract of $1,000,000 or more is to be awarded unless satisfactory compliance has been determined through a preaward review or a compliance review conducted within the preceeding twelve months.[12] Procedures for processing complaints are set up,[13] and a system of hearings for cancellation, termination and debarment is established.[14] Contractors are instructed to permit access to their records for purposes of investigation.[15] Most significantly, contractors (and subcontractors) with fifty or more employees and a contract of $50,000 or more are required to develop written affirmative action programs.[16]

The regulation on "Affirmative action programs"—Revised Order No. 4—is in many ways the heart of the contract compliance program. According to Order 4, "an affirmative action program is a set of specific and result-oriented procedures to which a contractor commits himself to apply every good faith effort."[17] Such a program rests on two devices: utilization analyzes and goals and timetables. The first of these entails an obligation of the contractor to determine if minority group members or women are encountered less frequently at various levels and in various areas of his operations than would be expected in view of their availability ("underutilization"). In the event that analysis discloses underutilization, or a "deficiency," the contractor must establish "goals and timetables"—predictions of increased utilization, to be achieved by good faith effort, according to a prescribed time scale to the point at which the deficiency is eliminated.[18] Persons who are discovered to be suffering from the effects of past discrimination make up an

---

[7] The "Guidelines on discrimination because of religion or national origin" stand in some contrast to the regulations dealing with race and sex discrimination. Contractors are instructed to review their employment practices "to determine whether members of the various religious and/or ethnic groups are receiving fair consideration for job opportunities." If the review shows deficiencies, a contractor is to undertake "outreach and positive recruitment activities." Religious and ethnic discrimination is made subject to the OFCC compliance review and complaint procedure. However, it is made clear that "the scope of the employer's efforts shall depend upon all the circumstances, including the nature and extent of the employer's deficiencies and the employer's size and resources." Contractors need not establish affirmative action plans, with their substructure of utilization analyzes and goals and timetables, to deal with religious and ethnic discrimination. The elaborate criteria applied to employer selection procedures need not be satisfied. The Guidelines provide that contractors must take reasonable steps to accommodate employees' religious practices if they can do so without "undue hardship." The question of hardship entails consideration of "(a) business necessity, (b) financial costs and expenses, and (3) resulting personnel problems." This seems a good deal more indulgent than various provisions of the Sex Discrimination Guidelines.

[8] Section 60-1.5, 41 C.F.R. ch. 60 specified certain exemptions, including, *inter alia*, contracts not exceeding $10,000 and contracts to be performed outside the United States by employees not recruited domestically.

[18] *Id.* at §§ 60-2.11, 60-2.12.

"affected class," and "corrective action" measures must be instituted to establish compliance.[19] An affirmative action program must in addition include a number of elements the regulations summarize as follows:

(a) Development or reaffirmation of the contractor's equal employment opportunity policy in all personnel actions;

(b) Formal internal and external dissemination of the contractor's policy;

(c) Establishment of responsibilities for implementation of the contractor's affirmative action program;

(d) Identification of problem areas (deficiencies) by organizational units and job classification;

(e) Establishment of goals and objectives by organizational units and job classification, including timetables for completion;

(f) Development and execution of action oriented programs designed to eliminate problems and further designed to attain established goals and objectives;

(g) Design and implementation of internal audit and reporting systems to measure effectiveness of the total program;

(h) Compliance of personnel policies and practices with the Sex Discrimination Guidelines (41 CFR Part 60–20);

(i) Active support of local and national community action programs, designed to improve the employment opportunities of minorities and women;

(j) Consideration of minorities and women not currently in the workforce having requisite skills who can be recruited through affirmative action measures.[20]

Many actions a contractor must take in conducting a utilization analysis, in establishing goals and timetables and in satisfying the other requirement of an affirmative action program are stipulated in the regulation. In sum, affirmative action demands attempts to seek out eligible minority and female candidates, efforts—as by way of training and provision of child care—to redress disadvantages from which minorities and women are thought to suffer and continuous, systematic and detailed oversight of personnel policies and practices to eliminate discrimination and guard against inadvertent or unconscious bias.

The regulation on "Employee testing and other selection procedures," though principally directed at formal testing programs, covers all methods of "hire, transfer, promotion, training or retention." "Test" is defined as "any paper-and-pencil or performance measure used as a basis for any employment decision" as well as "all other formal, scored, quantified or standardized techniques of assessing job suitability including, for example, personal history and background requirements which are specifically used as a basis for qualifying or disqualifying applicants or employees, specific educational or work history requirements, scored interviews, biographical information blanks, interviewers' rating scales and scored application forms." [21]

Contractors using tests are required to develop evidence of the test's validity—that is, demonstration of a relationship between test performance and job behavior. Minimum standards for validation are prescribed,[22] and separate demonstrations of validity for minority groups and women are demanded where "technically feasible." [23] If tests of substantially equal validity are available, contractors are expected to use the test "which will have the least adverse effect on the employment opportunities of minorities or women." [24] Contractors are not required to use "tests," but where there is evidence suggesting that techniques other than tests have had the effect of discriminating—*e.g.*, underutilization is found, evidence of validity may be required. If the contractor is "unable or unwilling to perform such validation studies," then "he has the option of adjusting employment procedures so as to eliminate the conditions suggestive of employment discrimination." [25]

The "Sex discrimination guidelines" are currently shifting in content, the text, of a proposed revision having appeared in the Federal Register at the end of December, 1973. The principal changes under consideration relate to "corrective action," insurance and pension and retirement plans and maternity benefits. Otherwise, both versions cover much the same ground. Thus, contractors must recruit among both sexes for all jobs, may not advertise in "Male" and "Female" columns, must provide equivalent facilities and services for both sexes and may not address requests for information— *e.g.*, marital status—to applicants of one sex only.[26] Employees of both sexes must enjoy equal opportunity to qualify for any job.[27] No sex-based distinction may be drawn in "employment opportunities, wages, hours, or other conditions of employment," [27a] sex-linked seniority lines, different retirement ages for men and women, discrimination in compensation and anti-nepotism rules which bear unequally on one sex are explicitly prohibited.[28] A contractor may not justify sex discrimination by reliance on state protective legislation—*e.g.*, a law limiting the weight women may be required to lift.[29] The proposed changes on insurance, pension and retirement plans and maternity benefits are discussed below. The subject of corrective action, introduced in the proposed guidelines for the first time, has to do with the problem of relieving the effects of past discrimination.[30] For example, the effects of historic sex segregation of jobs may persist after company policy is changed to permit transfer between jobs. This will likely occur when seniority for purposes of layoff dates from entry into a job, line of progression or department because women formerly locked into their positions by segregation may be reluctant to give up their accrued seniority upon transfer. The proposed regulation requires protection against consequences of this kind. In the example given, this might mean a shift to company-wide seniority for the affected women or an award of seniority credit to transferring women back to the date on which it may be calculated they would have made the transfer in the absence of segregation.

[25] *Id.* at § 60–3.13.

"Contractor evaluation procedures for contractors for supplies and services"—also known as Revised Order No. 14—lays down procedures for compliance reviews. As amended in February, 1974, this regulation describes a three-step review procedure consisting of (1) a desk audit, (2) an on-site review and (3) an off-site analysis of "information supplied by the contractor during or pursuant to the on-site review." [31] A desk audit is a review of a contractor's written affirmative action program and "workforce analysis," [32] to be furnished upon request of the compliance agency. Normally,[33] an on-site review will be scheduled following the desk audit except in two classes of cases: (1) where the desk audit discloses the contractor's failure to make a reasonable effort to meet his obligations, in which case enforcement proceedings should be commenced, and (2) where an on-site review has been conducted within the previous twenty-four months, the desk audit confirms that the contractor has a satisfactory program and the circumstances of the previous audit have not substantially changed.[34]

An on-site review, which is to include employee interviews,[35] encompasses "(1) information necessary to conduct an in depth analysis of apparent deficiencies in the contractor's utilization of women or minorities, (2) information required for a complete and thorough understanding of data contained in or offered in support for the affirmative action program and (3) information concerning matters relevant to a determination of compliance with the requirements of Executive Order 11246 (as amended) but not adequately addressed in the affirmative action program." [36] Finally, an off-site analysis of material obtained during the on-site review is to be conducted "where issues have arisen concerning deficiencies or an apparent violation which, in the judgment of the compliance officer, should be more thoroughly analyzed off-site before a determination of compliance is made."[37] The regulation attempts to provide a good deal of protection against public disclosure of data furnished by contractors.[38] Information a compliance agency obtains from a contractor is ordinarily available for public inspection and copying under the Freedom of Information Act.[39] This extends to affirmative action plans, conciliation agreements and validation studies of tests.[40] However, a contractor may claim that certain data is not subject to disclosure and obtain a determination of the question from the compliance agency, with a right of appeal to the Director of OFCC.[41] Material taken off-site for analysis and much information held by a compliance agency during a compliance review or an enforcement proceeding is considered part of an investigatory file compiled for law enforcement purposes and therefore exempt from disclosure under the Act for the duration of the review.[42]

[31] 41 C.F.R. § 60–60.3.

[32] "Workforce analysis" is defined as a listing of each job title as appears in applicable collective bargaining agreements or payroll records (not job groups) ranked from the lowest paid to the highest paid within each department or other similar organizational unit including departmental or unit supervision. If there are separate work units or lines of progression within a department a separate list must be provided for each such work unit, or line, including unit supervisors. For lines of progression there must be indicated the order of jobs in the line through which an employee could move to the top of the line. Where there are no formal progression lines or usual promotional sequences, job titles should be listed by department, job families, or disciplines, in order of wages rates or salary ranges. For each job title, the total number of incumbents, the total number of male and female incumbents, and the total number of male and female incumbents in each of the following groups must be given. Blacks, Spanish-surnamed Americans, American Indians, and Orientals. The wage rate or salary range for each job title must be given. All job titles, including all managerial job titles, must be listed." *Id.* at § 60–2.11(a), 39 Fed. Reg. 25654–55 (1974); 41 C.F.R. § 60–2.11(a), 39 Fed. Reg. 25654 (1974).

Certain data, such as trade secrets, confidential commercial or financial data, the names of complainants and personnel and medical files are regarded as not subject to disclosure.[43] A compliance review is to be concluded with an exit conference in which the compliance officer summarizes for the contractor the findings of the review. At that time or after further analysis the agency is to seek a written conciliation agreement committing the contractor to correct deficiencies revealed by the review.[44] The entire process is to be completed expeditiously. Enforcement procedures "shall be applicable" if a contractor fails to supply an affirmative action program and supporting documents, including a workforce analysis, within thirty days.[45] Within sixty days of receipt of the necessary documents the compliance agency is to have notified the contractor that he is in compliance or have issued a thirty-days show cause notice (subject to extensions of time for good cause).[46]

THE OFFICE OF CIVIL RIGHTS

Within HEW, the compliance agency for education, the agency responsible for performing the department's contract compliance functions is the Office for Civil Rights. Within OCR, the Higher Education Division has charge of the program for institutions of higher education. The Division's activities are conducted by a headquarters staff in Washington, D.C., and branch office personnel in ten regional offices. The location of the regional offices, the number of employees assigned to the executive order program in higher education as of June 30, 1973, and the number projected for June 30, 1974, are shown below:

---

[42] 41 C.F.R. § 60-40.3(5); 41 C.F.R. §§ 60-60.4(c), (d).

[43] 41 C.F.R. § 60-40.3. It seems apparent that the Labor Department undertook this latest revision of Order No. 14 in order to secure by administrative revision rather than attempt by appeal reversal of the decision in *Alameda County Legal Aid Society v. Schultz*, 349 F. Supp. 771 (N.D.Cal. 1972), holding that the Freedom of Information Act (5 U.S.C. § 552) required disclosure of a great deal of material furnished the Government by contractors. Under the new version of Order No. 14 it may be argued that much information revealed to government agents in the course of compliance reviews escapes the Freedom of Information Act because it never comes into the Government's possession (material made available only during an on-site review) or makes up part of an investigatory file compiled for law enforcement purposes. Comments furnished the Labor Department following publication of the revision show that both contractors and antidiscrimination groups saw the issue of public disclosure as by far the most significant aspect of the revision. Given the expansion in the legal concept of discrimination and the consequent narrowing of the gap between "underutilization" under the Executive Order and "discrimination" under Title VII of the Civil Rights Act of 1964, contractors have reason to fear that publicly disclosed data compiled for compliance review purposes will be used as evidence against them in Title VII cases and that plaintiff representatives may use such data to select defendants. These considerations operate with particular force where "affected class" situations are involved. Moreover, publicity itself can be used as a sanction. Plaintiff representatives might be expected to favor maximum disclosure for the same reasons contractors would resist it. Such material may also be helpful in litigation aimed at compelling compliance agencies to enforce the regulations because it may show that agencies are not in fact enforcing the regulations as written. Since academic personnel systems are often thought to depend upon confidential written evaluations of professors by colleagues and scholars in the same field, the question of disclosure has been a particularly sensitive one in HEW's higher education program. Revised Order No. 14 probably effects a satisfactory compromise from the point of view of most institutions of higher education; it is unlikely to please groups interested in employing the Order to advance minority and women faculty.

Region and city	June 30, 1973	June 30, 1974
Headquarters, Washington, D.C	19	19
Region:		
I Boston	7	10
II New York City	13	14
III Philadelphia	6	10
IV Atlanta	14	13
V Chicago	10	13
VI Dallas	10	12
VII Kansas City		8
VIII Denver	4	9
IX San Francisco	13	13
X Seattle	4	6
Total	100	127

There are an additional 48 employees projected for June 30, 1974, who will have responsibility for Titles VI and IX of the Civil Rights Act of 1964 (Title IX having been added by the Equal Educational Opportunity Act of 1972).

OCR's activities under the Executive Order might be divided into three categories: (1) performance of compliance reviews, (2) investigation of complaints and (3) furnishing technical assistance to higher education institutions. OCR's statistical record of its activities in higher education is not all one might wish, but the following data, supplied by OCR, gives some idea of the scale of its operations. In the period November 16, 1971, to December 31, 1972, OCR processed higher education affirmative action plans as indicated:

Regions	I	II	III	IV	V	VI	VII	VIII	IX	X	Total
AAP's approved interim or final	1	1	1	0	0	11	0	8	7	1	30
AAP's rejected	0	13	0	6	0	5	11	5	8	3	51
AAP's pending	15	17	3	6	24	9	0	21	17	4	116

During the period January 1 to July 23, 1973, sixty-two affirmative action plans were received, of which three were given final approval. The rest remained pending; none were rejected. Five plans were requested but not received. Since July 23, 1973, only a very few plans have been approved. Statistics on the number of plans approved fail to reflect the actual condition of the program. During the period in which there had been sustained compliance activity in higher education standards for approval of affirmative action programs have grown more stringent. Consequently, many plans previously approved, including plans adopted by some leading universities, do not meet OCR's current conception of the requirements of Order No. 4. The Director of the Higher Education Division has estimated that the number of approved plans which do meet this standard is probably nine (excluding junior colleges) and in any case not more than nineteen (as of April, 1974).

Statistics on the handling of complaints are, if anything, even more fragmentary. According to figures supplied by OCR, the agency received 544 complaints between November 16, 1971, and December 31, 1972. (These include both academic and non-academic staff.) Of these, 355 claimed sex discrimination and 189 charged discrimination on grounds of race and national origin. Two hundred twenty-five complaints were "settled or closed," seventy-six were under investigation, 107 had not been reached for investigation and 137 had been transferred to the Equal Employment Opportunity Commission. (EEOC acquired jurisdiction over higher education in March, 1972, and complaints filed with OCR after that date were transferred to EEOC. So-called "class complaints"—complaints filed on behalf of an individual and other persons similarly situated—of which eighty-eight were pending on December 31, 1972, were divided into class and individual aspects after EEOC's entry into the field, with the former component of the complaint being retained by OCR and the latter referred to EEOC. OCR currently has this arrangement under review.) The disposition of complaints carried as "settled or closed" is not clear. Many appear to have been dismissed as lacking in merit; in at least a few cases the agency obtained backpay settlements or reinstatement. Currently, OCR has 303 Executive Order complaints pending, of which 180 are class complaints and 123 individual complaints. These cases date back in some instances to 1969. (OCR is also processing at the present time some 62 complaints under Title VI and Title IX.) By the end of March, 1974, OCR had completed seventy-three letters of findings on individual and class complaints during the current fiscal year.

OCR employees spend some part of their time responding to inquiries and requests for assistance from institutions. Thus, in this fiscal year OCR anticipates furnishing guidance to about 178 institutions. In October, 1972, OCR issued its "Higher Education Guidelines," giving an interpretation of the OFCC regulations in the higher education context. Over a long period of time OCR has been attempting to prepare a technical assistance package supplying information bearing on the availability for academic positions of minority group members and women and discussing methods of calculating availability for purposes of determining underutilization and setting goals and timetables.

It seems generally agreed, within and without OCR, that administration of the higher education program in its first years suffered from a number of defects. As the figures given above suggest, the agency has had difficulty in achieving satisfactory and prompt resolution of complaints. It also appears that in some cases complaints were lost or files mislaid (hence, agency statistics on complaints are not entirely reliable). Nevertheless, a great deal of time has gone into this activity; according to estimates supplied by the branch officers to the Washington office of the Higher Education Division in January, 1973, individual complaints required an average of 27.2 man days per complaint. Also revealing is the variation reported among the branches; the estimates of man days required per complaint ranged from ten to fifty man days, suggesting that the regions held contrasting views on what constitutes a proper investigation.[47]

I	30	VI	15
II	50	VII	50
III	--	VIII	15
IV	10	IX	30
V	30	X	15

The compliance review process seems also to have been more burdensome to institutions than it was effective in securing compliance. Thus, many reviews have been conducted but only a relatively few plans have won approval and, of these, only a small handful are currently regarded as actually satisfactory. Meanwhile, institutions have supplied a great deal of data, and in some areas have been put to much trouble and expense, without any clear resolution of their compliance status having been achieved. Branch office representatives have not always appeared capable of analyzing properly the information they have received, and seem also to have lacked a common understanding of the compliance review process and of the standards to be applied to affirmative action programs. Complaints of universities on this last point seem to receive some confirmation from the information given in the table below, showing action on affirmative action programs by region for the period November 16, 1971, through November 31, 1972, and the region's estimates, given in January, 1973, of man days required for a compliance review.

Region	AAP's approved interim or final	AAP's rejected	AAP's pending	AAP desk audits man-days	AAP field review man-days
I	1	0	15	30	110
II	1	13	17	8	50
III	1	0	3		
IV	0	6	6	5	40
V	0	0	24	15	30
VI	11	5	9	10	15
VII	0	11	0	10	27
VIII	8	5	21	10	40
IX	7	8	17	20	20
X	1	3	4	15	60

---

[47] According to information supplied by OCR the regional offices made the following estimates of mandays required per complaint:

Thus, Regions II and VII collectively rejected twenty-four plans and approved only one while Regions VI, VIII and IX approved twenty-six plans and rejected eighteen. The region approving the highest number of plans (VI) required the least time to perform a compliance review—twenty-five man days, while the regions with the most adverse ratio of rejected to approved plans (II, VII) required fifty-eight and thirty-seven days, respectively, to complete a review.

At least some of the problems encountered in the administration of the program appear to be in the process of solution owing to the leadership provided by the current director of the Higher Education Division. Thus, the Division appears to be compiling more detailed and informative records, gaining more sensitivity to the unique characteristics of higher education and providing the branch offices more guidance and supervision and the compliance program as a whole may show a firmer sense of management. Certain difficulties remain, however.

The Division staff lacks experience with higher education. OCR has claimed fourteen employees have been connected with institutions of higher education in faculty, consultative and administrative positions, but there is good reason to believe that this number, though small, is inflated. There is one Ph. D. on the Division staff (the Director) and a small number of employees with Master's or law degrees. As of March 1, 1974, thirty-five positions were vacant owing to difficulty in recruiting persons with experience in higher education. Training within OCR has been limited. A three and one-half day seminar was given in Fall, 1972 and a three day seminar (for OCR personnel generally) in Winter, 1972 and Spring, 1973. A program concerned with affirmative action standards was given for senior branch office employees from August 20 to 24, 1973. New employees since February, 1973, are supposed to undergo a three month training and orientation program under the regional office branch chiefs. This includes "introductions, briefings, and seminars with local college administrators and equal opportunity officials, women's campus groups, officials in related Federal programs (e.g., OE, EEOC, and OFCC), etc.," together with "an overall orientation of compliance programs administered by the Office for Civil Rights."[48]

The Division's jurisdiction is vast and ill-defined. There are about 2,400 institutions of higher education in the United States, employing slightly over 250,000 fulltime faculty members (and, of course, many more part-time faculty nonteaching academic employees and nonacademic staff.) How many of these institutions are federal contractors is unknown, but one estimate, from the Higher Education Division, places it at about 1,100. How much federal money reaches these institutions through government contracts also appears to be unknown although, for some institutions government contracts undoubtedly provide an important source of funding. The total amount and its distribution, whatever they may be, would considerably understate OCR's purchase on higher education.

At least with respect to sex discrimination in employment, Title IX, forbidding sex discrimination in federally assisted educational programs and activities, provides an additional instrument or regulation. HEW also holds the view, a debatable one, that Title VI of the 1964 Civil Rights Act, which prohibits discrimination on grounds of race, color or national origin in programs receiving federal financial assistance, may apply to employment practices.[49] However, the Executive Order and Title VI and Title IX provide different criteria of administration (discussed below), so that these programs cannot easily be treated as a single integrated program. Passage of Title IX, together with HEW's interpretation of Title VI, both enlarge and complicate OCR's mandate in higher education. From the perspective of individual institutions, OCR must seem to resemble Gulliver in Lilliput, but OCR must feel that the more appropriate analogy is to Gulliver in Brobdignag. The agency lacks the staff and resources to fulfill its charter; it has failed to keep its complaint docket current, and it cannot perform compliance reviews in anything approaching the number or frequency OFCC regulations require. Many contracts of $1,000,000 or more have been awarded without a pre-award review, and it seems safe to say that a large number of higher education contractors have never been through a compliance review.

---

[48] Letter from Gwendolyn H. Gregory, Director, Office of Policy Communication, Office for Civil Rights, HEW, to Sheldon E. Steinbach, American Council on Education, dated September 17, 1973.

[49] Title VI of the Civil Rights Act of 1964, 42 U.S.C. § 2000d, seems not to apply to employment practices "except where a primary objective of the Federal financial assistance is to provide employment." *Id.* at § 604, 42 U.S.C. § 2000d–4. However, HEW takes the position that where employment discrimination produces effects prohibited by Title VI employment practices come within the statute. See 45 C.F.R. § 80.3(c)(3).

OFCC regulations rather impede than facilitate the administration of a compliance program in higher education. The very problematic application of these regulations receives extensive discussion below. Here, it may be sufficient to give one example of their lack of fit to higher education. Order No. 14 directs completion of compliance reviews in ninety days, from the compliance agency's request to the contractor for his affirmative action program to the agency determination of compliance status. OCR regards this schedule as hopelessly unrealistic, and it is clearly true that its reviews have regularly consumed a great deal more time than ninety days. The affirmative action program of Harvard University, approved in November, 1973, was reportedly the product of two years of negotiations, for example. At the same time that OCR administers an inappropriate set of regulations it also must coordinate the contract compliance program with other programs and other agencies. For some time, the Executive Order was the only federal regulation directed at employment discrimination in higher education (with the possible exception of Title VI of the 1964 Civil Rights Act, which seems to have had little or no practical significance for employment practices in higher education). The Order has now been joined by Titles VII and IX of the Civil Rights Act of 1964 and the Equal Pay Act, and OCR finds itself in uneasy alliance with the Wage and Hour Administration and EEOC. Whether or not there are too many cooks is not yet clear, but there are plainly enough to get in one another's way.

FEDERAL ANTIDISCRIMINATION REGULATION OF HIGHER EDUCATION

For a number of years the Executive Order was the only federal regulation of any significance covering discrimination among higher education faculty (and the Order, of course, applied only to institutions with government contracts). Title VII of the Civil Rights Act of 1964 did not extend to institutions of higher education or to agencies of state and local government.[1] HEW has interpreted the Title VI (of the 1964 Civil Rights Act) prohibition on racial or national origin discrimination in federally assisted programs as applicable in some circumstances to employment (although the Act states that it covers employment only when the purpose of the assistance is to provide employment),[2] but this administrative construction of the statute seems not to have had any importance in enforcement. The Equal Pay Act, forbidding sex discrimination in pay, excluded administrative, executive and professional employees.[3] The discovery that the Reconstruction Civil Rights Act (42 U.S.C. §§ 1981, 1983) might reach employment discrimination did not come until the late 1960's.[4]

The situation is now very much changed. The Equal Employment Opportunity Act of 1972 extended Title VII to take in higher education and state and local governments.[5] The same statute added Title IX to the Civil Rights Act with the effect of prohibiting sex discrimination in federally assisted programs (unlike Title VI, the new provision includes discrimination in employment.)[6] We are now learning that discrimination in employment on grounds of race violates 42 U.S.C. § 1981 and that race or sex discrimination by a state agency may violate 42 U.S.C. § 1983.[6a] In 1972 the exemption from the Equal Pay Act for administrative, executive and professional employees was eliminated. Higher education faculty now fall within an area covered by a number of overlapping but only partially consistent antidiscrimination measures.

---

[1] Section 702 of Title VII (78 Stat. at 255 (1964) provided that "this title shall not apply with respect to . . . an educational institution with respect to the employment of individuals to perform work connected with the educational activities of such institution."

[2] See, however, 45 C.F.R. § 80.3(c)(3); "The Executive Order Program—Administration in Higher Education" n. 49.

[3] Section 6(d)(1) of the Fair Labor Standards Act forbids sex discrimination in pay. Until the passage of P.L. 92–318, 86 Stat. 373 (1972) effective June 23, 1972, section 13 (a)(1) excluded persons employed in a professional, administrative or executive capacity from section 6.

[4] See Larson, *The Development of Section 1981 as a Remedy for Racial Discrimination in Private Employment*, 7 HARV. CIV. RIGHTS—CIV. LIB. L. REV. 56 (1972); *Braden v. University of Pittsburgh*, 477 F. 2d 1 (3rd Cir. 1972).

[5] Public Law No. 92–261, § 2, 86 Stat. 103 (1972) amended 42 U.S.C. § 2000e–1 to remove the exemption for educational institutions.

[6] 20 U.S.C. § 1681 *et. seq.*, 86 Stat. 373 (1972).

[6a] With respect to § 1981, see Larson, *The Development of Section 1981 as a Remedy for Racial Discrimination in Private Employment*, 7 HARV. CIV. RIGHTS–CIV. LIB. L. REV. 56 (1972); on § 1983 see, *e.g.*, *Smith v. City of East Cleveland*, 363 F. Supp. 1131 (N.D. Ohio 1973); *Cohen v. Miami*, 54 FRD 274 (S.D. Fla. 1972).

Along with this development has come a multiplication of enforcement processes and of forums in which questions of discrimination may be pursued. When the Executive Order was the sole measure applicable to higher education institutions (those which were federal contractors) their employment practices were subject to the HEW compliance review process, and individuals could file complaints with HEW, thereby triggering the cancellation, termination and debarment process. It would appear also that the Justice Department could sue to enforce the contract, seeking an order compelling conformance with the equal employment opportunity clause.[7] Now that Title VII covers higher education an individual can file a complaint with the Equal Employment Opportunity Commission and then bring an action in federal court. A case of this kind may of course be brought as a class action. At the same time that the higher education exclusion was dropped, Congress gave EEOC the power to sue, so that the agency becomes a potential plaintiff in addition to the individual complainant. Increasingly, sections 1981 and 1983 of Title 42 are becoming established as alternative vehicles for individual and class actions raising issues of discrimination, 1981 with respect to discrimination against blacks, 1983 with respect to race and sex discrimination by state agencies. As a result of the recent extension of the Equal Pay Act to administrative, executive and professional employees, questions of sex discrimination in compensation among higher education faculty are open to investigation by the Wage and Hour Administrator of the Labor Department, on his own initiative or in response to a complaint. Either the Secretary of Labor or individual employees may sue to redress claimed violations of the Act.[8]

The prevailing view has been that the Executive Order gives no basis to private parties for suit against contractors for alleged violation of the Order or its implementing regulations.[9] However, the law may now be shifting toward recognition of private actions based on the Order.[10] Title IX gives federal departments and agencies providing financial assistance a basis independent of the Executive Order for promulgating regulations dealing with sex discrimination in higher education; HEW, which provides much of the government's assistance to higher education, may become simultaneously the agent of the Labor Department in carrying out the contract compliance program on behalf of minority groups and women and the principal in its own program, in aid of women, setting conditions to any form of federal financial assistance. Title IX, however, merely forbids discrimination; unlike the Executive Order, it does not demand affirmative action.

HEW's proposed Title IX regulations provides for affirmative action only as a remedy when discrimination has been established.[11] In this respect the proposed regulations resemble court decisions under Title VII in which quotas or hiring ratios have been imposed to remedy proven discrimination. Title IX also differs from the Executive Order in that the latter applies to all facilities of a contractor, including facilities not involved in performance of any federal contract, while under the former assistance may be denied or terminated only as to a "particular political entity or part thereof or other recipient" found out of compliance, "limited in its effect to the particular program, or part thereof" in which noncompliance is established.[12] While over-all supervision of the Executive Order program is centralized in the Labor Department, Title IX divides authority among all agencies providing financial assistance to higher education.

---

[7] Section 209(a)(2) of Exec. Order No. 11246 authorizes the Secretary of Labor to recommend to the Justice Department that proceedings be brought to enforce the equal employment opportunity clause.

[8] FLSA § 16(b), 17 29 U.S.C. §§ 216(b), 217. Under section 16(b) employees may bring class action for damages, but "no employee shall be a party plaintiff to any such action unless he gives his consent in writing to become such a party and such consent is filed in the court in which such action is brought."

[9] See *Farkas v. Texas Instruments, Inc.*, 375 F. 2d 629 (5th Cir.), *cert. denied*, 389 U.S. 977 (1967); *Farmer v. Philadelphia Elec. Co.*, 329 F. 2d 3 (3d Cir. 1964).

[10] See *Lewis v. Western Airlines, Inc.*, 8 FEP Cases 373 (N.D. Cal. 1974). In *Lau v. Nichols*, 94 S.Ct. 786 (1974), the Supreme Court entertained on the merits an action brought by private plaintiffs claiming violation of HEW regulations issued pursuant to Title VI and incorporated in funding contracts between HEW and the defendant school district, a recipient of federal financial assistance. As Justice Stewart's concurring opinion points out, the defendants did not contest the standing of the plaintiffs to sue as beneficiaries of the contract (94 S.Ct. at 790 n. 2). Nevertheless, the decision may suggest that the Court is sympathetic to private enforcement of equal employment provisions in govern-

[12] 20 U.S.C. § 1682, 6 Stat. 374 (1972).

HEW thus is not the only agency with responsibility under Title IX, and institutions receiving assistance from more than one federal source will find themselves coming under the jurisdiction of a number of agencies. It may be the case that the various agencies responsible for administration of the Executive Order and Title IX are subject to private actions seeking to require the agencies to conform to their own regulations, the Order or one or another statute.[13] To the extent this occurs, the agencies are forced to share authority for the formulation and administration of policy with the federal courts, and regulated employers cannot rely with entire confidence on agency interpretations.

A single university may find itself in the following position. As a federal contractor it is obliged to refrain from discrimination on grounds of race, color, religion, sex and national origin and to take affirmative action to insure equal employment opportunity without regard to race, color, religion, sex or national origin. Its employment practices are subject to investigation by HEW as the compliance agency designated by the Department of Labor. Failure to conform to the requirements of the Executive Order program expose it to cancellation or termination of contracts and debarment as a federal contractor, and it may be sued by the Department of Justice in an action to enforce the equal employment opportunity clause.

Conceivably, individuals who claim to have been injured by violations of the nondiscrimination or the affirmative action standards of the program may also sue as a kind of third party beneficiary of the equal employment opportunity clause. As an employer subject to Title VII the university may be sued by persons who have filed charges with the EEOC claiming discrimination in employment on grounds of race, color, religion, sex or national origin. Such cases may be prosecuted by a single person attacking a particular event—*e.g.*, termination—or as a class action on behalf of a large number of "similarly situated" persons in which very extensive and detailed judicial regulation of employment practices is sought. The same range of issues may arise in suits brought by the EEOC in response to a complaint. It seems clear that blacks who wish to avoid certain procedural requirements of Title VII can by-pass the EEOC and sue directly under section 1981 of Title 42. If the university is a state agency, members of other groups may be able to make parallel use of section 1983. Since the university receives various forms of federal financial assistance, it is obliged under Title IX of the Civil Rights Act to conform to whatever regulations HEW and other agencies may eventually issue to implement the statute's prohibition of sex discrimination in federally assisted programs. The same may be true of alleged employment discrimination on grounds of race, color or national origin under Title VI of the Civil Rights Act of 1964. If violations of the regulations are shown in an administrative hearing, the agency conducting the proceeding may require affirmative action or terminate or deny assistance. HEW's proposed regulations provide for individual complaints, and, here too, it is possible that individuals may be able to sue directly on the regulations.

Finally, the university may find itself involved in disputes with the Wage and Hour Administrator or with individual employees over issues of compensation arising under the Equal Pay Act. Of course, many questions are common to more than one source of regulation. Thus, a claim of sex discrimination in pay could be raised under the Equal Pay Act, Title VII, Title IX or the Executive Order. At the same time, the same question can be posed differently depending upon the regulatory context in which it arises. Thus, one agency might conclude that a particular action was not "discriminatory" under Title IX while HEW might decide that the same action fell short of a commitment to "affirmative action."

There may be something to be said for this proliferation of antidiscrimination measures and enforcement mechanisms. It sets many guardians on employers and guarantees complainants a forum in which to press their claims. The inevitable collision of philosophies and the competition among divergent procedures may help clarify the goals of antidiscrimination policy and contribute to developing suitable methods of achieving them. But there are also costs which make the present, confused situation appear very doubtfully desirable.

---

[13] In *Adams v. Richardson*, 480 F. 2d the Court of Appeals for the District of Columbia Circuit held, *en banc*, that private plaintiffs could sue for an injunction requiring HEW to carry out the provisions of Title VI of the Civil Rights Act of 1964 by commencing proceedings to terminate federal financial assistance to segregated systems of education. See also, *Legal Aid Society of Alameda County v. Brennan*, — F. Supp. — (N.D. Cal. 1974).

These costs are of several kinds: (1) one proceeding conducted by one agency may duplicate another proceeding undertaken by another agency; (2) one agency may establish standards which conflict with standards developed by another agency; (3) different agencies may follow inconsistent interpretations of the same standards; (4) there is only limited assurance that a resolution achieved with one agency will be accepted by other agencies.

(1) EEOC investigations of Title VII complaints, agency investigations of Title IX complaints, HEW compliance reviews—whether under Title IX or the Executive Order—and investigations of the Wage and Hour Administrator all may cover some of the same ground. Unless the agencies standardize their investigatory procedures as much as possible, particularly their demands for information, multiple inquiries into the same events, employment patterns or personnel practices will prove needlessly burdensome to institutions and to the agencies themselves. For example, individuals sometimes file with OCR so-called class complaints on behalf of the complainant and all others similarly situated. After institutions of higher education came under Title VII and until recently, OCR's practice has been to refer the individual aspect of the case to EEOC and retain the "class" element of the charge for investigation by the appropriate field office. EEOC's demands for information can be very wide-ranging. Indeed, an exploration of a question of discrimination in an individual instance may require comparison among many similar cases, so that EEOC in effect may conduct much the same investigation as will OCR (or *vice versa*). If each agency fails to coordinate its approach with the other, they may repeat interviews with the same people, demand information bearing on similar concerns but in different form and otherwise waste their own and others' resources. The practical difficulties of distinguishing class complaints from individual complaints has led OCR to reexamine its practice in this regard, but no clear solution has emerged.

(2) Different agencies may fall into conflict on the same issue. This possibility has been realized perhaps most dramatically in the case of insurance and pension and retirement plans, but questions of maternity benefit policy and testing standards supply additional examples.

All the agencies are concerned to prevent discrimination. It follows that men and women should receive equal treatment under insurance and pension and retirement plans. What has remained obscure is what treatment is equal. Because the costs of medical insurance (excluding pregnancy and pregnancy-connected disabilities) and retirement benefits apparently tend to run higher for women than for men, it is open to argument whether equal contributions by the employer or equal benefits to employees yields equality of treatment. Originally, the OFCC Sex Discrimination Guidelines accepted either equal contributions or equal benefits.[14] So did EEOC, in giving its interpretation of Title VII, and the Wage and Hour Administrator, in furnishing his interpretation of the Equal Pay Act.[15] EEOC has changed its view, and now takes the position that only equal benefits will satisfy Title VII.[16] OFCC has issued a proposed revision of the Sex Discrimination Guidelines which avoids commitment to either position, merely setting out both as alternatives without presently choosing between them.[17] The Wage and Hour Administration (like OFCC, an agency of the Labor Department) stands on its original position. HEW's proposed regulations under Title IX follow the Wage and Hour Administration.[18] Fortunately, perhaps, the meaning of "discrimination" in this context is open to litigation under Title VII, and the courts may ultimately resolve this question.[19]

The agencies appear to be arriving at a common view on maternity benefit policy, but only after a period of disagreement resembling the impasse over retirement benefits. OFCC's current version of the Sex Discrimination Guidelines obliges a contractor to extend maternity leave on the same terms (except one) that leave is given for other purposes under his existing leave policy. The exception has to do with length; maternity leave must be granted for a "reasonable" time. If the contractor has no leave policy, the regulation compels him to grant reasonable maternity leave and reinstatement to the same or equivalent employment.[20] These requirements are less rigorous than the demands of Title

[20] 41 C.F.R. § 60–20.3(g) (1973).

VII as interpreted in EEOC's Sex Discrimination Guidelines.[21] However, if OFCC adopts the proposed revision of its Sex Discrimination Guidelines the two agencies will come into congruent positions. In the OFCC's language, "medically verifiable disabilities caused or contributed to by pregnancy, miscarriage, abortion, childbirth, and recovery therefrom are[,] for all job-related purposes, temporary disabilities and shall be treated as such under any health or temporary disability insurance policies or sick leave plans available in connection with employment." Matters such as "the commencement and duration of leave, the availability of extensions, the accrual of seniority and other benefits and privileges, reinstatement, and payment under any health or temporary disability insurance policies or sick leave plans" are to be dealt with on the same terms as "other temporary disabilities." However, if employees suffer termination because no leave or "insufficient" leave is available, the employer may be guilty of discrimination. This consequence follows if his policy follows with "disparate effect" on one sex, and he lacks justification in "business necessity." [22] The Wage and Hour Administrator takes no position on maternity benefits, holding to the view that they are not compensation for purposes of the Equal Pay Act.[23] The proposed regulations drafted by HEW under Title IX track the EEOC interpretation of Title VII and OFCC's proposed construction of the Executive Order.[24] Again, litigation under Title VII may give the courts the last word.

EEOC and OFCC have issued guidelines on testing and other employee selection procedures.[25] These are generally consistent with each other but probably inconsistent with Civil Service Commission practices in federal government employment. When the Federal Service Entrance Examination, developed and administered by the Civil Service Commission, was attacked in litigation as discriminatory against blacks, EEOC, as *amicus curiae*, asserted a position adverse to the Civil Service Commission.[26] (The plaintiffs' motion for preliminary injunction was denied and the case remanded to the Civil Service Commission for exhaustion of administrative remedies instituted after the action was filed.) An effect of this incident was to furnish a demonstration that one agency of government held a view of antidiscrimination policy sharply at variance with the conceptions of personnel selection followed by another agency with responsibility for administering the federal civil service. More recently, the Equal Employment Opportunity Coordinating Council, a group of agency representatives including EEOC and CSC, has collaborated on a set of uniform guidelines for testing and employee selection. Successive drafts of these guidelines have been circulating for many months but have not yet taken definitive form. HEW's draft regulations under Title IX seem to resemble OFCC and EEOC guidelines but are far less detailed. Questions of testing and employee selection are frequently raised in Title VII litigation; a number of courts have endorsed various aspects of the EEOC Guidelines, but some difficult problems remain unresolved.[27]

(3) Different agencies do not seem to share the same understanding of common techniques or strategies which they all employ. The proper use of "goals and timetables" illustrates this problem. "Goals" refers to projected proportions of minority and female employment in certain occupations or jobs utilized by an employer. "Timetables" are the periods of time in which the goals are expected to be reached. For example, a goal and timetable might predict that black employment in a certain job would expand from its current level of 2% in increments of 2% per year for five years, arriving at a total of 12% of employment in the job in five years' time.[28] Goals and timetables are a standard feature of affirmative action programs required by OFCC and its compliance agencies under the Executive Order. EEOC and the Justice Department have secured goals and timetables in negotiating settlements with employers in Title VII cases, and the courts have imposed them in some litigated cases as a remedy for past discrimination. The Civil Service Commission may also become involved with goals

[22] 38 Fed. Reg. 35337 (1973) (§ 60–20.3(h)).

[23] 29 C.F.R. § 800.110 (1973).

[24] 39 Fed. Reg. at 22237 § 86.47(b) (1974).

[25] 29 C.F.R. 1607 (1973) (EEOC); 41 C.F.R. 60–3 (1973) (OFCC).

[26] The case is *Douglas v. Hampton*, 4 FEP 382 (D.D.C. 1972).

[27] In *Griggs v. Duke Power Co.*, 401 U.S. 424 (1971), the Supreme Court endorsed generally the EEOC interpretation of Title VII as requiring that tests used for employee selection purposes be job related. How to interpret and apply this requirement remains problematic, as a number of cases illustrate. See, e.g., *Allen v. City of Mobile*, 466 F. 2d 122 (5th Cir. 1972). *Spurlock v. United Airlines*, 475 F. 2d 216 (10th Cir. 1972).

[28] Examples of goals and timetables, and of a process of calculating them, may be found in the OFCC "imposed" plans in the construction industry. See, *e.g.*, 41 C.F.R. 60–5 (1973) (the Washington Plan).

and timetables in seeking to prevent discrimination in federal personnel programs.

A survey of federal officials from these agencies and the Commission on Civil Rights in September, 1973, appeared to disclose differences of emphasis and perhaps of underlying conceptions, as well as a certain vagueness, in appraising the device of goals and timetables.[29] For the Civil Service Commission, goals and timetables seemed to serve as a tool for measuring an employer's progress in administering a system of employment based on "merit." In varying degrees other agencies appeared to regard goals and timetables as something approaching a commitment to produce increased minority and female employment.[30] Differences of degree and emphasis on the length of timetables and the size of goals, also revealed in the comments of agency officials, seem to reflect tension between a view of antidiscrimination action as a process designed to afford equal employment opportunity presently and in the future and a conception of antidiscrimination programs as a means of rapidly achieving the same pattern of outcomes as would have been obtained had there been no discrimination in the past. If past discrimination in society generally has had the effect of reducing the present qualifications, at least for some occupations, of minority groups and women, the latter view seems more likely to result in discrimination against whites and males than the former. It is not surprising, therefore, that agencies with a more result-oriented conception of affirmative action tended more to favor explicit consideration of race and sex in choosing among "equal" applicants and employees.[31] It is also noteworthy that four agencies—the Justice Department, the Labor Department, EEOC and the Civil Service Commission—had arrived at a common, written position on the use of goals and timetables in March, 1973. That document included the following passage:

"Under a system of goals, therefore, an employer is never required to hire a person who does not have qualifications needed to perform the job successfully; and an employer is never required to hire such unqualified person in preference to another applicant who is qualified; nor is an employer required to hire a less qualified person in preference to a better qualified person, provided that the qualifications used to make such relative judgments realistically measure the job in question, or other jobs to which he is likley to progress. The terms "less qualified" and "better qualified" as used in this memorandum are not intended to distinguish among persons who are substantially equally qualified in terms of being able to perform the job successfully. Unlike quotas, therefore, which may call for a preference for the unqualified over the qualified, or of the less qualified over the better qualified to meet the numerical requirement, a goal recognizes that persons are to be judged on individual ability, and therefore is consistent with the principles of merit hiring."[32]

---

[29] See *Malbin, Non-Discriminatory Hiring*, 5 NAT'L J. REPS. 1400 (1973).

[30] A representative of the Civil Service Commission said, ". . . goals are not the be-all and end-all of affirmative action. In fact, they are not affirmative action at all, but are merely the means of encouraging affirmative action" and that, "a selecting official should have some flexibility in hiring, but he may not use race or sex as a criterion in making his final selection." *Id.* at 1404. A Justice Department spokesman said, "You have a mix of people who were actually discriminated against and you have a mix of people who were not but who, by conditions of their race and sex have historically been discriminated against . . . Since you can't historically turn the clock back to know which are which, the judge takes some of the first group and adds a presumption that there are additional persons in the second group, and sets a goal." *Id.* at 1408. The Director of OFCC stated that as between two roughly equal candidates, "'I would encourage the contractor to give the minority applicant every consideration,' rather than let the decision be made by lot." *Ibid.* Another official of OFCC said that "before Order No. 4 it was a matter of looking at techniques. Now we look at results" and stated also, "it's a simple fact that there has been discrimination in the past. Our purpose is to achieve a degree of utilization which would have existed had discrimination not occurred. The mere fact that a contractor s hiring in rough proportion to availability does not mean that the contractor is in compliance. It depends on the seriousness of the deficiency. You would expect the goals in many cases to be higher than the current availability in order to remedy past deficiencies." *Ibid.* The Civil Rights Commission has issued a statement whch takes the view that, "An affirmative action plan must require some action that has not heretofore taken place, otherwise it is useless . . . One of the requirements therefore is that in the subjective evaluations that always occur in the selection process one factor previously excluded should now be included—a concern that a reasonable number of qualified minorities and women be hired until equity is attained." *Id.* at 1409.

[31] Compare a statement by a CSC representative—"I personally don't believe minorities can expect to catch up in the employment situation until they also catch up in other areas which affect their employability, such as education and past employment service. A lot of elements in society have to come along. This has to be looked at in a total context. It has been happening. Blacks, for example, have been increasing their college enrollment. More and more women are going into occupational areas formerly considered male. Things are changing but it is a gradual process. I don't see any overnight changes in the employment picture. A lot of people are looking for shortcuts, but shortcuts won't work. If you n. 30, *supra*, at 1405—with the Civil Rights Commission statement—"The best test for short-cut the idea of goals too much, leaving out the backup, they become quotas." *Malbin*, determining whether these aims are being achieved is by a results test. Whether expressed in terms of applications, hires or promotions, the rseults test is the best test of whether women and minorities in fact are achieving the equal employment opportunities required pursuant to the twn aims of affirmative action." *Id.* at 1409.

These statements may appear categorical; in practice they turn out to be ambiguous. Without a fairly precise understanding of such critical terms as "qualifications," "realistic measures" and "equal" qualifications different persons can agree on this formulation while holding quite divergent views on the size of pools of qualified labor, what proportion of those qualified are equal and how quickly minority and female employment can be increased without reverse discrimination. It is by no means apparent that a common understanding of such questions has emerged.[33]

(4) Given the present situation of overlapping jurisdiction, inconsistent standards and diverging interpretations of policy, an institution of higher education cannot be confident that conformity to one agency's views of its obligations will satisfy other agencies. This is most clearly evident in the case of retirement benefits. In this instance a university can comply with all relevant agency interpretations of the law only by adopting an equal benefits formula. The courts may, of course, ultimately hold that this position is correct. On the other hand, they may not. Meanwhile, there is at the least a certain anomaly in a state of affairs under which a university must abandon a position one agency considers in compliance with law to take a different position another agency of the same government regards as legally required. The very vague character of dominant concepts—"discrimination," "goals and timetables," "qualified," etc.—referred to above and discussed more fully below, leads to less obvious conflicts in the approaches different agencies bring to administration of equal employment opportunity in higher education. Conflicts of this kind may surface on occasion, as in a celebrated case involving the Bogalusa, Louisiana plant of Crown Zellerbach Corporation.[34] There, EEOC approved an alteration in the seniority system to redress the effects of past discrimination. This was overturned by OFCC, which imposed a new arrangement. The OFCC solution in its turn was attacked (successfully) by the Justice Department in litigation under Title VII. More commonly, discrepancies of view may remain concealed in the low visibility workings of administrative processes in which multiple agencies settle the conditions of eligibility for grants and contracts and attempt resolution of complaints of discrimination.

There presently exists machinery for coordinating the work of agencies active in the antidiscrimination field. This equipment, however, does not yet appear to be in good working order. The Equal Employment Opportunity Act of 1972 added section 715 to Title VII of the Civil Rights Act to create an Equal Employment Opportunity Council, composed of representatives of the Labor Department, the Justice Department, EEOC, the Civil Service Commission and the Civil Rights Commission.[35] The Council has "responsibility for developing and implementing agreements, policies and practices designed to maximize effort, promote efficiency, and eliminate conflict, competition, duplication and inconsistency among the operations, functions and jurisdictions of the various departments, agencies and branches of the Federal Government responsible for the implementation and enforcement of equal employment opportunity legislation, orders and policies." The principal achievement of the Council to date seems to be a set of draft guidelines on employee selection procedures. The Council deserves a great deal of credit for addressing what is probably the most crucial and difficult problem for antidiscrimination policy. On the other side, the Council has to be faulted for its failure to deal with the problem effectively. The Council's members have not agreed on a document they are prepared to publish, and the draft they have produced perpetuates some of the more notable inadequacies of the existing guidelines adopted by OFCC and EEOC. The four agency agreement on goals and timetables represents another praiseworthy, though only ambiguously successful, effort to achieve consistent interpretation of policy. There is also a section of the OFCC Sex Discrimination Guidelines providing:

---

[32] "Memorandum for U.S. Attorneys, Field Representatives of the Civil Service Commission, Field Representatives of the Equal Employment Opportunities Commission, Field Representatives of the Office of Federal Contract Compliance—Subject: Federal Policy on Remedies Concerning Equal Employment Opportunities in State and Local Government Personnel Systems" (Mar. 23, 1973) 3–4.

[33] See n. 30, 31, *supra.*

[34] *Local 189, United Papermakers & Paperworkers, AFL–CIO v. United States,* 416 F. 2d 980 (5th Cir. 1959), *cert. denied,* 397 U.S. 919 (1970).

[35] 42 U.S.C. § 2000e–14, 86 Stat. 111 (1972).

"To avoid overlapping and conflicting administration the Director will consult with the Administrator of the Wage and Hour Administration before issuing an opinion on any matter covered by both the Equal Pay Act and Executive Order 11246, as amended by Executive Order 11375." [38]

The undertaking to consult, however, clearly does not insure agreement, as evidenced by OFCC's willingness to consider a position in conflict with that of the Wage and Hour Administrator on retirement plans. The efforts at coordination made so far lead in the right direction. They remain piecemeal approaches to one or another problematic feature of antidiscrimination policy and fail to reflect a comprehensive view of what that policy ought to be. The Executive branch seems to lack capacity to formulate a clear conception of policy and to secure obedience to it on the part of the responsible agencies.

In many ways, despair seems the most appropriate response to the present state of affairs. In varying degrees, a number of agencies of the executive branch, the legislature and the courts have contributed to the tangle of overlapping jurisdictions, remedies and substantive standards which now exists. In all probability, it will never be entirely pulled apart and rationalized. It does not seem too much to ask, however, that at least the agencies of the executive branch concerned with equal employment opportunity should get out of each other's way, whether by deferring to some one agency on questions unique to a particular field, such as higher education, or by coming to a shared understanding on issues of common importance to all of them. Congress has already said there should be coordination; what remains to be done is actually to coordinate.

THE FAILURE OF ENFORCEMENT: HEARINGS AND SANCTIONS

On the surface, it would appear that the contract compliance program should furnish frequent occasion for administrative hearings directed toward the imposition of sanctions. Among the principal sanctions for noncompliance which the Executive Order provides are cancellation, termination or suspension of contracts and debarment of contractors.[1] The regulations contemplate regular compliance reviews, and no contract over $1,000,000 is to be awarded unless compliance on the part of the successful bidder has been established through a preaward review within the preceding twelve months.[2] Whenever a compliance review discloses that a contractor lacks an acceptable affirmative action program, or has "substantially deviated" from an approved affirmative action program, he must be declared nonresponsible; [3] the regulations provide that upon a second finding of nonresponsibility debarment proceedings must be commenced.[4] Furthermore, "when the Director [of OFCC] has reasonable cause to believe that a contractor has violated the equal opportunity clause he may issue a notice requiring the contractor to show cause, within 30 days, why monitoring, enforcement proceedings or other appropriate action to ensure compliance should not be instituted." [5] Under Revised Order 14, as published in the Federal Register in February, 1974, a compliance agency seemed to be required, within sixty days of receiving a contractor's affirmative action program, either to notify the contractor that he was in compliance or to issue a thirty day show cause notice.[6]

Earlier versions were more vague as to the periods within which compliance agencies were to act but also looked toward a finding of compliance or issuance of a show cause notice.[7] Revised Order No. 4 requires the compliance agency to give a thirty day show cause notice "immediately upon finding that a contractor has no affirmative action program or has deviated substantially from an approved affirmative action program or that his program is not acceptable . . ."[8] While it is not certain that these provisions are wholly consistent,[9] it is clear that cancellation, termination and debarment serve as prompt alternatives, at least on paper, to satisfactory compliance. None of these sanctions may be imposed without offering an opportunity for hearing.[10] The Director may suspend existing contracts under the regulations, but only during the period proceedings for cancellation, termination or debarment are pending; when the Government has accepted the contractor's plan within the preceding twelve months even suspension must be preceded by a hearing, unless the contractor has "deviated substantially" from the plan.[11] The Comptroller General has ruled that progress payments due under a contract may not be withheld for violation of the equal employment opportunity clause without an opportunity for hearing.[12]

[38] 41 C.F.R. § 60-2.5(c) (1973).

[1] Exec. Order No. 11, 246 §§ 209(a)(5), (6).

[2] 41 C.F.R. § 60-1.20(d) (1973).

[3] 41 C.F.R. § 60-2.2(b) (1973): If, in determining such contractor's responsibility for an award of a contract it comes to the contracting office's attention, through sources within his agency or through the Office of Federal Contract Compliance or other Government agencies, that the contractor has not developed an acceptable affirmative action program at each of his establishments or has substantially deviated from such an approved affirmative action program, the contracting office shall notify the Director and declare the contractor-bidder nonresponsible unless he can otherwise affirmatively determine that the contractor is able to comply with his equal employment obligations or, unless upon review, it is determined by the Director that substantial issues of law or fact exist as to the contractor's responsibility to the extent that a hearing is, in his sole judgment, required prior to a determination that the contractor is nonresponsible. . . .

[4] *Ibid.*

[5] 41 C.F.R. § 60-1.27 (1973).

[6] 39 Fed. Reg. 5630 (1974). On July 8, 1974, the regulations were amended to make clear that extensions of time could be granted, 41 C.F.R. § 60-6.7, 39 Fed. Reg. 25665 (1974).

Finally, the Equal Employment Opportunity Act of 1972 added to Title VII of the Civil Rights Act section 718, which provides:

> No Government contract, or portion thereof, with any employer, shall be denied, withheld, terminated, or suspended, by any agency or officer of the United States under any equal employment opportunity law or order, where such employer has an affirmative action plan which has previously been accepted by the Government for the same facility within the past twelve months without first according such employer full hearing and adjudication under the provisions of title 5, United States Code, section 554, and the following pertinent sections: *Provided*, that if such employer has deviated substantially from such previously agreed to affirmative action plan, this section shall not apply. . . .[13]

Government agencies award a large volume of contracts to institutions of higher education yet only a few of them have approved affirmative action plans. There has been ample opportunity for commencement of proceedings leading to cancellation or termination of contracts and debarment. The typical outcome of a compliance review is a finding of deficiencies in the institution's affirmative action program.

Only a small number of plans have received final approval, a larger number have been rejected and many plans have remained pending for long periods of time. The Director has had authority to initiate enforcement proceedings whenever he believed a contractor had violated the equal employment opportunity clause. Findings of noncompliance after compliance reviews are supposed to trigger show cause notices. Given the length of time some programs have been held under review, it must be the case that two or more contracts over $1,000,000 in amount have been awarded to a single institution with no finding of compliance having been made. But Revised Order 4 prohibits the award of a contract in excess of $1,000,000 unless a preaward review has established compliance and requires a debarment proceeding upon a second finding of nonresponsibility. Many contracts are awarded to institutions which have never undergone a compliance review because OCR, in common with other compliance agencies, lacks the manpower to perform the tasks set down in the regulations. It is also true, however, that the conditions to sanction proceedings are routinely satisfied at institutions which are reivewed. Yet the Government has never moved seriously to invoke against an institution of higher education the sanctions provided in the Executive Order.[14] Why not?

---

[7] Under 41 C.F.R. 60–60, 38 Fed. Reg. 13377 (1973) on-site investigations were to be conducted no later than forty-five days from the request to a contractor for his affirmative action program. 41 C.F.R. §§ 60–60.3(c)(2), (d) (1973). Within forty-five days of the initiation of the on-site investigation the contractor was to be notified that he was in compliance or a 30-day show cause notice was to issue. *Id.* at § 60–6.8. However, the compliance agency could grant an extension of time "for good cause, including an opportunity for the contractor to avail himself of conciliation . . ." *Ibid.*

[8] 41 C.F.R. § 60–2.2(c) (1973).

[9] It is not entirely clear whether a thirty-day show cause notice is to issue upon a finding of noncompliance or after failure of conciliation following noncompliance or one or the other, at the discretion of the compliance agency or Director of OFCC or dependng upon whether the deficiency is discovered in a preaward review, in a regular compliance review or in some other way.

[10] 41 C.F.R. § 60–1.26(b)(2) (1973).

[11] *Id.* at 60–1.26(b)(2)(iv) (1973).

[12] 52 COMP. GEN. 476 (1973).

[13] 42 U.S.C. § 2000e–17, 80 Stat. 384 (1972).

Several reasons may be offered for the absence of formal sanctioning proceedings in higher education. It is possible that HEW lacks the political will to pursue the drastic remedies of cancellation, termination and debarment on any very wide scale or against influential contractors. The sanctions are so overwhelming as to deter their use. The government projects an attitude of ambivalence toward the program, reflecting the tension between the function of the government contract as a means of procuring required goods and services at the highest quality for the lowest cost and use of the contract as a regulatory technique. HEW has an alternative means of bringing pressure to bear on contractors (the contract freeze, discussed below) which avoids the commitment of time and resources entailed by formal enforcement proceedings and postpones the need to resolve the underlying tensions and dilemmas of the regulations, as well as the problems posed by their lack of fit to the conditions of higher education. These features of the regulations furnish an additional, formidable impediment to straightforward enforcement.

At least some OCR employees have entertained doubts about the willingness of politically appointed officials to support strong enforcement measures against contractors. Whether or not such doubts are well-founded, their existence probably serves to inhibit vigorous action by the people involved in the day to day work of the compliance program. How persistent, widespread and deepseated is the skepticism about the current administration's commitment to the program is hard to say. Some officials profess considerable confidence in the wholehearted support of highranking political appointees in the executive branch, others are noncommittal and still others acknowledge considerable uncertainty.

If there is any general rule about the matter, it would seem to be that skepticism varies directly with the distance in the organization's hierachy between the speaker and the highest levels of administration, but what this tendency may measure could be less the real attitude of the speaker than the degree of his willingness to speak candidly. A number of people in and out of government claim awareness of one or another incident suggesting that political considerations may have deflected the program's administration on some occasion. Naturally, it is quite difficult either to verify or to disprove allegations of this kind. It does seem fair to say that OCR does not reflect full confidence that the Department stands prepared to support stern enforcement measures.

The very severity of the sanctions creates another obstacle to their use. Debarment of a number of universities, including may of those at which OCR has concentrated its efforts, would inflict considerable damage. Probable consequences would include layoff of personnel, sharp curtailment or elimination of many research programs and constriction of educational and training opportunities, particularly for advanced students. Futher, since universities are complex organizations very poorly described by the industrial model reflected in OFCC regulations, it is often difficult to frame clear issues and build a compelling case demonstrating that a university stands in default on a clearly stated and important requirement of the program. For example, much frustration has been encountered in developing satisfactory analyses of university workforces for the purposes of compliance review. Even to the initiated, an epithet OCR representatives infrequently deserve, a large university seems a confusing, if not chaotic, welter of job titles, disciplines, subfields and organizational units.

OCR representatives and university officials have in some cases spent considerable time constructing suitable methods of collecting and reporting data on employees.[15] The problem of calculating deficiencies and setting goals among academic employees supplies another illustration. There has been lacking fully satisfactory means of establishing the availability of eligible minority and female candidates, especially in the case of minorities. but these determinations must be made to estimate underutilization and set goals. In consequence of difficulties of this kind, it is easy to find a university out of compliance but hard to say exactly what it should have done in order to comply. Review of a university becomes a process of mutual discovery of a series of intractable problems; the university may lag behind OCR demands and requests, but it can usually avoid falling into obvious recalcitrance. In this setting, extreme sanctions which fall heavily on "innocent" employees and students seem out of proportion to the university's fault. Consequently, they are not employed.

---

[14] It is reported that the Office for Civil Rights requested HEW's General Counsel in November, 1971, to initiate steps leading to termination of Columbia University's federal contracts and debarment of Columbia as a government contractor. No hearing was ever held, however. See Wheeler, *The Role of University Counsel in Dealing with Equal Opportunity Compliance Problems*, 7 THE COLLEGE COUNCIL 249 (1972).

[15] See the account furnished by a lawyer for Columbia University in Wheeler, n. 14 *supra*.

In addition to the paradox that, at a certain point, sanctions lose efficacy as they gain in power, contract compliance faces the dilemma that its sanctions injure the Government at the same time they hurt the university. One of the purposes of contract awards to colleges and universities is to strengthen the higher education system.[16] To withhold contracts in aid of antidiscrimination efforts thus serves to advance one federal policy at the expense of another. (The converse is true only if there is no feasible alternative to withholding of contracts.) But Government policies conflict still more sharply.

The Government desires the goods and services it purchases through contracts with universities. Termination, cancellation and debarment further the Government's interest in improving the condition of women and minority groups but sacrifice the performance for which the Government has contracted and the contractor's capacity to assist the Government in achieving many of its goals. For example, it was reported that indefinite continuation of the recent freeze of contract awards at the University of California at Berkeley would have required cancellation of the Apollo-Soyuz space flight planned for July, 1975.[17] There will be disagreement, of course, over the appropriate ordering of priorities as between elimination of discrimination and achievement of various other objectives. The responsibility of monitoring compliance with the equal employment opportunity clause was separated from the function of awarding contracts precisely in order to increase the weight of antidiscrimination policy in the overall mix of governmental objectives represented by the Government contract device. The point remains that enforcement of equal employment opportunity involves a balance of gains and losses, and the responsible officials may sometimes conclude that the balance weighs against enforcement. At least some OCR officials see this tension in contract compliance quite clearly, and this perception contributes to their sense of isolation and to their suspicion that sanction proceedings will not be carried through to the end against important contractors.

OCR has available to it one method of bringing pressure to bear on contractors apart from the formal procedures of termination, cancellation and debarment. This method—the freeze on new contract awards—has been used on a number of occasions.[18] Revised Order No. 4 provides:

> If, in determining such contractor's responsibility for an award of a contract it comes to the contracting officer's attention, through sources within his agency or through the Office of Federal Contract Compliance or other Government agencies, that the contractor has not developed an acceptable affirmative action program at each of his establishments or has substantially deviated from such an approved affirmative action program, the contracting officer shall notify the Director [of OFCC] and declare the contractor-bidder nonresponsible unless he can otherwise affirmatively determine that the contractor is able to comply with his equal employment obligations or, unless upon review, it is determined by the Director that substantial issues of law or fact exist as to the contractor's responsibility to the extent that a hearing is, in his sole judgment, required prior to a determination that the contractor is nonresponsible. . . .[19]

Under the Federal Procurement Regulations contracting officers are required to evaluate the "responsibility" of prospective contractors. For the most part, the criteria of responsibility—*e.g.*, financial resources, record of performance—have to do with the contractor's capacity to supply goods or services according to contract specifications.[20] However, in order to be considered responsible a prospective contractor must "be otherwise qualified and eligible to receive an award under applicable laws and regulations . . .," including Executive Order 11246 and its regulations.[21]

[16] See Wilson, *A Dilemma of American Science and Higher Education Policy: The Support of Individuals and Fields versus the Support of Universities*, 9 MINERVA 171 (1971).

[17] See BNA, 42 Daily Lab. Rep. A12–A13 (Mar. 1, 1974).

[18] According to information supplied by HEW, delay of contracts has been utilized on some twenty-two occasions involving twenty institutions of higher education and nearly $28.5 million in contract awards (in some cases, no contracts were pending at the time the contract freeze was imposed). Letter from Cheryl Olkes, Public Information Office, OCR, to Sheldon Steinbach, ACE, dated Jan. 15, 1974.

[19] 41 C.F.R. § 60–2.2(b) (1973).

[20] See 41 C.F.R. § 1–1.1203 (1973).

If OCR is dissatisfied with a contractor's performance of his affirmative action obligations, it may announce that fact to contracting agencies, with the likely consequence that contracting officers will withhold findings of responsibility. So long as contracting officers are willing to defer to OCR determinations of noncompliance with Revised Order No. 4,[22] the agency is able to shut off the flow of federal contract money to the offending university for some (unknown) period of time. This technique permits OCR to induce concessions from contractors without incurring the substantial costs of time and resources demanded by formal proceedings. This tactic also allows OCR to demonstrate "progress" in expanding employment opportunities for minority groups and women while relieving the executive branch of the responsibility of taking a clear position on the meaning of affirmative action.

These are only in part the functions for which the contract freeze was designed. It appears that OFCC saw in this technique the means of solving two problems. As described by a Solicitor of Labor, these were:

> First, the compliance agencies frequently ignored the Executive order's mandate that conciliation efforts continue for only a reasonable time, thus permitting dilatory contractor's to protract "conciliation" for a period of several years; and, second, the adversary proceedings contemplated by Section 208(b) of the Executive order, even when promptly instituted, are time consuming and necessarily divert limited compliance resources from other program tasks.[23]

Under the most plausible interpretation of Order No. 4, the discovery that a contractor is deficient in meeting his affirmative action obligations should trigger a thirty day show cause notice as well as a finding of nonresponsibility. If the matter is not resolved during the thirty day period, there should follow a "notice of proposed cancellation of termination of existing contracts or subcontracts and debarment from future contracts and subcontracts. . . . "[24] OCR seems unconstrained by this timetable, apparently feeling free to continue "conciliation, mediation and persuasion" beyond the time periods set by the regulations.[25] The compliance review tends to evolve into a negotiation process with a partly indeterminate outcome. This whole process is quite likely to consume many months and may never reach a definitive conclusion. In this process, show cause notices and the occasional contract freeze serve rather to restore movement to a stalled negotiation than to lend structure to an enforcement procedure leading either to the imposition of the prescribed sanctions or a determination of compliance with a set of ascertainable standards. It would seem that OFCC hoped to provide an informal and expeditious means of resolving compliance problems which could bypass formal hearing mechanisms and proceed to a terminal point within a finite time period.

This objective assumes, however, that the compliance agency's task is primarily an administrative process of monitoring conformance to a set of determinate obligations described by the regulations. In reality, insofar as the regulations defy coherent application in the setting of higher education, the contract freeze comes to function as a pressure tactic in a bargaining process; delay of contracts helps to force agreement with a particular university while case-by-case negotiation of agreements allows OCR to escape the responsibility, which a litigation process might impose, of committing itself to a meaningful conception of affirmative action.

It seems clear that OCR should not be dependent so exclusively on the extreme sanctions of termination, cancellation and debarment. Their very severity seriously inhibits their use. Consequently, it could easily occur that OCR might leave unremedied an instituiton's defaults on a wide range of individual matters because the only sanctions available to the agency seem excessively harsh.[36] It is unlikely, for example, that OCR will seek to debar a university because, in the agency's view, a department has discriminated on grounds of sex in denying tenure to a woman faculty member. On the other hand, to the extent that OCR is prepared to pursue debarment in such cases the university is likely to capitulate out of unwillingness to risk eligibility for contracts on the outcome of litigation over a matter of secondary importance to the institution as a whole.

---

[21] *Id.*, at § 1-1.1203(e); 41 C.F.R. § 1-12.8 (1973).

[22] Under 41 C.F.R. §60-2.2(b) (1973) a declaration of nonresponsbility is made by the contracting officer. It is not clear that he is obliged to heed OCR's conclusions on the question of nonresponsibility.

[23] Nash, *Affirmative Action Under Executive Order 11,246*, 46 N.Y.U.L. REV. 225, 253 (1971).

[24] 41 C.F.R. 60-2.2(c)(1) (1973).

[25] According to 41 C.F.R. § 60-2.2(c)(2), "During the 'show cause' period of 30 days every effort shall be made by the compliance agency through conciliation, mediation and persuasion to resolve the deficiencies which led to the determination of nonresponsibility." However, "If satisfactory adjustments designed to bring the contractor into compliance are not concluded, the compliance agency, with the prior approval of the Director, shall promptly commence formal proceedings leading to the cancellation or termination of existing contracts or subcontracts and debarment from future contracts and subcontracts under § 60-1.26(b) of this chapter."

As a practical matter, a university for which government contracts are important will not deliberately risk its eligibility on the accidents of administrative litigation on any but the most gravely significant issue.[37] The present system creates the risks either that OCR obtains less than full compliance or that the agency imposes on institutions a version of their obligations which would not survive the test of litigation.

These unsatisfactory alternatives are partly due to the ambiguous and indeterminate character of the regulations. On one hand, institutions are uncertain as to the nature and extent of their obligation and, on the other, OCR's findings of compliance or noncompliance have a large element of pure discretion. In addition to revision of the regulations themselves, it would seem desirable to seek better definition of the program's requirements through the process of "elucidating litigation." This process will not go forward, however, within the framework of the present system of sanctions. Either OCR will not invoke them or the institution will make the minimum concessions necessary to avert the risk of debarment.

Two reforms seem desirable to correct this situation: (1) OCR should have at its disposal a system of graduated sanctions; (2) OCR should not be able to impose any sanction without an opportunity for prior hearing. The first of these is no simple matter to arrange. Essentially it is a matter of providing by contract for the range and flexibility of judicial remedies.

The penalties for violation of the regulations or departures from an affirmative action program should be heavy enough to discourage frivolous contests for purposes of delay or obstruction but not so overwhelming that institutions feel compelled to abandon genuinely held positions on serious questions. Sanctions should be adequate to deter but not so devastating that they either are not employed or imposed losses out of proportion to the institution's default or coerce compliance to debatable interpretations of the regulations. Depending upon circumstances, sanctions for demonstrated violations have one or more of three functions to perform: (1) to deter future violations of the regulations generally, by the respondent and others, (2) to compel a respondent to conform a continuing cause of conduct to the requirements of the program, (3) to make whole injured persons. A dispute might arise over an institution's recruiting practices, an example of (2) above. If those are shown to fall short of compliance with the institution's obligations under the Executive Order, the indicated remedy is the equivalent of an injunction. On the other hand, if an institution fails in a few individual instances to perform its commitment to advertise openings, an illustration of (1), a monetary penalty, the equivalent of a fine, might be appropriate. Finally, it may be desirable in some cases to provide remedies for individuals—i.e., a promotion or grant of tenure.

The Executive Order, as it stands, does not lend itself to a remedial scheme of this kind. It would be possible for OCR to seek termination or cancellation of a particular contract or a "portion thereof"[38] without attempting debarment as well. This would be a crude solution since it would tie the possible range of remedies to an institution's pattern of contracts and would allow only limited flexibility in the choice of remedy. It would also have undesirable side effects on the institution's activities and employees involved in the contract and on the contracting agency.

---

[36] See Fisher, *The Carrot and the Stick: Conditions For Federal Assistance*, 6 HARV. J. LEGIS. 401 (1969), for a description of this dilemma.

[37] 41 C.F.R. § 60–1.24(c)(4) provides: "Where a prime contractor or subcontractor, without a hearing, shall have complied with the recommendations or orders of an agency or the Director and believes such recommendations or orders to be erroneous, he shall, upon filing a request therefor within ten days of such compliance, be afforded an opportunity for a hearing and review of the alleged erroneous action by the agency or the Director." It does not appear that this procedure has ever been utilized. For this there may be several reasons. Contractors dislike challenging the Government for fear of prejudicing the award of future contracts. Action once taken can be difficult to undo later—*e.g.*, a grant of tenure to a complainant. OCR tends to avoid "orders" or "recommendations" in favor of pointing to "deficiencies" (*e.g.*, inadequate workforce analysis, availability not sufficiently established), and the requirements of the program are so vague and open-ended that a contractor can ordinarily assume he is out of compliance. Indeed, it may be doubled that OCR has been entirely satisfied even with those few plans it has approved, to say nothing of OFCC. To contest an order, therefore, invites a retaliatory debarment proceeding, and this poses serious risks.

[38] Executive Order 11, 246, in section 209(a)(5), provides for cancellation, termination or suspension of a contract or "any portion or portions thereof."

More satisfactory would be amendment of the Executive Order to permit promulgation by regulation of a scale of monetary penalties to which institutions would consent in entering into government contracts. These would be imposed for violations either admitted by institutions or proved through the existing hearing procedures (subject to judicial review). Penalties in appropriate amounts would either be imposed, as in cases in which fines are appropriate, or forgiven upon compliance with the obligation established through litigation, as when a change in practice or provision of remedies to individuals is demanded from the institution. The debarment sanction could be retained for cases of continued recalcitrance.

A solution of this kind would work awkwardly or imperfectly in some cases. Since it would almost certainly prove infeasible to specify in advance what penalties would be appropriate for which violations, the question of penalty would often have to be litigated along with the underlying issue of the violation itself. Consequently, OCR might be tempted to claim large penalties to gain bargaining leverage, thereby circumventing the hearing process. Also, such a system would function most effectively with institutions which rely heavily on government contracts, much less well with institutions which contract with the Government only sporadically or for small amounts. Defects like these, however, simply reflect the distortions and anomalies which accompany the use of the government contracts as a regulatory device. As always, proposals have to be judged against existing arrangements and practical alternatives.

The availability of an adjudicative process does not insure that it will be used. As long as OCR can exert significant pressure on institutions outside the framework of formal sanctions, the program's content may continue to depend more on what the agency has the strength to negotiate than on what the regulations can be shown to require. At present, termination or cancellation of contracts and debarment can take place only upon opportunity for prior hearing. However, the agency claims the power simply to declare an institution a nonresponsible bidder for inability to comply with the equal employment opportunity clause, and this technique, by damming the flow of contract funds to the institution, may enable OCR to win concessions which may exceed what can properly be imposed.[29] It is open to doubt whether the compliance agencies actually have authority to make findings of nonresponsibility without affording an opportunity for hearing.[30] However that may be, it would seem desirable as a matter of policy to force OCR to formulate an intelligible conception of the program and demonstrate its legitimacy by channelling enforcement away from the administrative mechanism of the contract freeze and into an adjudicative process.

The same considerations apply to administration of Title IX, forbidding sex discrimination to federally assisted education programs and activities. Section 902 provides:

> Each Federal department and agency which is empowered to extend Federal financial assistance to any education program or activity, by way of grant, loan, or contract other than a contract of insurance or guaranty, is authorized and directed to effectuate the provisions of section 901 with respect to such program or activity by issuing rules, regulations, or orders of general applicability which shall be consistent with achievement of the objectives of the statute authorizing the financial assistance in connection with which the action is taken. No such rule, regulation, or order shall become effective unless and until approved by the President. Compliance with any requirement adopted pursuant to this section may be effected (1) by the termination of or refusal to grant or to continue assistance under such program or activity to any recipient as to whom there has been an express finding on the record, after opportunity for hearing, of a failure to comply with such requirement, but such termination or refusal shall be limited to the particular political entity or part thereof, or other recipient as to whom

---

[29] The use of the contract freeze to settle dispute over the meaning of the regulations is comparable to resort to strike in preference to arbitration to resolve a question arising under collective bargaining agreements. In both situations a test of strength determines issues of interpretation.

[30] In *Crown Zellerbach Corp. v. Wirtz*, 281 F. Supp. 337 (D.D.C. 1968), the court enjoined the Secretary of Labor from, *inter alia*, temporarily suspending the plaintiff corporation from further business with the government prior to a hearing on the plaintiff's compliance status under Executive Order No. 11, 246.

> such a finding has been made, and shall be limited in its effect to the particular program, or part thereof, in which such noncompliance has been refound, or (2) by any other means authorized by law: *Provided however*, that no such action shall be taken until the department or agency concerned has advised the appropriate person or persons of the failure to comply with the requirement and has determined that compliance cannot be secured by voluntary means. In the case of any action terminating, or refusing to grant or continue, assistance because of failure to comply with a requirement imposed pursuant to this section, the head of the Federal department or agency shall file with the committees of the House and Senate having legislative jurisdiction over the program or activity involved a full written report of the circumstances and the grounds for such action. No such action shall become effective until thirty days have elapsed after the filing of such report.[31]

HEW's draft regulations under Title IX provide for suspension of assistance while formal proceedings to terminate or deny assistance are pending.[32] To the extent that assistance is critical to the recipient institution, it will be true under Title IX, as under the Executive Order, that interruption of funds will lead to a negotiated outcome, circumventing the procedures of hearing and judicial review afforded by the statute as well as its machinery for legislative oversight. It would seem as desirable in the administration of Title IX as in that of the Executive Order that any cut-off of funds follow, rather than precede, the adjudicative procedure the statute provides.

Precisely the same argument holds for Title VI of the Civil Rights Act of 1961, which Title IX simply repeats in the respect relevant here.[33]

THE DILEMMA OF ENFORCEMENT: UNADMINISTRABLE STANDARDS OF MERIT

The Executive Order forbids discrimination and requires affirmative action. Neither of these terms lends itself to straightforward application. Labor markets are inherently discriminatory; one of their functions is to allocate a good in short supply relative to demand. The formula "discrimination on grounds of race, color, religion, sex or national origin" seems to mean that these attributes are not to figure in the discriminations among persons which employment decisions inevitably effect. On one view, claims of discrimination turn on the question whether or not the employer took these characteristics into account, using them as standards to guide his decisions. Discrimination poses fundamentally a psychological issue, and the employer's intentions are crucial. If it appears that his decisions do not vary depending, for example, on the race of applicants or employees, he cannot be guilty of racial discrimination. What considerations apart from race may determine his decisions is immaterial. The employer can discriminate on any basis he chooses, other than race. If, for example, an employer refuses to hire applicants who have arrest records, his practice is nondiscriminatory even though a larger proportion of blacks than of whites have arrest records. At one time this notion of discrimination as conduct resulting from an intention to discriminate on prohibited grounds seems to have marked the limit of the legal conception of discrimination.[1]

On another view of the matter, racial discrimination need not rest on an intention to discriminate on grounds of race but may exist even where there is an intention not to discriminate in this way. Now claims of discrimination depend on the effects of the employer's practices. If their effect is disproportionately to disadvantage blacks as against whites, the employer has discriminated on grounds of race.

Of course, the question arises, disproportionate with respect to what? One answer might be, with respect to the fraction of blacks in the labor force. Another answer would be, with respect to the relative "merit"—i.e., job performance—of blacks and whites in the labor force. These two answers might come to the same thing if it were the case that capacity for job performance were equally distributed among blacks and whites for all jobs.[2] This is, however, not the case.

---

[31] 20 U.S.C. § 1682, 86 Stat. 374 (1972).

[32] 39 Fed. Reg. 22238–39 (1974) (§ 86.63(b)).

[33] 42 U.S.C. § 2000d–1, 78 Stat. 252 (1964).

[1] See, Blumrosen, *Strangers in Paradise: Griggs v. Duke Power Co.* and the Concept of Employment Discrimination, 71 MICH. L. REV. 59, 66–75 for an account of the evolution of the legal concept of discrimination.

[2] They would not necessarily amount to the same thing. If, for example, blacks and whites differed in their relative access to employment opportunities—owing to residential patterns and plant location—disproportionately high numbers of blacks or whites might be employed even though the capacity of the two groups was equal.

For example, a lower percentage of blacks than whites possess what society insists upon as a necessary minimum of training for the practice of medicine. The cumulative impact of the black experience in the United States has the consequence that relative capacity across the entire range of jobs in the economy (in the sense of "present" as opposed to "innate" capacity) is not proportionately distributed between the two racial groups. It makes a difference whether discrimination against blacks is defined as, employing a lower proportion of blacks in particular jobs than their proportion of the labor force, or as, employing less able whites than available blacks. The former definition may serve as a measure of discrimination in society, but it is unlikely to furnish a test of unlawful discrimination unless modified to include a standard of minimum qualification.

At least three considerations combine in favor of the latter definition. It serves an interest in efficiency. It gives effect to the view that the person who will perform a job best deserves the job. It rejects race as a criterion of selection. When discrimination is understood in this way, the case of the employer who rejects applicants with arrest records needs to be reexamined. Unless arrest records signal some disqualifying trait for the job in question, this employer discriminates on grounds of race.[3] It is this second concept of discrimination as decisions which, whether or not intentionally, fail to match racial patterns of employment with capacity for job performance that approaches the contemporary legal meaning of discrimination.[4]

This expansion of the meaning of discrimination reduces the scope of affirmative action, as used in the Executive Order. If discrimination meant only knowing or intentional departures from the principle of selection according to capacity for job performance, then a duty to take affirmative action could be used to alter unintentional or inadvertent practices with the same effect. It may be, for example, that an employer's failure to recruit aggressively among minority groups and women is not discrimination. If so, however, a duty to recruit may be imposed as part of a federal contractor's affirmative action obligation.[5] But affirmative action on behalf of minority groups and women reaches its limit at the point of discrimination against whites and men. Although the Constitution may permit the Government to require preferences to members of disadvantaged groups, it appears that federal law at present forbids discrimination for as well as against such groups.

Thus Title VII prohibits discrimination on grounds of race or sex, not discrimination against blacks or women, and the Supreme Court has read the statute as saying that "discriminatory preferences for any group, minority or majority, is precisely and only what Congress has proscribed."[6] Since Title VII covers federal contractors, it is very doubtful that the contractual stipulation for affirmative action could require reverse discrimination.[7] In any case, it seems that the Executive Order itself bans discrimination against whites or males.[8] Although the obligation to take affirmative action is said to require something more than nondiscrimination, the duty not to discriminate for or against persons on grounds of race, color, religion, sex or national origin limits the reach of affirmative action. As the meaning of discrimination comes to take in more ground affirmative action "to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, or national origin" comes to be squeezed more and more tightly against the ban on discrimination hostile to persons of any race, color, religion, sex or national origin.

---

[3] In *Gregory v. Litton Systems, Inc.*, 472 F. 2d 631 (9th Cir. 1972), the court held that the use of arrest records as a screening device violated Title VII on the grounds that the device disproportionately disadvantaged black applicants and had not been shown to further a reasonable business purpose.

[4] This proposition emerges from decisions establishing the principles that racial imbalance may create a *prima facie* case of discrimination, that findings of discrimination do not require proof of intention to discriminate and that racially neutral selection criteria which adversely effect minority groups are unlawfully discriminatory unless shown to be related to job performance. For a discussion of these principles see Larson, *The Development of Section 1981 as a Remedy For Discrimination in Private Employment*, 7 HARV. CIV. RIGHTS-CIV.-LIB. L. REV. 56, 90–96 (1972).

[5] In *In re Allen Bradley*, CCH EMPL. PRAC. GUIDE ¶¶ 8065, 8070 (OFCC 1968, 1969), recruitment from walk-in applicants was considered to violate the contractor's affirmative action obligation rather than his duty not to discriminate.

[6] *Griggs v. Duke Power Co.*, 401 U.S. 424, 431 (1971).

[7] See 42 OP. ATT'Y GEN. No. 37 at 11 (1969), *cf.*, *Youngstown Sheet and Tube Co. v. Sawyer*, 343 U.S. 579 (1952).

[8] Thus, the Executive Order does not prohibit discrimination against minority groups and women but discrimination on grounds of race or sex. Order No. 4 provides that "The purpose of a contractor's establishment and use of goals is to insure that he meet his affirmative action obligations. It is not intended and should not be used to discriminate against any applicant or employee because of race, color, religion, sex, or national origin." 41 C.F.R. § 60–2.30. HEW "Higher Education Guidelines Executive Order 11246" state: "A university contractor must carefully and systematically examine all of its employment policies to be sure that they do not, if implemented as stated, operate to the detriment of any persons on grounds of race, color, religion, sex or national origin." * * * "The *nondiscrimination* requirements of the Executive Order apply to *all* persons, whether or not the individual is a member of a conventionally defined 'minority group.' In other words, no person may be denied employment or related benefits on grounds of his or her race, color, religion, sex or national origin." HEW, "Higher Education Guidelines: Executive Order 11246," 2–3, 8 (1972) (emphasis in original).

The cumulative effect of the duties to refrain from discrimination and to take affirmative action is to compel employee selection according to job performance, actual or predicted. A contractor's failure to employ members of minority groups and women in each job in the proportions indicated by their relative capacity for performance suggests that he has been derelict in taking affirmative action if, indeed, he has not discriminated. On the other hand, to the extent that he has favored minority persons or women over whites or males of superior job performance capacity he has been guilty of reverse discrimination. To be workable at all, the contract compliance program must have an administrable conception of job performance. It is at this point that the program suffers breakdown in its application to faculty employment.

Administration of the contract compliance program is facilitated by certain conditions. The regulations assume that the contractor is an organization characterized by a hierarchical authority structure, with a centralized management capable of establishing a system of personnel rules and monitoring conformance to the rules by subordinates. Entry level jobs require little training, experience or education beyond that widely distributed in the population at large and any additional necessary skills are acquired during employment. The content of jobs is clearly understood, as when the technology of production defines the job, and criteria of performance are subject to objective measurement. There is an effective ceiling on performance imposed by the character of the job itself or, at least, there is an average level of performance defined as successful which is commonly attained. Faculty employment in higher education stands in marked contrast.

In matters of employment and promotion the institution's authority tends to be widely diffused to departments and schools, and there is considerable participation by faculty in faculty personnel matters, amounting at times almost to control. Entry into faculty employment typically follows a lengthy and intellectually demanding period of training, and entry may only serve to commence a probationary period of several years duration, often with no assured outcome. The professor's role is very complex and the variation in performance quite wide. The work is highly specialized, and much of it, especially research, can only be judged by experts. Criteria of performance are vague and subject to dispute. Nevertheless, they tend to produce rankings of people within a field rather than broad groupings. In this setting, it is possible to estimate how well various groups have succeeded, but difficult to determine how much of observed differentials result from illegal discrimination by institutions and how much from varying tastes or preferences and the cumulative effect of such influences as socialization or discrimination in society at large.[9]

A considerable amount of work has been done on the position of women among higher education faculty.[10] This work strongly suggests some degree of sex discrimination. At the same time, it helps to illustrate why the contract compliance "women college faculty are only about half as likely as men faculty to hold a doctorate." [11]

Women are more highly concentrated in lower paying fields, more often indicate primary interest in teaching than in research, publish less and are employed disproportionately in two-year institutions. Women appear less mobile than men, apparently with a negative effect on their salaries. Even after allowance is made for differences between male and female faculty of this kind, however, significant discrepancies remain. The authors conclude that:

> If the same criteria, with the same weights, were applied in awarding rank to women as are applied to men . . . the average compensatory increase in rank would be from slightly below to somewhat above the assistant professor level, an average of one-fifth step. To award women the same

---

[9] ACADEMIC WOMEN ON THE MOVE (Rossi ed. 1973), is a convenient collection of material representative of the literature which undertakes to demonstrate the disadvantaged position of women in higher education.

[10] Astin & Bayer, *Sex Discrimination in Academe*, EDUCATIONAL RECORD, Spring, 1972, 101, 103.

[11] *Ibid.*

> salary as men of similar rank, background, achievements, and work settings . . . would require a compensatory average raise of more than $1,000 (1968–69 standards). This is the amount of salary discrimination which is not attributable to discrimination in rank. The amount of actual salary discrimination, attributable to discrimination in advancement, would substantially increase this figure.[12]

Further, some of the choices women make which help account for their lower pay and rank may not be choices at all but additional handicaps imposed by discrimination. Hiring discrimination may restrict their access to better paying institutions, and they may be given fewer opportunities in administration and research than they deserve.[13]

On the other hand, many women may make certain career choices which tend to limit their professional success but which accurately reflect their interests and their perception of their abilities. In any event, some part of the differential between men and women faculty seems not to be the result of failure to apply existing academic standards evenhandedly but rather a consequence of their application. Thus, high scholarly productivity is rewarded, and this tends to favor male faculty. However, the standards themselves may be attacked as unfairly discriminatory. The study just quoted from illustrates a common approach:

> Sex discrimination in academe does not begin when a woman accepts an appointment at a college or university. Rather, its roots reach far back to the cumulative effects of earlier sex differentiation processes and discrimination: early childhood socialization for "appropriate" sex roles, different treatment and expectations accorded to boys and girls by their parents, teachers, and peers throughout adolescence and early adulthood, differential opportunities for access and admission to undergraduate and graduate school, and so forth. As a result, when they enter teaching careers in colleges and universities, most women have interests, aspirations, expectations, educational backgrounds, and life experiences that differ from those of their male counterparts.
>
> Once on the faculty, women experience a second barrier to equality with men: the academic reward system is biased toward behaviors and activities exhibited more often by men than women. Indeed, the content of the academic reward system was established by men, so rewards go primarily to those women who accept and share men's criteria for academic rewards. Thus, administration, research and publications, which men engage in to a greater extent than women, receive higher rewards than teaching, which women devote more time to than men.
>
> This reward system is far from ideal and may even be dysfunctional to the educational objectives of American colleges and universities. Indeed, the system should be examined and restructured.[14]

This passage strikes two themes: the theme of the mute inglorious Milton and that of the ugly duckling. On one side, women are differentiated from men by socialization processes which stultify their innate capacity for intellectual roles; on the other, women are different from men in ways which enhance their capacity for service in higher education, once it is understood that the faculty role should properly be defined by a different set of characteristics than it is at present. Anyone who has worked on a university campus during the past several years must by now be familiar with both these themes, developed in the case of minority groups besides that of women, as well as with the claim that women who perform indistinguishably from men are less well rewarded nonetheless. Considerable evidence can be mustered in support of the last proposition. Neither of the first two is clearly wrong by any means. Together, they set a dilemma for policies aimed at producing "equal opportunity." There is reason to believe that existing standards have not been applied evenhandedly across sex lines in a significant number of cases. It may also be true that one or more groups protected by the Executive Order and legislation might still fare less well, on average and for some period of time at least, than whites and males under a regime of perfect consistency in the application of standards of faculty employment. It might also be true that a reformulation of standards would improve the position, *e.g.*, of women relative to men. Whether they should be reformulated, and how, squarely poses the issue of "merit" in faculty employment and raises, in turn, the question of how the mission, or missions, of higher education should be defined. OFCC's regulations are incapable of speaking to such questions intelligibly. Taken literally, however, the regulations preempt them. This dubious objective they achieve by imposing an impossible burden of demonstration on judgments of academic merit.

[13] *Id.* at 116.
[14] *Id.* at 101.

A contractor's obligation to take affirmative action follows from the discovery of underutilization in his workforce. The regulations define "underutilization" as "having fewer minorities or women in a particular job classification than would reasonably be expected by their availability."[15] A notion of availability implies possession of attributes important for successful job performance; a person cannot be said to be available for a position in any meaningful sense if he lacks capacity to perform it. In calculating underutilization, the contractor is to "consider . . . the general availability of minorities [women] having requisite skills in the immediate labor area" and "the availabilities of minorities [women] having requisite skills in an area in which the contractor can reasonably recruit," as well as "the availability of promotable and transferable minorities [female employees] within the contractor's organization."[16] What attributes, or skills, a job demands, however, is no less a judgment than the decision who, among a number of candidates, possesses them in greatest measure. Misevaluation of the requirements of a job and of the job-related characteristics of the persons considered both could be systematically biased against women or minority persons. Where this occurs, it will result in "adverse effect"—technically, "a differential rate of selection (for hire, promotion, etc.) which works to the disadvantage of a covered group."[17]

Misdefinition of the job may lead to underutilization also, but avoid adverse effect in this narrow sense. This will happen if members of minority groups and women who do have "requisite skills" are discouraged from applying (or are not considered) because they possess less often than whites or men the superflour attributes the contractor requires. The regulations take account of this possibility. Contractors are instructed that "special attention should be given to academic, experience and skill requirements to insure that the requirements in themselves do not constitute inadvertant discrimination."[18] Further, "where requirements screen out a disproportionate number of minorities or women such requirements should be professionally validated to job performance."[19] How one determines that a screening effect is disproportionate in impact is left unsaid. However, "Testing and Selection Order Guidance Memorandum No. 7a," recently issued by the Department of Labor, speaks to the general problem with unusual clarity:

12. Q. May a contractor utilize unvalidated selection requirements in deciding the availability of applicants with requisite skills when using Revised Order No. 4 criteria to establish goals?

A. No.[20]

Thus, who is available and, hence, whether there is underutilization (including adverse effect), together with the extent of underutilization, at least partly depends upon selection requirements. To insure detection of inaccurate measures of availability resulting from faulty selection requirements, those requirements must be validated. What is validation?

According to the Guidance Memorandum, "validation is the demonstration of the job relatedness of a selection procedure."[21] Under the Testing and Selection Order, there are three methods of showing the necessary relation between a position and a procedure used to select for it: criterion-related validity, content validity and construct validity.[21a] The regulations provide technical standards for establishing criterion validity and content validity (but not construct validity). Satisfaction of these standards would appear to depend upon the use of "tests," which are defined as follows:

---

[15] 41 C.F.R. § 60-2.11(a) (1973).

[16] *Id.*, [illegible] §§ 60-2.11(a)(1)(iv), (v), (vi), 60-2.11(a)(2)(iii), (iv), (vi). See also 41 C.F. [illegible] -2.11(a)(2)(v): "The availability of women seeking employment in the labor or recruitment area of the contractor."

[17] U.S. LAB. DEP'T, EMPLOYMENT STANDARDS ADMINISTRATION, OFCC, *Testing & Selection Order Guidance Memorandum No. 7a*, "Question & Answer 7" (1974).

[18] 41 C.F.R. § 60-2.24(b) (1973).

[19] *Ibid.*

[20] *Testing & Selection Order Guidance Memorandum No. 7a*, n. 17 *supra*, "Questions & Answers" 12.

[21] *Id.*, "Questions & Answers" 3.

[21a] These types of validity are defined as follows:

Criterion-related validity—A statistical demonstration of a relationship between a selection device and the job performance of a sample of workers.

Content-validity—A demonstration that the content of a selection device replicates job duties disclosed in the job analysis, or measures job knowledge, or skills shown to be critical and essential for immediate performance on the job.

Construct-validity—A demonstration that (a) a selection device is a measure of the construct (*e.g.*, honesty) and (b) the construct is related to actual job performance. *Ibid.*

> For the purpose of this order, the term "test" is defined as any paper-and-pencil or performance measure used as a basis for any employment decision. This order applies, for example, to ability tests which are designed to measure eligibility for hire, transfer, promotion, training, or retention. This definition includes but is not restricted to, measures of general intelligence, mental ability and learning ability; specific intellectual abilities; mechanical, clerical and other aptitudes; dexterity and coordination; knowledge and proficiency; occupational and other interests; and attitudes, personality or temperment. The term "test" also covers all other formal, scored, quantified or standardized techniques of assessing job suitability including, for example, personal history and background requirements which are specifically used as a basis for qualifying or disqualifying applicants or employees, specific educational or work history requirements, scored interviews, biographical information blanks, interviewers' rating scales and scored application forms.[22]

There may be selection techniques employed which are not "tests." The regulations deal with these in the following manner:

> Selection techniques other than tests, as defined in § 60-3.2, may be improperly used so as to have the effect of discriminating against minority groups or women. Such techniques include, but are not restricted to, unscored or casual interviews, unscored application forms and unscored personal history and background requirements not used uniformly as a basis for qualifying or disqualifying applicants. Where there are data suggesting employment discrimination, the contractor may be called upon to present evidence concerning the validity of his unscored procedures regardless of whether tests are also used, the evidence of validity being of the same types referred to in §§ 60-3.4 and 60-3.5. Data suggesting the possibility of discrimination exists, for example, when there are higher rates of rejection of minority candidates than of nonminority candidates for the same job or group of jobs or when there is underutilization of minority group personnel among present employees in certain types of jobs. . . .[23]

Since selection techniques can only be validated under the criteria given in the regulations for tests, which entail quantification, it is hard to see how any procedure other than a test can be validated. Rather, if validation is necessary, it would seem that a test must be substituted. Confirming this impression, the Guidance Memorandum says:

> Although unscored interviews or applications are not specified in the definition of a test, these procedures also come under the requirements of the Testing and Selection Order if they have the effect of discriminating against minorities or women (sec. 60-3.3). In these cases the contractor must either eliminate the adverse effect or quantify the procedures (i.e., make them into "tests") so that they can be validated. Therefore, all selection procedures are covered by the Testing and Selection Order.[24]

Of course, validation is demanded only when there exists "data suggesting employment discrimination." The Guidance Memorandum states, "If there is no finding of adverse effect, there is no validation requirement."[25] However, under the Testing and Selection Order, an implication of discrimination may be suggested not only by differential rejection rates according to race or sex (adverse effect) but also by the residual phenomenon of underutilization. Underutilization depends upon availability, and availability cannot be determined by unvalidated selection requirements.

How feasible is validation? At best, it seems, validation is difficult and expensive. The cost and difficulty is markedly increased by the requirement that "differential validity" be demonstrated—i.e., that a test be separately validated for groups in the relevant population separated by race and sex. The utility of establishing differential validity seems to be in controversy among psychologists.[26] Otherwise, the criteria of validity may well reflect something approaching a consensus of informed professional judgment on the conditions justifying high confidence in a test; they are taken over from a manual of the American Psychological Association. What is less clear is how widely those conditions may be feasibly achieved.[27] That they can be satisfied at all readily seems doubtful in the case of a great deal of professional employment.

[23] *Id.* at § 60-3.13.

[24] *Testing & Selection Order Guidance Memorandum No. 7a.*, n. 17 *supra*, "Questions & Answers" 1.

[25] *Id.* at 6.

[26] See Malbin, *Hiring Practices*, 5 NAT'L J. REPS. 1429, 1433 91973).

For example, take the requirement of a Ph.D. as a condition of employment in academic positions. This might well be considered a "test." Is a university to hire one hundred persons with the degree and one hundred without and then compare the performance of the two groups? Presumably, the definitive comparison would take place after several years—something like the presently established period for tenure review. How would one eliminate the possibility of "supervisory bias" in evaluations? Is it possible the Ph. D. is job related for university positions in the physical sciences but not in foreign languages? In one subfield but not elsewhere in the discipline? If so, is there a sufficiently numerous population appropriately distributed to test the possibility? To demonstrate differential validity?

One must ask what are the elements of the performance under evaluation. At the University of California, for example, faculty members are to be judged on the dimensions of teaching, scholarship, university service and public service. It is probably accurate to say these are classically regarded as analytically separable but, in practice, aspects of a single role. Thus, teaching feeds scholarship and scholarship teaching, while the professor's cultivation of his discipline equips him to contribute to the public interest at the intersections of scholarly inquiry and public debate or policy formation, and the need for reconciling the demands of professional autonomy with the imperatives of coordinating intricately overlapping and opposing activities and interests in a complex organization imposes a citizen's obligation of participation in governance.

No doubt, "scholarship" ranks well ahead of the other components of the faculty member's role. Even though scholarship is crucial to appointment and promotion, however, it receives different weight in relation to the remaining elements in different schools and departments and, additionally, falls subject to varying criteria in one unit as against another. It is not always clear in what exactly scholarly work consists, and the worth of most examples of this genre is proverbially vulnerable to challenge.

Why should not teaching rate higher in relation to scholarship? Many people believe it should. But, whatever its relative weight, how should it be judged? Teaching takes place in many settings and at a number of levels. These include lecture courses for large undergraduate classes, seminars for small groups of undergraduate or graduate students and supervision of a doctoral candidate's research. What is the value of one form of teaching as against another? It is not obvious how to rate a faculty member's performance in any of his teaching functions with sufficient precision to permit accurate and ready comparison with others. Nor is it always clear what point or points in time furnish appropriate moments for judgment.

University service and public service are rather cloudy notions. A conception of public service limited to something like that suggested above—intervention in some public forum on the basis of a scholar's expertise in his academic field—would strike many persons as much too restrictive. Some disciplines may lend themselves to public service more readily than others. A law professor, for example, may have more opportunities to contribute to the public interest, in some conventional understanding of the term, than a professor of Sanskrit. Their actual contributions, however, may stand in inverse relation to their opportunities. What significance attaches to considerations of this kind?

Many faculty members perform little or no service to the public or to the university. Some part of a faculty is made up of poor teachers, another fraction (including, unfortunately, a number of the same individuals), of very indifferent scholars. Many professors emphasize different aspects of the professor's role at different stages of their careers. It is understood that the role of the professor is an abstraction which will not accurately or fully describe the behavior of many professors. What is important is that the resources the university possesses in its faculty collectively supply the university's demands.

Of course, the requirement of a Ph.D degree, where it exists, makes up only a part of the over-all selection process. For certain institutions, possession of the degree is not, in itself, a qualifying. Selection of junior faculty is time-consuming and expensive. Many persons who hold the degree will not be considered at all, for to consider everyone would entail unacceptably heavy commitments of time, effort and expense. Academic employers may rely on various clues to eliminate many potential candidates, reducing the number given serious consideration to manageable proportions. Prominent among these are the institution (and department) granting the degree and endorsements of teachers respected in the field. Theoretically at least, such criteria are not purely arbitrary rationing devices. On the contrary, they function partly to focus attention at the institutions which attract the most able students, identify their academic qualities most accurately and provide the best training. Naturally statements of this kind imply a lengthy series of debatable assumptions. They easily qualify as "unvalidated selection requirements." Choice among the persons who do become serious competitors for a position involves instituitonal judgements which would seem clearly to be procedures "other than tests."

---

[27] *Id.* at 1432.

The objective is to predict which person will perform the role of professor so as to contribute most to the discharge of the faculty's collective obligation in the forseeably likely mix of people, resources and responsibilities. In one case, capacity for productive scholarship may almost eclipse performance as a teacher; in another instance, teaching ability may count far more heavily. At times, competence in particular subfields may be decisive. In every case, judgments will be intuitive, discretionary, quite possibly arbitrary; they also may be informed or expert. They can hardly be validated according to the regulations, but such judgments may be indispensable to the conduct of the enterprise.

The regulations do provide an alternative to validation. The Testing and Selection Order provides that, "if the contractor is unable or unwilling to perform such validation studies, he has the option of adjusting employment procedures so as to eliminate the conditions suggestive of employment discrimination." [28] Examples of such conditions, it will be recalled, are "adverse effect"—e.g., "a higher rate of rejection of minority candidates than of nonminority candidates for the same job or group of jobs and "underutilization." It would seem that aggressive recruiting among women and minority groups might generate adverse effect at the same time that it produced equal employment opportunity—enlarging the scale of the recruiting effort gives assurance that no qualified minority or woman candidate has been overlooked but may operate to bring forward many unqualified minority and women applicants. More significantly, to refer to "underutilization" is simply to reenter the same circle travelled above in which underutilization depends upon availability and availability to determinations require validated selection devices.

At this point, it seems the themes developed in the regulations have reached a moment of denouement at which they all stand frozen on the stage awaiting the descent of some deus ex machina, which, however, the management has unfortunately neglected to provide. No one can tell whether equal employment opportunity is present or absent without satisfactory standards of merit, but the criteria of merit are cast in such a way that no one can say what it is or show who has it and who does not. It is understandable that in this setting affirmative action programs would be more negotiated than designed against a set of intelligible criteria.

The regulations fail to address the characteristics of faculty employment. Rather, it is insisted that faculty personnel standards conform to the regulations. Carried to its logical conclusion, this would imply: substitution of objective standards of appointment and promotion to foreclose the possibility of biased judgments, subdivision of the professorial role to facilitate application of objective standards and enlarge the pool of eligible candidates, strengthening of centralized administration to enforce adherence to required procedures for selecting academic staff. These tendencies conflict with academic traditions of peer review, decentralized authority and diffused responsibility and integration of functions—notably, research and teaching. It is precisely these traditions which are widely regarded as central to the academic enterprise. It seems unlikely that such a metamorphosis of butterfly into caterpillar will be seriously attempted. What seems more likely is that administration of the contract compliance program, left to itself, will veer ineffectually between de facto quotas and incipient breakdown, caught between the need to produce results and the inherent defects of the program's design.

ADMINISTRATIVE CONFERENCE OF THE UNITED STATES,
Washington, D.C., December 10, 1974.

---

[28] 41 C.F.R. § 60–3.13 (1973).

PROPOSED RECOMMENDATION FOR AFFIRMATIVE ACTION FOR EQUAL OPPORTUNITY IN UNIVERSITY FACULTY EMPLOYMENT[1]

STATEMENT

Executive Order 11246, which concerns equal employment opportunity, applies to all contractors with the Federal government. Pursuant to this executive order, the Department of Labor has promulgated only a single set of equal employment opportunity regulations (prohibiting discrimination and requiring affirmative action) to govern all non-construction contractors, including institutions of higher education. These regulations apply to employment in all facilities of the contractors, not just those facilities involved in performance of government contracts. Compliance with regulations, for institutions of higher education, is the responsibility of the Department of Health, Education, and Welfare.

These regulations, especially in their affirmative action aspects, fail to take account of special circumstances involved in the employment of academic personnel, the non-quantifiability of standards for academic personnel (e.g., research, teaching, public service) and the concept of peer review in academic employment practices. The regulations, moreover, are ambiguous and contradictory in such a way as to be incapable of coherent application to institutions of higher education. Application of these non-construction regulations to the employment practices of institutions of higher education has proven unduly burdensome, disruptively inefficient and ineffective.

RECOMMENDATION

1. The Department of Labor, in consultation with the Department of Health, Education, and Welfare, should develop and promulgate equal employment opportunity regulations which are adapted specifically to academic employment in institutions of higher education. Such regulations should give appropriate recognition to: (a) the special aspects of such institutions (e.g., diverse functions, limited pool of qualified applicants, non-quantifiability of qualifications and performance standards). The regulations should also give appropriate recognition to the differences among types of institutions (e.g., community colleges versus research universities).

2. Recruitment and assignment of staff responsible for promulgating and administering regulations applicable to institutions of higher education should reflect a high priority of familiarity with such institutions. The Departments of Labor and Health, Education, and Welfare should arrange for greater consultation with representatives of such institutions and other interested groups.

3. The administration by the Department of Health, Education, and Welfare of equal employment opportunity regulations applicable to institutions of higher education should be centralized within Department headquarters, and regional office staffs should act on the basis of uniform and clearly defined policies.

4. The Department of Labor should develop a system of graduated sanctions for breach of the obligation contained in the equal employment opportunity clause of government contracts with institutions of higher learning.[2] No sanction, including that of declaration of non-responsibility as a contractor, should be imposed except after opportunity for a hearing at which the validity of the claim of breach and the appropriateness of the proposed sanction may be placed in issue.

5. The Department of Health, Education and Welfare should strengthen the coordination of its administration of regulations applicable to higher education with other agencies having overlapping responsibilities, in particular the Equal Employment Opportunity Commission and the Wage and Hour Administration of the Department of Labor.

6. The Department of Labor should review the contract compliance program applicable to other categories of non-construction contractors with a view to determining whether problems of the sort encountered in higher education exist. In conducting such a review, the Department should consider whether (1) variations in the susceptibility of the work to uniform methods of evaluating and predicting performance and (2) variations in policies of recruitment, advancement and other personnel practices suggest a need for regulations more closely adapted to the characteristics of specific occupations or industries.

---

[1] This recommendation has been approved by the Committee on Grant and Benefit Programs of the Administrative Conference of the United States. It has not been approved by the entire Conference. It is not to be quoted, attributed or published without reference to this disclaimer.

[2] In this connection the Department should consider Conference Recommendation 71–9: Enforcement of Standards in Federal Grant-in-Aid Programs, and Recommendation 72–6: Civil Money Penalties as a Sanction.

CIVIL RIGHTS OBLIGATIONS OF INSTITUTIONS OF POSTSECONDARY EDUCATION

FRIDAY, SEPTEMBER 20, 1974

House of Representatives,
Special Subcommittee on Education
of the Committee on Education and Labor,
Washington, D.C.

The subcommittee met at 9:30 a.m., pursuant to recess, in room 2261, Rayburn House Office Building, Hon. James G. O'Hara (chairman of the subcommittee) presiding.

Present: Representative O'Hara.

Staff members present: Jim Harrison, staff director; Webb Buell, counsel: Elnora Teets, clerk; Yvonne Franklin, minority counsel.

Mr. O'Hara. The subcommittee will come to order.

This morning the subcommittee continues to take testimony on the civil rights obligations of institutions of postsecondary education.

We are going to begin today by hearing from Dean Frederick M. Hart of the University of New Mexico Law School.

Dean Hart appears in his capacity as chairman of the law school admission council.

Most of the testimony we have heard to date deals with the employment practices of colleges and universities.

Dean Hart will be able to talk to us about admissions policies particularly as they relate to law schools, a subject on which the Supreme Court recently avoided a decision but which remains very much at the center of our attention in this area.

The varying policy positions that we have heard set forth before this subcommittee regarding employment policies would seem to me to be applicable in terms of admissions policies as well. The arguments over group rights, individual rights, affirmative action, equal opportunities and even over the old boy network seem to be as relevant to admission as to employment.

Dean Hart, we would appreciate it very much if you would proceed with your testimony in whatever manner seems to you to be most appropriate.

TESTIMONY OF DEAN FREDERICK M. HART, CHAIRMAN, LAW SCHOOL ADMISSION COUNCIL, UNIVERSITY OF NEW MEXICO

Mr. Hart. Thank you very much, Mr. Chairman.

I have a prepared statement which I furnished copies to you and to members of your subcommittee.

I would like to perhaps highlight that statement and comment upon it rather than reading it.

Mr. O'Hara. Without objection we will enter your prepared testimony in full at this point in the record and you may proceed.

[Mr. Hart's prepared statement follows:]

Prepared Statement of Frederick M. Hart, President, Law School Admission Council, Dean, University of New Mexico School of Law

HISTORY AND ORGANIZATION OF THE LAW SCHOOL ADMISSION TEST AND THE LAW SCHOOL ADMISSION COUNCIL

In the late 1940's, law school admissions offices began to feel pressures resulting from the return of many war veterans who qualified for GI benefits. These returning veterans exposed law schools to wholly new admission problems and, while many of these resulted from sheer pressure of numbers, other factors added to their complexity. Because applicants were appearing with such a wide variety of training and backgrounds, the difficulties in comparing them called for establishing at least one common denominator. A test designed to measure the academic capacities and skills related to law school work would meet the demand for a new index of measurement. With this realization, several law schools joined together in 1947 and started the Law School Admission Test program.

During the years of its development and use, the test has proved responsive to needs beyond those underlying its conception. It has helped to focus the attention of law schools on the need for keeping admissions practices under constant review and, in many instances, has aided in the development of selective admissions programs. It has long been used as a counseling tool both in law school and in college, and through it candidates have been encouraged to undertake general programs of prelegal study which law schools believe desirable. Law schools and, to some extent, colleges have found the test helpful in their efforts to appraise themselves and their students. Because it is common not only to candidates but also to law schools, it has facilitated a wide exchange of information about admissions among schools.

Although the Law School Admission Test is administered by Educational Testing Service (ETS), it is owned by the Law School Admission Council, a non profit educational corporation chartered under the laws of New York State. Law Schools may become members of the Council if they require that substantially all applicants for admission take the test and if they are approved by the American Bar Association. Presently, over 150 law schools are members. Canadian law schools are eligible for associate membership.

Both the authority and the responsibility for carrying on the testing program rests with the Council. In effect, the Council contracts with ETS for the administration of its programs. Meetings of the Council are held once each year and attendance is encouraged by using Council funds to pay the travel expenses of one representative from each member school. From time to time, the Council sponsors admissions seminars under arrangements which permit all law schools, whether members of the Council or not to be represented.

The power and responsibility of running the Council is vested, under New York Law, in the Board of Trustees. For the current year, the Board is composed of the following individuals: Frederick M. Hart, President, University of New Mexico; Norman Penney, Past President, Cornell Law School; William T. Keogh, Chairman, Finance Committee, Stanford University; L. Orin Slagle, Chairman, Legal Affairs Committee, Ohio State University; E. L. Roy Hunt, Chairman, Prelaw Committee, University of Florida; Frank K. Walwer, Chairman, Services Committee, Columbia University; Richard O. Kummert, Chairman, Test Development and Research Committee, University of Washington; Vaughn C. Ball, University of Southern California; Pearl Colvin, University of Colorado; Barbara A. Kulzer, Rutgers; Walter B. Raushenbush, University of Wisconsin; Harry B. Reese, Northwestern University; Russell A. Simpson, Harvard University; James A. Thomas, Yale Law School; Thomas O. White, University of Pittsburgh. The Board meets three times each year: in December, April and June.

There are five standing committees: Finance, Services, Test Development and Research, Legal Affairs and Prelaw, each of which meet three times a year. Recommendations from the committees are made to the Board for action. In all, there are over 50 law school faculty members and admissions officers actively involved in the management of the program.

In addition to the Law School Admission Test, the Council operates the Law School Data Assembly Services which provides analysis of transcripts and reporting of grade point averages, LSAT scores, and predicted first year averages to each of the schools. Through this service, much of the routine paperwork has been centralized and much prior duplication of effort by the law schools and applicants has been avoided.

During 1973–74, expenses of the Council totaled $4,217,700.

In addition to providing services to applicants and the law schools, the Council also has an extensive research program. A brief summary of the Council's research projects over the past 25 years is attached as Appendix A. This year the budget for research is over $200,000. Conferences and training sessions for law school admissions officers are frequently held and the Council publishes the Prelaw Handbook which has a circulation of about 800,000 copies.

THE LAW SCHOOL ADMISSIONS TEST

The LSAT was first administered in 1948 as a five-hour test with ten separately timed sections. In 1951 it was shortened to three and one-half hours after an extensive study of its validity showed that a decrease in testing time would not adversely affect validity. The item types remaining in 1951 and the time allocations for each item were as follows: Reading Comprehension (60 minutes), Principles and Cases (40 minutes), Data Interpretation (35 minutes), Contrary and Irrelevant Statements (15 minutes), and Figure Classification (15 minutes).

In the first four years of the program, 32 distinct item types were tested without success in the hope that the validity of the test could be improved. Five additional item types were tried on an experimental basis in 1954, and on the basis of these studies, several changes were introduced in 1956. A 20 minute test of Error Recognition was introduced, 30 minutes of Reading Recall replaced part of the Reading Comprehension, Principles and Cases was lengthened to 45 minutes, Contrary and Irrelevant Statements was discarded and the test as a whole was lengthened by 10 minutes.

In the mid-fifties, item type research turned in the direction of personality indicators, but the research was not sufficiently promising to indicate any change in the test. However, in 1962 two major changes were made when the test was lengthened substantially to accommodate new tests of Writing Ability and General Background. These tests were scored and reported separately. In 1970, the General Background test was discontinued as studies showed that it did not add to validity and was little used by the law schools as an indicator of applicant's general academic achievement.

Perhaps the most massive and extensive investigation ever undertaken by any testing program was conducted by the Council in 1970, and, as a result, the test is presently undergoing another revision. A new format will be introduced during the coming year which will eventually replace that presently being used. The new form will include the following item types: Logical Reasoning (30 minutes), Practical Judgment (40 minutes), Quantitative Comparisons (15 minutes), and Principles and Cases (40 minutes). The Writing Ability test will remain basically as it is now, but one part of it, Sentence Correction, will be included in scoring both the LSAT and the Writing Ability parts of the test.

Presently two studies are under way involving new item types. In 1972–73, two item types, Issues and Facts and Artificial Language, were administered experimentally. The validity of these will be investigated during the next few months as law school grades of those taking the items become available. During the coming year, two other item types, Analytical Reading and Usage, will be administered experimentally.

Investigation of a new item type is a laborious and expensive proposition. The initial concept may come from another testing program, a law faculty member, research conducted by the Council on the attributes of a good law student or from what is very basic research conducted by psychologists on the learning process. Items must be designed that appear to effectuate the concept, and they must be pretested to determine whether they have any hidden inaccuracies, mistakes or defects. The next step is to experimentally administer the items to a group of law school applicants, and finally, the grades of those applicants must be collected and a validity study conducted. The time span required may be from three to four years, and then at least another year is needed before the items can be made operational. The Council will continue to investigate new item types, but recent experience indicates that there is little hope for any immediate breakthrough that will substantially increase the predictive power of the test.

Another line of research that has been undertaken by the Council involves the methods by which the test can be scored. Since its commencement, the test has been scored on the number of correct responses made by the applicant. There is no "penalty" for wrong answers, and there is no credit given for selecting the "second best" answer. Formula scoring, empirically weighting procedures, a priori option weighting and confidence weighting have also been considered, but rejected in the face of evidence that they would not increase validity.

Recently, the Council has become interested in some new methods of testing that require students to answer different questions based upon how they respond to a previous item. Called "branch testing" or "flexilevel testing," the basic procedure is that the applicant is told to go to a certain question on the test based upon his answer to the question he is then attempting. One study indicates that there is no increase in validity to be gained by this approach, but research does suggest further lines of inquiry that the Council might take.

The Law School Admissions Test is presently scored on a scale of from 200 to 800. During the years that it has been administered, the mean score for all takers during that time is 520. With a standard error of measurement of 30, and a reliability of .90, it clearly falls within acceptable limits for internal consistency. The excellence of the test is assured by pretesting all new items and by routinely conducting an item analysis of each new form. To develop a new form of the test, i.e. a test of all new items of the same type presently being used, costs close to $50,000.

The Writing Ability Test is scored on a scale of 20 to 80, has a standard error of measurement of 4 and a reliability of .84. The mean score is 50.

PREDICTIVE POWER OF THE LSAT (VALIDITY)

The question is often asked whether the Law School Admission Test predicts success in law school, or whether the Council has ever tried to determine whether it predicts law school success. Over the past 25 years, about 400 studies have been conducted to determine whether and to what extent the LSAT predicts law school performance and the answer is that it clearly does. The studies that determine the predicive power of the test are generally referred to as "validity studies," and the word "validity" technically refers to the extent to which the test is effective in predicting law school grades. At the present time, the Council offers as a free service to the law schools a validity study each two years. The studies are generally done on a school by school basis because combining law schools presents statistical problems due to the different grading systems and the different standards of the numerous schools.

The measure of validity—of the predictive power of the test—is called a "correlation coefficient." In effect, the correlation coefficient expresses the relationship between two variables, the test and the grades or height and weight. The coefficient can range between −1.00 and +1.00. The larger the number, irrespective of sign, the stronger the relationship. Thus, if height and weight are correlated +.56, and strength and age correlated −.70, the latter relationship is stronger. A coefficient of .00 shows that there is no relationship between the two variables; a correlation of +1.00 or −1.00 shows that the relationship is perfect. The sign in front of the coefficient (plus or minus) indicates the direction of the relationship. Thus, in the examples given, height increases as weight increases, but strength decreases as age increases.

The last report of the effectiveness of the LSAT as a predictor, based upon studies conducted in 1972–73 for 99 separate law schools, showed that the correlation of the LSAT with first year law school grades (FYA) ranged from .12 to .70 with the median coefficient being .32. This does not mean that the LSAT predicted "correctly" in 12%, 70% and 32% of the cases respectively. The concept of a correlation coefficient is more complicated than that. One way of looking at it is represented by Table 1 which follows:

TABLE 1.—RELATION BETWEEN STANDING ON PREDICTOR AND STANDING ON CRITERION FOR VARIOUS VALUES OF THE CORRELATION COEFFICIENT

Correlation coefficient and standing on predictor	Percent of students standing in each criterion group		
	Bottom ⅓	Middle ⅓	Top ⅓
0.10—			
Top ⅓	16	60.0	24
Middle ⅓	20	60.0	20

Bottom ⅓	74.8	25.2	.002

Another manner in which a correlation coefficient can be expressed in operational terms is through the production of an expectancy chart based upon a particular coefficient. Such a chart gives the chances in 100 that an applicant will obtain a particular score. Table 2 is a typical expectancy table. It shows that for the law school under consideration a student who is predicted to earn a 2.0 average in that law school has: a 50% chance of earning at least a 2.0; a 71% chance of earning at least a 1.8, a 29% chance of earning at least a 2.2, etc.

TABLE 2.—CHANCES IN 100 THAT STUDENTS WITH VARIOUS PREDICTED 1ST-YR AVERAGE GRADES (BASED ON LLSAF SCORE AND UNDERGRADUATE AVERAGE) WILL ACTUALLY EARN VARIOUS 1ST-YR AVERAGE GRADES

	Chances in 100 that student will earn a 1st-year average of at least													
	1.4	1.8	1.4	2.0	2.2	2.4	2.6	2.8	3.0	3.2	3.4	3.4	3.8	4.0
Predicted average grade:														
3.4						99	98	95	86	71	50	29	14	3
3.2					99	98	95	84	71	50	29	14	3	2
3.0				99	98	95	86	71	50	29	14	3	2	1
2.8			99	98	95	84	71	50	29	14	3	2	1	
2.4		99	93	93	86	71	50	29	14	3	2	1		
2.4	99	98	95	86	71	50	29	14	3	2	1			
2.2	98	95	84	71	50	29	14	3	2	1				
2.0	95	86	71	50	29	14	3	2	1					
1.6	86	71	50	29	14	3	2	1						
1.6	71	50	29	14	3	2	1							
1.4	50	29	14	3	2	1								

Still a third method is to determine the extent to which the proportion of successful selectees relates to the coefficient. Table 3 is indicative of this approach, indicating, for example, that if a law school selects 20% of its applicants, and if its correlation coefficient is .40, it improves the proportion from 50% (random selection) to 73%.

TABLE 3.—PROPORTION OF SUCCESSFUL SELECTEES AS A FUNCTION OF VALIDITY AND SELECTIVITY [1]

[Percent selected]

Validity	Selectivity					
	5	10	20	30	40	50
0	0.50	0.50	0.50	0.50	0.50	0.50

1.00	1.00	1.00	1.00	1.00	1.00	1.00

[1] Adapted from Tiffin, 1965, p. 652.

The results of the validity studies undertaken by the Council establish that the test has substantial predictive power in selecting law school applicants. It is far from perfect, but the state of the art is such that perfection, or anything near perfection, should not be expected. The results also demonstrate that it would be unwise to admit students solely on the results they obtain on the test unless there is no other data available. That there is other information about applicants accessible to an admission officer, will be discussed after a brief excursion into the question of whether the test is culturally biased.

CULTURAL BIAS IN THE LAW SCHOOL ADMISSIONS TEST

The question of whether standardized tests such as the LSAT are culturally biased against certain subgroups of the applicant population has been raised for more than a decade. The Council first began a systematic investigation of this question over 10 years ago and has published several studies during the ensuing years. Appended to this statement is a paper completed within the past month by Dr. Robert L. Linn of the University of Illinois reviewing the work done by the Council in the context of more general studies of cultural bias undertaken by other organizations and individuals. (Appendix B)

It should be noted that research in this area is extremely difficult because of the small number of minority students in law schools. This results in the necessity of adopting research designs that are less than ideal. For example, the number of students used in the validity studies of minority students has been about 50, whereas the normal minimum number used in Council validity studies is 100. Also, it has been necessary to "cross years" or to "cross schools" in order to obtain even the small numbers that are used. This means that a challengeable assumption is being made that there is a proper adjustment in the law school grades of several schools so that they are all reduced to a common system, or that there is no change in the grading at a particular school from year to year. As a result of these compromises, studies conducted should be subjected to close scrutiny and conclusions drawn from them only with great caution.

Dr. Linn's paper points out that there has been considerable recent study aimed at defining what is meant by "cultural bias." Most psychometricians reject the proposition that cultural bias exists simply because the mean score of the subgroup, e.g., blacks, is lower than that of the entire population. Beyond that, there is substantial disagreement. Many accept Anastasi's definition: "In the psychometric sense, test bias refers to overprediction or underprediction of criterion measures. If a test consistently underpredicts criterion performance for a given group it shows unfair discrimination or 'bias' against that group." However, recent studies completed by a number of highly respected psychometricians have developed different definitions based upon differing approaches to the problem. Under some of these models, a greater percentage of minority students probably would be admitted.

Assuming that the LSAT is not culturally biased in the Anastasi sense of the term, this is because whatever cultural bias that exists in the test also exists in the first year of law school. Obviously some "bias" is desirable: we want the test and the first year of law school "bias" against those individuals who do not have the abilities to be competent lawyers. There is, however, little agreement as to what constitutes a "competent" lawyer and practically no studies have been done on this subject. It may be that some of the applicants who do not have great promise of being exceptional law students do have abilities to make them outstanding lawyers.

It is clear that the research undertaken by the Council and by others in the area of cultural bias is only a beginning. In a separate paper, Dr. Linn has suggested to the law schools the following lines of inquiry for the future: (1) Replication of the studies comparing minority and majority groups; (2) Investigation of the implications of differential prediction; (3) Comparison of prediction systems for men and women; (4) Investigation of the adequacy of first year grades as a criterion with emphasis on criterion bias, the comprehensiveness of the criterion measure, and the relationship between law school grades and later performance in the profession; (5) Continued research on alternative models of fairness and of new definitions of cultural bias; and (6) the applications of decision theoretic models. It is highly likely that the Council will follow at least some of his suggestions in its future research efforts.

PREDICTING SUCCESS OF APPLICANTS FROM THE LAW SCHOOL ADMISSION TEST UNDERGRADUATE GRADE POINT AVERAGE AND OTHER AVAILABLE DATA

The discussion so far has been confined to the Law School Admission Test which is but one of several pieces of "hard data" that operate to predict the success an applicant will have in law school. An applicant's undergraduate grade point average is used by all schools in attempting to predict his success. In fact, this is normally a better indicator of law school performance than is the LSAT and if a school had to choose to use only one predictor it would use the undergraduate grade point average (UGPA). An obvious deficiency in the use of UGPA is that there is no uniformity among undergraduate college grading systems. Frequency distribution of grades, standards, mean ability of the student body and many other factors which would go into the letter or numerical grade that a student would get differ widely from college to college. The Council has on several occasions tried to provide a system for "adjusting" undergraduate grade point averages so that they would all be on a common scale. Only marginal success has been achieved and that through the "LCM" which is simply the mean Law School Admission Test score that all applicants from a particular college receive over a specified period of time. The last piece of hard data generally used by law schools is the Writing Ability score from the LSAT which is reported separately from the general LSAT score. Thus, there are four items of "hard data" that can be used in obtaining a predicted first year average (PFYA) for applicants.

Schools differ in the manner in which they determine which predictor will be used in the formula that will determine the predicted first year average of their applicant. During 1973–74, 46 law schools used a combination of two predictors; 21 used three predictor formulas involving UGPA, LSAT and Writing Ability; 17 schools used UGPA, LSAT and the LCM; 25 schools used a combination of all four predictors; and one school used UGPA only.

In addition to determining which predictors it will use, a law school must also determine the weight to be given to each predictor. Most schools decide this after consideration of the latest validity study done for that particular school because the validity study has as one of its components the production of "regression equations" which determine the optimal weighted combination of the various predictors. Table 4 is a report to the University of New Mexico School of Law based upon a validity study done this past summer.

TABLE 4.—INTERCORRELATIONS, MEANS, AND STANDARD DEVIATIONS OF 1ST-YEAR AVERAGE GRADE IN LAW SCHOOL, UNDERGRADUATE AVERAGE, LSAT, WRITING ABILITY, AND OTHER PREDICTOR(S) BASED ON THE RECORDS OF THE 1973 ENTERING CLASS, UNIVERSITY OF NEW MEXICO SCHOOL OF LAW, STATISTICAL ADMITS

	83 students							
	FYA	LGPA	LSAT	WA	LCM	MMDG	Mean	S.D
1st-yr average	....	0.18	0.14	0.18	0.18	−0.34	2.87	0.38
Undergraduate average	0.18	....	−.33	.03	−.24	−.10	3.31	.41
Law school admission test	.14	−.33	....	.38	.41	−.07	624	55
Writing ability test	.18	.03	.38	....	.25	−.31	60.2	7.8
LSAT college mean	.18	−.24	.41	.25	....	−.15	527	41
1 equals NM 0 equals other	−.34	−.10	−.07	−.31	−.15	....	.36	.48

Two predictors (UGPA and LSAT):
Multiple correlation coefficient, 0.28 (0.23 shrunken).
Standard error of estimate, 0.37.
Regression equation predicted FYA equals 0.2309(UGPA) plus 0.0016 (LSAT) plus 1.1328.

Three predictors (UGPA, LSAT, and WA):
Multiple correlation coefficient, 0.29 (0.23 shrunken).
Standard error or estimate, 0.37.
Regression equation predicted FYA equals 0.2137(UGPA) plus 0.0012 (LSAT) plus 0.0050 (WA) plus 1.0831.

Four predictors (UGPA, LSAT, WA, and LCM):
Multiple correlation coefficient, 0.33 (0.25 shrunken).
Standard error of estimate, 0.37.
Regression equation predicted FYA equals 0.2363(UGPA) plus 0.0009 (LSAT) plus 0.0039 (WA) plus 0.0016(LCM) plus 0.4710.

Three predictors (UGPA, LSAT, and LCM):
Multiple correlation coefficient, 0.32 (0.27 shrunken).
Standard error of estimate, 0.37.
Regression equation predicted FYA equals 0.2307(UGPA) plus 0.0011 (LSAT) plus 0.0017(LCM) plus 0.4685.

Five predictors (UGPA, LSAT, WA, LCP, and MMDG):
Multiple correlation coefficient, 0.43 (0.36 shrunken).
Standard error of estimate, 0.35.
Regression equation predicted FYA equals 0.2090(UGPA) plus 0.0010 (LSAT) minus 0.0003 (WA) plus 0.0013(LCM) minus 0.2264(MMDG) plus 0.9957.

It should be emphasized that judgmental decisions must be made at this point of the admissions process even though the end result appears to be based upon mathematical certainty. A few comments about the choices that our law school had to make in this regard may be illustrative. Our first reaction to the data supplied by the validity study was to select the regression equation which provides the highest correlation coefficient. That would be the fifth one which makes use of five predictors. However, the computer program used to crank out predicted first year averages on students will not accommodate five predictors. Hence, that one could not be used. However, it is possible to go to a two regression equation system, separating the group of applicants into two subgroups based upon the fifth predictor used in the five predictor formula (the distinction here would be between UNM undergraduates and non UNM undergraduates because that was the basis of the fifth predictor). The five predictor equation also presents an anomaly that occurs not infrequently. It shows that an applicant's Writing Ability score ought to receive a negative weight. In other words, the higher his score on the Writing Ability portion of the LSAT, the lower his predicted first year average. Although this is a correct statistical result, it runs against the grain of most admissions offices to discount an applicant's predicted first year average because he or she did well in that portion of the test.

The two formulae that use LCM also present difficulties because studies have shown that use of LCM, even though it adds to the predictive power of the equation, may skew the admissions policy by making it practically impossible for someone to gain admission when he or she comes from a college with a low median law school admission test score even though that person as an individual has very high credentials. In these two formulae, that would probably not happen because the weight given to LCM is relatively low in a comparison to the other predictors. However, many admissions offices discard the use of LCM unless if substantially adds to the correlation coefficient and even then they may decide not to use it. That leaves the two predictor formula and the three predictor formula using the Writing Ability score. The choice we had basically came down to which of those two we would use.

Because the weighting of the LSAT, vis a vis, the undergraduate grade point average and the two predictor formula was more consistent with national norms and with our prior experience, we decided to use that. We did however make an adjustment for whether the student attended the University of New Mexico as an undergraduate or another school by going to a two formula system and varying the constant, depending upon whether he or she attended the University of New Mexico. Appendix C is a memorandum sent to the law school along with the validity studies attempting to explain some of the considerations that should be brought to bear upon the selection of a prediction equation. It shows the differences that can occur in the ranking of applicants with specific credentials, depending upon which of several formulae are selected.

Once a decision has been made about the regression equation that will be used by a school, this determines how applicants will be ranked by that law school. The equation is transmitted to Educational Testing Service and when a student registers for the Law School Data Assembly Service, sending his or her transcript and LSAT score, Educational Testing Service will combine the predictors in accord with the equation selected by the school and report to the school the predicted first year average of the applicant. Applicants can then be ranked according to that number. It would appear that some people believe that the only "fair" procedure that can be adopted by a law school is to start at the top of the ranking and go down the list until it has accepted sufficient people to fill its first year class. This approach clearly neglects the limited value of the information condensed into a predicted first year average and also the use that may be made of "soft data" about an applicant.

In most law schools there is an attempt by the admissions office and the admissions committee to improve prediction by a careful review of an applicant's entire file. Any catalog of the types of information that would be helpful in making a determination of whether the computer's calculation of an applicant's PFYA is accurate would be incomplete but a few illustrations can be given:

1. Where there has been a significant period of time between an applicant's graduation from college and his application to law school, a poor college record coupled with a very high LSAT may indicate that the student is likely to do better in law school than the PFYA assigned by the computer. The reason is that the applicant may have been immature or disinterested in academic work when he attended college, resulting in a poor UGPA. However, it is possible and perhaps likely that he has matured since graduation and that the LSAT is a more direct test of his "abilities" and may be a better predictor than the two combined.

2. If an applicant has a very high undergraduate grade point average and a low LSAT, inspection of his record may show that he went to a relatively weak college and that he majored in a subject with little academic content. Here again the judgment may be made that the LSAT is a better predictor than a combination of the two.

3. If the student has a very high UGPA but a low LSAT and he can substantiate that he was ill when he took the test or that he has a history of doing poorly on standardized tests, the UPGA may be a better predictor than a combination of the two.

4. If a student began his college career as a pre-med student then transferred into the social sciences, it may be that his early college work should be discounted because of his apparent lack of interest in the pre-med program.

SELECTION OF A LAW SCHOOL STUDENT BODY

In addition to attempting to predict the success of applicants, law schools apply policy considerations in determining which students will be admitted. This is a separate process and one in which an applicant's predicted performance is only one of many factors given consideration. For years some of the "national" law schools have sought broad geographical representation in the student body, thereby discriminating against applicants from the more populous states. State schools have favored citizens of their own state, thereby discriminating against applicants from the more populous states. State schools have favored citizens non-residents. Some schools have favored the children of alumni, of generous donors, or of politicians. A school may give preference to those who are likely to practice in rural areas of a state, or in the ghetto or the barrio. Any one of these policies has the effect of "discriminating" against those who have predicted first year averages higher than those accepted because of the policy followed.

Consider another specific situation. An applicant may be given extra consideration because he or she has a Ph.D. in Urban Planning. Studies have shown that an applicant's grades in graduate school do not operate to predict success in law school, nor does the fact that the applicant has received an advanced degree. A decision to accept the applicant over others who have a better PFYA is "discriminatory" against those with higher PFYS's who have been denied admission. The same is true when a person's employment with the government or in business gains him or her a place in the class.

Still, these kinds of decisions do make sense in view of the fact that there are significant limitations on the effectiveness of the PFYA. Most people are repelled at the thought that selections must be determined solely by a computer printout and there is a general recognition that the law schools have a very real responsibility to make rational judgmental decisions.

It appears to me that selection policies adopted by a law school should be tested against two broad standards: (1) selection should be such as to assure that the class is populated with individuals who themselves will enrich the educational experience of law school by their talents and viewpoints; and (2) selection should be designed to accept those who will best serve society upon graduation. Particularization of the elements of these standards is difficult but it would seem clear that diversification would qualify as a reasonable goal.

"QUALIFIED" APPLICANTS AND QUOTAS

Much of the rhetoric surrounding the admission of applicants from minority backgrounds centers about the words "qualified applicants" and "quotas." The way in which the words are used in the context of law school admissions indicates a lack of understanding of the admissions process and of the situation facing law schools at the present time.

Definition of the word "qualified" or "more qualified" can be approached in several ways. Who is qualified for admission to the University of New Mexico School of Law? One answer is that everyone is qualified who has a baccalaureate degree and who has taken the LSAT because those are the only stated qualifications stated in our catalog. Another way is to look at the past history of the school to see who was actually admitted. For example, we might seek to see whether anyone with an LSAT of under 500 is "qualified." Our records show the following percentages of the first year class was composed of students with LSAT's of less than 500 over the past ten years: 1964—37%; 1965—31%; 1966—27%; 1967—27%; 1968—27%; 1969—26%; 1970—18%; 1971—8%; 1972—13%; 1973—14%. It would appear from our prior admissions action that we could not say that a qualification for admission is an LSAT of over 500. Another way of looking at it is to say that everyone who has a better than 50—50 chance of making it through law school is "qualified" or everyone who has a 75% chance meets that definition. The important conclusion that any law school would come to is that it has more qualified applicants than it can possibly accept.

With regard to one applicant being "more qualified" than another, one can act blindly and say that a person with a 2.34 predicted first year average is "more qualified" than one with a 2.31 PFYA. Any such conclusion, however, is sheer madness and indicates nothing more than a slavish adherence to meaningless differences.

The word "quota" simply is not descriptive of anything that is going on in law school admissions today. Obviously we are not using quotas in the negative sense. Neither are we using them in a positive sense, for that use of the word carries the unmistakeable impression that we are committing a certain proportion of our entering class to minority students irrespective of all the other factors that go into an intelligent admissions decision. That, so far as I know, is not an accurate description of any law school's admission procedure. This is not a mere semantic quibble. Our admissions processes remain intelligent and both professionally and educationally responsible. A minority admissions decision, like all other admissions decisions, involves the thorough consideration of a range of factors and of an overall judgment about the applicant's educational and professional prospects.

RACE AS A DETERMINANT IN THE SELECTION OF APPLICANTS

Frequently asked is the question of whether the race or ethnic origin of an applicant is presently being used as an element in determining whether he or she will be admitted to law school. The answer is clearly yes, but both the question and the answer is far more complicated than it would appear to be. I should like to indicate to you a number of ways in which race may become a factor in an admissions decision. Some of these approaches may overlap and become confused with one another, but that is because the admissions process is not a series of clearly discrete steps but rather it is like any decision making process: complicated and somewhat disorderly.

1. The race of an applicant may influence a committee to believe that the regression equation has underpredicted his first year average because of some initial disadvantage suffered which has been overcome. Thus, if a black applicant has a poor college record during his first year of college but improves steadily from there on, and if the applicant appears to come from a high school where there was a weak academic program, the committee may disregard his early college work on the ground that he needed the first year of college to adjust to the more difficult work expected. Of course, the same consideration would be shown to a white applicant, but the fact of the matter is that it is much more likely that the black applicant was faced with this situation and the fact that he is black would trigger the inquiry into his background. A statutory provision that prohibited law schools from having "any criteria for admission which accord any preference or pose any disadvantage to any applicant on account of race, color, national origin, or sex" might be read to prohibit an admissions committee from singling out applications from minority candidates for the type of investigation needed to determine whether he or she was in fact disadvantaged. If this were proscribed, it would mean that the law schools would have to close their eyes to the fact that there is a reasonable likelihood that minority applicants often do come from elementary and high schools where the preparation for college is inadequate.

2. A similar, but somewhat distinct situation is presented where an application from a member of a minority is carefully scanned to determine whether his or her record may show something not tested by the LSAT: motivation. In some cases, it is a reasonable conclusion that the work done by a person from a disadvantaged background, although not as good as that done by others, evidences a far greater amount of work and devotion simply because the disadvantaged applicant had to work so much harder. In such cases, it is also reasonable that the candidate will continue to "overachieve" because of his or her motivation. Again, this principle applied equally to whites, blacks, Chicano, etc., but the fact that minority groups are more often disadvantaged should prompt the admissions officer to look into their records routinely to determine whether the situation exists.

3. Although summer pre-law programs such as CLEO are open to all disadvantaged persons, the proportion of minority group representatives is very high. This is understandable for it has been the minority group member who has the least opportunity in our society. Law schools often take into account the performance of an applicant during the summer program in the belief that a person's performance in a law school setting is the best indicator of success. Since many schools have only minority candidates from the summer programs, race would be an indirect factor in admission of those candidates.

4. In some cases admissions committees may have less confidence in the traditional predictors of success when the applicant is from a minority group. In effect, this is a judgment that the LSAT and UGPA are culturally biased. Although there is no solid evidence to support this, the evidence to the contrary is certainly not overwhelming, and one could make a reasonable decision that cultural bias does exist. Also, the models of cultural bias proposed by Cole, Thorndike, Darlington and others all require separate treatment of members of subgroups. It should be emphasized that these models are based upon purely psychometric considerations, not upon a policy decision to favor minority applicants.

5. In a more direct way, race may be considered for the purpose of obtaining a more diverse student body or a more diverse membership in the profession. Let me pose a rather typical situation. Assume that there is only one seat left to be filled in the entering class and there are a half dozen files that are still open. None of the remaining candidates will have particularly high predicted first year averages; if they did, they would have been accepted earlier. And the predicted

averages for all of them will be similar, perhaps ranging from 2.2 to 2.5 where the "clear admit" lower limit for the school is 2.7. The likelihood that anyone of the applicants would succeed in law school is high. Each will have something "unusual" in his or her file. One may have a Ph.D., another several years of experience in a government agency.

A third may be a person who was president of his or student body in undergraduate school, and the fourth may be blind. Assume that the fifth is Chicano. The committee would like to admit all of the applicants as each would add something to the class and probably to the profession. If the school has already admitted others with Ph.D.'s ,who are blind, student body presidents, and government officers, but has no Chicanos in the entering class, the decision may be to prefer the Chicano for this last remaining seat.

The reason is that the committee feels that the Chicano will add to the experiences of all students in the class because he will bring something different to the school. The same committee, following the same policy, would admit the Ph.D. instead if several Chicanos had already been admitted, but there were no students with advanced degrees in the class.

8. Race may also be used as a determinant under a theory suggested by *Griggs* v. *Duke Power Company*. The holding in the Griggs case is essentially narrow and would appear to be inapplicable to the law school admissions process as it now exists. However, the tone of *Griggs*, and the underlying rationale of that holding would appear to be applicable. In essence, the case seems to say that whenever a test or admissions process is operating in fact to prevent members of a minority group from gaining access to [illegible] job or a profession, the process is subject. As a result, it should be carefully scrutinized and modified to avoid a result that works against the opportunities of the minority groups.

Many of us who have worked in the admissions field believe that there must be something wrong with a process that produces so few lawyers who are members of minority races. In 1970, about 1% of all lawyers were black in spite of the fact that 12% of the population was black. In 1968, there were over a half million American Indians in this country, but you could count the number of lawyers who identified as Indians on the fingers of one hand. These facts cry out for action by the law schools and by the legal profession. If we in the law schools turned our back on this obvious problem, or if we simply made excuses or if we relied upon unsophisticated statistical studies to prove that we did not discriminate, we would be shrinking our responsibilities.

It is our job to test the fairness of our admissions system as it applies to minority applicants. One way of doing this, perhaps the only way, is to "take a chance" on some blacks, Chicanos and Indians whose predicted performance indicates that there is some risk that they will not succeed. At least we will be able to accumulate data if we follow this course, and we will have the possibility of determining what, if anything, makes it so difficult for a minority person to become a lawyer.

RESULTS OF LAW SCHOOL EFFORTS TO ATTRACT AND GRADUATE MEMBERS OF MINORITY GROUPS

It is difficult for those outside the law school world to realize or understand the effects of the increase in applications on minority admissions. Table 5, below, shows the dramatic increase in the number of individuals seeking admission to law school. Ten years ago, there were two seats for every three people taking the Law School Admission Test. Since some who took the test decided against going to law school, practically everyone who applied was accepted at some school. Last year, there was one seat for every three test takers, and it is a reasonable guess that only about a half of those who wanted to attend law school actually had the opportunity to enroll.

The effect that this increase in applicants has had on minority groups can be exemplified by a hypothetical that will mirror the actual situation at many law schools.

Suppose a law school with room for 200 students in its entering class receives 300 applications. Suppose further that about 10% of the applicants are from minority races and that on the basis of academic predictors these 30 applicants are evenly distributed among the pool. On the basis of usual admissions factors (excluding race) the school determines that ⅔ of the applicants are qualified, in the sense of having a better than even chance of succeeding at law study. Two hundred applicants then will be admitted, and the class will contain 20

TABLE 5.—LEGAL EDUCATION AND BAR ADMISSION STATISTICS, 1963-73

Year	Total	Enrollment, women	1st year	LSAT candidates	J.D. or LL. B. awarded	New admissions to the bar
1963	49, 552	1, 883	20, 776	30, 528	9, 638	10, 788
1964	54, 265	2, 183	22, 753	37, 598	10, 491	12, 023
1965	59, 744	2, 537	24, 167	39, 406	11, 507	13, 109
1966	62, 556	2, 678	24, 077	44, 905	13, 115	14, 644
1967	64, 406	2, 906	24, 267	47, 110	14, 738	16, 007
1968	62, 779	3, 704	23, 652	49, 756	16, 077	17, 764
1969	68, 386	4, 715	29, 128	59, 050	16, 733	19, 123
1970	82, 499	7, 031	34, 713	74, 092	17, 183	17, 922
1971	94, 468	8, 914	36, 171	107, 479	17, 006	20, 485
1972	101, 707	12, 173	35, 131	119, 694	22, 342	25, 086
1973	106, 102	16, 760	37, 018	121, 262	27, 756	....

Note: Enrollment is that in American Bar Association approved school as of Oct. 1. The LSAT candidate volume is given for the test year ending in the year stated. Thus, 121,262 administrations of the LSAT occurred in the test year July 1972 through April 1973. J.D. or LL. B. degrees are those awarded by approved schools for the academic year ending in the year stated. Thus, 27,756 degrees were awarded in the year beginning with the fall, 1972 term and ending with the summer, 1973 term. Total new admissions to the bar are for the 1972 calendar year and include those admitted by office study, diploma privilege, and examination and study at an unapproved law school; the great bulk of those admitted were graduated from approved schools.

minority students. This means that when minority applicants are evenly distributed in the applicant population, and when all qualified applicants are admitted, the same percentage of minority applicants will be in the class as were in the applicant population (10%). This we would regard as an ideal situation, and one in which the race of an applicant would not have any special relevance in the admissions decision.

Now, to make the hypothetical more realistic, suppose the following year the school receives 3000 applications instead of 300. Further, suppose that the number of minority applicants has not grown at the same rate, so that there are only 60 minority applicants (5%) evenly distributed in the total applicant population. On precisely the same standards used the prior year, the school determines that ⅔ of the applicants are qualified. But of course it does not have room for the 2000 qualified students (including the 40 minority qualified students).

How should the school select the 200 students it can hold? Assuming race is not used as a factor, the school will select one out of ten applicants, producing a class of 196 nonminority students and 4 minority students. Observe the consequence. Compared to the first year, the school has not changed its standards. While the number of minority applicants has doubled (from 30 to 60) and while the qualifications of the minority applicants has not changed, yet the class has a minority component of only 2% rather than 10%.

The hypothetical could be made even more realistic if one relaxed the assumption that minority applicants were evenly distributed in the applicant population. If the school ranks applicants in terms of academic predictors it may find that, for a variety of historical reasons, minority applicants are not evenly distributed. In the first year of our example, suppose that the 30 minority applicants clustered around the middle and lower end of the rankings so that only half of them were judged qualified as compared to the ⅔ of the applicants generally. That year, then 15 would be admitted, or about 7%. In the following year, when there are 3000 applicants (including 60 minority applicants, 30 of whom are qualified) the chances are excellent that no minority applicants would be accepted, since they may be unrepresented in that narrow band of applicants at the top of the applicant ranking for whom there is space in the entering class. The result is to exclude minority students who are fully qualified and who would have been admitted the prior year. Again, nothing has changed except the size of the total applicant population.

The law schools have attempted to avoid the undesirable effects of these number peculiarities by taking race into account in the admissions decision. In the face of growing applicant populations, it is the only way the schools can achieve the racial and ethnic diversity necessary for meeting our educational and professional goals.

In spite of substantial efforts by the law schools to attract minority candidates, only modest progress has been made. Table 6 which follows indicates the number of minority students in law school during the past four years. The gain is impressive, but in 1973 blacks still constituted only 4.5% of all law students; Chicanos, 1.2%, Indians, .2% and all minorities combined only 7%. Clearly, the oftenheard charge that the only people who get into law school are minorities simply is not true.

TABLE 6.—1973 SURVEY OF MINORITY GROUP STUDENTS IN LEGAL EDUCATION: MINORITY STUDENTS ENROLLED IN APPROVED LAW SCHOOLS

	1st year	2d year	3d year	4th year	Year not stated	Total
Black American:						
1973–74	1,943	1,443	1,207	101	123	4,817
1972–73	1,907	1,324	1,106	74	12	4,423
1971–72	1,716	1,147	761	55	65	3,744
1969–70	1,115	574	395	44		2,128
Chicano (Mexican-American):						
1973–74	539	386	271	63	0	1,259

APPENDIX A

MAJOR RESEARCH EFFORTS OF THE LAW SCHOOL ADMISSION COUNCIL (1948–73), FREDERICK M. HART, UNIVERSITY OF NEW MEXICO SCHOOL OF LAW

(This paper was prepared as a handout for a speech that Fred Hart gave at the 1973 AALS meetings. It is not quite up to date since some of the studies referred to as ongoing are now complete. However, for the purposes of this conference the paper should provide a good overview of the research that has been conducted for LSAC over the past 25 years.)

I. INTRODUCTION

Since the LSAT was first offered in 1948, the Law School Admission Council (LSAC) has continuously conducted research in the admissions field. During the past ten years, the pace and volume of this research has accelerated and has included attempts to improve the LSAT and its use, as well as research on undergraduate records and upon other possible predictors of academic success.

Full reports of the Council's research efforts are included in the various Annual Reports of the LSAC. The Council has also published and distributed to all law schools the Summary of LSAT Research which contains brief summaries of all research reports. The following is necessarily brief and there is the concomitant danger that comments will be misleading.

II. USE AND USEFULNESS OF TRADITIONAL PREDICTORS

A considerable amount of the research done by the Council is aimed at developing better means for using the standard predictors of the law school success: the Law School Admission Test (LSAT) and undergraduate grades (UGPA). Validity studies are done for each individual school on a regular basis if the school wishes them. These validity studies have two purposes: (1) to ascertain how well the predictors are in fact predicting; and (2) to develop a multiple regression equation for each school showing the optimum weights to be given the predictors in order to obtain the best prediction for applicants to the school.

From the validity studies provided each of the schools, it is possible to determine how well the LSAT and UGPA are predicting success generally. For the last round of validity studies, completed in the fall of 1972 for 99 schools, the correlation coefficients for the relationship between the best combination of two predictors (LSAT and UGPA) and first-year law school grades (FYA) ranged from approximately .18 to approximately .73. The median coefficient for all 99 schools was .43. Although this is far from perfect prediction, it does show that the predictors are highly useful and that the LSAT is at the ultimate level of refinement in the present state of the art.

The Council has also sponsored a number of studies looking at particular aspects of the use of the standard predictors. For example, in 1966 the Council funded the first of three "Discrepant Predictor Studies." Prior to these studies, some admissions officers intuitively believed that applicants showing wide discrepancies between their undergraduate grade point averages and LSAT scores ought to be treated differently from those who had LSAT and UGPA scores in the same general range. For example, a multiple regression equation might predict the same law school first-year average for an applicant having a 700 LSAT score and a bare C average and for another applicant with a 575 LSAT and B average. Admissions offices doubted whether these two applicants showed the same promise. The first two Discrepant Predictor Studies, one reported in the 1968 Annual Council Report and the other in the 1970 Annual Council Report, addressed themselves to this question. Both studies showed that applicants with discrepant predictors should be treated no differently than those with consistent predictors. Another study along the same lines questioned whether applicants who had significant differences between the morning LSAT score and the Writing Ability score ought to be treated differently than other applicants. The report on that study, published in the 1970 Annual Council Report, showed that they should not.

In June of 1969, the Council funded a study designed to investigate how predictors should be used: the "Discriminant Function Analysis in the Prediction of Law School Performance." This study was aimed at developing a different way in which to conduct validity studies. Traditionally, validity studies ascertain the applicants based upon the prediction equation is perfectly represented by first-perfect correlation coefficient of 1.00 would indicate that the rank ordering of extent to which the variables predict a rank ordering of the applicant. Thus, a perfect correlation coefficient of 1.00 would indicate that the rank ordering of applicants based upon the prediction equation is perfectly represented by first-year grades, i.e., the person who predicted highest actually was first in the class; the person who predicted second, was second in the class; etc. This is an extremely rigorous test of predictors and is not necessary for admissions purposes. The concept of the discriminant function analysis was to attempt to draw two lines and categorize applicants among three basic classifications: (1) those who would be in the top 10% or 20%; (2) those who would be in the bottom 10% or 20%; and (3) those who would be in the middle. For many schools, the critical point might be the line between those who are in the bottom and those who are in the middle.

It was thought that this approach might lead to different weightings of predictors and that the different weightings might better predict into which of the three groups a student would fall. The study, reported in the 1972 Annual Council Report, shows that this type of analysis is no better than the traditional validity study approach.

The Committee undertook two new studies in this general area in 1972. The first study investigated the desirability of deriving part scores from the tests. The hope was that validity might be improved if the global LSAT score for the morning test were divided into parts. The draft of the report on this study shows that this approach fails to improve predictors. The final report will appear in the 1974 Annual Council Report.

The other study undertaken in 1972 was designed to explore whether the relationship between predictors and law school grades is curvilinear or linear. Normally validity studies assume that the relationship between predictors and first-year averages is linear in form. In other words, that there is a regular and continual progression such that as the combination of predictors increases, there is a corresponding progression in the expected first-year performance of the applicant. It is possible, however, that the progression may not be regular. For example, it may be that at the higher end of the curve there is a tailing off so that once a particular index or predicted first-year average is reached, everyone over that predicted first-year average should be expected to do equally well even though there is a difference in the prediction index. The pilot study was completed in 1973 and is reported in the 1973 Annual Council Report. From the pilot study it appears that relationship is curvilinear and a second phase of the study is underway.

III. RESEARCH ON THE PREDICTION OF APPLICANT SUBGROUPS

More than ten years ago, the Law School Admission Test Council became aware of possible problems law schools might have in predicting the success of applicants from subgroups of the total population. This interest led to the formation of the Special Committee on Student Background Factors in 1963. When that committee was discontinued in 1970, responsibility for research in this area was transferred to the Test Development and Research Committee. Initially the concern was principally whether the traditional predictors, LSAT and UGPA, were as valid for black applicants as they were for white applicants. Gradually research of this type has been expanded to other subgroups, e.g., chicanos and women.

In an article, entitled "The Law School Admission Test and the Minority Student," Charles E. Consalus reviewed much of the early literature that has been written in this area. (Vol. 1970, University of Toledo L.R. 501). In that article he stated:

> Although there is no sound statistical or other scientific evidence which demonstrates that the LSAT is per se prejudicial to minority and disadvantaged students, most admissions offices and professors can cite example where the criticism appears to be true and those anecdotes often pass for proof. It is perhaps natural for critics to place primary blame for the current shortcomings of society and the profession on the test . . . furthermore, the fact that the test is the element common to virtually all applicants for admission makes it a natural subject for vilification.

As Mr. Consalus points out in his article, no area of research has received as high a priority as that dealing with subgroups during the past several years. Yet, the difficulties inherent in this type of research have made progress slow and may give the appearance that the Council may not have been as diligent as it should have been in determining whether the test is in fact culturally biased.

There have been two basic problems inherent in research studies focusing on subgroups: (1) the number of students in the subgroups is small; and (2) law school students and applicants are not neatly classifiable into subgroups. Compounding the problem of this type of research is the difficulty of gathering data from individuals and from law schools.

If there were sufficient data, it would be relatively easy to design a research project that would determine whether the test is culturally biased, at least in the way the words "cultural bias" have been used traditionally. Students in one class at one law school would be divided into subgroups and a validity study would be conducted on each subgroup. For example, a class would be divided into black students and white students and separate validity studies done on each of the two subgroups. The validity studies would yield a correlation coefficient and a regression equation. The coefficient would show how the test predicts and the regression equation would show how the predictors, e.g., LSAT and UGPA, should be weighted to produce the best result in predictions. In order to assure that the results were statistically significant, they would be cross-validated; *i.e.*, the regression equation obtained would be used on another sample to see whether it predicts that other sample the same as it did for the sample from which it was derived.

In such a project three factors would be investigated: (1) the standard error of estimate; (2) the slope of the regression equation; and (3) the intercepts.

The standard error estimate shows the extent to which it can be expected that persons have the same predicted first-year average will vary from that prediction. The slope of the regression equation shows the way in which two or more predictors should be weighed and the intercepts show whether or not the same combination of predictors will yield the same predicted first-year average. If all three of these are the same, the test is predicting equally for the two subgroups.

Ideally, here should be at least 100 students in each of the subgroups. Thus, it would be necessary to find a law school that has 100 black students and 100 white students in one entering class in order to conduct this type of a project in the traditional manner. So far, there has been no school that has met this criteria.

Even if one school met the criteria, it is unlikely that the subgroup would be a homogeneous group. Some would be women and some men. It is conceivable that the LSAT predicts differently for males than it does for females. Also, some might come from rural areas, others from the city, and others from suburbia. It is conceivable that these differences among those in the subgroups might have an effect upon the way in which the predictors operate.

The first research project involving subgroups was funded in 1964 by the Council and was entitled "The Interpretation of Law School Admission Test Scores for Culturally Deprived and Non-White Candidates." This is usually referred to as the "1966 Cultural Deprivation Study." An important objective was to focus this study on black applicants, but there were far too few black students then in law schools to produce a statistically sound subsample. A study of cultural deprivation, thought to be characteristic of black applicants, was therefore mounted. A somewhat arbitrary subgroup of those who were "culturally deprived" was obtained by having students in 16 law schools complete a questionnaire which produced measures in three general areas: socio-economic, educational, and composite. This yielded two subgroups, one of which was "culturally deprived" in relation to other students in the schools. The results of this study, published in the 1966 Annual Council Report, indicated that the LSAT and UGPA predicted the same for each of the groups. A separate study done by Professor Garrett Flickinger at the University of Kentucky threw some doubt on the results as did a replication of his initial research. (See Annual Council Report of 1968 and 1969.) A replication of the 1966 Cultural Deprivation Study was funded by the Council in 1968. The report on this study, published in the Annual Council Report, supported by the finding of the original LSAC study that there was no significant difference in prediction of the two groups.

In 1970 the Council approved funding of a study entitled "Predicting Law School Grades for Negro-American Law Students." This study, often referred to as the "Black/White Validity Study," presented significant problems both in accumulating sufficient numbers of students to conduct the study and in defining the subgroup. The subgroup was ultimately defined as "black students," irrespective of their background. Since no school had sufficient black students in one class to conduct a validity study, it was necessary to cross years. Five schools were found that had sufficient black students over three or four years to form an adequate subgroup. When the study was designed it was thought that it would be possible to combine students from different years at the same law school without loss of statistical significance.

The report on the pilot portion of this study is published in the 1973 Annual Council Report. It shows: (1) there is more difficulty in combining students from different years than was originally thought: (2) the standard error of estimate appears to be somewhat lower for black students than for white students; (3) the slope of the regression equation appears to be the same for the same two subgroups; and (4) there appears to be a statistically significant difference in the intercepts for black and white students. The main part of this study is presently underway. Preliminary findings tend to confirm the results of the pilot study, and a full report should be included in the 1974 Annual Council Report.

A similar study was commissioned by the Council in June of 1972 where women formed the subgroup. This study is presently in progress, but preliminary findings indicate that the same phenomenon, namely that the slopes and errors of estimate are the same, but that the intercepts are different. A final report of this study should be available in the 1974 Annual Council Report.

Another method of obtaining sufficient students to form a subgroup is to combine students from different law schools. This presents an additional problem as grades earned at the several law schools must be equated before any comparisons can be made. Several studies combining students from different schools were undertaken several years ago with discouraging results, but the development of new techniques led the Council to fund a series of new studies in June of 1972. The studies were designed to compare the following subgroups, subject to the availability of adequate numbers of cases: (1) males versus females; (2) black males versus white males; (3) black females versus white females; (4) black males versus black females; (5) white males versus while females; (6) black students versus white students versus chicano students versus Oriental-American students versus all other students; (7) students 22 and younger, 23 through 25, and over 25; (8) humanities majors versus social science majors versus natural science majors versus business and commercial major versus English majors versus majors in other areas of study. These studies are presently in progress.

The 1972 Annual Council Report contains two reports of another approach to questions involving subgroups. One report describes an item analysis of the Law School Admission Test comparing the answers of male and female candidates on each of the items in the test. The purpose of this project was to determine whether any of the items appeared to be biased against either men or women. Briefly stated, the study shows that the 1,150 white men used as a comparison group had a mean LSAT score of 539 and a mean Writing Ability score of 49.3 compared with 1,165 white women in the study who had a mean LSAT score of 549 and a mean Writing Ability score of 56.7. Women did better on 4 of the 6 sections in the LSAT: reading comprehension, reading recall, error recognition, and sentence correction. Men did better on one section, data interpretation, and the two groups scored about equally on the principles and cases section. The second report describes a similar item analysis comparing various subgroups, e.g., black applicants, white applicants, chicano applicants, etc. The study concluded that the results provided no basis for any suspicion that any items were biased against any group relative to other items of the same type.

Another study seeking to discover whether the LSAT is biased against black students, funded by the Council in 1969, is entitled "A Study of Speededness as a Source of Test Bias." Based upon information that black candidates apparently did not finish the test in as large a proportion as do white candidates, at those centers where the fee was waived, the study was designed to determine whether this resulted in unfairness to the black candidate. A report of the pilot study is found in the 1971 Annual Council Report. The results of the analysis showed: (1) the test is somewhat more speeded for candidates taking the test at the fee-free (predominantly black) centers than it is for regular candidates; (2) reducing the amount of speededness produces higher scores for both regular (22 scaled score points) and fee-free (33 scaled score points) center candidates; and (3) reducing speedidness is not more beneficial (in terms of increasing the number of items answered correctly) to fee-free than to regular center candidates.

Since this project appeared to have positive results, a more complete study of speededness was undertaken in June of 1971. The original study was limited by two factors: (1) the subgroup of black students all came from the fee-free centers and it is possible that these were not representative of other black students; and (2) the experimental form of the test was constructed somewhat artificially in order to present the issue of speededness. The new study avoided both of these problems by use of a broader sample and a different design.

The report of the extended speededness study, found in the 1973 Annual Council Report, concluded that the test was not appreciably speeded for any of the groups in the sense that most candidates had an opportunity to consider most of the items. Score differences between groups of the same sex and cultural background who took the test under different time constraints were consistently small.

In another project relating to subgroups, the Council approved a project in June of 1971 entitled "Proposal to Study Relationships Between Characteristics of Minority-Group Students who Entered Law School in 1968, 1969, and 1970." This study was designed to provide data descriptive of minority students. Previously, CLEO had funded a project using ETS personnel to establish a data bank on minority students in law schools. Their funding permitted them only to establish the bank without doing any studies of the relationships among the students. The Council, in cooperation with CLEO, funded this project to permit some preliminary analysis of the students in the data bank. The analysis has recently been completed and a final report of the study will appear in the 1974 Annual Council Report.

Another proposal involving subgroups studied the application and acceptance ratios for me nand women law school applicants. The impetus for the study was the fact that 13% of all LSAT candidates in 1970 were women but only 11% of first-year law students in the fall of 1971 were women. The study found that 16.25% of the LSAT candidates in 1971–72 were women and that law schools accepted 18.58% of those applicants who were women. Hence, the ratio of acceptances for women was higher than that for men.

Any report of the LSAC's research efforts in connection with subgroups of applicants, must be considered in the context of the increasing psychometric literation on test bias. Most of the early work accepted the view of T. A. Cleary that a test is biased:

> If the criterion score predicted from the common regression line is consistently too high or too low for members of the subgroups. (Clearly, Test bias: Prediction of grades of Negro and white students in integrated colleges. Journal of Educational Measurement, 1969, 5, 115–124.)

New approaches to the question by R. L. Thorndike, N. S. Cole, R. D. Darlington, R. L. Linn and R. R. Reilly indicate that the question is far more subtle than was initially believed and that there are several psychometric, as well as policy, dimensions to the question. (See, Linn, Fair Test Use in Selection, Review of Educational Research, 1972, Vol. 43, No. 2, 139, and Reilly, A Note on Minority Group Test Bias Studies, 1973, Vol. 80, No. 2, 130.)

IV. RESEARCH INVOLVING THE APPLICANT POPULATION AND DEMOGRAPHIC INFORMATION

In 1962, a study, partially supported by the Law School Council, was completed by the National Opinion Research Center. It resulted in a book entitled "Lawyers in the Making" by Seymour Warkov and Joseph Zelan which described the applicant population and students then in law school. Among other findings, it highlighted the need for more financial assistance to law students and the almost insignificant number of minority students attending law schools at that time.

In June of 1970, the Council approved a similar study in cooperation with medical schools and graduate schools. The study entailed two questionnaires, one of which was administered to college seniors during the spring of 1971. Approximately 62,000 questionnaires were distributed with somewhat less than half being returned. The total number of students who anticipated going to law school within the group amounted to over 900. The questionnaire, besides asking for demographic information, concentrated upon the student image of the various professions and graduate and professional schools, the manner in which the student decided to select one profession or school rather than another, and the respondent's experience with the admissions policies of the various schools. A second questionnaire was administered in the spring of 1972 to first-year law students. Many of the questions were similar to those asked in the first questionnaire and an attempt will be made to ascertain whether the students' expectations were fulfilled.

The results of the first survey were recently published as a monograph entitled "The Graduates" by Leonard L. Baird, who was the principal investigator. The most striking feature of the data on law school applicants is its similarity to that existent in 1960 when the last such study was completed. The results of the second survey are presently being compiled and are undergoing analysis.

V. RESEARCH ON PREDICTORS OTHER THAN THE LSAT AND UGPA

It is appropriate that the Law School Admission Test Council search for predictors other than the undergraduate grade point average and the traditional cognitive items that form part of the LSAT. Interest in other types of tests that might be administered to applicants led, in 1961, to the inclusion of the test of Writing Ability and a separate test of General Background as part of the LSAT. These tests were administered in the afternoon until the 1971–72 testing year at which time experience indicated that the General Background test did not add to prediction and was not used by these law schools in any significant way to determine the admissibility of students. Hence, the General Background test was eliminated. Because other studies showed that both the morning test and the Writing Ability test could be shortened, it was possible to administer both tests in the morning.

Another important study sponsored by the Council investigated noncognitive predictors. This was completed in 1965. Entitled "Personality Differences in

Student Survival in Law Schools," a full report was published in Volume 19 of the Journal of Legal Education at page 460. In this study, the Myers-Briggs Personality Indicator was administered to 896 students in 4 schools. This instrument, based upon the taxonomy of personality developed by Jung, divides students into 4 quasi-dichotomous dimensions of personality: (1) extraversion- introversion; (2) sensation-intuition; (3) thinking-feeling; and (4) judging-perceiving. The most important statistically significant finding of the study was that "thinking" types tended to drop out of the law school voluntarily more than did "feeling" types.

Another study of non-traditional predictors was funded by the Council through the Individual Research Grant Program of the Committee. Entitled "New York University Admissions Interview Study," this project investigated the validity of interviews as a predictor of academic success. A report of the study is found in the 1969 Annual Council Report. The study showed that interviews, although perhaps useful for other purposes, did not contribute to the prediction of an applicant's success in law school.

For several years, the LSAC through its Services Committee worked toward the development of a standard law school recommendation form that might be adopted by a number of law schools. In June of 1970, the Council approved a pilot study recommended by the Committee aimed at determining whether such a form might have predictive value. A final report of the study was published in the 1971 Annual Council Report. Several tentative conclusions regarding the Standard Recommendation Form were reached as a result of that study: (1) it appears that the scales as they are used are highly interdependent and that this interdependence or homogencity probably results from something akin to the "halo" effect usually associated with rating forms; (2) in the data study only one rating scale. Effectiveness of Oral Communication, appeared to offer any promise for the prediction of first-year averages; and (3) the data suggested that a rescaling of the scale categories was probably not in order.

In spite of the limited usefulness of recommendations indicated by the study, undergraduate faculty ratings, through a standard recommendation form or through some other device, the Council still had hopes that faculty ratings might produce a new independent predictor or, in the alternate, that they might be useable as a substitute for the UGPA in the event that undergraduate schools moved toward a pass/fail type of transcript. In June of 1971, a proposal for "Development of Rating Scales in the Law School Setting," was approved by the Council. Based upon a technique used in a study funded by the graduate business schools, the project envisioned the development of a number of scales that could be used to rate students. The use of specific observable instances of student behavior were used to anchor the scales. From the results of other studies, this appeared to decrease the "halo" effect. A number of law schools used these new forms for students entering in the fall of 1973. Unfortunately, preliminary analysis shows that the reliability of the rating is so low that it is very doubtful whether the study should be continued.

The Study of Moderator Variables also falls into this general classification of research. The pilot Moderator Variable was approved by the Council in June of 1966 and a report on that portion of the study was published in the 1967 Annual Council Report. The basic concept of moderator variables is that there are certain variables in applicant backgrounds that do not directly predict success in law school but which might divide the applicant population into subgroups, each of which would be more predictable if a specific regression equation were developed for the subgroup. For example, although age may not be a predictor of success in law school, it may be that if the applicant population were divided into those who were below 25 and those who were 25 or over, and if a different weighting of undergraduate grade point average and LSAT were used for each group, better prediction would be possible. The report on the pilot study indicated that there was promise of success along these lines.

A report on the Advanced Moderator Variable Study appears in the 1973 Annual Council Report. The study concluded that certain groups, such as those who are older, are more predictable than other groups, but that separate regression equations for the various subgroups did not increase prediction.

VI. RESEARCH INVOLVING UNDERGRADUATE GRADES OF APPLICANTS

The LSAT has always been but one of the two major predictors of law school success, the other being the applicant's undergraduate grade point average. All of the validity studies have shown that a combination of these two predictors yields the highest correlation coefficient and most validity studies have shown that if a school had to choose between the two, the undergraduate grade point average would give somewhat better prediction that would the LSAT alone.

Probably the most helpful device that could be afforded admissions offices is a manner in which grades received from various colleges could be adjusted to reflect the severity of grading at the several undergraduate schools. Most admissions offices believe, instinctively, that an A received at a particular college is not the equivalent of A's received at another college. In the early 1960's, the Law School Admission Test Council approved a proposal entitled "Adjusted Undergraduate Average Grade as Predictors of Law School Performance," wherein an attempt was made to adjust undergraduate averages. This study, completed in September of 1964, found little optimism regarding the effectiveness of grade adjustments for improving predictions under the conditions then existing. There is no published report of this study.

In the validity studies done for the individual schools in 1969, the LSAT mean for the student's undergraduate college taken from the LSAT Statistical Summary by Undergraduate Colleges Attended was included as a predictor in the belief that this would operate as an adjustment for college grades. This has been only moderately successful and has some significant disadvantages.

With the advent of the Law School Data Assembly Service (LSDAS), it is both easier to collect data on undergraduate college averages and the data is in better form. Also, new statistical procedures have been developed giving rise to the expectation that grade adjustment might be feasible at this time. For these reasons, the Council approved a new study in June of 1972. In spite of the new procedures and data, the results were again negative and no way, other than the LCM, was found for adjusting college grades.

In June of 1970, the Council approved a pilot project entitled "Transcript Study." The purpose of this study was to investigate whether selected information from an applicant undergraduate transcript might afford a better predictor than his cumulative grade point average. The final report is found in the 1971 Annual Council Report under the heading "Contributions of Selected Transcript Information to Prediction of Law School Performance." This pilot study indicated that certain parts of the applicant's transcript might indeed constitute a better predictor than the applicant's cumulative average. The study was conducted only at two law schools and was hardly conclusive. A replication and extension of the study is reported in the 1973 Annual Council Report. The basic conclusion is that an applicant's cumulative undergraduate grade point average is a better indicator of success than any other factor found in the applicant's undergraduate transcript.

VII. RESEARCH INVOLVING LAW SCHOOL GRADES

Law school grades constitute the criteria against which the effectiveness of predictors are measured. For several years it has been thought by the Committee that investigation of the criteria might well result in a better test design, and, several projects have looked at law school grades.

In 1966, a brief study was completed showing that grades in the several first-year courses at a law school tended to correlate very highly. That same year, the Criterion Study was funded by the Council. In the Criterion Study, 16 professors at 16 different law schools used the same examination question as part of their final examination in contracts. The examination was graded as a part of the student's grade and the professors selected 5 answers which were used to form a pool of 80 answers. The 80 answers were then graded by the 16 professors to determine whether there were different "schools of thought" about what constituted a correct answer to the question. The report of the study, published in the 1968 Annual Council Report, reached the following conclusions among others: (1) students tend to be consistent in thei rperformance on different essay questions used in law schools; (2) the level of agreement among professors and how they graded a single typical essay was high enough to expect that law school grades are potentially quite predictable; (3) although the basis for the professors' agreement was not clear, they did have a marked preference for longer answers and those written by brighter students; and (4) individuals who had no law training generally assigned the same grades to the papers as did the professors.

A second study using the same data was funded by the Council in the same year and was completed in 1970. The second study was an effort to determine why law school professors agreed in their grading and involved physically separating each paper by topic or issue. The conclusion reached by the second part of the study, which bears the title "The Nature and Correlates of Law School Essay Grades" and is reported in the 1970 Annual Council Report, were as follows: (1) the agreement among professors was generally better for issues judged to be of major importance; (2) the students appeared to get better over-all grades if their answer identified the major issues, limited their answers to them, presented their arguments in an orderly manner, pushed for a particular conclusion strongly while arguing both sides of the issue, used legal jargon and wrote neatly and did not make composition errors. In an attempt to follow up on the second study, a conference was held involving a number of the professors who worked in the original study along with other professors and ETS personnel. The conference attempted to ascertain how professors graded and to develop item types for the LSAT. Several potential item types were developed, one of which was experimentally tested during the 1970–71 test year.

In June of 1971, the Council authorized study to look at the criterion. Entitled "Factor Analysis of Law School Grades," the primary purpose of this study was to ascertain whether different courses in law schools tend to require different abilities. A similar study done in the graduate business school indicated that there was only one "factor" or cluster of abilities required for all courses, and the final report of the LSAC study reached the same result. The report can be found in the 1973 Annual Council Report.

VIII. DEVELOPMENT OF NEW ITEM TYPES

During the early days of the Law School Admission Council, primary emphasis was on the development of the LSAT. A significant number of items were tested to determine which were the most useful as predictors, and the test quickly assumed the basic form that it has today. The last significant change in composition occurred in 1971 when the Figure Classification items and Organization of Ideas items were discontinued and the Editing Portion of the Writing Ability test was reduced from 30 minutes to 20 minutes. At the same time, the General Background portion of the test was discontinued. These changes were made as a result of the Factor Analysis of the LSAT which indicated that changing the test in this manner would not reduce either reliability or validity.

Although there have been relatively few changes in the test over its history, there have been a number of research projects designed to produce new types of items. For example, in September of 1966, the Council approved a project investigating a series of experimental tests of intellectual ability. A final report on that study, found in the 1968 Annual Council Report under the title "An Examination of the Validity of Nine Experimental Tests for Predicting Success in Law Schools," indicated that one of the types tested had some potential for increasing validity. Unfortunately, there were significant problems in adapting that type of an item to a machine gradeable format and the item has never been made operational.

Another study, approved by the Council in 1968, explored the possibility of developing a branching test: that is, a test in which the presentation of test items is made contingent upon the previous responses of the examinee. A report of the study is found in the 1969 Annual Council Report. Although the results were negative this may have been because the design was such that only a significant increase in validity would give a positive result.

During the 1969–70 academic year, the Committee reviewed several new item types which seemed promising and in June of 1970, the Council authorized the pretesting of several experimental item types. These are described in the 1971 Annual Council Report and include: (1) a common word item type; (2) an extended reading recall item type; (3) a quanitative comparison item type; (4) a logical reasoning item type; (5) a practical judgment item type; and (6) a new approach to the principles and cases item type. Extensive validity studies showed that several of the experimental items increased prediction significantly, and these will become operational within the next year.

IX. THE ULTIMATE CRITERION

During the past two or three years there has been increased interest in trying to predict how an applicant will succeed in the legal profession, rather than simply to predict how he or she will succeed in law school. Perhaps the most significant difficulty in undertaking research involving the "ultimate" criterion is the problem of defining success in the profession. As a first step in this direction, the LSAC has joined with the AALS, the American Bar Foundation and the National Conference of Bar Examiners to conduct a study of the relationships among law school admission factors, law school grades and bar examination results. The Advisory Committee to this study, composed of representatives of the sponsoring organizations, has undertaken the responsibility of going beyond the narrow confines of the study and of addressing the problem of defining and measuring the quality of professional performance.

APPENDIX B

TEST BIAS AND THE PREDICTION OF GRADES IN LAW SCHOOL

(By Robert L. Linn,* University of Illinois)

During the past several years the number of students seeking admission to law schools has grown much more rapidly than the capacity of the nation's law schools. A rough indication of the increased demand can be gleaned by comparing the number of persons taking the Law School Admission Test (LSAT) and the number of first-year law students over the course of several years.[1] For example, 50,793 persons took the LSAT in 1967–68. In 1971–72 the corresponding number was 121,871, an increase of 140% in four years. Over the same period of time, however, the number of first-year law students increased by only 47%; from 25,746 in 1967–68 to 37,724 in 1971–72.[2]

The tremendous increase in applicants to law school has put considerable pressure on the admissions procedures and has tended to make the already fairly selective admissions requirements increasingly selective. As a consequence of this greater selectivity, the average LSAT score and average undergraduate grade-point average (UGPA) of first-year law students has increased substantially at many law schools.

At the same time that many law schools were forced to deny admission to increasing numbers of applicants because of the mushrooming demand for legal education, many of these same schools were making efforts to expand the enrollment of members of some minority groups (e.g., Blacks, Chicanos, Puerto Ricans). These efforts to increase the number of minority group students in law school were stimulated by many considerations, including the disproportionately small number of lawyers from minority groups. There is no question that members of the target minority groups have been grossly underrepresented among the ranks of lawyers. For example, in 1970, there were 355,242 lawyers in the United States, yet only 3,845 were black, or scarcely more than 1%.[3]

The efforts of law schools to recruit more minority group students have met with at least some measure of success. There were almost as many black students enrolled in law schools during the 1971–72 academic year (3,732) as there were black lawyers in 1970 (3,845).[4] The desire to enroll more minority students, however, sometimes appears to conflict with the need to be more selective. Indeed, the conflict is quite marked if only the common numerical indices provided by the LSAT and the UGPA are used as major selection tools unless provision is made for special evaluation of these indices for members of minority groups.

Even if minority and majority groups had equivalent distributions of scores on the LSAT and the UGPA, the goal of increasing the proportion of law students from minority groups probably would be in conflict with the goals of requiring high values on these indices and of requiring the same scores regardless of group membership. This is so because the average scores of these numerical indicators are lower for some minority groups than for the majority group and because the number of minority group applicants is a small fraction of the total number of applicants.[5] Thus, if these numerical indicators are given a heavy weight in the admission decision and group membership is not taken into account, the goal of increasing the number of minority group law students will be thwarted.

---

*Thanks to Robert F. Boldt, Alfred B. Carlson, Nancy S. Cole, Franklin R. Evans, Frederic M. Hart, J. Thomas Hastings, Melvin R. Novick, Barbara Pitcher, Richard R. Reilly, William B. Schrader, and Robert L. Thorndike for helpful comments on an earlier draft of this manuscript.

[1] The number of students taking the LSAT and number of first-year law students are not strictly comparable because not all schools require the LSAT. Students may take the LSAT more than once, and not all test takers would attend law school even if admitted. Nonetheless, the numbers give a rough indication of the increased demand. The increase has started to level off, but the demand continues to far exceed the available spaces.

[2] These figures were supplied by Educational Testing Service, Princeton, New Jersey.

[3] *1972–73 Prelaw Handbook: Official Law School Guide*, published by The American Association of Law Schools and The Law School Admission Council, pp. 7 and 9.

[4] *Ibid.*

[5] Swineford, F. "Law School Admission Test: Comparisons of Black Candidates and Chicano Candidates with White Candidates." Statistical Report SR–72–19, Princeton, New Jersey: Educational Testing Service, 1972.

One response to the above conflict is to reject the numerical indicators for purposes of considering minority group applicants. Although it may be conceded that the LSAT and UGPA have predictive value for the majority group, it is frequently argued that these indicators (particularly the LSAT) are not useful for members of minority groups, or that they they will tend to underestimate the actual performance of minority persons. In the case of the test itself, it is argued that it is a reflection of the culture of the white majority and is inappropriate for members of other cultural groups. In short, the test is said to be biased. Although seldom done with equal force, a similar charge could be made against the UGPA.

The charge of test bias is not unique to the LSAT. It has been leveled against standardized aptitude tests generally and has resulted in a fairly substantial literature about the topic of test bias in the last 10 years. This literature spans a wide range including theoretical discussions of the meaning of test bias, empirical investigations, logical and psycholinguistic analysis of test content, and much heated rhetoric. The literature about test bias and that describing empirical investigations involving other tests provides a background for examining the available evidence about measures commonly used in making law school admissions decisions.

The following sections of this paper focus on the use of the LSAT and UGPA for members of minority groups. Questions such as the following are addressed: Do these numerical indices have predictive value for members of minority groups? Is the LSAT biased? What are the consequences of using a single prediction equation for all individuals regardless of group membership? In addressing these questions, heavy reliance will be placed on the empirical results of a few recent studies supported by the Law School Admission Council. The results of these studies, however, will be discussed within the context of related research on admissions tests used at the undergraduate level and in the context of current thinking on the issue of what constitutes test bias or, conversely, what is fair test use? Some broader issues will be touched, but no attempt will be made to deal adequately with larger questions such as: What importance should be given the predicted grades in admissions decisions? Do first-year grades provide a fair criterion for minority group persons? If law school grades have little relevance to future performance as a lawyer or are biased against members of particular groups, then none of the models that are discussed below are adequate for evaluating potential bias in the LSAT or other predictor variables. Issues of criterion relevance and fairness are of primary importance, and in no way are the narrower considerations that are discussed herein a substitute. At best, the following material may provide information that is relevant to consideration of the broader issues and the formulation of policy.

CONCEPTS OF TEST BIAS

Group Differences in Average Scores

In order to decide whether the LSAT (or any instruments and procedures that are used to predict grades in law school) is biased, it is necessary to have some agreement on what constitutes bias. Unfortunately, this seemingly simple first step is a major stumbling block. It appears that there are many different answers to the simple question, what is test bias? Thus, it may be useful to consider this question before attempting to review the empirical investigations of the LSAT and other predictors of first-year law school grades.

The most straightforward definition of test bias is that a test is biased if the average test score of one population of individuals is greater than that of another. Such a definition rests on the *a priori* assumption that the populations do not differ on the characteristic that the test purports to measure, and hence any differences in average test scores must be due to imperfections or bias in the measuring instrument. According to this definition, any existing aptitude test could undoubtedly be shown to be biased against some groups of people. Even if the test was modified so that some got the same average, other groups still might differ.

To most people who are professionally involved with testing, differences in average test scores do not necessarily imply that the test is biased. It may be that groups differ on the characteristic being measured and that the test merely reflects the difference. Accepting the possibility that the groups may differ on the characteristic being measured rather than only on the average test scores is repugnant to many people, in part, because test scores frequently are loaded with surplus meaning. Too often, test scores are used to infer differences in "inherent ability" and, even more broadly, differences in "personal worth" of individuals or groups of people.

No claim should be made that the LSAT measures an individual's "inherent ability" or "mental capacity." A reasonable and more modest claim is that the LSAT is a usefully valid indicator of probable performance in law school (primarily as measured by first-year grades). It is admittedly influenced by an individual's background and educational experience. Thus, one would expect different average LSAT scores for groups of persons who had quite different backgrounds and experience. Indeed, it would be surprising if, in this society where members of minority groups have been denied opportunities over an accumulation of many years, these groups did not show a lower mean score on the LSAT than members of the majority group.

It also should be recognized that the LSAT is not given to a cross section of any group. Persons electing to take the LSAT have already survived several stages of selection [illegible] means of external barriers and self-selection. Hence, group differences in LSAT scores may be partially due to differential preselection in different groups.

Equality of Prediction Systems

Given the premise that differences in average test scores are not sufficient grounds for concluding that a test is biased, then some other basis for determining bias is needed. One approach to the question would be through a content analysis of the test items. By this approach it might be shown that the item content is more familiar to the majority group than to a minority group. Whether this should be considered as evidence of bias depends on the purpose of the test. For an achievement test that was intended to be equally appropriate to the experiences of both groups, a content analysis would be extremely relevant.[6]

For a test that is designed primarily to predict a particular criterion, the results of a content analysis are, however, less central because it may be that the content of the criterion is itself more familiar to members of a particular group. For the test to perform well as a predictor of such a criterion, it may be necessary to use content that is less familiar to one group than to another.

The primary concern for a test such as the LSAT is how good a job it does at predicting later performance. An LSAT score is of little interest in its own right but derives its value from the relationship of these scores to grades in law school. Thus, it is natural that the issue of test bias should be evaluated in terms of the predictive value of the test for members of different groups.[7]

Over- and Under-Prediction

The definition of test bias that has been most widely accepted among test specialists is quite consistent with the above notion. According to Anastasi, "In the psychometric sense, test bias refers to overprediction or underprediction of criterion measures. If a test consistently underpredicts criterion performance for a given group it shows unfair discrimination of 'bias' against that group."[8] This definition, or some minor variant of it, has been the most widely accepted definition of bias within a predictive context. It is basic in the conceptualization of test bias found in the work of Bartlett and O'Leary, Cleary, Pothoff, and Temp, as well as many others.[9] It is the view of test bias that Bray and Moses express in the *1972 Annual Review of Psychology*—"The key question turned out to be whether test scores meant the same thing in terms of their predictions of job performance for those who were disadvantaged and those who were not."[10] It also can be found in Humphreys' chapter of the *Annual Review of Psychology* 20 years earlier.[11]

---

[6] Substantial increases in the relative performance of black students have been found on some achievement tests when the number of items involving cultural contributions of blacks is increased: Medley, M. D. and Quirk, T. J. "Race and subject matter influences on performance on general education items of the National Teacher Examinations." *Journal of Educational Measurement*, in press.

[7] Studies of differential effects of test speededness and of possible interactions between items and group membership have been conducted for the LSAT. These studies are important for purposes evaluating testing practices and possibly identifying potential sources of group differences, but they are not directly relevant to the issue of bias within a predictive framework. Hence, these studies are not reviewed here. The interested reader should see: Evans, F. R. and Reilly, R. R. "A study of speededness as a source of test bias." *Journal of Educational Measurement*, 1972, *9*, 123–131; Evans, F. R. and Reilly, R. R. "Law School Admission Test: Comparisons of black candidates and Chicano candidates with white candidates." Statistical Report SR–72–19, Princeton, New Jersey: Educational Testing Service, March, 1972.

[8] Anastasi, A. *Psychological testing.* (3rd ed.) New York: Macmillan, 1968, p. 559.

Predictive validity studies have typically used a linear model to investigate the relationship between the predictors and the criterion.[12] Given a predictor (e.g., the LSAT, UGPA, or a combination of these) and a criterion variable (e.g., first-year grades in law school), and assuming a linear model for two groups that are to be compared, the prediction systems for two subgroups can differ in three important ways: (1) The variability around the repression lines can be unequal for the two groups; (2) the slope of the regression lines can be different; (3) and/or the intercepts of the regression lines can differ. Two groups can have prediction systems that are identical in all three of these characteristics yet have different validity coefficients (i.e., the correlations between the predictor and the criterion can be different for the two groups). This point has sometimes been overlooked, and differential validities have been discussed as if they implied test bias. A simple comparison of validity coefficients is not sufficient for evaluating test bias. Different validity coefficients can occur for two groups even though the groups have identical prediction systems because one group has a greater variability in test and criterion scores.

Standard Errors of Estimate

If two groups have equal slopes and intercepts but differ in variability around the regression line (i.e., have different standard errors of estimate), the same prediction equation is applicable for both groups, but the accuracy of prediction is better for one group than the other. In this situation, it might not be considered unfair to use the regression equation for one group to make predictions for members of the other group. There would be no systematic errors since the regression equations are identical. For individual members of the group with the larger standard error, however, there would be a greater likelihood of large errors.

The effect of different standard errors of estimate can be seen in the hypothetical results shown in Table 1. The chances in 100 that a student will receive a first-year grade average of at least 2.0, 2.5, 3.0, or 3.5 are shown for four levels of LSAT scores within two groups that differ in standard error of estimate. The figures in Table 1 are based on hypothetical results where it is assumed that the regression of grades on LSAT is the same for both groups and that the two variables have a bivariate normal distribution[13] within each group.

Equal Risk

Although the results in Table 1 are hypothetical, they are not out of line with what might be approximated in practice. In any event, the results in Table 1 can be used to illustrate some of the implications of different standard errors of estimate. Consider, for example, an individual with an LSAT score of 450. The predicted first-year average for this person is 2.5 regardless of whether the person is a member of Group A or Group B. Suppose, however, that the admission policy was to admit anyone who was predicted to have one chance in four or better of making at least a 3.0 average. Given such an admission policy, a person from Group B with an LSAT score of 450 would be accepted due to the larger standard error of estimate, whereas a person from Group A with an LSAT of 450 would not be accepted. To treat a score of 450 the same, regardless of group, would be fair in the sense that the probability of having a grade of at least 3.0 depends on the group to which the individual belongs.

Washington, D.C., American Council on Education, 1966, 458–464.

[12] Recent studies of nonlinear models for predicting grades in law school suggest that little, if anything, would be gained by using a nonlinear prediction system. See Schrader, W. B. and Pitcher, B. "Extension of the study of the possibility of curvilinearity in law school validity study data." Report to the Law School Admission Council, May, 1974.

[13] A bivariate normal distribution is a theoretical distribution that is mathematically convenient and provides a useful approximation to many observed bivariate frequency distributions. For a brief explanation, see, for example, Glass, G. V. and Stanley, J. C. *Statistical methods in education and psychology*. Englewood Cliffs, New Jersey: Prentice-Hall, 1970, pp. 105–107.

TABLE 1.—HYPOTHETICAL ILLUSTRATION OF THE EFFECT OF DIFFERENT STANDARD ERRORS OF ESTIMATE ON PROBABILITY OF VARIOUS LEVELS OF PERFORMANCE [1]

Group	Within-group standard error of estimate	LSAT score	Chances in 100 that student will receive a 1st-year average of at least—			
			2.0	2.5	3.0	3.5
A	0.5	750	99.9	98.0	84.0	50.0
B	.8	750	97.0	89.0	73.0	50.0
A	.5	600	97.0	84.0	40.0	16.0
B	.8	600	89.0	73.0	[illegible]	27.0
A	.5	450	84.0	50.0	16.0	2.0
B	.8	450	73.0	50.0	27.0	11.0
A	.5	300	50.0	16.0	2.0	.1
B	.8	300	50.0	27.0	11.0	3.0

[1] Table entries are based on the assumption that actual and predicted grades have a bivariate normal distribution within each group. It is further assumed that the regression of 1st-year average on LSAT is the same in both groups with a slope of 0.00333 and an intercept of 1 but with different standard errors of estimate.

Possible differences in standard errors of estimate, as well as in slopes and intercepts, led Einhorn and Bass to propose a model for test bias based upon the probability of success rather than only on the predicted scores.[14] Their model is consistent with a definition of test bias suggested by Guion[15] that Cole[16] and Petersen and Novick[17] have discussed under the heading of "The Equal Risk Model." To be fair according to the equal risk model, persons with equal probabilities of success should have equal probabilities of being selected.

From the example in Table 1 an admissions policy that required a person to have at least 27 chances in 100 of obtainig at least an average grade of 3.0 would require an LSAT score of 450 or higher from members of Group B but a score of approximately 506 or higher for members of Group A. On the other hand, if a different admission standard were applied, a higher score might be required for members of Group B than for members of Group A. For example, if persons were to be admitted who had at least 73 chances out of 100 of obtaining an average grade of at least 2.0, then a score of approximately 394 or higher would be required for a person in Group A as opposed to a score of 450 or higher for a person in Group B.

Equality of Slopes

If the standard errors of estimate can be assumed to be equal, then the equal risk model will lead to the same decisions as would be obtained if admissions decisions were based on criterion scores that are predicted by the equation appropriate to each group. That is, people with equal predicted scores will have approximately the same probability of having a criterion score above any specified point. The regression equations may be different, however.

If the slopes of the regression lines are not the same for the two groups, then the effect of using the regression equation of one group to make predictions for members of the other group will depend upon the level of the predictor scores. In Figure 1, two hypothetical regression lines are illustrated. Suppose the regression line for Group A is used to make predictions for members of Group B, as might happen if these groups were respectively the majority and the minority groups. The Group A equation would underestimate the average performance for Group B members with test scores below the intersection of the regression lines (Score Level II in Figure 1) and overestimate the average performance of members of Group B with test scores above the intersection. Thus, on the average, the predictions using the Group A regression line would be "biased" in favor of Group B members with high test scores (above Level II) and "biased" against members of Group B with low test scores (below Level II). The average effect for Group B as a whole depends on the location of the test score distribution. If the mean test score for Group B is at Score Level I, then the bias would be against Group B overall; on the other hand, if the Group B mean is at Score Level III, the bias would tend to be in favor of Group B.

Equality of Intercepts

If the standard errors of estimate and the slopes are the same but the intercepts are different, there would be a constant error if the regression equation for one group was used to make predictions for members of the other group. Instead of intersecting lines, as depicted in Figure 1, the regression lines for the two groups would be parallel with one line above the other as depicted in Figure 2. For any test score the equation for Group A in Figure 2 would overpredict the average performance of members of Group B by a constant amount. Conversely, the equation for Group B would underpredict for members of Group A.

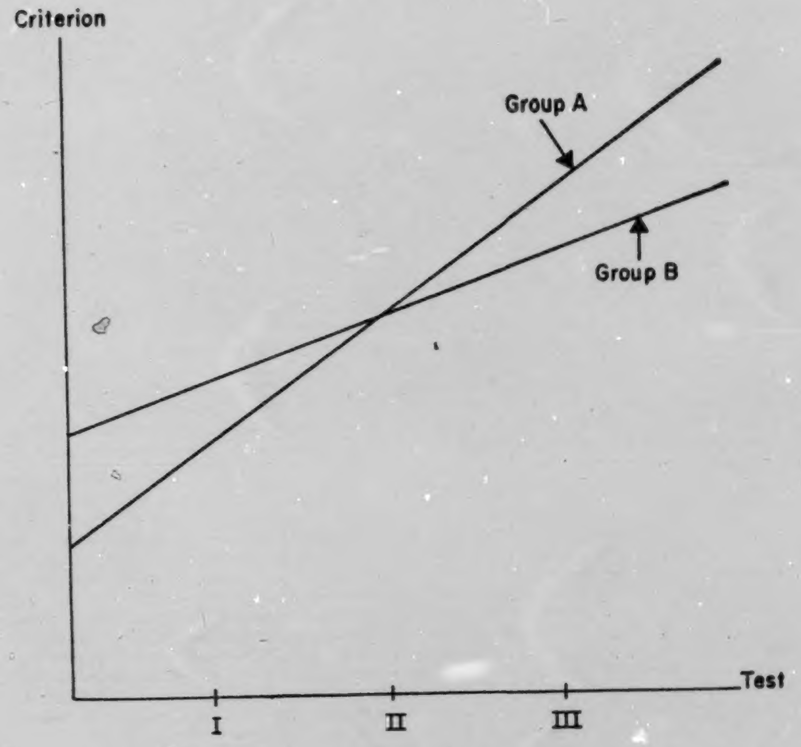

Figure 1

Illustration of regression lines with unequal slopes

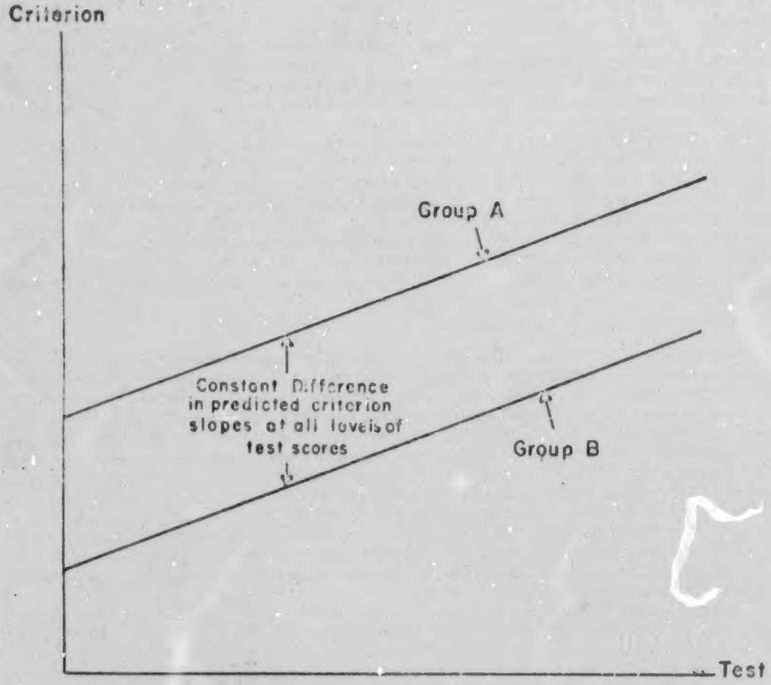

Figure 2

Illustration of regression lines with equal slopes but unequal intercepts

The possibility of different intercepts has some correspondence to the frequently voiced expectation that tests are unfair to minority groups in the sense that they underestimate their performance on the criterion variable. In terms of Figure 2, this expectation would be represented if Group A was the minority group and Group B the majority group. Commonly used prediction equations are dominated by the majority group because the number of minority group persons for whom criterion data are available is typically a small fraction of the total group. Thus, if the above expectation is accurate, minority group members would be expected to perform above their predicted performance on the average, and if separate prediction equations were obtained, the intercept for the minority group would be expected to be above the intercept for the majority group.[18] As will be seen below, however, this expectation is not supported by the data.

Technical Issues

If it is agreed that test bias for a predictive measure should be evaluated in terms of a comparison of the prediction systems for the different groups, then studies of bias are seemingly relatively straightforward. Unfortunately, however, the slopes of the regression lines are influenced by the reliability[19] of the test. As Linn and Werts have shown, lack of reliability in the test typically will tend to make a majority group regression equation predict higher criterion scores for persons in groups with low average test scores than would be the case if the test were more reliable.[20] This effect may work in the direction of making a majority group regression equation overestimate the performance of minority group members rather than underestimate it as commonly anticipated.

---

[18] The expectation that actual performance of minority students would be underpredicted follows from the work of Clark, K. B. and Plotkin, L. *The Negro student at integrated colleges*. New York: National Scholarship Service for Negro Students, 1964. It is also consistent with the charge that tests and other standard predictors are biased against minority group members.

Another complicating factor in the evaluation of bias is that a predictor that is found to overpredict or underpredict when used in isolation may do the opposite when used in conjunction with another variable.[21] Reilly has argued that differences between groups on an outside variable that is related to the test, to the criterion, and to group membership may be expected to make the majority group regression equation overpredict the performance of minority group members.[22] Thus, there appear to be technical phenomena that tend to result in overprediction for groups of individuals that score low on the predictor, e.g., minority groups.

Alternative Models of Test Fairness

The general approach outlined above for evaluating fairness in a test or other variable used mainly for purposes of prediction was not seriously questioned in the psychometric literature until 1971. Although there are distinctions between simply comparing prediction equations and the equal risk model, the two are reasonably compatible and in practice are usually investigated in the same manner (i.e., groups are compared in terms of standard errors of estimate, slopes, and intercepts). In 1971, however, an article by Thorndike and one by Darlington were published in the *Journal of Educational Measurement* which suggested that there were alternative ways of defining fairness in test use.[23] Furthermore, these alternative formulations, as well as an additional one recently suggested by Cole,[24] are incompatible with the traditional formulations considered in the preceding section in the sense that a procedure that is fair from one perspective will be unfair from another.[25]

Petersen and Novick have recently completed an evaluation of the various models of fair test use that have been proposed.[26] In the process they introduced six additional models, some of which are the logical converses of previously proposed models. Most of the previous and newly introduced models are rejected as being inappropriate, however. Only the equal risk model and the regression model that requires that predictions be based on within-group prediction equations survive their analysis, and even they are considered appropriate only in very specific situations, with the equal risk model generally being the most useful. They argue that the remaining models contain logical contradictions because they are based on the wrong conditional probabilities. They do indicate, however, that these models contain important ideas that might be reformulated in ways that would avoid their objections.

---

[19] There are different types of reliability estimates, but they all attempt to measure the degree to which scores on a test result from systematic differences among examinees. For a discussion of reliability, see, for example, Ebel, R. L. *Essentials of educational measurement*, Englewood Cliffs, New Jersey: Prentice Hall, 1972, Chapter 15.

"Fair test use in selection." *Review of Educational Research*, 1973, 43, 139–161.

[26] Petersen, N. S. and Novick, M. R., *op. cit.*

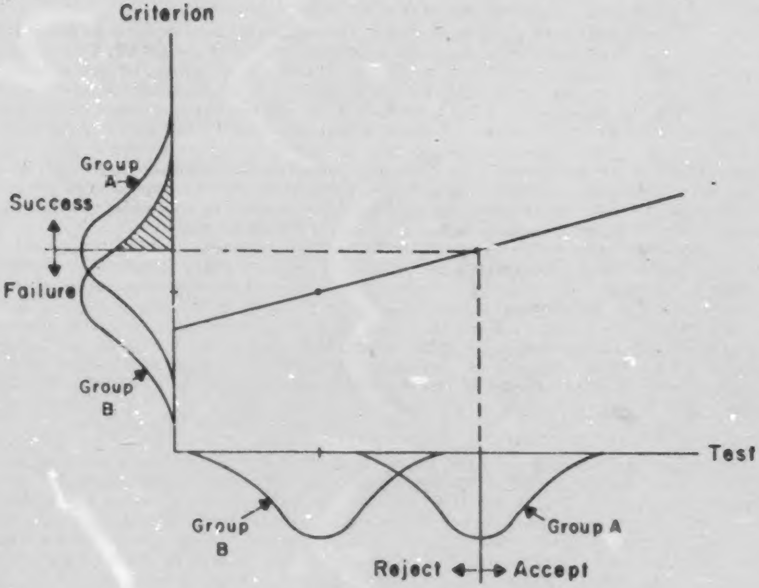

Figure 3
Illustration of Thorndike's Alternate Definition of Culture Fairness

The two models that are not rejected by Petersen and Novick are special cases of a decision-theoretic model. This model would require that utilities (i.e., the degree of value) be assigned to each possible outcome in the admissions process. The utilities attached to different outcomes might vary from group to group. Petersen and Novick prefer the general decision-theoretic model to the special case of the equal risk model, with the latter being appropriate only when the utilities in the two groups are identical.

More detailed consideration will be given the various alternative models in the third major section of this paper. Before further discussion of the various alternative models, however, it may be desirable to review the empirical evidence that is available regarding the possibility of bias in the prediction of first-year average grade in law school. This seems desirable for two reasons. First, the bulk of the available evidence regarding the use of the LSAT, UGPA, and the Writing Ability Test (WA) for members of minority groups falls within the framework of the regression or equal risk models. Secondly, these are the traditionally accepted models.

EMPIRICAL INVESTIGATIONS OF BIAS IN PREDICTION OF GRADES IN LAW SCHOOL

The focus of the review in this section is on the results of five studies that have investigated the use of LSAT, UGPA, and WA for prediction of first-year grades in law school for members of minority groups. All of these studies have been completed within the last two years, and some of the reports are still in draft form.

General Predictive Value of Standard Numerical Indicators

Before considering the prediction of law school grades for members of minority groups, a few brief comments about the predictive value of the LSAT, UGPA, and WA may be in order. There is substantial evidence in the form of hundreds of validity studies to support the practice of using a weighted combination of LSAT and UGPA or the LSAT, UGPA, and WA to obtain the predicted first-year average (PFYA). The degree of relationship between PFYA and actual first-year average (FYA) and the magnitude of relative weights assigned to LSAT and UGPA in the prediction vary from one law school to another and from year to year within the same law school. Some variability is to be expected on purely statistical grounds due to sampling variability, and some is undoubtedly attributable to real differences among schools and/or student populations.

In any event, the PFYA is typically found to correlate about .40 with FYA.[37] A correlation of this magnitude is sufficiently high to make predictions worthwhile for purposes of selecting students who are most likely to be academically successful. The prediction is obviously far from perfect. Many factors not measured by the LSAT or the UGPA contribute to a student's first-year grades in law school. Furthermore, the general usefulness says nothing about the value of the PFYA or its components for particular groups of individuals that make up relatively small fractions of the student bodies of most law schools, such as Blacks, Chicanos, or women.

Survey Results

Schrader has recently reported on the results of a survey of law schools conducted in the spring of 1971.[38] This study was not designed to investigate possible bias in the LSAT, UGPA, or WA for the prediction of FYA. Its purpose was to obtain descriptive information about the enrollment of minority students in law school that might be useful in evaluating the effectiveness of the efforts of law schools to encourage more members of minority groups to obtain legal educations. Some of the results of the survey have, at least, a tangential bearing on the issue of bias, however.

A total of 98 of the 142 law schools surveyed actually supplied data. Thus, the results are not necessarily representative of all law schools. Furthermore, as noted by Schrader, relationships obtained when data from various law schools are combined may be influenced by differences between schools and therefore may not be similar to relationships within schools. Even acknowledging these limitations, the survey results lend some support to the proposition that the traditional predictors (LSAT, UGPA, and WA) have relevance for the prediction of grades in law school for minority group students.

The law schools were asked to provide rank-in-class based on first-year law school grades, LSAT scores, WA scores, and a number of other items of information for each minority group student who had enrolled in 1968, 1969, or 1970. Rank-in-class data were supplied for a total of 624 minority students by 72 law schools. Across the 72 law schools, it was found that a minority group student who had an LSAT score of 550 or above was over four times as likely to rank in the highest fifth of the class as a minority student who had an LSAT score below 450. Conversely, a student with a score below 450 was over twice as likely to rank in the bottom fifth of the class as student with a score of 550 or above. Similar results were obtained for the three specific minority groups with large enough numbers of students to make the analysis feasible. These groups were made up of students reported by their law schools to be Black American (385 students), Mexican American (131 students), or Asian American (50 students). Similar results were also obtained when separate analyses were conducted for minority students enrolled in the 33 schools with LSAT means of 570 or above.

A clear relationship between WA scores and rank in class was also obtained for the combined group of minority students and within each of the three specific minority groups listed above. The magnitude of the relationship was comparable to that observed for the LSAT.

As previously indicated, these results do not speak directly to the issue of bias. The relationships may be affected by between-school differences. Furthermore, even if the relationships hold within schools, the students may be performing better (or worse) than would have been predicted from within-school prediction equations that are based primarily on prior experience with majority group students. At best, the results are only suggestive that the LSAT and WA are useful predictors of first-year grades for minority students.

---

[37] Schrader, W. B. and Pitcher, B. "Summary of validity studies, 1949–1971." In Law School Admission Council, *Annual Council Report*, 1972, pp. 423–431. It might be noted that the correlation between the LSAT and grades would be expected to be higher if the LSAT was not used for admissions purposes.

[38] Schrader, W. B. "Relationships between characteristics of minority groups students who entered law school in 1968, 1969, and 1970." Report to the Law School Admission Council, dated April, 1974.

Comparison of Prediction Systems

In the remaining studies, within-school data were used to compare the prediction system of a specified minority group to the prediction system of "other students," "nonminority students," "white students," or "male students."[29] The studies followed a very similar pattern. If the smaller of the two groups to be compared included at least 50 students, then significance tests were conducted for equality of standard errors of estimate, equality of slopes, and equality of intercepts.[30] Where the smaller group had less than 50 students only the slopes and intercepts were tested for equality.[31] In each case, separate significance tests were conducted with UGPA alone, LSAT alone, WA alone, UGPA and LSAT together, and UPGA, LSAT, and WA together.[32]

LSAT as the Only Predictor

For purposes of evaluating the practical implication of group differences for predicting grades, the most critical comparison is the one for that combination of predictors that is actually used in a school. Frequently this would be LSAT and UGPA, or these two in combination with WA. However, since the LSAT may be especially suspect as a variable that might underestimate actual performances for members of minority groups, I will first look at results from the four studies for the LSAT alone and then review the results where combinations of variables are used.

In Table 2, significance test results from the four studies conducted by Pitcher and by Schrader and Pitcher are summarized. In Study I, prediction equations at five law schools are compared for students who were identified as "culturally deprived" with equations for "other" students in those schools.[33] In Study II, regression equations for black students are compared with those for their white counterparts at five schools.[34] Comparisons of equations for black students with those for nonminority students are made in seven additional schools in Study III.[35] Comparisons of equations for Mexican American and nonminority students at three schools are also made in Study III. Finally, prediction equations for males and for females are compared in Study IV.[36]

The first column of Table 2 identifies the study and the school within each study, using the letters that were used in the original reports to identify schools. The second and third columns report the number of students in each group where this information was available. In the case of Studies II and III, this is limited to a report of 50 or more students (GT50) or less than 50 students (LT50). Columns 4, 5, and 6 list the results of the significances tests for the equality of the standard errors of estimate, the equality of the slopes, and the equality of the intercepts, respectively. These significance tests are sequential; that is, the test of slope is ambiguous if the errors of estimate are significantly different, and the test for intercepts is ambiguous if either the errors of estimate or slopes are significantly different. The last column of Table 2 simply states whether or not there is a significant difference between the groups on at least one of the significance comparisons.

B. and Pitcher, B. "Predicting law school grades for black American law students." LSAC Annual Report, 1973, pp. 530–569; Schrader, W. B. and Pitcher, B. "Prediction of law school grades for Mexican American and black American students." Report to Law School Admission Council (to be published in the LSAC Annual Report, 1974); Pitcher, B. "Predicting law school grades for female law students." Report to Law School Admission Council (to be published in LSAC Annual Report, 1974).

[30] Significant test procedures that were used with group sample sizes of at least 50 are described in Gulliksen, H. and Wilks, S. S. "Regression tests for several samples." *Psychometrika*, 1950, *15*, 91–114.

[31] Significance tests, used where the smaller sample size was less than 50, are described in Williams, E. J. *Regression analysis*. New York: Wiley, 1959.

[32] In Pitcher's study of prediction for women (June, 1974) equations using the mean LSAT score for an applicant's undergraduate institution were also investigated.

[33] Particular responses to 28 multiple-choice questions were used as indicators of cultural deprivation. A student who selected one of the keyed responses to 8 or more of the 28 items was classified as "culturally deprived" for purposes of the analyses.

[34] The Study II results, summarized in Table 2, used the "white proportional" group as the basis for comparison (i.e., the proportion of students from each entering class was made the same for both groups).

[35] The Study III results, summarized in Table 2, are for the "proportional comparison group."

[36] Although not a minority in the general population, women are a minority in law school and in the legal profession.

TABLE 2.—TESTS OF EQUALITY OF REGRESSIONS: LSAT ALONE

Study and school [1]	Number of students [2]		Errors of estimate	Slopes	Intercepts	At least 1 significant difference
	CD [3]	Other				
I-A	47	252	(4)	(5)	(5)	No.

[1] Studies are coded I for Schrader and Pitcher (September 1972), II for Schrader and Pitcher (March 1973), III for Schrader and Pitcher (May 1974), and IV for Pitcher (June 1974). The letters designating schools correspond to the letters used in the original reports.

[2] In studies II and III the numbers of students within each school were not reported. Sample sizes are denoted GT for 50 or more students and LT for less than 50 students.

[3] CD refers to students who individually were identified as "culturally deprived" according to responses provided by the student on a 28-item questionnaire.

[4] Tests of errors of estimate were not conducted if either group had less than 50 students.

[5] Not significant at 0.05 level.

[6] Significant at 0.05 level.

[7] Not significant, but test is questionable due to significance of prior significance test.

[8] Significant, but test is questionable due to significance for prior significance test.

As can be seen, the results of the significance tests reported in Table 2 follow a rather clear pattern. None of the six comparisons between the "culturally deprived" group of students and "other" students is significantly different. It should be noted, however, that the number of students in the "culturally deprived" group is rather small in all cases, and the direction of the differences was consistent with results in Study II. Also, the group identification is rather ambiguous in Study I.

In all 13 comparisons of equations for black students with those for white students and in all three comparisons of Mexican American students with white students, the prediction systems were significantly different in at least one respect. The results for the comparison of equations for males with those for females are not consistent with significant differences in three schools and with no significant differences in the remaining five schools.

One major conclusion that can be drawn from the results in Table 2 is that, when first-year grades in law school are predicted from the LSAT alone, the prediction system for majority students *cannot* safely be assumed to be the same as the one that would result from data based on minority group students. This conclusion is particularly applicable where the minority group consists of black students or Mexican American students, but it also holds where the "minority group" consists of women. The lack of differences for "culturally deprived" versus "other" students is difficult to interpret due to the ambiguity of the categories and the small sample sizes.

The results for the LSAT are consistent with previous results obtained at the undergraduate level. When the Scholastic Aptitude Test (SAT) or the American College Testing Program tests (ACT) are used to predict undergraduate grades, significant differences in prediction systems have frequently been found for black students in comparison to white students. For example, comparisons of the regression of undergraduate grades on SAT for black students with that for white students were significantly different in 14 of 22 colleges included in the results reviewed by Linn.[37] In the case of sex differences, there are fewer significant differences for the LSAT than have typically been found at the undergraduate level for the SAT or ACT.[38]

Given the conclusion that prediction systems should *not* be assumed to be equal, there remains an important question about the direction and magnitude of the difference. This will be considered in detail below, but first the results of comparisons of group prediction systems where the LSAT is used in combination with other predictors will be briefly reviewed.

LSAT in Combination with Other Predictors

A table similar to Table 2 could be constructed for UGPA alone, WA alone, UGPA and LSAT combined, and for UGPA, LSAT, and WA combined. But, the results of the significance tests are so nearly identical to those for the LSAT alone that such detail does not seem warranted in this review. The detailed results are available in the reports of the original studies conducted by Schrader and Pitcher.

Since UGPA and LSAT, or these two plus WA, are usually used in combination to predict first-year grades, the significance tests for the multiple regression system are of particular interest. In Table 3, the results of these tests are summarized for the same schools and students for whom results were reported in Table 2. As sugested above, the significance tests for the multiple regression systems lead to the same conclusion that was reached where the LSAT was used as the only predictor. That is, it is *not* safe to assume that data for different groups of students within a single school would lead to the same prediction system. In particular, separate prediction systems are usually indicated for black or Mexican American students in comparison to nonminority students.

TABLE 3.—SUMMARY OF TESTS OF EQUALITY OF MULTIPLE REGRESSION SYSTEMS

Study	Groups compared	Number of comparisons of regression system	Number of comparisons with at least 1 significant difference [1]
	LSAT and UGPA as predictors:		
I	CD [2] and other	6	0
II	Black and white	5	5
III-1	Black and nonminority	8	8
III-2	Mexican-American and nonminority	3	3
IV	Female and male	8	4
	LSAT, UGPA and WA as predictors:		
I	CD and other	6	0
II	Black and white	5	4
III-1	Black and nonminority	8	6
III-2	Mexican-American and nonminority	3	3
IV	Female and male	8	3

[1] A significant difference may be in standard errors of estimate, slopes, or intercepts.

[2] CD refers to "culturally deprived" as defined by responses to a questionnaire.

Implications of Using a Common Versus Separate Prediction System

The statistical comparisons summarized in the preceding section indicate that separate prediction equations would provide better predictions than a single equation. It is important, however, to understand the implications of using a separate prediction equation based on within-group data rather than using a common regression. Many schools do not enroll enough students from a particular minority group to make the development of separate prediction equations very feasible. Even those schools that have sufficient numbers of students from one minority group to develop a separate equation will generally lack data for another group. For this and other reasons it is desirable to know whether a common prediction equation usually underestimates or overestimates the actual grades of minority group members.

Although the common expectation is that a single prediction system, based on all students or only on majority students, would underpredict the actual grades of black or Mexican American students, the result is uniformly in the opposite direction. That is, on the average, law school grades of black students or of Mexican American students are overpredicted by the equation for white students or by a common equation based on both groups of students. This is true at every school that was included in the two studies conducted by Schrader and Pitcher.[39] These results are summarized in Table 4.

In Table 4, the predicted grade for a hypothetical person with UGPA and LSAT scores equal to the within-school mean for black students, or the mean for Mexican American students, is obtained by using the equation for the combined group of students. The resulting predicted average grade, which is reported in column 2 of Table 4, can be compared to the actual average grade (column 3). The predicted and actual grades would be equal if the predictors had been based on the minority group regression equation. Using the prediction equation, based on the combined group, results in overprediction of the minority group grades on the average (column 4 of Table 4).

Similar result scould be displayed by using either UGPA, LSAT, or WA alone, or the three predictors combined. The only difference is that the amount of overprediction tends to be somewhat larger when predictions are based on a single predictor. The tendency for the overprediction to be less for multiple predictors than for a single predictor might be anticipated on the basis of Reilly's analysis.[40]

TABLE 4.—PREDICTED AND ACTUAL GRADES FOR BLACK AND MEXICAN AMERICAN STUDENTS [1]

Study and school	Predicted average grade [2]	Actual average grade	Amount of over-prediction
Black students:			
II-A	39	36	3
II-B	42	37	5
II-C	40	38	2
II-D	40	36	4
II-E	40	38	2
III-D	36	33	3
III-E	39	36	3
III-F	39	37	2
III-G	44	42	2
III-H	40	36	4
III-I	38	33	5
III-J71	40	35	5
III-J72	40	36	4
Mexican-American students:			
III-A	40	36	4
III-B	49	44	5
III-C	41	38	3

[1] The predictions are based on UGPA and LSAT using the combined group consisting of the total black or Mexican-American sample and the proportional white sample. Studies are code II for Schrader and Pitcher (March 1973) and III for Schrader and Pitcher (May, 1974).

[2] Grades were scaled to have a mean of 50 and a standard deviation of 10 for the combined group of students within each school. Predictions are for UGPA and LSAT scores at the mean of black or Mexican-American students within each school.

[40] Reilly, R. R., *op. cit.*

Although overprediction is contrary to many people's intuitive expectations, the result is quite consistent with the typical finding at the undergraduate level. For example, in the studies reviewed by Linn, the equations based on white students overpredicted the average grades of black students in 18 of 22 schools.[41] Overprediction is also a common finding in comparative studies of predicted job performance.[42]

The implication of the overprediction result is that, if separate equations are used for black students or for Mexican American students, the predicted grade is apt to be lower than if a single equation was used for all students. If students were admitted solely on the basis of predicted grades, the implication is that higher scores on the LSAT and/or UGPA would be required for black or Mexican American applicants than for white applicants. Clearly, the predicted grade average should not be the only consideration in an admissions decision, but inasmuch as it is one of the important considerations in the decision for minority group members as well as majority group members, then using separate prediction systems is apt to lower rather than raise the likelihood of admission of a black or Mexican American student.

Such an implication obviously runs counter to the goal of increasing the number of minority persons in the legal profession, one of the considerations that stimulated the investigations of possible bias in the first place. Although the implication that there might be a justification for requiring higher UGPA and LSAT scores for admission of black and Mexican American students than for admission of white students conceivably could be of concern in future litigation, there are a number of grounds on which this implication can be rejected. To begin with, as has already been indicated, predicted grades in law school are only one of many factors that need to be considered in an admissions decision. In addition, the grades may themselves be biased.

They may have different relationships and degrees of importance to later performance as a lawyer for minority group members than for majority group members. Yet another consideration is that special steps are required because of the accumulation of the effects of past discrimination. To treat everyone "alike" would contribute to the process of continued discrimination ". . . by enforcing its consequences and excluding the victim because he has been wronged in the past by others."[43]

It was the recognition that the blind use of predicted performance without regard to group membership can have undesirable consequences that led to the formulation of alternative concepts of fair test use by Thorndike, by Darlington, and by Cole.[44] These alternative models of fairness along with the more recent work of Petersen and Novick are discussed in the next section, but first the implications of using single sex versus combined group predictions are briefly reviewed.

Table 5 reports the results of using a combined group regression equation to predict for a person with UGPA and LSAT scores at the mean for women students. The actual average grades achieved by women and the difference between predicted and actual grades are also listed in Table 5. The results are mixed. In

TABLE 5.—PREDICTED AND ACTUAL GRADES FOR WOMEN STUDENTS[1]

Study and school	Predicted average grade[2]	Actual average grade	Predicted minus actual grade
III–A	50.4	50.8	−0.4
III–B	49.2	47.1	2.1
III–C	50.1	49.7	.4
III–D	49.7	51.1	−1.4
III–E	50.3	52.7	−2.4
III–F	50.0	51.7	−1.7
III–G	50.6	49.9	.7
III–H	50.5	50.8	−.3

[1] The predictions are based on UGPA and LSAT, using the combined group of men and women in each school. The results are from Pitcher (June 1974).

[2] Grades were scaled to have a mean of 50 and a standard deviation of 10 for the total group of students within each school.

five cases the average grade is slightly overestimated, and in three cases the average grade is slightly underestimated. Thus, whether a combined equation works in favor of or against women depends on the school. In none of the schools are the differences very large, nor are the differences in average predictor scores large relative to those typically observed between minority and majority groups.

ALTERNATIVE MODELS OF FAIR TEST USE

The Thorndike Model[45]

The usual definition of test fairness in terms of regression equations is fair to the law school in the sense that it provides the school with a way of selecting students whose average first-year grade is maximum. It is also "fair" to individual members of the groups under consideration because grades are not systematically over- or underpredicted for members of any group. Nonetheless, Thorndike clearly demonstrated that a test that has equal regression equations for the two groups ". . . is 'unfair' to the lower scoring group as a whole in the sense that the proportion qualified on the test will be smaller, relative to the higher-scoring group, than the proportion that will reach any specified level of criterion performance."[46]

Thorndike has argued persuasively that the traditional way of looking at test fairness in terms of equality of the prediction systems is not the only perspective that should be considered. Figure 3 illustrates the problem with the traditional definition that Thorndike has so clearly identified. A situation is depicted in which the regression of the criterion (e.g., grade average) on the test is identical in the two groups (shown by the solid line with a slope equal to .25). Thus, the test would be considered "fair" from the traditional psychometric point of view and according to the *EEOC Guidelines.*[47] Note, however, that the difference in means on the test is substantially larger than the difference on the criterion variable.

Now suppose, for purposes of illustration, that the mean of Group A on the criterion variable corresponded to what was considered minimum acceptable performance (i.e., those with grade averages above that point are considered successes, and those below it are considered failures). As can be seen in Figure 3, about 50% of the hypothetical Group A have criterion scores above this cutting point and about 20% of Group B (shaded area of the Group B distribution curve) have criterion scores above the cutting point. Since criterion scores are not known in advance, it is the predicted criterion scores that are used for selection. If only those individuals with predicted scores equal to or above the success-failure point on the criterion variable were accepted, then approximately 50% of Group A would be accepted, but essentially none of Group B members would be accepted. This is the phenomenon that Thorndike was referring to when he said that, while the traditional approach with equal regression equations is "fair" to individual members of the minor group, it is "unfair" to the minor group as a whole. ". . . in the sense that the proportion qualified on the test, will be smaller, relative to the higher scoring group, than the proportion that will reach any specified level of criterion performance."[48] In the illustration depicted in Figure 3, the relative proportions in Groups A and B that are qualified on the test are .50 and essentially zero, respectively, whereas the proportions above the success-failure point on the criterion variable are approximately .50 and .20, respectively.

Thorndike proposed that: "An alternate definition (of fairness) would specify that the qualifying scores on the test should be set at levels that will qualify applicants in the two groups in proportion to the fraction of the two groups reaching a specified level of criterion performance."[49] Thus, we have two conflicting definitions of fairness. The only time that the equal regression definition and Thorndike's definition are in agreement occurs when the validity is perfect. The difference between the traditional and Thorndike definitions of fairness is not merely of theoretical interest. The two models would suggest quite different predictor score requirements for admission.

In summary, Thorndike has identified a consequence that he views as undesirable that is apt to result from application of the traditional definition of "fairness." His formulation suggests that we should be looking at the implications for the proportions of students admitted as well as at the regression lines. For a case with the same regression equations so that illustrated in Figure 3, different cutting scores would be required to make the proportions qualified on the test equal to the proportions successful on the criterion. In particular, a lower cutting score on the test would be required for the hypothetical Group B in Figure 3 in order to satisfy Thorndike's alternate definition.

[48] Thorndike, R. L., *op. cit.*, p. 63.

[49] *Ibid.*, p. 63.

The problem that Thorndike identified is implicit in some earlier discussions. For example, Cooper and Sobel seem to be referring to this problem in their discussion of tests with low, but significant, validity. They argue that where such tests have an ". . . adverse impact on blacks, use of test scores as a major factor in employment decisions is likely to be unnecessarily prejudicial to blacks."[50] More than one sense of fairness seems implicit in Cooper and Sobel's comment.

Limitations of the Thorndike Model

Thorndike made a major contribution to thinking on the problem of fair test use by pointing out the need to consider the problem from more than one perspective. Petersen and Novick, however, have recently argued against the application of the Thorndike model, which they refer to as the Constant Ratio Model.[51] They object to the model on both theoretical and practical grounds.

The theoretical objection is that the Thorndike model is based on what they judge to be the wrong conditional probability. As a consequence, the model leads to what may be considered a logical contradiction and can lead to undesired results in some instances.

To demonstrate the logical contradiction Petersen and Novick introduce what they call the Converse Constant Ratio Model. Whereas Thorndike's Constant Ratio Model focuses on persons who would be considered successful and persons who are accepted, the Converse Constant Ratio Model focuses on the rejected and the unsuccessful. In Thorndike's Constant Ratio Model, the ratio of the success rate to the selection rate would be required to be equal for all groups. In the Converse Constant Ratio Model, the ratio of the failure rate to the rejection rate is required to be the same for all groups.

The Converse Constant Ratio Model is logically just as defensible as the Constant Ratio Model. Indeed, as noted by Petersen and Novick, the two models can be arrived at by the same logic. But, the two models are inconsistent, i.e., a selection strategy that is fair according to one model will generally not be fair according to the other one.

Due to this inconsistency Petersen and Novick argue that neither the Constant Ratio Model nor its converse should be used. The Constant Ratio Model and its converse, however, might be viewed as appropriate under two different value systems in the decision process. In the Constant Ratio Model, primary importance is attached to the success rate in comparison to the selection ratio, whereas the failure rate in comparison to the rejection ratio is of primary importance in the Converse Model. It may be that the different values expressed by these models can be accommodated in a decision theoretic framework.[52] In any event, a decision theoretic formulation should have the advantage of making explicit the differential values attached to various outcomes.

Conditional Probability Model and Its Converse

Cole proposed another definition of fair test use that differs from the previously considered models.[53] Her model is based on the conditional probability of being selected, given performance on the criterion at or above some specified level. A selection procedure would be fair, according to Cole's model, if the probability of being selected, given satisfactory performance, is the same for all groups.

Cole's Conditional Probability Model differs from the traditional regression model and from Thorndike's Constant Ratio Model on practical as well as theoretical groups. For situations where the majority group regression equation tends to overpredict for minority group members, as was found above for the predictors of grades in law school, then strict applications of the three models would result in the fewest minority students selected according to the regression model and the most selected according to the Conditional Probability Model. The fact that the Conditional Probability Model would tend to justify the selection of more minority students in typical situations may be seen as a great advantage of the model. It seems to provide a rational justification for procedures that will usually be consistent with achieving a goal seen as desirable by many. Of course, the result for a particular situation is no tadequate justification per se, for any model.

[51] Petersen, N. S. and Novick, M. R., *op. cit.*

[52] Personal communication from Nancy S. Cole indicates that she, Richard L. Sawyer, and James W. L. Cole are working on a general decision theoretic model in which each of the proposed models can be expressed as different utilities in the decision process. She believes that the Constant Ratio Model and the Conditional Probability Model, as expressed here, may be approximations to proper decision theoretic solutions.

[53] Cole, N. S., *op. cit.*

Petersen and Novick introduced the Converse Conditional Probability Model to illustrate that the two models that can be derived from the same logic are generally incompatible. They argue that the Conditional Probability Model uses the wrong conditional probability which results in the contradiction between the model and its converse. They also question whether it is fair to students to select them when they have little chance of success, as can happen with the Conditional Probability Model.

Although the Conditional Probability Model and its converse yield inconsistent results, it might be argued that the inconsistency is due to implicit differences in values attached to various outcomes under the two models. Under the Conditional Probability Model, the concern is with the potentially successful students and no concern is given to the potential failures. Again, however, a decision theoretic formulation has the advantage of making the differential values, or utilities, explicit.

Decision Theoretic Model

The lack of general agreement on what constitutes fair test use creates real discomfort for anyone who would like to have a well-specified set of procedures to follow in order to insure fairness. This desire for a definite and mechanical answer may, in fact, be part of the problem, however. The question of what constitutes fairness or how admissions decisions should be made for members of different groups apparently is not amenable to a strictly technical solution.

As noted by Darlington, ". . . there is often a conflict between the two goals of low cultural discrimination and high validity, and no simple mechanical resolution of this conflict is generally possible, since an optimum balance between the two goals necessarily depends on a subjective judgment concerning their relative importance."[54] In deciding how to pursue the goal of increasing the number of minority persons in law schools and the goal of admitting to law school those students with the highest probability of excellent academic performance, it is necessary to look beyond a technical resolution of the problem. Competing values must be weighed.

Although the problem of balancing the pursuit of conflicting goals cannot be solved by purely technical means, there are approaches which can make the process of weighing the competing goals explicit. Darlington has suggested one way of doing this by explicitly acknowledging that a given grade average for a member of a minority group is to be valued just as highly as a somewhat higher grade average for a member of the majority group. This, in effect, would be like adding a constant to the predicted grade average of minority group applicants before comparing it to the predicted grade averages of majority group applicants. Although this is done implicitly now in some schools, there may be advantages to making the procedure explicit and furthermore, as Anderson suggests, public.[55]

The most satisfactory means to weigh the competing values explicitly is to formulate the admissions problem in decision theoretic terms. For situations in which it is reasonable to dichotomize the criterion into success and failure and the predictor into accept and reject, values attached to each of the four outcomes (accept-success, accept-fail, reject-would succeed, and reject-would fail) need to be considered.[56] Separate consideration of these four possible outcomes for members of a minority group and for members of the majority group yields a total of eight outcomes to which values need to be attached.[57] A complete treatment would require that values be assigned to each of the eight outcomes and that the selection rules be identified that would maximize the overall value. Discussions of fair test use would benefit from explicit consideration of the values attached to all eight outcomes even if formal maximization procedures were never employed.

[54] Darlington, R. D., *op. cit.*, p. 78.

[55] Anderson, W. R. "The admissions process in litigation." *Arizona Law Review*, 1973, *15*, 81–115.

[56] In setting the utilities for the two-by-two table for each group, there are really only two evaluations that need to be made because the zero point and scale are arbitrary. Thus only the difference between row utilities are important (M.R. Novick, personal communication). For a discussion or related work see Novick, M. R. and Lewis, C. *Problems in criterion-referenced measurement*. CSE Monograph Series in Evaluation No. 3, Los Angeles: Center for the Study of Evaluation, University of California.

[57] This idea was first suggested to the author by Robert F. Boldt (personal communication). The approach has been developed by Gross, A. L. and Su, W. "A decision theory approach to test bias." Unpublished manuscript, 1973.

A more complete decision theoretic formulation has recently been developed by Petersen and Novick.[58] By explicitly specifying the utility that would be assigned to each possible outcome, the decision theoretic approach provides a solution that maximizes the overall utility. The goal of increasing the enrollment of minority group students could be accommodated within the decision theoretic approach by attaching utilities to the outcomes for minority group members that are different from those attached to the same outcomes for majority group members.

Although the competing values of increased minority group enrollment and of high grade averages can be accommodated within a decision theoretic model, many practical problems would need to be resolved. Decisions about who is to determine the utilities to be used must be made, and a justification of the choice of any particular set of utilities would be required. The latter may be particularly difficult if different utilities are to be attached to the same outcome for members of different groups.

CONCLUSIONS

Messick and Anderson have distinguished between (1) the adequacy of a test as a measure, and (2) the value judgment of whether a test should be used in a particular context.[59] Predictors of first-year grades is law school that have acceptable validities for one group have generally been found to have acceptable validities for other groups. In addition, the expectation that UGPA and LSAT would underpredict first-year grades of minority group members has not been supported. On the contrary, overprediction for black or Mexican American students was found in every school studied. Thus, from the standpoint of technical adequacy, the traditional predictors of law school grades are usually found to be about as adequate for minority persons as for majority persons, and the use of a single prediction equation usually favors the minority group member.

The above generalization, although consistent with results obtained for the prediction of undergraduate grades, is not intended to suggest that further investigations are unnecessary. There seems to be enough variation from one situation to another to require that differential validity studies should be conducted when technically possible.

Of possibly greater importance, however, is the realization that studies of predictive bias depend upon the acceptance of a criterion measure. Inasmuch as grades are as inadequate criterion measure, then the absence of predictive bias is of little value. The first-year grade average may be thought to tap too narrow a range of behaviors; it may lack reliability, or it may itself be subject to systematic errors for members of one group (i.e., it may be biased). Greater emphasis needs to be placed on the selection and development of criterion measures that go beyond first-year grades.

Even if the predictors are judged to have adequate validity and first-year grade average is considered an acceptable criterion, it is undesirable to use the predicted first-year grade average in isolation. Predicted grades should be used along with other sources of information, and the implications of various uses should be evaluated from several perspectives. The implications of a procedure that excludes or results in an underrepresentation of a minority group must be evaluated in those terms. It is not sufficient to consider only the expected performance levels on the criterion measure. Ideally, the utility of every possible outcome would be evaluated for different groups of people and these utilities explicity used in the admissions process.

APPENDIX C

THE USE OF VALIDITY STUDY PREDICTION EQUATIONS AS ADMISSIONS INDEX FORMULAS IN THE LSDAS SYSTEM

The Law School Data Assembly Service (LSDAS) system has been designed so that one of the equations resulting from a Validity Study Service (VSS) study can be used as an Admissions Index formula.[1]

---

[58] Petersen, N. S. "An expected validity model for 'optimal' selection." ACT Technical Bulletin No. 24. Iowa City, Iowa : American College Testing Program, 1974.

[59] Messick, S. and Anderson, S. "Educational testing, individual development, and social responsibility." *The Counseling Psychologist*, 1970, 2, 80–88.

[1] Under certain conditions two equations resulting from a VSS study could be used. For example, two subgroups might be categorized by undergraduate institution, perhaps your own versus all others. Thus, there would be two formulas: one for applicants from the undergraduate college of your own university and another formula for applicants from all other institutions.

Most law schools that have had new validity studies will probably want to consider using one of their new equations as an Admissions Index formula in the LSDAS system during 1974–75. The information and examples set forth in this memorandum may be helpful to you in reaching a decision concerning the use of a validity study prediction equation as an Admissions Index formula for your law school.

PREDICTION EQUATIONS IN YOUR VALIDITY STUDY REPORT

The validity study report for your school, which is enclosed (following page 32 of the pamphlet *Law School Validity Study Service* or, if this is your school's first Validity Study Service (VSS) study, inserted in the red notebook following page 32 of the general section), sets forth two or possibly more equations. Please refer to these equations. They are labeled "regression equation" and appear in the reports on the pages with "Table 4" (also Tables 5 and 6 if your study includes subgroups).

The first equation is based on the optimally weighted combination of the undergraduate grade point average (UGPA) and of the LSAT score for predicting first-year law school average grades (PFYA) for the particular class whose records were used for the study.

The second equation is similar to the first except that it includes the Writing Ability score (WA) in addition to the UGPA and the LSAT.

All Validity Study Service reports include these first two equations. If your study used optional predictors, such as LSAT College Mean (LCM) or some other predictor of your choice, two o rthree additional equaltions are included.

II. COMPARING WEIGHTS FOR UGPA AND LSAT

Suppose a law school wishes to compare the amount of weight for the UGPA and the LSAT in a prediction equation as produced by its validity study. There are two ways this may be done. One way is the relative predictive weight method. Another is the per cent approach.[2]

A. Relative Predictive Weights

The relative predictive weights method is illustrated by the following example. Assume that a prediction equation for Law School A is:

Predicted first-year law school average (PFYA) = 0.2247 (UGPA) + 0.0021 (LSAT) + 0.7515.

Set the multiplier for the LSAT (e.g., 0.0021) equal to 1. This is done by dividing the multiplier for the LSAT and the multiplier for the UGPA by the multiplier for the LSAT.

$$\text{e.g., } \frac{0.2247}{0.0021}\text{ (UGPA) } + \frac{0.0021}{0.0021}\text{ (LSAT)}$$

$$107\text{ (UGPA)} + 1\text{ (LSAT)}$$

Thus the relative predictive weight would be:

107 for the UGPA

and

1 for the LSAT

This means that a difference of 107 points in the LSAT score would produce the same amount of difference in the predicted first-year average (PFYA) as a difference of 1 point in the UGPA would produce.

Thus—if applicant X has a 3.0 UGPA,
and applicant Y has a 2.0 UGPA, 1 point lower,
and X has a 500 LSAT,
and Y has a 607 LSAT, 107 points higher,
they will both have the same predicted grade.

For X, 107 times the UGPA (3.0) is 321,
1 times the LSAT (500) is 500,
321 plus 500 is 821.

For Y, 107 times the UGPA (2.0) is 214,
1 times the LSAT (607) is 607,
214 plus 607 is 821.

The effective range of numerical values for the UGPA is generally from 1.0 to 4.0. The range for the LSAT scores is 200 to 800 (i.e., the UGPA multiplied by 200 produces numbers the same as the LSAT range). Thus, there is a sense in which one can say that a weight of about 200 for UGPA is roughly equivalent to a weight of 1 for the LSAT. Therefore, if the relative predictive weight which is produced by taking the steps above is

---

[2] These methods, although based on the results of a regression analysis, are highly simplified and not precise.

200 for the UGPA

and

1 for the LSAT

then the two predictors are being weighted approximately equally. Since in our example the UGPA was weighted 107, the UGPA has less predictive value than the LSAT. If the predictive weight for another school were more than 200 for the UGPA, then in that school's case the UGPA would have *more* predictive value than the LSAT.

The Admissions Index formulas for the 46 law schools that used a single formula based on the two predictors, UGPA and LSAT, during 1973–74 were looked at in this way:

> The median weight for the UGPA turned out to be about 200 (i.e., about equal weight to the UGPA and the LSAT).
>
> The lowest weight was under 100 (more weight to the LSAT than to the UGPA).
>
> The highest weight was over 300 (more weight to the UGPA than to the LSAT).

Weights were also computed in this manner from the two-predictor (UGPA and LSAT) equations in 115 Validity Study Service (VSS) studies in 1972–73 and 1973–74:

> The median weight for the UGPA was 136 (more weight to the LSAT than to the UGPA).
>
> The lowest weight was 35 (much more weight to the LSAT than to the UGPA).
>
> The highest weight was over 600 (much more weight to the UGPA than to the LSAT).

Thus, there is a great variation in the relative weights for the UGPA and the LSAT that law schools are using or that result from their validity studies.

B. Per Cent Approach

A second way of comparing the amount of weight given to the UGPA and the LSAT in a prediction equation is the per cent approach. In this approach one needs not only the prediction equation but also the standard deviations of the predictors. (The standard deviations for a school's Validity Study Service report are found in Table 4.)

This second method of comparing the weights is shown in the following example. Assume again the prediction equation for Law School A is:

Predicted first-year law school average (PFYA)=0.2247 (UGPA)+0.0021 (LSAT)+0.7515

Further assume that Law School A had a standard deviation of 0.41 for the UGPA and 70 for the LSAT. The procedure is illustrated in the following example:

First, multiply each weight by the corresponding standard deviation:

> Multiply the weight for the UGPA (e.g., 0.2247) by the standard deviation for the UGPA (e.g., 0.41). The result for this example is 0.092127.
>
> Multiply the weight for the LSAT (e.g., 0.0021) by the standard deviation for the LSAT (e.g., 70). The result for this example is 0.147.

Add the two results together. 0.092127+0.147=0.239127.

Then compute the per cent that each is of the total (0.239127), as shown below:

$$\text{UGPA} \left(\frac{0.092127}{0.239127}\right) \quad 39\%$$

$$\text{LSAT} \left(\frac{0.147}{0.239127}\right) \quad \frac{61\%}{100\%}$$

This method of comparing the weights for Law School A's equation leads to the same conclusion that the first method did. That is, the LSAT score has more predictive value than has the UGPA at Law School A.

A serious limitation of the second method of comparing the relative predictive effectiveness of the UGPA and the LSAT is that it may be misleading to the untrained user, since it implies that the combination of the two predictors accounts for 100 per cent of the effectiveness in predicting the first-year average grade in law school. The numerical prediction is far from being a perfect index of what an applicant will do in law school. Many other factors, such as motivation to become a lawyer and perseverance, for instance, would have an important effect on a student's performance but are not included in the prediction equation. However, the correlation coefficient in all cases makes it clear that the prediction is not perfect. If it were perfect, the correlation coefficient would be 1.00, whereas a typical coefficient from the law school validity studies is .43 (for UGPA and LSAT used in combination).

A major advantage of the first method is that it enables a law school to compute an Admissions Index that has numerical values that do not look like actual law school grades.

III. RELATIVE PREDICTIVE WEIGHTS FOR A TWO-PREDICTOR EQUATION

Some law schools desire to make direct use of a prediction equation (also called "regression equation") resulting from a validity study to compute Admissions Indexes for their applicants in term of the predicted first-year average. Others prefer to use numbers that bear a relationship to the first-year average but which are not on the same numerical scale. One way to get numbers that look different from your law school's grading scale and, at the same time to get weights for the UGPA and the LSAT that are easier to think about than the 4-decimal place numbers given in the prediction equation is to use relative predictive weights. To do this you would follow the relative predictive weight method as illustrated in II.A above. You will recall that the results for that example for Law School A turned out to be 107 for UGPA and 1 for LSAT.[3]

To get a feeling as to how these relative predictive weights relate to individual predictions or computations of Admissions Indexes, it may be useful to consider some illustrative examples. Suppose we have nine applicants with grades and scores, as follows:

Applicant	Undergraduate grade point average	LSAT score
Ann	4.0	700
Joe	3.0	700
George	2.0	700
Jack	4.0	600
Jim	3.0	600
Alice	2.0	600
Henry	4.0	500
Mary	3.0	500
Tom	2.0	500

It is obvious that these examples have been selected so that there are three different values of undergraduate GPA (2.0, 3.0, 4.0) and three different LSAT scores (500, 600, and 700) represented.

Example I Law School X

If Law School X, by taking one of its prediction equations, produces through the methods illustrated a relative predictive weight of about 200 for the UGPA and 1 for the LSAT (i.e., about equal weight to both), then, for example, Ann's Admissions Index would be computed by the following steps:

Her UGPA is 4.0.

The UGPA weight (200) times the UGPA (4.0) is 800, which becomes the weighted UGPA.

Her LSAT score is 700.

---

[3] If you wish to refer to the validity study report for the law school whose equation was used in the example, please turn to page 10 of *Law School Validity Study Service*, enclosed, where you will find a "Table 4" for "Sample A College of Law." In the following discussion reference will be made to results for "Sample A College of Law," whose VSS report tables are on pages 7–10, and "Sample B School of Law," whose tables are on pages 11–16 of the general section of your enclosed report. Appreciation is extended to these two law schools that have very kindly granted their permission to use their results as examples. School A selected only the basic study; B used LCM, another additional predictor, and divided its class into two subgroups.

The LSAT weight (1) times the LSAT score (700) is 700, which becomes the weighted LSAT.

Thus. her weighted UPGA (800) plus weighted LSAT (700) is 1500, which becomes the Admissions Index.

Similarly, Alice's Index would be 1000 and George's would be 1100. With weights of 200 and 1 it turns out that Henry, with an LSAT score of 500 and an undergraduate grade point average of 4.0 would have the same Admissions Index (1300) as Joe (1300), whose LSAT score of 700 is 200 points higher than Henry's and whose undergraduate grade point average of 3.0 is one point lower. A table showing the sample Admissions Indexes computed from the formula 200 UGPA + 1 USAT follows:

Undergraduate GPA	LSAT score					
	500		600		700	
4.0	Henry	1,300	Jack	1,400	Ann	1,500
3.0	Mary	1,100	Jim	1,200	Joe	1,300
2.0	Tom	900	Alice	1,000	George	1,100

Example 2 Law School Y

If the prediction equation for Law School Y produces through the above method weights of 100 and 1 (i.e., more weight to the LSAT score), then the table for the same applicants would look like this:

Undergraduate GPA	LSAT score					
	500		600		700	
4.0	Henry	900	Jack	1,000	Ann	1,100
3.0	Mary	800	Jim	900	Joe	1,000
2.0	Tom	700	Alice	800	George	900

In this second example Henry, Jim, and George have the same computed Admissions Indexes (900).

Example 3 Law School Z

If in Law School Z the weights were 300 to 1 (more weight to UGPA) you could compute a third table in the same way that the two tables above were computed. For example, Alice's Admissions Index using 300 UGPA + 1 LSAT would be 1200; Henry's would be 1700.

SUMMARY

It is clear from these examples that the use of relative predictive weights as different as 200 to 1 and 100 to 1 would make a noticeable difference in the ranking of some individuals. In these examples, the rankings from high to low, based on the Admissions Indexes computed in Examples 1 and 2 above, would turn out as follows:

	Score
200 UGPA plus 1 LSAT	
Ann	1,500
Jack	1,400
Henry and Joe	1,300
Jim	1,200
Mary and George	1,100
Alice	1,000
Tom	900
100 UGPA plus 1 LSAT:	
Ann	1,100
Jack and Joe	1,000
Henry, Jim, and George	900
Mary and Alice	800
Tom	700

In both examples the person with the highest UGPA and LSAT, Ann, ranks first, and, correspondingly, Tom, with the lowest UGPA and LSAT given in the examples, ranks lowest. Since the formula using a relative predictive weight of 100 gives more weight to the LSAT score than does the formula using a relative predictive weight of 200, there is a noticeable difference in rank for Joe and George, with LSAT scores of 700, compared with Henry and Mary, whose LSAT scores are 500—200 points lower.

IV. SAMPLE PREDICTION TABLE

To relate this way of looking at prediction equations or Admissions Index formulas back to the type of information that is provided by a Validity Study Service report, a sample prediction table for Law School A is given on the next page. The original prediction equation whose relative predictive weights were found to be 107 and 1 was used to prepare the table. In the original example for Law School A the prediction equation was

$$PFYA=0.2247\ (UGPA) + 0.0021\ (LSAT) + 0.7515$$

Assume you wish to compute a predicted first-year law school avearge for Alice whose:

UGPA was 2.0
LSAT was 600

The UGPA weight of 0.2247 times the UGPA of 2.0 is 0.4494, the weighted UGPA.

The LSAT weight of 0.0021 times the LSAT score of 600 is 1.2600, the weighted LSAT.

The weighted UGPA plus the weighted LSAT is 1.7094, plus the additive constant of 0.7515 is 2.4609.

Thus, Alice's predicted grade, rounded to 1 decimal place, is 2.5, which is located in the sample prediction table under the column heading of 600 for LSAT score and on the line for an undergraduate average (UGPA) of 2.00. Although the numbers computed from using weights of 107 and 1 or from using the prediction equation in the form in which it is given in a Validity Study Service report look very different, they would rank the students in the same order.

Since the UGPA weight of 107 in Law School A is very close to the rounded value of 100 used in example 2 above, an increase of about 100 points in the LSAT score and a decrease of 1.00 in the undergraduate average (or an increase of 1.0 in the undergraduate avearge and a decrease of 100 in the LSAT score) should result in essentially the same predicted first-year law average grade, except for rounding differences. This may be seen by examining the entries in the sample prediction table. Two sets of examples (UGPAs of 4.00, 3.00, and 2.00, paired with LSAT scores of 550, 650, and 750, respectively, and 3.60, 2.60, and 1.60, paired with 400, 300, and 600, respectively) have been marked to emphasize this relationship.

Two notes of caution concerning the examples given here must be kept in mind. The first concerns the empirical determination of prediction equations. The second concerns the use of such equations to predict individual applicants' performance in law school.

First, although a prediction equation of the kind given in the example for Law School A is objective, empirically determined, and, from a statistical viewpoint, the "best" equation that can be determined from the data on the particular set of predictors and grades for the particular class on which the study is based, there is no assurance that equations developed on data for another class, even at the same school, would be the same. There would necessarily be a certain amount of statistical fluctuation, or sampling error, as it is called, even if the two classes were admitted under the same policy, taught the same first-year courses by the same teachers, and were otherwise treated as similarly as possible. Although one would expect more variation from one law school to another than from one class to another at the same school, part of the difference in relative predictive weights from one law school to another is also due to sampling error.

SAMPLE PREDICTION TABLE—PREDICTED 1ST-YEAR LAW AVERAGE GRADES FOR STUDENTS WITH VARIOUS UNDERGRADUATE AVERAGES WHO EARN VARIOUS LSAT SCORES BASED ON THE RECORDS OF THE 1971 ENTERING CLASS—SAMPLE A COLLEGE OF LAW, 150 STUDENTS

Undergrad average	Predicted 1st-year average grade for student whose LSAT score is—												
	200	250	300	350	400	450	500	550	600	650	700	750	800
4.00	2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.6	2.9	3.0	3.1	3.2	3.3
3.80	2.0	2.1	2.2	2.3	2.4	2.6	2.7	2.8	2.9	3.0	3.1	3.2	3.3
3.60	2.0	2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.8	2.9	3.0	3.1	3.2
3.40	1.9	2.0	2.1	2.3	2.4	2.5	2.6	2.7	2.8	2.9	3.0	3.1	3.2
3.20	1.9	2.0	2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.8	2.9	3.0	3.2
3.00	1.6	2.0	2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.8	2.9	3.0	3.1
2.80	1.8	1.9	2.0	2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.9	3.0	3.1
2.60	1.8	1.9	2.0	2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.8	2.9	3.0
2.40	1.7	1.8	1.9	2.0	2.1	2.2	2.3	2.4	2.6	2.7	2.8	2.9	3.0
2.20	1.7	1.8	1.9	2.0	2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.8	2.9
2.00	1.6	1.7	1.8	1.9	2.0	2.1	2.3	2.4	2.5	2.6	2.7	2.8	2.9
1.80	1.6	1.7	1.8	1.9	2.0	2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.8
1.60	1.5	1.6	1.7	1.8	2.0	2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.8
1.40	1.5	1.6	1.7	1.8	1.9	2.0	2.1	2.2	2.3	2.4	2.5	2.6	2.7

Note: The following equation, derived from the best-weighted combination of undergraduate average and LSAT score used in the multiple correlation of these predictors with 1st-year average grades, was used to prepare this table: predicted FYA = 0.2247 (UGPA) + 0.0021 (LSAT) + 0.7515.

Second, as has been stated in all law school validity study reports prepared at Educational Testing Service during the past twenty-five years, a predicted grade (or, in the LSDAS context, an Admissions Index) computed from the kind of equation resulting from a validity study is only an estimate, not an exact forecast, of what an applicant will do in his or her first year of law school.

Accompanying every prediction table ("Table 2" in each validity study report) is an expectancy table ("Table 3" in each report) that may be used to determine the chances in 100 that an entrant will earn a first-year average grade equal to or higher than any selected average grade. If you will refer to page 9 in *Law School Validity Study Service*, enclosed, you will see from Table 3 for Sample A College of Law that a student would have a 50–50 chance of earning exactly the grade that was predicted for him or her. A student predicted to make a 3.0 average, for example, would have more than 50 chances in 100 (i.e., 88 chances in 100) of earning an average of at least 2.6 but fewer chances (i.e., 12 chances in 100) of earning an average of at least 3.4.

V. SELECTING AN APPROPRIATE EQUATION FOR YOUR LAW SCHOOL IN 1974–75

The following material is designed to assist you in selecting an appropriate equation to use in calculating Admissions Indexes for applicants to your law school during 1974–75.

The Validity Study Service report for your school contains two or more prediction equations. Please refer to the report for your school and, for illustrative purposes, the report for Sample A College of Law (set forth in Table 4 on page 10 of the *Law School Validity Study Service*).

On purely statistical grounds, an equation accompanied by the highest "shrunken multiple correlation" (which appears in parentheses in each Validity Study Service report)[4] would be the best one to pick. This is so, since, other things being equal, it would yield the most accurate predictions of the first-year average grades that students would be expected to earn. When the multiple correlation is higher, "the standard error of estimate" (which also appears in each Validity Study Service report) [5] is lower, another indication of greater accuracy of prediction.

---

[4] The term "shrunken multiple correlation" will be a new one for many admissions officers. This brief memorandum is intended to provide you with a simplified, basic understanding of such statistical terms. Please refer to pages 2–4 of the enclosed *Law School Validity Study Service* for further background information regarding the concept of correlation and its use in validity studies.

Briefly stated, a *correlation coefficient* expresses a relationship between two measures, such as height and weight, or LSAT scores and first-year average grades in law school. A *multiple correlation coefficient* is used to evaluate combinations of predictors, such as the two-predictor combination of UGPA and LSAT or the three-predictor combination of UGPA, LSAT, and WA. In comparing multiple correlation coefficients based on different numbers of predictors you should use the *shrunken multiple correlation coefficient*, which adjusts the multiple correlation coefficient to take account of different numbers of predictors and therefore improves the statistical precision of the comparison.

ILLUSTRATIVE EXAMPLES

The two law schools whose results were selected for use as examples in the *Law School Validity Study Service* were chosen because their results were typical, or near the middle of the distribution of all of the study results from the 90 studies carried out in 1972–73.

Sample A—College of Law (page 10)

In Sample A College of Law both the two-predictor combination of UGPA and LSAT and the three-predictor combination of UGPA, LSAT, and WA yield the same shrunken multiple correlation coefficient (.43) and the two standard errors of estimate are identical (0.35). (It should be noted that the Writing Ability test score has a small negative weight in the three-predictor equation, which may raise policy questions about its use, because a higher WA score would be associated with a lower predicted first-year average, and vice versa. To avoid this anomaly, most schools in the position of Sample A College of Law would probably want to use the two-predictor equation.)

Sample B—School of Law (page 14)

Sample B School of Law's study included the LSAT College Mean (LCM) as one of the predictors. (Note that, although Sample B School of Law used a fifth predictor (ADP) the LSDAS system is not equipped to handle an equation with five predictors.)

It is not surprising that Sample B's shrunken multiples are almost the same as Sample A's for the combinations of UGPA and LSAT and for UGPA, LSAT, and WA. The standard errors of estimate for Sample B, however, look quite different from Sample A's because the two law schools used very different numerical scales for their grades. In Sample B's case the standard error of estimate for the three-predictor combination of UGPA, LSAT, and LCM is slightly smaller than the standard errors of estimate for the other combinations (3.36 compared with 3.37 and 3.38), indicating that the combination of UGPA, LSAT, and LCM yields very slightly more accurate predictions than the other three combinations. Thus, on statistical grounds, there is a slight preference for the three-predictor combination of UGPA, LSAT, and LCM.

VI. USING AN EQUATION WHICH INCLUDES LSAT COLLEGE MEAN (LCM)

As previously indicated, Sample B School of Law had the LCM as one of its predictors. Please refer to Sample B School of Law (Table 4, page 14 of the *Law School Validity Study Service*).

When a law school considers the use of an equation which includes the LCM it is important for the admissions officer to be aware of the effect of the use of such an equation on individual student applicants. This is particularly important where the relation between the weight accorded to the LSAT College Mean (LCM) and the weight accorded to the UGPA is such that a relatively small change in the LCM (e.g., 35 points) results in the same amount of change in the predicted first-year average as does a substantial change in the UGPA (e.g., one-third of a grade point).

The following examples illustrate the relative effect on individual prediction of the first-year average (PFYA) from using the LCM. By following the steps shown in the examples of using data on a sample of your own applicants, you will be able to determine the effect of the use of the LCM on your own applicants. Two examples follow: one where there is relatively little effect and one where there is relatively large effect from the use of the LCM on the individual prediction of first-year average.

---

[5] The *standard error of estimate* expresses the accuracy of prediction in terms of the numerical scale used for the first-year average grades (FYA). For example, at Sample A College of Law (page 10), whose 1971 entering class had a mean FYA of 2.57, the standard error of estimate is 0.35. This can be interpreted roughly to mean that of every 3 predictions made from these results, 2 should be within 0.35 point of the actual grade and one would differ by more than that amount.

Example A: Relatively Little Effect on Individual Predictions from the Use of the LSAT College Mean (LCM)

We shall use the same nine applicants as those in Examples 1 and 2 on pages 5 and 6. Following are their grades and scores with the addition of the LSAT College Means (LCMs) from the imaginary undergraduate colleges that they attended (they are ranked by LSAT score):

Applicant	Undergraduate grade point average	LSAT score	LCM
Ann	4.0	700	480
Joe	3.0	700	600
George	2.0	700	560
Jack	4.0	600	560
Jim	3.0	600	520
Alice	2.0	600	520
Henry	4.0	500	600
Mary	3.0	500	520
Tom	2.0	500	600

Please refer to Table 4 for Sample B School of Law in the *Law School Validity Study Service* (page 14). You will note that there are five prediction equations. This discussion concerns only the following two prediction equations: The two-predictor equation using only the UGPA and LSAT

$$\text{PFYA}=3.3291\ (\text{UGPA})+0.0192\ (\text{LSAT})+53.8299$$

and the three-predictor equation using UGPA, LSAT and LCM:

$$\text{PFYA}=3.3002\ (\text{UGPA})+0.0186\ (\text{LSAT})+0.0102\ (\text{LCM})+48.8996$$

Note that the shrunken multiple correlation coefficient (.44) is the same for both equations.

Applying the two-predictor equation to Alice's UGPA and LSAT score:

$$\text{PFYA}=(3.3291)\times(2.0)+(0.0192)\times(600)+53.8299$$

you obtain a PFYA for her of 72.0.

Following the same step for each applicant, the PFYA for all the applicants would be as follows:

Undergraduate GPA	LSAT score					
	500		600		700	
4.0	Henry	76.7	Jack	78.7	Ann	80.6
3.0	Mary	73.4	Jim	75.3	Joe	77.3
2.0	Tom	70.1	Alice	72.0	George	73.9

We shall now illustrate what would happen to these applicants if the LCM was included with the UGPA and the LSAT. Under this circumstance, Sample B School of Law would apply the three-predictor equation (UGPA, LSAT and LCM) given above. Applying the three-predictor equation to Alice's UGPA, LSAT score, and LCM:

$$\text{PFYA}=(3.3092)\times(2.0)+(0.0186)\times(600)+(0.0102)\times(520)+48.8996$$

you obtain a PFYA for her of 72.0.

You will note that the PFYA for Alice is the same (72.0) using either the two-predictor or three-predictor equation. Following the same steps for each of the other applicants using their UGPA, LSAT, and LCM as given above, the PFYA for all of them would be as follows:

Undergraduate GPA	LSAT score					
	500		600		700	
4.0	Henry	77.6	Jack	79.0	Ann	80.1
3.0	Mary	73.4	Jim	75.3	Joe	78.0
2.0	Tom	70.9	Alice	72.0	George	74.3

Although some of the predicted grades change slightly, the ranking (from high to low based on PFYA) of the applicants would be the same under either of these two prediction systems:

Applicant	PFYA under 2-predictor equation (UGPA, LSAT)	PFYA under 3-predictor equation (UGPA, LSAT, LCM)
Ann	80.6	80.1
Jack	78.7	79.0
Joe	77.3	78.0
Henry	76.7	77.6
Jim	75.3	75.3
George	73.9	74.3
Mary	73.4	73.4
Alice	72.0	72.0
Tom	70.1	70.9

Note that Ann, with the highest UGPA (4.0) and LSAT (700) ranks first (i.e., has the highest PFYA compared to the others) while Tom, with the lowest UGPA (2.0) and LSAT (500) ranks last (i.e., as the lowest PFYA compared to the others).

Another way to determine whether the use of LCM will result in a change in the ranking of applicants is to see how much difference in the LCM brings about the same difference in predicted grade that a given difference in UGPA would produce. For example, in Sample B School of Law's *three-predictor equation*, an increase of 324 (e.g., 400 to 724) points in the LCM would lead to the same change in the PFYA as an increase of 1.0 point (e.g., from 2.0 to 3.0) in the UGPA. (324 was obtained by dividing the weight for the UGPA in the three-predictor equation, 3.3092, by the weight for the LCM in that equation, 0.0102. This yields an LCM point increase equivalent to a 1.0 UGPA increase.) If you had LCMs of 400 and 724 (324 point difference in the LCM) for two applicants to Sample B School of Law who had the same UGPA (2.0) and LSAT scores (500), their PFYAs, using the three-predictor equation, would be as follows:

Applicant	LCM	PFYA for UGPA (2.0)/ LSAT (500)
A	724	72
B	400	69

Similarly, if the two applicants had UGPAs of 2.0 and 3.0 (1.0 point difference in UGPA), but the same LCM (400) and LSAT scores (500), their PFYAs using the three-predictor equation would be as follows:

Applicant	UGPA	PFYA for LCM (400)/ LSAT (500)
A	3.0	72
B	2.0	69

In each case the PFYA goes from 69 to 72. In the first instance, although the two applicants do not differ in UGPA and LSAT, a relatively large difference in the LCM of the colleges they have attended has resulted in applicant A being ranked higher. In the second instance, although both applicants had the same LSAT score and came from undergraduate colleges with the same LCM, a one-point UGPA difference has resulted in applicant A being ranked higher.

Clearly, LCMs differing by as much as 324 points are extremely unlikely. However, since in the foregoing example a full point (1.0) difference in UGPA is equivalent to a 324 point difference in LCM, a difference of about one-third of a point in the UGPA (e.g., 3.0 to 3.3) would be equivalent to a 108 point difference (one-third of 324) in LCM. Obviously, many applicants will differ by as much as 108 points in LCM or by one-third of a point in UGPA.

Example B: Relatively Large Effect on Individual Predictions from the Use of the LSAT College Mean (LCM)

Let us assume, for the sake of example, that we have another law school with the following fictitious equations and shrunken multiples. Let us further assume that this school has transformed its equations to simpler numbers by the relative predictive weights method described on page 2 of this memorandum.

Two-predictor equation (UGPA and LSAT):

PFYA=109 (UGPA)+1 (LSAT) (.44 shrunken)

Three-predictor equation (UGPA, LSAT and LCM):

PFYA=206 (UGPA)+1 (LSAT)+2 (LCM) (.50 shrunken)

Note that there is a noticeable increase in the shrunken multiple based on UGPA, LSAT, and LCM compared with the shrunken multiple for the two-predictor combination of UGPA and LSAT. Using the steps at the end of the previous example on this fictitious law school's three-predictor equation we find that a change of about 34 points in LCM corresponds to a difference of one-third of a grade point.

The *two-predictor equation* (UGPA and LSAT) for this fictitious school would not yield the same numerical results for PFYA as would be yielded by applying the two-predictor equation of Sample B law school to the same applicants. However, the applicants would be ranked the same at both the fictitious law school and Sample B law school. You could confirm this by using the date for the applicants in the previous example (page 11) and following the steps for Sample B School of Law given on page 11 but using the fictitious school's two-predictor equation (PFYA=109 UGPA+1 LSAT).

Thus, if the applicants in our example had applied to both the fictitious law school and Sample B School of Law, and each law school had applied its own *two-predictor equation* (PFYA=109 UGPA+1 LSAT for the fictitious law school and PFYA=3.3291 UGPA+0.0192 LSAT+53.8299 for Sample B School of Law) to the applicant's grades and LSAT scores, the results would be as follows:

Applicant	Fictitious law school: PFYA under their 2-predictor equation (UGPA, LSAT)	Sample B school of law: PFYA under their 2-predictor equation (UGPA, LSAT)
Ann	1,136	80.6
Jack	1,036	78.7
Joe	1,027	77.3
Henry	936	76.7
Jim	927	75.3
George	918	73.9
Mary	827	73.4
Alice	818	72.0
Tom	718	70.1

In both cases, although the numbers differ, the applicants are in the same rank order (i.e., Ann is first and Tom last).

To see what would happen for the fictitious law school if the third predictor (LCM) is used, one would apply the steps outlined on page 12 to the fictitious law school's three-predictor (UGPA, LSAT, LCM) equation (206 UGPA+1 LSAT+2 LCM). Doing this for the same nine applicants (page 11) yields the following results:

Undergraduate GPA	LSAT score					
	500		600		700	
4.0	LCM 600: Henry	2,524	LCM 560: Jack	2,544	LCM 480: Ann	2,484
3.0	LCM 520: Mary	2,158	LCM 520: Jim	2,258	LCM 600: Joe	2,518
2.0	LCM 600: Tom	2,112	LCM 520: Alice	2,052	LCM 560: George	2,232

The effect of using the LCM for the fictitious law school is enough to change the ranking of the applicants significantly as shown in the table below:

Fictitious law school's applicants ranked according to predictions from:

UGPA and LSAT:		UGPA, LSAT, and LCM:	
Ann	1,136	Jack	2,544
Jack	1,036	Henry	2,524
Joe	1,027	Joe	2,518
Henry	936	Ann	2,484
Jim	927	Jim	2,258
George	918	George	2,232
Mary	827	Mary	2,158
Alice	818	Tom	2,112
Tom	718	Alice	2,052

Ann with the highest UPGA and LSAT, is no longer at the top of the list, because of the LCM (480) at her college. At the other extreme, Tom, with the lowest UGPA and LSAT score, has moved up ahead of Alice, because of the relatively high LCM (600) at his college. Extreme cases such as Ann and Tom are not very likely to be found often among actual applicants at most law schools, since there would usually be more correlation among UGPA, LSAT, and LCM than in these examples.

CONCLUSION

It has been demonstrated that when a relatively *large* difference in the LCM of applicants (e.g., 108 as in the case for Sample B School of Law) was equivalent to a significant (one-third) point difference in applicants' UGPAs, the ranking of applicants was not significantly different for either the two-predictor or three-predictor equations. However, when a relatively *small* difference in LCM of applicants (e.g., 34 points in the case of the fictitious law school) was equivalent to a significant (one-third) point difference in applicants' UGPAs, some rather dramatic changes in rank order occurred. In the latter case, there was also a noticeable incease in the shunken multiple when LCM was added (three-predictor equation of UGPA, LSAT and LCM) as compared to when it was not (two-predictor equation of UGPA and LSAT).

Accordingly, in examining your own validity study report results, it is important to:

1. *determine* the amount of difference between applicants in their LCM that is associated with a given difference in UGPAs between applicants for your three-predictor equation (UGPA, LSAT, and LCM)—especially if there is a noticeable increase in the shrunken multiple for the three-predictor equation (UGPA, LSAT, and LCM) as compared to the two-predictor equation (UGPA and LSAT); *and*

2. *apply*, following the steps outlined in the examples above, your two-predictor (UGPA and LSAT) and three-predictor (UGPA, LSAT, and LCM) equation to the actual data for a sample of your applicants to see how they would rank under each predictor equation. (Note that the same general steps that were outlined for obtaining PFYAs from two-predictor or three-predictor equations could be applied to a four-predictor equation, e.g., UGPA, LSAT, WA, and LCM.)

Law School Policy Options in Deciding Whether to Use the LCM

The decision to use the LSAT College Mean (LCM) in the computation of an Admissions Index is a policy decsion which the law school must make. This memorandum has demonstrated the steps to go through in order to determine the effect that using LCM would have on the rankings of your applicants. If the use of the LCM does have a significant effect on the ranking of individual applicants, a law school might choose one of the following three options:

1. The law school may use a formula with LCM, realizing that the LCM will have an effect on one applicant's Admissions Index compared with another applicant having the same UGPA, LSAT, and WA (if used), but who attended a different undergraduate college (having a different LCM).

2. The law school may use a formula with LCM generally, but treat extreme cases specially. Note that this year, for the first time, the individual score reports that you receive will have the LSAT College Mean (LCM) from the applicant's degree college printed on them so that you can readily see what a particular LCM is, rather than having to look it up in a separate publication as you had to do in the past.

3. The law school may opt to use a two-predictor (UGPA and LSAT) formula, or a three-predictor (UGPA, LSAT, and WA) formula, ignoring LCM.

I would, of course, be glad to answer any inquiries regading any of the points made in this memorandum.

BARBARA PITCHER.

AUGUST, 1974.

Mr. HART. Thank you very much. I appreciate that.

Perhaps I should say that although I do come here as a representative of the Law School Admissions Council there is considerable diversity among the members of that association—namely all the law schools in the United States—and I cannot speak for any one of them because as far as individual law schools are concerned they vary in their admission procedures considerably.

There are a couple of major points that I tried to make in my prepared statement.

The first is that I believe most people assume that we can predict law school success better than we actually can. In a sense they are too kind to the law school admission test and to the other predictors of success.

Second, I have tried to make the point that the admissions process is far more complex than most people believe, that soft data has always been used in the process, that hard data is not as hard as it appears to be at times, and law schools have always made policy decisions as to whom they will admit to the school over and above simply accepting those with the highest predicted first year averages or the prediction of those with the best performance.

My statement also comments upon the use of a few words that occur quite often in any dialog involving this subject, namely, the word "quotas," the word "qualified" and the word "most qualified." I think those words are often used in a way that does not really mirror reality and does not represent the situation as it exists in the law schools.

My statement also comments upon the many ways in which race or ethnic origin is a factor used by admissions offices in law schools.

Finally, I have attempted to point out that the situation in this country, in my opinion, demands that the law schools do something to increase the number of lawyers from minority groups.

If I may, I would like to refer to several parts of the statement I have given to you.

Initially, the statement attempts to describe the Law School Admissions Council and its operations and to tell you something about the test.

On pages 7, 8, and 9 there are tables which reflect the ways in which the test may be used and the predictive power of the test. Typically the predictive power of the test is reduced to a number, so-called correlation coefficient: The higher the correlation coefficient, the more predictive the test.

The law schools through the Law School Admission Council have investigated the predictive power of the test on numerous occasions. We have run over 400 validity studies in the past 25 years to determine the extent to which it predicts success.

Studies currently show that the test definitely is a predictor of success in law school. The correlation coefficients in a recent study we did involving 99 law schools run from 0.12 to 0.70.

A 0.12 correlation coefficient is extremely low. For the particular school that had that correlation coefficient, the test was not doing very much in the way of predicting the success of its applicants.

At the school that had the 0.70, it was doing a fairly good job.

But what is a fairly good job? What is not such a good job?

There are three or four ways of expressing this. Table 1 on page 7 looks at the correlation coefficient in one way. If for example the school has a correlation coefficient o f 0.40 that means to the admission officer that of the students predicted to be in the top fifth of the class 7 will in fact be in the botton fifth, 55 will in fact be in the middle of their class and 38 will be in the top fifth.

Certainly not mathematical accuracy or certainty as to prediction.

Another way of looking at a correlation coefficient is example emphasized by table 2 on page 8, which is an expectancy table. Actually this expectancy table was produced for the University of New Mexico School of Law. It indicates that with the correlation coefficient that we have, if an applicant has a 2.0 predicted first year average, he has a 50–50 chance of making a 2.0 or better, 29 percent chance of making a 2.2 average, and a 71 chance of making at least a 1.8 average in law school.

The table on page 9 is still another way of viewing a correlation coefficient. That table looks at the extent to which we improve prediction depending upon the validity of the law school admission test.

If selection were by random chance—that is, if we are selecting people just randomly without looking at any data—we would have a 50–50 chance of making correct decisions. In a school where the correlation coefficient were 0.4, if that school was selecting 20 percent of its applicants the chance of making correct decisions would be increased to 73 percent. So, again, the test does increase the ability to predict success.

Still another way of looking at the correlation coefficient which I have not gone into in my statement is to look at the extent to which the test is measuring the variables that go into making a good law student.

The basic statistical approach here is to take the square of the correlation coefficient. This is then said to measure the amount of the variance tested.

Hence if you had a correlation coefficient of 0.40, squaring that you have 0.16, and the test would be measuring only 16 percent of the variables that go into making up a good law student. Other things, such as motivation, stick-to-it-iveness, tolerance to ambiguity, and all sort of other qualities, are not measured by the predictors.

The conclusion drawn from this by me and other admissions officers is that the law school admissions test is a very useful tool to the admissions officer, but it has significant limitations.

Most law schools, I would say all law schools, use data in addition to law school admissions test.

The second item of hard data generally used is the applicant's undergraduate grade point average.

To predict success, the law schools use the law school admission test, the undergraduate grade point average of the applicant, and perhaps two other bits of predictive data; namely, the writing ability test score that comes off of the LSAT but is scored separately, and finally the LCM, which is simply the median law school admission test score of the particular college which the applicant attended. These are then combined into a regression equation which weighs those four variables in such a way as to optimize prediction.

On page 13 I have included as table 4 a page out of the validity study that we just completed for our law school. This type of study and report has been done for most of the law schools in the country, either this year or last year.

This study shows the various possible formulae that we can choose in order to predict the performance of applicants.

Each formula in table 4 weighs the law school admission test and the undergraduate grade point average. Some also include the LCM, and the writing ability score.

In addition, the fifth one includes a specific variable; namely, whether the individual went to the University of New Mexico as an undergraduate or went to some other institution. As the fifth formula shows, we improved prediction where a distinction was made between those two groups of people.

The first step in the admission's process at our law school is to inspect the validity study. We must determine which of the five formulae we are going to use for this year. That selection, in itself, can make a difference as to an individual applicant as he or she be admitted under one formula and not under another. This is because of the differing weightings of the variables, that is, LSAT and UGPA.

There are judgmental decisions which have to be made at this time. For example, if you look at table 4, the first inclination is to take the five-predictive formula because it has a corrolation coefficient of 0.43, which is considerably higher than any of the others. But we can't use that formula because it doesn't fit into the computer. The most that we can use in any prediction equation is four variables, four indicators of success. So we have to discard the fifth formula.

But it is possible for us to adjust one of the other formulae to take into account what we have been told by the five-predictive formula.

Another thing I would point out in the five-predictive formula is that one of the predictors that you sometimes use is the writing ability score. This has a negative value in the fifth formula; a value of minus 0.0003. This in effect tells us that if we use that formula somebody who scores high on the writing ability portion of the law school admission test has less chance of being admitted to law school. My reason repels at that.

The reasoning of most admissions officers is the same. I would probably discard the use of that formula simply because it penalizes someone for doing well in a portion of the test. Statistically that formula is perfectly sound. It is correct. But again it goes against reason in the sense that it deducts for good performance in one element of the test.

For next year we have selected the two-predictive formula in table 4. We don't like LCM because LCM sometimes skews results. In some schools that use the LCM, this means that an individual from a particular undergraduate institution has almost no chance of getting into the school because the median LSAT of the people at that school is so low that it pulls him or her too far down.

Again, what I am trying to point out is that there are judgmental decisions even at this point of the admissions process; judgmental decisions that affect who is going to get into school, even though it appears that the predictive equation comes out as a nice neat number, a nice neat mathematical formula.

After a school has determined upon a regression equation, looking at data similar to that in table 4, there is another step that almost all law schools take. That is to try to improve prediction through the use of the expertise of their admissions committee or admissions officers.

In my statement, I have tried to give a number of illustrations where soft data is used to improve prediction. For example, a particular individual who has applied may have a very high LSAT but has a relatively low undergraduate grade point average earned some years before. If there is an interval of time between graduation from college and his or her law school application, during which the individual has had experience either in the military or employment of some kind, many admissions offices would hazard a guess that the LSAT is probably a better predictor of success than both criteria together, on the grounds that the individual was probably immature when he attended undergraduate school and has probably matured.

Next I have tried to cover the selection of a student body. After you have put all applicants in a rank order—although actually it is never done that way, because they are all coming at different times and it is very difficult to ever get a nice neat computer printout of the exact ranking of all applicants—and the computer does not in effect take judgmental decisions as to employment, et cetera—there are policy decisions made by law schools as to the way in which they will select students.

The two common examples, I suppose, are the national law school that want geographical representation in the student body and hence discriminate against applicants from the more populous States, and the State law schools who decide it will cater to residents of the State. These schools discriminate against citizens of other States. We do that as do most State law schools.

There are other policy decisions made. Some schools feel that it is important that there be more legal representation in rural areas. They try to select students who are more likely to return to some of the rural areas of the State. New Mexico, for example, still has some counties where there are no lawyers even though there are substantial people in those counties.

Mr. O'HARA. You ought to advertise that fact and people would move to those counties if they could find a county with no lawyers.

Mr. HART. I am afraid all the lawyers would move there, Congressman, and ruin them.

Mr. O'HARA. Yes, that is right.

Mr. HART. There are other policies that have been adopted by law schools for a long period of time. Diversity of student body is one. For example we would like to have some people in our student body who have Ph. D.'s. We also would like to have in our student body a medical doctor because we think this would not only bring something to the student body but also bring something to the profession.

Such policy determinations always involve judgmental decisions. For example there is an argument, that I have made on occasion, that we ought to exclude anybody who has an advanced degree from law school on the ground that the person has had his or her chance at graduate education and that since resources are so limited we should take somebody who hasn't had a chance to go beyond college. I don't think my position is sound but it is arguable.

The next thing I have tried to address in my statement myself is the use of the word "qualified applicants" and the use of the word "quotas." It is often said that we have denied admission to more qualified white applicants in order to accept some black students. The problem is in determining what is meant by qualified or by more qualified.

If you look at the situation that has occured in the law schools applications, it is clear that a high proportion of people, white, black, Chicano, all kinds of people from all kinds of backgrounds who are being denied today would have been admitted to law school 6 or 7 years ago because our standards, have risen.

All that is meant by raising standards is that we are now more selective. We do not have sufficient positions in the law schools to accommodate all the people who want to come.

If you try to say who is qualified, for example, to come to the University of New Mexico, one way of defining a qualified person is everyone who has a college degree and who has taken the LSAT. Those are the only two qualifications that we require.

I tried in my statement to look at this question another way and say, "Well, how high an LSAT does a person have to have to be qualified to attend the University of New Mexico School of Law. Picking 500 as an arbitrary figure, it is obvious that we had far more below that number 5 years ago or 10 years ago than we have today.

Certainly, someone who had an LSAT under 500 in 1964 for example had a fine chance of getting into our class. In fact, 37 percent of our class of that year was made up of people with an LSAT of under 500.

If you look at the concept of qualified or more qualified or most qualified applicants, there is a danger that you will adhere too closely to the numbers. If you look at a computer printout of applicants to a school, you will see someone who has a 2.31 predicted first-year average and someone else who has a 2.34 predicted first-year average. The tendency is to say that the person with the 2.34 predicted first-year average is more qualified.

But, in my opinion, that is a slavish adherence to a meaningless difference. If you start considering that you are dealing with probabilities and if you look at the slight difference in the number of items that an individual has to get right in the law school admission test, which, after all, is only a half-day test, to raise him or her from a 2.31 to a 2.34 or even from 2.30 to 2.40 or 2.50 it becomes rather obvious that if you say one is more qualified than the other, that is the easy way out. You are just taking a look at some numbers that are cranked out by a machine which purport to have only limited effectiveness.

Also I would quarrel with the use of the word "quotas" as far as the admission of minority students are concerned in law school. I know of no school that uses a quota in the sense in which I use that word.

Mr. O'HARA. I can give you one.

Mr. HART. OK.

Mr. O'HARA. My own alma mater, the University of Michigan Law School, by agreement negotiated with the Black Student Union, 10 percent of the freshman class is to be black each year.

Is that not a quota?

Mr. HART. A couple of responses. I do not think that is right to enter into an agreement that 10 percent of the students to be admitted will be black.

Mr. O'HARA. That is a goal?

Mr. HART. I will not defend the procedure if it is as you describe it.

Mr. O'HARA. It is a goal rather than a quota?

Mr. HART. If it is a goal then I would want to inquire more carefully into what the University of Michigan is actually doing. If it is a goal in the sense that they would like to have 10 percent of their students from the black community and they aim toward obtaining 10 percent of their student body from black applicants by recruitment efforts, by looking carefully at applications from black individuals, then I would defend that.

If it is a goal in the sense that it is really a quota and they in effect reserved 10 percent of the seats and no one can get those seats but blacks, then I cannot defend their procedure either as an individual or as representative of the law school admissions council.

I would suggest, however, that I know of no law school—I don't know about Michigan and I don't know about all law schools, although I think I know about many—that do set quotas quite like that.

Let me tell you one thing we do at the University of New Mexico that looks very much like a quota, but I deny that it is. We have about 100 seats in the first-year class. We aim at exactly 100 people in the first year, and we reserve 20 of those seats for late admissions. Some may say that late admissions is simply a euphemism for minority admissions. Why do we reserve the seats? Because we know that there is the CLEO program, and an American Indian law scholarship program that operate during the summer between an applicant's graduation from college and his potential entrance into law school.

We reserve those 20 seats in the hope that we will receive applicants from those programs who meet our qualifications and whom we can accept.

We want to make decisions about these applicants at the end of the summer after these programs are over because we want to take into consideration the applicant's performance in those programs as well as their LSAT and undergraduate grade point average.

There are years when we don't get 20 accepted applicants from these programs. That doesn't concern us all that much. We would like to have 20 but we don't get them from those programs; we fill the vacancies from people on our waiting list.

There are years when we go over 20. This past year we went way over and took more than 20 as a result of summer programs. As a result we have 124 in the first-year class.

Now, the entire 24 were not from the CLEO programs. There were other mistakes we made in our admissions procedures. But again that doesn't bother us too much that we have gone over a little bit. It doesn't bother us if we go under as far as total admissions, and we end up with 95 or 93 students.

I would suggest that although our procedure looks like a quota and people may say, "Well, you are holding 20 seats for minorities," I don't think that is right. I think we are holding 20 seats to give a certain group of people the opportunity to prove to us through a summer program that they are capable of adequate performance in our law school and that they meet our qualifications.

I would suggest that the schools that have adopted a policy that they would like to have a certain percentage of students from the black community or from the Chicano community or from the Indian community are doing the same sort of thing as we are.

The decisions are rational, intelligent decisions based not only upon race but upon all the factors, all of the credentials, that an individual brings to the admission committee.

Mr. O'HARA. With respect to these late admissions, are you applying the same standards? You have a system at the University of New Mexico Law School for how you decide who you are going to let into your law school. You use these predictive factors. LSAT, UGPA, grade point average——

Mr. HART. All that stuff.

Mr. O'HARA. All that.

Mr. HART. Right.

Mr. O'HARA. And you arrive at—you don't use them so mechanically. But whatever it is you do have some sort of a rough level at which you stop admitting that group.

Mr. HART. Yes, sir; we do.

Mr. O'HARA. Do you exact the same requirements of the late admissions that you do of the early admissions?

Mr. HART. I believe we do. Again I have to explain my answer because it may appear as though we don't.

What we are doing for the coming year is to draw a line on the projected first-year average below which everyone will be denied admission whether they are black, Chicano, white.

That will probably be a line showing a predicted first-year average of about 2.1 or 2.2. So we deny everyone who doesn't have about a 70 percent chance of completing our law school.

We will then draw another line at the top. We will say anyone that has a predicted first-year average of over 3.0 will be admitted.

The remaining applicants, the largest group, is composed of those in the middle. In this group everyone will be considered in full including hard data and including anything else the applicant sends to us. This includes answers to a question that we are going to ask this year, that is essentially, "Why should you be admitted over other people who are equally or more qualified?"

We are going to ask everyone to file an answer to that question because we think it might evoke the kind of response that will show us something about the ability of the individual.

Within the middle group we take race into consideration in ways that, in my opinion, are not violative of equal protection. For example, we know from past experience that a large proportion of the blacks and Chicanos are disadvantaged as far as their educational background is concerned. As a result, when it is brought to our attention that an applicant is from a minority race, we are more alert to the fact of possible educational disadvantage, and we try to investigate the background that individual in more detail through what he submits to us.

Mr. O'Hara. But you don't do that for an Anglo applicant, do you?

Mr. Hart. We will for the Anglo if it comes to our attention that he may be culturally disadvantaged.

Mr. O'Hara. But not if it doesn't.

Mr. Hart. Not if it doesn't.

Mr. O'Hara. So, if the Anglo child of migrant farmworkers isn't savvy enough to come up to your office and say, "Hey, I am the child of a migrant farmworker and I grew up in poverty and had an interrupted education and got a lot of problems," then you don't give him any credit for that.

But on the other hand if he was a child of a black migrant farmworker you would automatically find out, wouldn't you?

Mr. Hart. No, we don't automatically find it.

Mr. O'Hara. You mean you would take his file aside?

Mr. Hart. That is right.

Mr. O'Hara. And you would look for it there.

Mr. Hart. Yes, sir. Our reaction is based upon simply the probabilities that the Chicano applicant from New Mexico or the black applicant from New Mexico is more likely to be educationally deprived.

Mr. O'Hara. Dean, I don't think I would agree with you that your system is not discriminatory. But I don't want to get into that argument at the moment because I want to get to a couple of other matters with you, if I could.

Mr. Hart. Certainly.

Mr. O'Hara. The law school admissions test, we have had witnesses come before us and tell us it is culturally biased. Is that true?

Mr. Hart. I don't know.

Mr. O'Hara. You have certainly heard a lot more of those complaints than I have.

Mr. Hart. Yes, sir, I have heard a few.

Mr. O'Hara. What have you heard to tell me that is isn't culturally biased?

Mr. Hart. We decided about 10 years ago to try to determine whether there was any cultural bias in the law school admissions test. We have run a number of studies since then. The primary difficulty is numbers. To do a good statistical study you need a minimum number of people.

To conduct a validity study you like to have one law school with at least 100 blacks in the first-year class and 100 whites in the same class. You then compare the two subgroups by doing separate validity studies on each subgroup. Unfortunately, this situation does not exist in any law school in the United States.

We have dropped the number on the validity studies from 100 to 50 in the research that we have done. That automatically starts to color the question. To get even 50 blacks in one school we have had to cross years. In other words, run two classes together. Again that raises statistical questions.

The studies we have done have all resulted in a showing that the test is not culturally biased in the traditional sense of the use of that term, but I am reluctant to draw any strong conclusions from those studies because of the compromises we make with good statistical practices.

That is one thing. The second is that in the last decade psychometricians across the country have spent much time on the concept of what is meant by "cultural bias."

One way of looking at it is simply that if the majority or the minority have different mean scores the test is culturally biased. In the Law School Admission Test the whites have a higher mean score than do the blacks and than do the Chicanos, but most psychometricians reject the conclusion that this demonstrates that test is culturally biased because the test is trying to determine abilities that may be culturally related. It is trying to predict success in law school. If one subgroup happens to be lower than another in those abilities that is simply the way things are.

Another way of looking at "cultural bias" is to determine whether the test overpredicts or underpredicts for either subgroup.

Our studies show that the test predicts for blacks, whites and the Chicanos, three groups that we have studied, approximately the same. There are some differences. There are no differences in the slope of the regression lines but there are differences in the error of estimate of prediction and in the intercepts.

I believe that most people who look at our studies would say that the differences are not all that significant, there are some differences.

During the last 2 years there have been a number of published studies that question the proper definition of cultural bias. Highly respected psychometricians like Robert L. Thorndike, Nancy Cole, Melvin Novick and others have built different models of cultural bias. I have attached those to my remarks as appendix B. A study recently completed by Dr. Robert L. Lynn, a psychologist at the University of Illinois—he discusses these various models in the context of the concept of cultural bias. I draw two conclusions from these studies and the investigations we have conducted on the LSAT.

I do not think the test is culturally biased in the traditional sense of the term, but I am not sure of my belief because we need to do more work on this question. We will and we are doing it.

Second, I am not so sure anymore about the definition of cultural bias as I was a couple of years ago because there are different models, different ways of looking at that concept.

Mr. O'HARA. Some of the witnesses that have appeared before us have used as an excuse for applying different standards in admitting minority applicants to law school from those used in the majority of applicants is the claim that the LSAT is culturally biased.

They say therefore because it is culturally biased we ought to make up for that by applying a different standard.

Mr. HART. I put it a little differently, Congressman.

Mr. O'HARA. I noticed that.

Mr. HART. I think there is something wrong with the system that produces lawyers. I think there is something wrong with a system where only 1 percent of our lawyers are black. I believe the same thing is true with respect to Chicanos and American Indians. I don't know where that defect lies. I don't know whether it is in the LSAT or whether it is in the early educational background if applicants from these groups or whether the undergraduate grade point averages is "culturally biased," however I believe the presumption must be that there is something wrong with the system.

Mr. O'Hara. Let me give you a couple of hypotheses, OK? I think to begin with there is something damn wrong with the system in which we have thousands and thousands of prospective law students, people who want to become versed in the law, who want to appreciate our legal heritage, who want to understand the way our system operates, who can't get into a law school even though they are qualified to do so. That is the real starter.

I am sorry that no one addresses themselves to this. What in the name of God is so grand about a law school that we have to exclude most people who want to get into it?

Mr. Hart. Congressman, the answer is simple. It is money.

Mr. O'Hara. I think it is more than money.

Mr. Hart. I don't think so. I don't know of law schools that have elected to expand if they can obtain sufficient money to allow them to expand without dropping standards substantially. I think the history of legal education shows that the lawyers, the legal profession, has truly been shortchanged as far as education is concerned. The cost of legal education in this country is simply a disgrace if you compare it with any other kinds of graduate education.

We have no reluctance at all to have a 6-to-1 student-faculty ratio turning out somebody who gets a master's or Ph. D. in political science, but a law school is damned lucky if there is a 25-to-1 student-faculty ratio.

If you look at the University of New Mexico—and we mirror other universities in this—there are only three departments offering graduate level instruction in the whole university that are below us: Home economics, business and I forget what the third one is. We are right down there and we have been——

Mr. O'Hara. That is the very thing that makes me wonder about the cost argument, you see. It is cheaper to educate lawyers than practically anybody else.

Mr. Hart. It is cheaper to give lawyers a degree. It is not cheaper to educate them. That is what we have been fighting for in law schools.

Mr. O'Hara. Some of them are uneducable.

Mr. Hart. That is true, too. What the law schools have been trying to do over the last decade is to have more resources at the disposal of students. We have made some progress. Also, I would point out that we have in fact expanded the size of our student bodies. If you look at table 5 of my statement, it provides statistics on the number of students in law school and on bar admissions. In the past 10 years we have almost doubled the number of seats in the first year of law school. That was not easy to do.

Mr. O'Hara. I would like to see a program and I am going to try to devise one in which the Federal Government helps that every qualified applicant that wants to attend law school is going to be admitted. I see nothing wrong with that.

Then, of course, we don't have any problem, you and I, about who you admit. You admit everybody that is qualified. You don't have to ration out the places because when you have got a scarce commodity and you give it to A, it means you didn't give it to B. That, of course, is the vice of the whole operation.

The reason it doesn't bother you, that you apply certain different standards, is you aren't the one that has been denied admission. It bothers DeFunis, I will tell you. And with darn good reason. If you were in DeFunis' shoes you would be a lot more bothered about it than you are today.

Mr. HART. Sir, I would disagree with you on that. It does bother me. I consider myself a liberal. As far as I am concerned the principal tenants of our country, if you had to narrow them down, are really due process, the first amendment, and equal protection.

This area does bother me. It bothers me substantially. I think I am right. I think after working with it that I am doing the right thing. But to say that it doesn't bother me is simply not true.

Mr. O'HARA. I was taking your word. You said it didn't bother you that you have this system at the University of New Mexico Law School.

Mr. HART. I should say I think it is right. My father will be 89 next week. His parents died very young. He went out looking for a job in the mills up in Boston when he was 18 years old. He saw a lot of signs, "No Irish Need Apply."

I remember his stories about his problems. It hurts me when I think anyone being denied admission to law school, particularly anyone that has a reasonable chance of succeeding.

Mr. O'HARA. It was quite a while ago that they said, "no Irish need apply."

I will give you a more recent case. When I was at the University of Michigan they had a quota at the medical school, a quota designed to limit the number of Jewish applicants who would be admitted to the medical school. Highly qualified applicants who were Jews were turned down at the University of Michigan Medical School.

They were people about my age. So presumably many of them went off and married and had children, just as I did. I now have a son at the University of Michigan. I wouldn't be surprised if the children of some of those Jewish classmates of mine who couldn't get into the medical school aren't trying to get into the medical school right now and being turned away because they aren't black or they are not women or they are not something else.

We are telling them, "Look, don't worry about it. We are overcoming the effects of past discrimination, you know, at your expense. So it is OK."

But I don't think it is OK. It bothers me a great deal. I am glad that it bothers you.

There are several ways of going at it. One of them is we are going to have to expand the number of opportunities. I think the more people that are trained in the law in this country the better off we are going to be.

I find even in my district a lack of understanding of the real basis of our constitutional principles and so forth, among the populace.

I think the more people we have that have a good grasp of that, what Magna Carta was and what the Bill of Rights is, the better country we are going to have.

So I would like to see more and more people going to law school, not necessarily practicing law, because one of these days I am going to be turned out of office and I will have to go back and compete with them, but, you know, trained in the law.

Mr. HART. I would totally agree with you, Congressman. Certainly the Federal Government has responded to needs in other professions, the medical profession. It has given subsidies to medical schools that increased the size of their student body. Also, when we needed people in engineering and the sciences; the same thing was done.

I would certainly hope that some response would be given to the law school needs.

Mr. O'HARA. Just one last question about law school aptitude test. You judge the test in every case, really, whether you are looking for cultural bias, whether you are looking for any kind of validity, by law school success?

Mr. HART. Yes, success in the first year of school.

Mr. O'HARA. That is what you are trying to predict, law school success.

Mr. HART. Yes, sir.

Mr. O'HARA. You are not trying to predict whether this fellow would be a good Supreme Court Justice some day. That is a little beyond what you are asked to do. And you have found that it does have a reasonable correlation. In fact you have set yourself a test standard here because you have set top fifth, middle three-fifth's, bottom fifth.

What kind of correlation coefficients do you get if you just predict successful completion on the basis of——

Mr. HART. No different, Congressman. We tried that a couple of years ago in a study. We drew two lines, top 5 percent of the class and those who had failed. The top 5 percent at that time was important for scholarship purposes.

We found that prediction under that system is the same as it is under the tradition validity approach: You have as many misses and hits under that system as disclosed by the correlation coefficient.

In short, we have found no better way of expressing the predictability of the test better than the correlation coefficient.

Mr. O'HARA. I think you hit pretty good when you were hitting as good a corrolation as you do. That is a pretty good predictor, as perdictors go.

Mr. HART. I think it is at this level of education.

Mr. O'HARA. O.K., thank you very much for coming before us.

Mr. HART. Thank you, sir.

Mr. O'HARA. I am going to see to it that not only is your full statement but the various appendices that you supplied with the statement will be printed in the record of the hearing. I think they provide some valuable background with respect to the whole question of the Law School Aptitude Test and its validity and its use.

Mr. HART. Thank you very much, Congressman.

Mr. O'HARA. Thank you.

Our next witness will be Sidney Hook, a distinguished author and teacher who is a professor emeritus at New York University.

Professor Hook? Would you please take a place at the witness stand?

TESTIMONY OF PROF. SIDNEY HOOK, EMERITUS PROFESSOR OF PHILOSOPHY, NEW YORK UNIVERSITY, AND SENIOR RESEARCH FELLOW, HOOVER INSTITUTION ON WAR, REVOLUTION, AND PEACE, STANFORD UNIVERSITY

Mr. HOOK. I have a prepared statement which is comparatively brief. I am not going to read all of it. I shall take no more than 10 minutes. I know how valuable your time is.

My statement is directed to what I think, as evidenced by the testimony this morning, is a basic consideration which has arisen in the analysis of the obligations of institutions of higher education to provide equality of opportunity in education and employment. I can say a great many more things. But I am going to stress that main argument.

I appear before you primarily as a philosopher and an educator who has spent more than 50 years as a teacher, almost all of them in college and university.

I speak for no vested interest within or without the academy. My educational philosophy is derived from my teacher, John Dewey, who taught that in democracy every person has a right to that schooling which will enable him to achieve his maximum intellectual growth and spiritual growth as a human being and that what intelligent and loving parents want for their children in the way of education, the community should want for all its children, regardless of race, religion, sex or national origin.

I have been committed to this philosophy all my life. I have fought against all forms of invidious discrimination, especially in education.

I have welcomed the long overdue Executive Order 11246 and its amendments as well as the Civil Rights Act of 1964.

It was this commitment that inspired my public criticism of the enforcement procedures of the Office for Civil Rights of HEW, which was delegated to it by the Department of Labor's Office of Federal Contract Compliance.

For the directives and procedures that emanated from that office violated the spirit and letter of the Executive order and the section 703 of title VII of the Civil Rights Act of 1964 by requiring that "numerical goals and time schedules" be established to guide hiring practices of members of minorities and women wherever their underutilization is allegedly shown.

In a series of articles which I believe is in your possession, Congressman O'Hara, I developed the argument and showed that cognitively, even theoretically, not merely practically, but cognitively, there was no difference between "good faith efforts" to achieve numerical goals within a certain time frame and "good faith efforts" to achieve quotas.

Subsequently, I helped organize the Committee on Academic Nondiscrimination and Integrity, a group of distinguished scholars who are convinced that the educational health of the country, the public welfare and plain justice require that appointments and promotions in the academy be determined solely on the basis of competence rather than by membership in any group; that academic integrity requires that the best qualified person be appointed to the post without consideration of scholastically extraneous factors such as race, sex, religion or national origin.

Indeed in behalf of that very principle that has inspired their opposition to past and present deplorable practices of discrimination against women and members of minority groups, the members of our committee are as steadfastly opposed to discrimination in favor of women and members of minority groups.

To save time I shall focus my remarks on one key, indeed, the decisive point. This point was apparent in the testimony that preceded mine.

Do the Higher Education Guidelines of the Office for Civil Rights call for or encourage preferential hiring or the introduction of a quota system as I maintained from the very outset of my criticism?

Before considering this question it is important to treat briefly some peripheral questions to avoid confusion.

We do not deny that discrimination in the past on grounds of religion, race, sex, and national origin has occurred, that in some places it still exists and that it is morally wrong.

We do not deny that this discrimination is apparent not only in hiring but in rewarding, promoting, and retiring and that all such practices should be abolished forthwith.

What makes these practices wrong is the violation of the merit principle. Individuals have been punished for no fault of their own but merely because they were members of some group membership that had nothing to do with the qualifications for the post in question. For the moment I do not inquire whether purely statistical disproportions in the employment of individuals of various groups is cogent evidence of active discrimination.

Granted then the evil of past and present discrimination, what is the remedy? Surely not another kind of discrimination. No one would argue that because many years ago blacks were deprived of their right to vote and women denied the right to vote that today blacks and women should be compensated for past discrimination by being given the right to cast an extra vote or two at the expense of their fellow citizens or that some white men should be deprived of their vote.

Take a more relevant case. For years blacks were shamefully barred from professional sports. Would it not be absurd to argue that therefore today in compensation for the past there should be discrimination against whites in professional athletics?

Would any sensible and fair person try to determine what proportion of whites and blacks should be on basketball or football teams in relation to racial availability or utilization?

We want the best players for the open positions regardless of the percentage distribution in proportion to ratios either in the general population or in the pool of candidates trying out.

Why should it be any different when we are looking for the best qualified mathematician to teach topology or the best medieval philosophy scholar?

Why not drop all color, sex, and religious bars in honest quest for the best qualified, no matter what the distribution turns out to be?

The retort that dropping all bars of discrimination is not sufficient to achieve parity of representation for various groups is completely without merit since it assumes what has never been proved: that under fair and equal opportunities of vocational selection the ultimate outcome would reflect the proper proportions among qualified applicants. Of course, the quest must be public and not only fair, but seen to be fair.

How can we drop all these extraneous, discriminatory bars and still strive to achieve "numerical goals?" If we abandon all discriminatory practices in recruitment, enrollment, salaries, and promotion why do we need "numerical goals," unless it is argued that the only real proof of the abandonment is the achievement of these numerical quotas?

The representatives of HEW shy away from the word "quota." Hardly anyone will say they believe in the quota system because they know that a quota system is incompatible with the basic norms of merit and individual justice.

This is a matter of logic. A "numerical goal" when selections are guided by anything but merit is precisely what we normally mean by a quota, the dictionary definition of a quota.

In Europe the Latin phrase numerus clausus was used to set religious quotas for entry into universities.

One can take this as an elementary exercise in logic. Suppose I say, "You are to aim at a quota of x percent of blacks, Chicanos, Puerto Ricans, women, et cetera, for your staff within 2 years."

How does that proposition differ from this proposition: "You are to set as your goal recruitment of x percent of blacks, Chicanos, Puerto Ricans, Women, et cetera, within 2 years?"

The representatives of HEW confuse themselves and others by saying that numerical goals are not quotas because "good faith efforts" to achieve goals is "an adequate substitute for evidence that goals have been met."

But this is logically equivalent to saying that sincere good faith efforts to achieve quotas are adequate evidence that quotas have been met.

Here is a proposition in ethics. If anything is morally wrong then sincere efforts to bring it about are wrong. If quotas are morally wrong in education then sincere "good faith efforts" to achieve them are also wrong.

For some purposes, trade, immigration policy, rationing of scarce commodities, the compilation of jury rolls, a quota system may be legitimate and numerical goals reflecting a community's racial or sexual profile accepted as a guide.

But when we are seeking the best qualified person or persons for a position it is never morally legitimate to make membership in a group, whether religious, racial, or sexual, a ground of selection all the more so because such grounds of selection have been the cause of the discrimination in the past that we deplore.

When I first protested the establishment of numerical goals and timetables as part of the affirmative action programs demanded by HEW I predicted that colleges and universities in order to prove that they had made sincere, good faith efforts to achieve these goals would resort to preferential hiring.

That prediction has been fulfilled. The Anti-Defamation League, the University Centers for Rational Alternatives and other organizations during 1972–73 have uncovered more than a hundred examples of racially determined preferential seletion for 1972 and 1973.

Even with our very limited resources hardly a day goes by in which we do not hear of continued discriminations. Many complaints are not made because victims fear publicity.

The fundamental cause of this policy of discrimination, adopted presumably to end discrimination, is the requirement that numerical goals and timetables be an integral part of the affirmative action programs acceptable to HEW.

Despite our repeated criticism, protestation and petitions for the abandonment of prejudicial numerical goals and timetables the Nixon administration refused to take any action. Yet these are the continuing source of preferential hiring practices.

Where Federal funds are necessary to the survival of so many institutions of higher education administrators feel intimidated by the requirement.

Representatives of HEW are confused by it themselves. One of them before this committee on August 9, 1974, in answer to a question by Mr. Dellenback concerning the degree to which numerical goals at the end of the 5-year period are to reflect the availability of minorities and/or women, replied:

"The OFCC regulations in effect require that in the life of the plan or the end of the life of the plan, the 5 years, that parity be achieved. If the work force is 20 percent female Ph. D., political science, one would expect that the composition of the faculty in *X* political science department at *X* university would be 20 percent female."

Then, not having the courage of his confusions, he adds: "That is not a quota."

But that it is a quota is apparent in the answer to Mr. Dellenback's next question:

> What if a given institution came to you with an affirmative action plan which showed very clearly that in solicitation, in hiring and everything else that is followed thereafter they really were on target in following the nondiscriminatory practice, they were really going to reach, but said nothing about what they would have in composition five years hence, would that be acceptable?

To which Mr. Holmes answered, "no."

Apparently then absolute fairness in every aspect of the hiring, paying and promoting process is not enough and the quota or goal must be reached.

Despite this Mr. Holmes then goes on to add, in reply to a further question:

> We would urge the institution, as the regulations propose, that the goal be parity, but we will not and we have not gotten hung up with an institution over that issue if we think that the actions they are proposing to take are with regard to salary equity equitable and broadening of the recruitment process.

But if this is so then why require "numerical goals and time schedules," especially since they are the source, as HEW itself sometimes admits, of pervasive misunderstanding by university administrators?

A few words in conclusion. Preferential hiring or quotas in education under any disguise is inherently divisive, unjust and undemocratic.

It destroys the quest for excellence and opens the door to mediocrity, injurious to students, educational institutions and in the long run to the public good.

It gives rise to the impression that even when inequalities and inequities in hiring practices, salaries, leaves, promotions and tenure have been abolished, members of minority groups and women cannot make it on their own, that they require the crutch of extraneous group membership to compete successfully with others.

It ultimately will be harmful to the professional dignity and integrity of all teachers, including those who slip into positions because they meet a quota or goal rather than because they have succeeded on merit.

For it will create a two-standard faculty—those who have made it on their own and those who have not.

It tends to debase standards of scholarship and teaching under the cloak of combating discrimination.

Prof. Jacob Neusner of Brown University is my authority for the following incident. I do not contend it is typical, but it does point up a danger of the degradation of quality of teaching instruction.

Representatives of the regional offices of HEW demanded an explanation of why there were no women or minority students in the graduate department of religious studies.

They were told that a reading knowledge of Greek and Hebrew was presupposed. Whereupon the representatives of HEW advised orally: "Then end these old-fashioned programs that require irrelevant languages. And start up programs on relevant things which minority group students can study without learning languages."

If we are considering the question of quotas or any system of preferential selection in a larger context, it should be clear that it violates two fundamental and interrelated principles of social morality, justice, and human welfare.

Once basic human needs are equally gratified, differential rewards of scarce goods, services, and opportunities should depend on merit or desert. The person who is best qualified for a post deserves it even if other considerations sometimes override his or her right.

But in this case considerations of human welfare strongly reinforce the right of award by merit because the consequences of recognizing it create values and goods that are to the benefit of the entire community.

The principle of merit or desert therefore encourages and strengthens the quest for excellence. In the course of the pursuit of excellence, everyone profits.

In imposing a quota system, we are not only defeating the ends of justice but unnecessarily limiting multiple advances in human welfare.

The society which today sacrifices the principle of merit and which downgrades the quest for excellence faces very bleak prospects of survival in our precarious and dangerous world.

In addition, the use of preferential treatment by race or sex as a tool of the administration of social policy presents the most dangerous kind of precedent to society at large. It not only sets groups against each other and promotes discord, but it also devalues what it means to be a citizen of the United States since what once was a precious right, equal justice under the law, becomes a privilege to be doled out at the pleasure of an administrator.

Discrimination where it exists must and can be policed, punished, and eradicated, but it should not be created anew in the name of its opposite.

Our educational emphasis must fall not on lowering existing standards of achievement but on adopting all effective measures—financial, psychological, social and pedagogical—that will increase the qualified supply of members of minorities and women.

In the area of law Congressman O'Hara had just made a suggestion today which I think is very valid and will increase the qualified supply of members of minorities and women.

The community has a responsibility not only in education but in all areas of industry to provide employment for all who are willing and able to work. This expansion of opportunities on all levels of education does not require quotas or numerical goals but fundamental commitment to democracy as a way of life.

Thank you very much, Congressman.

[Professor Hook's prepared statement follows:]

Statement of Professor Sidney Hook, Emeritus Professor of Philosophy, New York University and Senior Research Fellow, Hoover Institution on War, Revolution, and Peace, Stanford University

I am grateful for the kind invitation to testify before you on the obligations of institutions of higher learning to provide equality of opportunity in education and employment. I appear before you primarily as a philosopher and educator who has spent more than fifty years as a teacher, almost all of them in college and university. I speak for no vested interest within or without the academy. My educational philosophy is derived from my teacher and friend, John Dewey, who taught that in a democracy every person has a right to that schooling which will enable him to achieve his maximum intellectual and spiritual growth as a human being, and that what intelligent and loving parents want for their children in the way of education, the community should want for all its children, regardless of race, religion, sex or national origin.

Committed to this philosophy, I have fought all my life against all forms of invidious discrimination, especially in education. I have welcomed the long overdue Executive Order 11246 and its amendments as well as the Civil Rights Act of 1964. And it was this commitment that inspired my public criticism of the enforcement procedures of the Office for Civil Rights of HEW, delegated to it by the Department of Labor's Office of Federal Contract Compliance. For the directives and procedures that emanated from this office, violated the spirit and letter of the Executive Order and the Section 703(j) of Title VII of the Civil Rights Act of 1964, by requiring that "numerical goals and time schedules" be established to guide hiring practices of members of minorities and women wherever their underutilization is allegedly shown. In a series of articles which I believe is in your possession, I developed the argument and showed that cognitively there was no difference between "good faith efforts" to achieve numerical goals within a certain time frame and "good faith efforts to achieve quotas. Subsequently, I helped organize the Committee on Academic Nondiscrimination and Integrity, a group of distinguished scholars who are convinced that the educational health of the country, the public welfare, and plain justice require that appointments and promotions in the academy be determined solely on the basis of competence rather than by membership in any group; that academic integrity requires that the best qualified person be appointed to a post without consideration of scholastically extraneous factors such as race, sex, religion or national origin. Indeed, in behalf of the very principle that has inspired their opposition to past and present deplorable practices of discrimination *against* women and members of minority groups, the members of our Committee are as steadfastly opposed to discrimination *in favor of women* and members of minority groups.

To save time I shall focus my remarks on one key, indeed, decisive point. Do the Higher Education Guidelines of the Office for Civil Rights in effect call for or encourage preferential hiring or the introduction of a quota system as I maintained from the very outset of my criticism? Before considering this question, it is important to treat briefly some peripheral questions to avoid confusion.

We do not deny that discrimination in the past on grounds of religion, race, sex and national origin has occurred, that in some places it still exists—and that is morally wrong. We do not deny that this discrimination is apparant not only in hiring but in rewarding, promoting and retiring, and that all such practices should be abolished forthwith. What makes these practices wrong is the violation of the merit principle. Individuals have been punished for no fault of their own but merely because they were members of some group-membership that had nothing to do with the qualifications for the post in question. For the moment, I do not inquire whether purely statistical disproportions in the employment of individuals of various groups is cogent evidence of active discrimination.

Granted, then, the evil of past and present discrimination, what is the remedy? Surely not another kind of discrimination. No one would argue that because many years ago blacks were deprived of their right to vote and women denied the right to vote that today blacks and women should be compensated for past discrimination by being given the right to cast an extra vote or two at the expense of their fellow citizens or that some white men should be deprived of their vote. Take a more relevant case. For years blacks were shamefully barred from professional sports. Would it not be absurd to argue that therefore today in compensation for the past there should be discrimination against whites in professional athletics? Would any sensible and fair person try to determine what proportion of whites and blacks should be on basketball or football teams in relation to racial availability or utilization? We want the best players for the open positions regardless of the percentage distribution in proportion to ratios either in the general population or in the pool of candidates trying out. Why should it be any different when we are looking for the best qualified mathematician to teach topology or the best medieval philosophy scholar? Why not drop all color, sex and religious bars in honest quest for the best qualified—no matter what the distribution turns out to be? (The retort that dropping all bars of discrimination is not sufficient to achieve parity of representation for various groups is completely without merit since it assumes what has never been proved: that under fair and equal opportunities of vocational selection the ultimate outcome would reflect the proper proportions among qualified applicants.) Of course, the quest must be public and not only fair, but seen to be fair.

How can we drop all these extraneous, discriminatory bars and still strive to achieve "numerical goals"? If we abandon all discriminatory practices in recruiting, enrollment, salaries and promotion why do we need "numerical goals"—unless it is argued that the only real proof of the abandonment is the achievement of these numerical goals?

The representatives of HEW shy away from the taboo word "quota" because they know that a quota system is incompatible with the basic norms of merit and individual justice. But a "numerical goal" when selections are guided by anything but merit is precisely what we normally mean by quota. In Europe the Latin phrase *numerus clausus* was used to set religious quotas for entry into universities. Where one says (A): "You are to aim at a quota of X% of blacks, Chicanos, Puerto Ricans, women, *etc.* for your staff within two years," the meaning is the same as (B): "You are to set as your *goal* recruitment of X% of blacks, Chicanos, Puerto Ricans, women, *etc.* within two years." The representatives of HEW confuse themselves and others by saying that numerical goals are not quotas because "good faith efforts" to achieve goals is "an adequate substitute for evidence that goals have been met." But this is logically equivalent to saying that sincere good faith efforts to achieve quotas are adequate evidence that quotas have been met. If anything is morally wrong, then sincere efforts to bring it about are worng. If quotas are morally wrong in education, then sincere "good faith efforts" to achieve them are also wrong.

For some purposes—trade, immigration policy, rationing of scarce commodities, the compilation of jury rolls—a quota system may be legitimate and numerical goals reflecting a community's racial or sexual profile accepted as a guide. But when we are seeking the best qualified person or persons for a position, it is never morally legitimate to make membership in a group—whether religious, racial or sexual—a ground of selection all the more so because such grounds of selection have been the cause of the discrimination in the past that we deplore.

When I first protested the establishment of numerical goals and timetables as part of of the affirmative action programs demanded by HEW, I predicted that colleges and universities, in order to prove that they had made sincere, good faith efforts to achieve these goals, would resort to preferential hiring. That prediction has been fulfilled. The Anti-Defamation League, the University Centers for Rational Alternatives and other organizations during 1972–73 have uncovered more than a hundred examples of racially determined preferential selection for 1972 and 1973. Even with our very limited resources hardly a day goes by in which we do not hear of continued discriminations. Many of the victims fear publicity.

The fundamental cause of this policy of discrimination, adopted presumably to end discrimination, is the requirement that numerical goals and timetables be an integral part of the affirmative action programs acceptable to HEW. Despite our repeated criticism, protestation and petitions for the abandonment of prejudicial numerical goals and timetables, the Nixon administration refused to take any action. Yet these are the continuing source of preferential hiring practices. Where federal funds are necessary to the survival of so many institutions of higher education, administrators feel intimidated by the requirement. Representatives of HEW are confused by it themselves. One of them, before this committee on August 9, 1974, in answer to a question by Mr. Dellenback, concerning the degree to which numerical goals, at the end of a five year period, are to reflect the availability of minorities and/or women, replied:

> "The OFCC regulations, in effect require that in the life of the plan, or the end of the life of the plan, the five years, that parity be achieved. If the work force is 20% female Ph.D., political science, one would expect that the composition of the faculty in X political science department at X university would be 20% female." (Stenographic Transcript, p. 296)

And then, not having the courage of his confusions, he adds: "That is not a quota."

But that it is a quota is apparent in the answer to Mr. Dellenback's next question:

> What if a given institution . . . came to you with an affirmative action plan which showed very clearly that in solicitation, in hiring, and everything else that is followed thereafter, they really were on target in following the non-discriminatory practice, they were really going to reach, but said nothing about what they would have in composiiton five years hence, would that be acceptable? *Mr. Holmes*: "No." (Hearings, p. 298).

Apparently then, absolute fairness in every aspect of the hiring, paying and promoting process is *not* enough and the quota or goal *must* be reached. Despite this, Mr. Holmes then goes on to add, in reply to a further question:

> We would urge the institution, as the regulations propose, that the goal be parity, but we will not, and we have not gotten hung up with an institution over that issue, if we think that the actions they are proposing to take are with regard to salary equity [equitable] and broadening [of] the recruitment process. (Hearings, p. 299.)

But if this is so then why require "numerical goals and time schedules," especially since they are the source, as HEW itself sometimes admits, of pervasive misunderstanding by university administrators?

A few words in conclusion. Preferential hiring or quotas in education under any disguise is inherently divisive, unjust and undemocratic. It destroys the quest for excellence and opens the door to mediocrity injurious to students, educational institutions and in the long run to the public good. It gives rise to the impression that even when inequalities and inequities in hiring practices, salaries, leaves, promotions and tenure have been abolished, members of minority groups and women cannot make it on their own, that they require the crutch of extraneous group membership to compete successfully with others. It ultimately will be harmful to the professional dignity and integrity of all teachers, including those who slip into positions because they meet a quota or goal rather than because they have succeeded on merit. For it will create a two standard faculty--those who have made it on their own and those who have not. It tends to debase standards of scholarship and teaching under the cloak of combatting discrimination. Profession Jacob Neusner of Brown University is my authority for the following incident. I do not contend it is typical but it does point up a danger. Representatives of the Regional Offices of HEW demanded an explanation of why there were no women or minority students in the Graduate Department of Religious Studies. They were told that a reading knowledge of Greek and Hebrew was presupposed. Whereupon the representatives of HEW advised orally: "Then end these old fashioned programs that require irrelevant languages. And start up programs on relevant things which minority group students can study without learning languages."

If we are considering the question of quotas or any system of preferential selection in a larger context, it should be clear that it violates two fundamental and interrelated principles of social morality—justice and human welfare. Once basic human needs are equally gratified, differential rewards of scarce goods, services and opportunities should depend upon merit or desert. The person who is best qualified for a post deserves it even if other considerations sometimes override his or her right. But, in this case considerations of human welfare strongly reinforce the right of award by merit, because the consequences of recognizing it create values and goods that are to the benefit of the entire community. The principle of merit or desert therefore encourages and strengthens the quest for excellence. In the course of the pursuit of excellence everyone profits. In imposing a quota system we are not only defeating the ends of justice, but unnecessarily limiting multiple advances in human welfare. The society which today sacrifices the principle of merit and which downgrades the quest for excellence faces very bleak prospects of survival in our precarious and dangerous world.

In addition, the use of preferential treatment by race or sex, as a tool of the administration of social policy, presents the most dangerous kind of precedent to society at large. It not only sets groups against each other and promotes discord, but it also devalues what it means to be a citizen of the United States since what once was a precious right, equal justice under the law, becomes a privilege to be doled out at the pleasure of an administrator. Discrimination where it exists must and can be policed, punished and eradicated, but it should not be created anew in the name of its opposite.

Our educational emphasis must fall not on lowering existing standards of achievement but on adopting all effective measures, financial, psychological, social and pedagogical, that will increase the qualified supply of members of minorities and women. The community has a responsibility not only in education but in all areas of industry to provide employment for all who are willing and able to work. This expansion of opportunities on all levels of education does not require quotas or numerical goals but commitment to democracy as a way of life.

Mr. O'Hara. Mr. Hook, thank you very much. I like your conclusion. I think you have also very cogently demonstrated the error of the newspeak and newthink in this business of goals, that goals are really different from quotas.

HEW has said, "Well, we really haven't put anybody in trouble. No one has ever gotten in trouble for failing to meet their goal."

Well, maybe. But if you are an administrator of a university that has Federal contracts with $3 or $6 or $8, $12 million, and you want to hang on to this contract because you have to have it in order to keep the university functioning in the way that it has grown accustomed to functioning, you aren't going to take any chances.

That is indeed what they rely on. The way the system works they say, "You can satisfy us by two methods. One, you meet your goal or, two, you prove to us that you made a good-faith effort to meet your goal but failed. The burden of proof is on you."

So you face this problem. You say, "All right, we have our choice here. We can either meet the goal or we could not meet the goal and then fight it out and with good luck and the help of God we will prevail."

You know the easy way out of that one.

Mr. Hook. I think you have put your finger right on the key issue. It is very difficult to establish a negative conclusion when one has made good faith efforts. How does one really know? There is always doubt about it. Meanwhile, the contracts and the money are being held up.

The universities are in a straightened financial situation. All sorts of crucial things depend upon it. The administrators then bring pressure upon members of their departments to meet these goals so they can solve their problems and avoid threatening countermeasures.

Mr. O'Hara. The easy way out is to meet the goal. That is the easy way.

Mr. HOOK. I have never gotten a clear answer from a representative of HEW as to why they need in their guidelines the reference to numerical goals and quotas.

Let us assume that we have all of the other recommendations: the broad recruitment policy, advertisement for every possible job, the appointment of an overall committee to supervise the appointment and selection within the faculty to see that actually the best-qualified person has been hired, that there are equal standards for men and women, that the criteria for promotion are the same and that the nepotism rule is abolished, which in effect has mainly affected women. All of these are very worthwhile objectives. If these are adopted, why do we need insistence on numerical goals and timetables?

The answer is implied in what you have said. This is the whip with which they can bring the universities to heel. The effect has been—and this, I think, in the long run is the most serious aspect of the situation—in the field of education a degradation of standards of scholarship.

Some representatives of HEW have maintained that in the past criteria have been used in a discriminatory way. In one case, they contended that if there weren't any qualified applicants for a post, whether minorities or women, then the standards that were employed in the past for the least qualified person in the department should operate for the future.

That means that if 20 years ago some mediocre man was hired, because no one else was then available, and in the meantime the standards of the department have improved, that if an applicant appears, a woman or minority member, whose qualifications are no better than that of the individual who was hired 20 years ago, he or she then has to be hired.

To be sure, it is argued that sometimes there is a danger that an administrator in order to bar a member of a minority or a women, will capriciously raise the standards.

That is a danger. How do you test it? You watch his next appointments; you observe what happens. You proceed as you do when you suspect discrimination in housing. What is the evidence of discrimination in housing when a landlord establishes certain criteria for his tenants, say, he wants them well-behaved, of a certain income level, and so on.

If you suspect that he is using this as a dodge for discrimination, then you send some minority person who meets those criteria and see what happens. If the landlord subsequently rents to somebody who doesn't come up to these criteria then you have your proof of discrimination.

I have really been puzzled. Perhaps, Congressman, you can answer my question. It is almost a simple-minded question. Why have so many witnesses before you consistently denied that a numerical goal within a certain time period is a quota?

It seems to me as obvious as two plus two equals four that a numerical goal and a quota are synonymous. Why do they insist that there is a difference? They shirk from the use of the term "quota." Emotively there is a difference between numerical goals and quota just as emotively there is a difference between the term "lazy"—and "easy-going."

But cognitively, intellectually, it seems to me there is no difference.

But even deans, as we have heard, sometimes say there is a difference between a goal and a quota.

I wonder if you can account for this failure to recognize the obvious?

Mr. O'Hara. I find it very hard except that I guess, Mr. Hook, when somewhat ardently desires the achieving of an objective they can talk themselves into believing that there are differences. I understand it. I am sure you do too, especially when some of the witnesses who have appeared before us on behalf of women applicants for positions at universities and so forth, they say, "Well, look, if 20 percent of the qualified"—they have been the victims of discrimination, you and I both concede that and they are arguing that they continue to be the victims of discrimination in academic promotion, hiring, pay, and so forth—"if 20 percent of the qualified persons are women that if you adopt a nondiscriminatory hiring practice on the average around the country you are going to end up with a 20-percent female faculty in that department and therefore it is a good standard to use in measuring whether or not there has been discrimination."

Mr. Hook. Yes, but what they overlook is the fact that even if you have 20 percent, to use the illustration, of women who have Ph. D.'s, certain social considerations and attitudes may operate in determining their availability.

These are matters one may deplore. Some people say, "I resent it that you have so few women on faculties compared to the number of women that go to college." But I can testify from my own experience why this is so. I have always urged by bright coeds to try to combine marriage and a career. I again and again discovered—this was especially true in the 1940's and 1950's—that many of them said, "Oh, no, I am not interestd in a career. I am primarily interested in getting married and raising a family." You find all sorts of testimony which shows that the social mores of the time did not encourage the quest for a career as well as marriage. Sometimes you will also find that women who wanted a career and got married and discovered that husbands were not sufficiently cooperative.

These attitudes are changing. I think more and more today it is recognized that it is desirable for women to combine marriage and a career.

Mr. O'Hara. Professor, let me make the point that when we talk about the pool of Ph. D.'s you are talking about a group of women who in effect made a career decision.

Mr. Hook. Let us take 20 percent of the Ph. D.'s in political science. One must then ask how many of them are married?

When they get married the burden of bringing up the children usually falls upon them. Evidence shows for example that women who are not married progress more rapidly than those that do, not because there is discrimination against women, women are involved in both cases, but because the main burden of developing a family rests upon the woman. She is therefore not able to devote as much time to professional chores as she would if she were unmarried. There are certain social factors which operate in a way that make it questionable to say "If you have 20 percent Ph. D.'s among women therefore they should have 20 percent of the teaching jobs available."

Mr. O'Hara. When you put that social and marriage filter on the pool you still don't, even when you apply those things to end up with the actual pool of available Ph. D. women, you still——

Mr. HOOK. Then you have the question of geographic distribution. Why? Because in this day and age if the woman gets a job somewhere her husband seldom decides to give up his job to join her. There was an article published in the newspaper about a husband who did—it is so rare. The general rule is that if a woman is teaching and her husband is teaching, if he takes a job elsewhere, the wife will follow. There she may be unemployed because they may not have a need for her. Nonetheless she will normally follow her husband not vice versa.

When it comes to minorities, I would say look at the record. If you had 20 percent of the minorities, say, in mathematics then I would certainly think you would find 20 percent of the mathematics jobs in the colleges held by blacks.

Today the quest for numbers of minorities at the universities is very intense.

Mr. O'HARA. There is a bidding war.

Mr. HOOK. They can write their own tickets.

Mr. O'HARA. Which gets them into trouble with women because then they bid up. They have 16 institutions bidding for the black Ph. D. and they have to offer more money.

Mr. HOOK. That sometimes happens. You stressed the point that there should be more law schools available. I think there should be more effort to prepare members of minorities for work in higher education.

Mr. O'HARA. I certainly agree with your analysis. So you can see that I am on your side of the argument. But I am troubled and I am sure you are by the fact that when you try to approach this whole problem on a case-by-case basis that it takes a long time to overcome discriminatory practices and the enforcement process is slow.

I can understand the frustration of those who feel that they are not being given equal treatment. I think many minorities and women feel that they aren't going to be given equal treatment in faculty hiring unless there is some kind of an effective club being held over the heads of the departments heads at the universities and so forth and that the threat of a prosecution upon an individual complaint being made by someone who believes they are discriminated against is not enough of a club. So I can understand how they feel.

Mr. HOOK. I can understand it. But I think it would be unfortunate if we relied upon the present club because it is developing a series of injustices.

Mr. O'HARA. It has got too many spikes in it.

Mr. HOOK. That you will hear more about in the future.

Nevertheless, Congressman O'Hara, I would maintain that the climate in the universities is perceptibly changing, that the faculties themselves now are in a position to implement and police the guidelines against discrimination.

In the past if you wanted to hire somebody you would get in touch with your colleagues at another university. Today very few people will hire that way. It is expected that they make public, advertise if possible, the opening of a job.

If an affirmative action committee is appointed then it can be empowered to go over the appointments that were made. On these committees women and members of minorities can serve. It may be a slow process. But I think in the end any other approach would do irreversible damage to the integrity of the educational process.

Mr. O'Hara. Professor Hook, I am in agreement that the present approach is creating injustices. I cannot support the present approach. But I would like to try to find ways in which we can effectively guarantee the rights of all applicants to equal treatment without depriving anyone else of their rights.

If I come up with that answer it will be a miracle. I do think that we ought to be looking at it from both angles.

I think the present system is wrong. But I think we ought to do better.

Mr. Hook. If we could, as you suggested, increase the number of law schools, so I would suggest increasing our efforts to establish more colleges. We have to give priority to education. I think our children are our most precious crop.

We should move in the direction of full educational employment. Suppose it is true that in some university you hire the most qualified person. You can't hire everybody there. If there were other educational opportunities there would be other avenues for significant activity on the part of individuals.

There will always, of course, be some disappointment if one is preferred over somebody else. But I do think that every person who is able and willing to engage in his vocation should have an opportunity to do that. That is a responsibility of the community and the Government.

That is why I believe this is only one aspect of a larger problem which requires the attention of the entire country, not merely that of educators.

Mr. O'Hara. I very much enjoyed talking to you.

Mr. Hook. Thank you very much for your courtesies.

Mr. O'Hara. Our next witness will be Prof. Miro M. Todorovich who is associate professor of physics at the Bronx Community College, City University of New York, and a coordinator of the Committee on Academic Nondiscrimination and Integrity.

Mr. Todorovich?

[Mr. Todorovich's prepared statement follows:]

Prepared Statement of Prof. Miro M. Todorovich, Associate Professor of Physics, Bronx Community College, City University of New York, and Coordinator of the Committee on Academic Nondiscrimination and Integrity

Mr. Chairman and distinguished members of the Subcommittee: I wish to present before the Subcommittee the views of the Committee on Academic Nondiscrimination and Integrity on various aspects of Antibias Regulations in Higher Education promulgated by the Federal Government.

For several years now, American colleges and university professors have found themselves psychologically squeezed between lofty egalitarian rhetoric and harsh realities of life. On the one hand, they are urged to work towards a fully nondiscriminatory society in which everyone will be treated "without regard" to race, sex, color or national origin (Presidential Order 11246, Amended); on the other, regulations of the Labor and HEW Departments, and the EEOC demand that teachers and scholars become very much conscious of color, sex and ethnos in dealing with all segments of their campus population, and cooperate in the preparation of affirmative action plans, implying favored treatment of some groups designated as preferred. Members of our faculty are first told that it is up to them to develop sensible estimates of what can be reasonably accomplished; soon they find their institutions under the threat of governmental punishment if they do not conform to the demands of Federal investigators. This enormous discrepancy between words and deeds, declared intentions and actual decisions of pertinent bureaucratic officials can best be illustrated by factual examples.

Institutions of higher learning have been repeatedly told that they and they alone should establish realistic affirmative action plans. This assertion has been reiterated most recently by Mr. Holmes during his testimony to this Subcommittee on August 9. The facts, however, tell another story.

For example, New Mexico State University was one among several public institutions which promulgated with pride, back in 1970 and 1971, their Equal Employment or Affirmative Action programs. This was followed by compliance review visits by officials from the Dallas Regional Office for Civil Rights of the HEW. Things went from bad to worse until in the Fall of 1972, President of the University, Gerald W. Thomas felt compelled to protest:

> I am concerned that the reports always point to deficiencies and problems *and never recognize the special efforts being made by the University to move ahead in a positive manner.*
>
> I am concerned about the implication of statements such as, "The only women in the College of Agriculture are in Home Economics, and there are no women in the Engineering College." This statement is misleading in that it implies that qualified women with advanced degrees are "available" in all fields. The problems here are not discriminatory in nature, *but* problems of availability of qualified people. Furthermore, Agricultural Extension was not included in the survey.
>
> I am concerned that, in order to correct the historic problems associated with past generations, we cannot give proper consideration to many highly qualified male applicants from the majority culture.
>
> I am concerned when the Office of Contract Compliance of HEW feels that it must use threats and coercion to force "quotas" rather than to set goals and objectives as specified by Congress. For example, the following is a quote from our recent review:
>
> > "A detailed response to our findings and the revised affirmative action plan (inclusive of goals and time tables) must be submitted to our office within 30 days. The award of a substantial contract of over 2 million dollars is pending our approval. In view of this fact we are sure you will want to act as expeditiously as possible by making adequate commitments."
>
> And,
>
> I am concerned about the lost time and effort and the tremendous expense associated with the investigation and review merely because we were not given advance information about the nature of the investigation or the time span of the study. We were told by members of the review team that the universities "could not be trusted with advance notices" because they would "change their records." This statement is a reflection on all Institutions of Higher Education in this Nation and cannot foster the cooperation needed to correct our historic problems of discrimination.

The reasons for President Thomas's indignation are self-explanatory

The San Francisco OCR-HEW regional office was so insistent on a naive interpretation of numbers and on its demand that "University [of Arizona] must submit written commitments to this office within thirty (30) calendar days, indicating in detail how each of the above deficiencies will be corrected, along with numerical goals and timetables for completion," that University of Arizona's President, Richard A. Harvill, felt compelled to write a long didactic reply which explained among other things the actual employment picture:

> On page 5 of your letter a number of specific departments are listed with no female faculty. Unfortunately, degree data for the time span 1948–1968 were not available by subject matter. Data were available, however, for 1960 through 1968 giving by subject matter the number of doctorates awarded to women. On the basis of these data, it is evident that in over half of the departments listed there are not enough women docorate holders available to justify the listing of these departments as deficient. In Agronomy, for example, over the nine years period examined, only six Ph.D.'s were obtained by women; two were obtained in the same time span in Meteorology; eight, in Watershed Management. Even doubling this degree output to estimate the number of degrees granted over a twenty year span does not provide a sufficient pool of females to justify the inclusion of these depart-

> ments on the list. As a matter of fact, over half of the departments listed had less than fifty female doctorates available from which to recruit during the period 1960 to 1968. Even doubling these amounts to simulate a longer time span hardly provides an adequate supply of women faculty for the hundreds of departments needing such personnel among the twenty-four hundred institutions of higher education in this country. This is especially so when consideration is given to the fact that not all of these women are available for higher education. Many go to business, industry and the government. It hardly seems reasonable to expect institutions to have women faculty members in academic fields in which the supply is too limited to permit representation on more than a few departmental faculties in the country.
>
> A statement on page 8 of your letter says: "Departments with significant numbers of female Graduate Assistants would be expected to have a similar proportion of females on their faculties." This statement does not take into account the fact that only a limited number of female graduate students reach the level of training needed for a university teacher, possibly because no great number seem to be interested in university teaching. In many disciplines such as English, foreign languages and education a large number of the graduate assistants are not preparing themselves for a career in university teaching, but plan rather to teach at the junior college, high school or elementary school level. Indeed, in general, if we base our hiring purely on the basis of trying to find the best qualified person for a given position, the number of women on our faculty will depend on the particular pool from which we search for faculty and this will vary from subject to subject.
>
> In the sciences and mathematics, for instance, we recruit not from fresh Ph.D.'s in general but from post-doctorals, those who are research associates or faculty members in other universities. In the fine arts we recruit from established professionals to a large extent. In areas such as history or English we recruit from instructors in other universities who have good publication records or from established professionals. These pools are in general selected from those Ph.D.'s who have chosen to subject themselves to a competitive test beyond the Ph.D. and who are relatively well known performers. Since we avoid hiring our own students in order to prevent inbreeding, the number of women students in these pools is not under our control. Hiring must in any case be based upon the availability of the personnel and not upon the representation of the sexes among graduate students.

At the other end of the country, negotiations with the New York City institutions was mostly handled by the main Office for Civil Rights in Washington, with some almost comical overtones. For example, in November of 1972, City University of New York's Chancellor, Robert Kibbee, wrote a letter to the Presidents of City University campuses, emphasizing in the first sentence that, "as you no doubt are aware, the City University has developed an Affirmative Action Program more than a year ago even though at the time the existing Executive Orders did not require the development of a plan by public institutions." Dr. Kibbe obviously believed that CUNY had had a plan for about a year or so, a plan which was developed with the active participation of the entire university community. Not so, says a paragraph written by J. Stanley Pottinger at about the same time: "we look forward to completing our investigation and assisting the University in *establishing* an affirmative action program *at the earliest possible date*." (tIalics added.) OCR's assistance is apparently of paramount importance.

The just quoted Kibbee-Pottinger exchange took place during the successful effort by the university to secure a *certain degree* of confidentiality for wholesale data demanded by HEW. It is interesting to note that the letter outlining the understanding between OCR and CUNY on this point contained the following clause:

> In addition, we wish to make clear that the contents of this letter apply specifically and only to the City University of New York. In no way do these temporary procedures necessarily express or imply procedures or policies for investigation with regard to other Federal contractors, and we will appreciate your treating this letter with the confidentiality necessary to preserve this point.

Thus, not only were the university administrators and faculties most of the time in the dark as to what they were exactly expected to do; the uncertainty seems also to have been deliberately perpetuated by officials of the crucial agency.

In his testimony to this committee, Mr. Peter Holmes, Director of the Office for Civil Rights of HEW, stated that "the recent recruitment analysis, selection analysis, salary equity analysis, promotion analysis are in our estimation so much more important to correcting discrimination factors in the . . . employment process . . . that we quite candidly do not attempt to make an issue of an institution that is establishing goals and timetables for itself that it must achieve parity at the end of a five year period." However, the impression of gentle reasonableness, conveyed by Mr. Holmes's statement has surely eluded Mr. Edward V. Grant, Acting President of the University of Connecticut after reading the letter by John G. Bynoe, Regional Civil Rights Director of the Boston area in which he rejects the UCON plan. Mr. Bynoe states for example:

> An acceptable affirmative action plan is required by Section 60–2.12 to have goals and timetables. These are provided as a means of measuring progress in the elimination of underutilization. Goals are to be developed separately for minorities and women based on the conclusions of the utilization analysis. The goals-setting process should involve department chairpersons and faculty, personnel relations staff and unit managers. Goals timetables and affirmative action commitments must be designed to correct any identifiable deficiencies.

In other words, Mr. Grant is asked to use goals and timetables as "a means of measuring porgress" and "to coreret identifiable deficiencies." There is even no talk of "good faith effort": you either satisfy the "measure" or risk losing the badly needed funds.

The Boston OCR officer was even more fundamentalist in his enforcement of Order No. 4. He charges:

> Instead of a detailed utilization analysis for minorities and women in the total university workforce, your response has concentrated on proving the inadequacy of the minority workforce in the areas from which you are most likely to recruit. You also cite the local housing, transportation and social problems, which are all external to the university, as reasons for the meager workforce of minorities available for employment. . . . Order No. 4 requires an institution to examine external problems and develop programs which will help to correct these problems where they inhibit minority employment.

Does this mean that the University must "develop programs which will help to correct these [external] problems" of "housing, transportation, and social problems"? Of course it does, as can be seen from another "recommendation" by the OCR official:

> Your response cites a transportation survey that is now three years old and relies on its continuing validity as a definitive answer to the request made in this recommendation. We believe the passage of time coupled with the obligation of an institution complying with affirmative action requirements to do more than ensure employment neutrality with regard to race, color, religion, sex, and national origin demands that the university undertake specific efforts which can be documented to meet this problem. This is not evidenced by your response.

After this some faculty wrote to our CANI office to inquire, jokingly, how could a university get into the railroad business. That this was not entirely beyond the range of OCR's ambition, the earlier set of recommendations made by HEW in November 1972 shows clearly:

> The University should undertake a feasibility study to investigate ways of improving transportation between Hartford and Storrs, Connecticut as a way of improving the minority applicant flow.

Thus, OCR did not just want the University to find out the facts: it also wanted the school to solve the "problem" of an "insufficient" supply of possible minority applicants for employment.

In the light of the above examples, it is no wonder that what was billed as a drive for nondiscrimination ended in the establishment of "numerical goals and precise timetables" which became quotas in everything but name. It took the OCR officials about two years to break down the last barriers of academic self-esteem. From then on, at least in the goal-timetable areas, universities became pliable to the point of accepting everything.

The already quoted President of New Mexico State University became party to a bargaining with the HEW's Regional Contract Compliance Officer in Dallas, Mr. Miles Schulze, which involved not only integral numbers of bodies but even fractions of a person. Here is an excerpt from his letter to Mr. Schulze:

> In paragraph 3, page 1, you have indicated that we failed to meet the goals set for minorities. Our analysis of chart I indicates that we did not meet our goals in the official-managers category (3 projected—0 hired) technicians (10 projected—9 hired) and sales workers (1 projected—0 hired). We did exceed our goals in the professional category (5 projected—19 hired) and the office clerical category (40 projected—55 hired). Our overall goal for these five categories was also exceeded (59 projected—83 hired). In the technician and sales workers category we missed our goal by one individual. Although there were no minority new hires in the official-managers category, two Spanish-Surnamed Americans (J. J. Tejada, Asst. Director, Cooperative Extension Service, and Jose I. Garcia, Manager, Administrative Systems Development, Computer Center) were promoted into this category, but have not been counted as new hires.
>
> In paragraph 1, page 2 you have indicated that we have no Native Americans on the faculty. Assistant Professor Richard J. Lease of the Police Science Department is *three-fourths* Cherokee, considers himself a Native American, and is so shown in all of our reports since he joined the faculty in 1965. The new Director of the Agricultural Extension Service is *part* Cherokee Indian. (Italics added.)

At the University of Cincinnati, which is under the jurisdiction of another regional branch of HEW, their Affirmative Action plan contains the statement that the objective of the University is "to utilize women and minority group employees in all fields and on all levels of employment in proportion to the availability of minority group members and women in the populations of a reasonable recruitment area." In practice this means, for example, at the start of the 1973–1974 school year (employment period August–December 1973), that the white male faculty had increased by 214 persons while the combined female and minority category had registered an increase of 238, *i.e.* more than one preferred category person hired for every candidate from the category of "others."

At the University of Michigan, whose president so ably described some of the difficulties, the Affirmative Action plan invoked in the fall of 1973 provided that in all employment categories 777 new positions projected for the coming three year period should be filled by 698 additional minority members and 105 non-minority women for a *net loss* of 26 non-minority men. No matter how flexibly one interprets these goals, the stated targets are a *reduction in* non-minority employment (−26) compared to a colossal *increase* (803) in the preferred categories. In the case of new academic personnel, the projected three year increments are +101 for minorities, +54 for non-minority women and +61 for non-minority men—a total of +216 new openings. This should be compared with an additional position activity of 290 covering attrition and turnover, for which "the University will continue to hire large numbers of non-minority men as well as women and minorities over three years." (*University Record*, October 8, 1973.)

It is worth noting that these and many other goal-timetable projections of this one inch thick Affirmative Action Document, for which the "cost of compiling the information would, I think, astound members of this committee," (testimony of President Robben Flemming of August 12, 1974), have been compiled despite the cautionary warning in another part of this astonishingly expensive document that:

> Both limited availability and keen competition for minorities makes it highly improbable that this percentage can be realized. In the current market minorities do not constitute one in five applicants for institutional positions.

Thus, it is clear that the yearly goals grossly exceed the proportions of minorities and women on the labor market, in programs not only approved by HEW, but extracted (as at Michigan) after long and arduous negotiations. This, despite the testimony to this committee that the goals are merely supposed to reflect, *in each year's new hires*, the existing availability proportions.

* * * * * * *

Commitments to goals of the type listed above lead inevitably to consequences of a most deplorable nature. Discriminatory actions of the type most of us thought had been pushed into the disrespected underground of human consciousness, emerged suddenly with ugliness and vigor. In order to fulfill the required goals within a stated period of time, and, in the words of Columbia's President

McGill, to "get the government off our back," departmental chairmen and other administrators began to write and mail announcements and letters like this:

> Dear Mr. Pittman, The recommendation for your appointment to the Department of Psychology at Prince George's Community College was disapproved by the Board of Trustees on August 15, 1972. The basis for disapproval was primarily that the position presently vacant in that department requires certain qualifications regarding the overall profile of the institution and department as well as educational qualifications of the individual involved.
>
> The disapproval in no way reflects upon your professional preparation or specific background in the area of Clinical Psychology. The decision was based primarily on the needs of the department in accord with its profile and qualifications.
>
> Sincerely,
>
> ELMER J. KUHN, *Dean*.

Similar was the experience of Richard J. Larschan, a prospective teacher of English who looked for a job at Connecticut College in New London:

> It is quite true that we have an opening here and that I have examined your dossier. It is very impressive indeed, and I wish I could invite you to come for an interview. At present, however, the department is interested in the appointment of a woman so we are concentrating on interviews of this kind.
>
> I appreciate very much your interest in the College, and I know that with your excellent qualifications you will find a position of your choice. Naturally, I shall keep you in mind should any changes occur.
>
> Best wishes to you for success.
>
> Sincerely yours,
>
> G. J. WILLAUER, Jr., *Chairman*.

Likewise, the chairman of the Sociology Department of a University in Florida wrote to a prospective appointee in February of 1972:

> Since I last corresponded with you regarding the possibility of a position in this Department, decisions have been made by the top administration of the University that have created some awkwardness in our recruiting efforts.
>
> The decision I refer to is that all unfilled positions in the University must be filled by black or females. Since I have no information reguarding your racial identification, it will only be possible to consider you for a position in the event that you are black.
>
> I might add that we have received letters from your references and have been enthusiastic about your candidacy.

Sometimes, the applicant didn't have to bother. On April 18, 1972 a Sonoma State College Administrator wrote to a placement officer at Berkeley:

> I was intrigued by the description you gave of Mr. Michael Goldberg and very much appreciate your efforts on his behalf. Your letter says much about you at well as about him.
>
> Mr. Goldberg has not contacted me and I fear that were he to do so we would have no more than a pleasant conversation, for we are pledged to the affirmative action policy in our hiring this year.

Similar restrictive announcements are coming from all kinds of colleges, big and small, East and West:

> Sacramento State College is currently engaged in an Affirmative Action Program, the goal of which is to recruit, hire, and promote *ethnic and women candidates until they comprise the same proportion of our faculty as they do of the general population.*
>
> The Department of Philosophy at the University of Washington is seeking qualified women and minority candidates for faculty position at all levels beginning Fall Quarter 1973 . . .
>
> All of the California State Colleges have been requested to implement a program of active recruitment of qualified faculty of minority background, especially Negro and Mexican-American.
>
> Since I am unable to determine this type of information from the resumes you have sent me, I should very much appreciate it if you could indicate which of your 1972 candidates are either Negro or Mexican-American.
>
> Your prompt response to my letter of May 12 with four candidates, *all of whom seem qualified for our* vacancy, is greatly appreciated. Since there is no indication that any of them belongs to one of the minority groups

> listed, I will be unable to contact them at present. My instructions are to exhaust every opportunity for recruiting a qualified person from among a minority group, including women. If this attempt is fully documented, I will then be given permission to seek the best qualified person available regardless of race, color, or creed which has always been our practice in the past. If I get this "green light," I would certainly be interested in two of your candidates and would contact them to see if they were still available.

Particularly heartbreaking, has been the case of Martin S. Goldman, a native of Philadelphia whom this committee may have an opportunity to hear first hand. Having first worked in predominantly black schools, he learned about deficiencies in existing curricula. Like many others of his generation, he proceeded to translate his understanding into action. Faced with a choice of possible specialties, he put heavy emphasis on courses in black history. His intent was to teach at some college or university, and his first experiences looked promising.

Three years ago, in April of 1971, the University of Michigan, Dearborn Campus, invited him out for an interview for a position in Afro-American and urban history. He flew out to Dearborn and after giving a paper was offered a one-year half-time appointment on the spot by the Dean of Liberal Arts and the Chairman of the Department. He told them that he had not yet begun research on his thesis and would very much appreciate it if they would hold the offer open for the following year. (He had only passed his Ph. D. orals the day before the interview.) They said they would try, but of course could make no promises. The next year he received a note telling him how impressed they were and that he was still the top candidate for the spot. In the spring of 1972, the Chairman called and said that because of budget problems no position was funded but that Mr. Goldman would be reconsidered for that year. A call to the Chairman, Dr. Donald Proctor, broke the news, however, that a new dean had been installed and that he had passed down the word to hire blacks. Though still very impressed with Goldman's work, said Proctor, the department would have to follow the dean's orders—a bitter disappointment for someone whose hopes had been kept high for almost two years.

Little had Mr. Goldman known at the time that this refusal was only a beginning. Over the ensuing years, he tried unsuccessfully to knock on the door of more than 100 U.S. universities and colleges of every size and in every geographic area, only to find them shut tight. Like many other young persons who selected the same scholarly area, he was subjected to every type of discriminatory treatment that may be found in the book. After many unsuccessful years of search, Mr. Goldman has given up and accepted a Federal job. Donald Avery, also specializing in the Afro-American aspects of American history, was finally lucky and landed a satisfactory teaching job. Not so fortunate was Paul Lammermeier who had to settle for a job of short-order cook in a pancake house in Mentor, Ohio.

The present situation seems quite bleak. Particularly revealing is a study covering the field of Sociology which was carried out by Dr. Edgar Borgatta, distinguished professor at Queens College, City University of New York. He polled chairmen and male and female members of departments of Sociology all over the country with results which cannot be simply set aside. The first question,

> . . . During the last three years, have you (has your department) received any communication from your administration to the effect that positions would be made available (added, replaced or not deleted in the budget) if an acceptable candidate from a minority group could be found?

elicited a "yes" reply from 37% of chairmen, 39% of female staff and 35% of male staff. The second question read:

> During the last three years, has any candidate been sought out preferentially (non-competitively) because of sex, race, national origin, or other arbitrary characteristics (assuming, of course, the person was presumed to have acceptable qualifications as a sociologist)?

It would seem clear that in responding "yes" to this question we would have a statement of attempted preferential hiring. 40% of polled chairmen answered in the affirmative, and so did 42% of their female and 47% of their male staff. The third question was quite straightforward:

> . . . During the last three years, have you (has your department) received any communication from your administration, formally, to seek out and give preference to candidates of minority groups in filling positions, i.e., not treat one or more of the positions as open to all comers on a competitive basis?

23% of the chairmen answered "yes" with 24% and 38% being the respective numbers for female and male. Next inquiry was about other institutions:

> During the last three years, have you (or has the staff member in charge of answering requests about your students and faculty who are entering the market) received any requests which explicitly or implicitly indicate that preference in filling a position will be given (non-competitively) to a person or minority group status?

The "yes" answers were 57%, 26% and 38% for the respective categories. The chairmen's answers should be considered more reliable since they are mostly recipients of the requests in question. Finally, Dr. Borgatta asked:

> In your opinion, which of the statements below represents the interpretation of Affirmative Action on your campus according to actual procedures (and the explicit or implicit support of your administration)?
>
> 1. Affirmative Action requires special attention to finding some minority group candidates, with the objective of preferentially hiring them if the (minimum acceptable) standard of the department of the school can be satisfied.
>
> 2. Affirmative Action requires special attention to finding minority group members in the recruitment process so that they can be evaluated with other candidates, but preference in selection is to be given to some minority group members among candidates who are acceptable to the department and school if this is the only way to add minority group members to the department.
>
> 3. Affirmative Action requires that attention be given to locating all possible candidates for a position, including those of minority group status, but once the inclusive recruitment base is established only the factors related to academic potential and excellence are to be used.

The first alternative answer was indicated by 15% of the chairmen, 13% of female staff and 27% of male staff. Respective numbers for the second alternative were 23%, 42% and 32%, *i.e.* 38% of chairmen, 55% of female staff, and 56% of male staff believe that Affirmative Action means some kind of preferential *i.e.*, discriminatory treatment. Thus in the same issue of ASA Footnotes (December 1973) in which another author bitterly complained about essentially all results of Affirmative Action in the field of Sociology, Dr. Borgotta could not escape the conclusion that:

> In summary, with whatever limitations this abbreviated research may have, it is doubtful that any conclusion can be reached other than that in a large proportion of academic institutions Affirmative Action has meant giving preference to women and minorities, and, in the words of Bernice Sandler, violating the very laws and regulations they are seeking to observe. In corroboration of the findings of this study, another report recently appeared with findings that 35 percent of responding chairmen from a broader sample of institutions indicated that their departments had formally determined a priority list for the hiring of women and minorities (Lorch 1973).

SUMMARY AND RECOMMENDATIONS

Affirmative action programs have fallen into the abuses and contradictions described by many witnesses essentially because their devisers sought to find a shortcut from the task of correcting the wrongs of discrimination. That shortcut was the so-called "statistical" method (usually characterized by a lack of statistical preparation) and it resulted in the goals and timetables. The problem arose that getting the proportions right is not the same thing at all as nondiscrimination. Looked at from the outside, from the point of view of a bureaucrat observing proportions, it may appear identical, but looked at from the inside, from the point of view of the man or woman, black or white, who has seen someone preferred to him or her precisely in *order* to get the numbers right, it is nothing more than discrimination in its crudest form. Like many shortcuts, this one turned out to be a snare and a delusion.

Not only have these programs worked injustice on many individuals and created a general cynicism about the justice of what should be merit considerations, but, as several witnesses, such as Presidents Hester and Flemming, have testified before this committee, they are clumsy, expensive and time-consuming out of all proportion to thier effectiveness, conceived in a spirit of *a priori* punitiveness, and, in short, unworkable. As President Hester said, if many aspects of the regulations are meant to be taken at face value and their five or ten year deadlines enforced, "it will be disastrous." If they are not meant to be enforced, then they represent a colossal waste.

The "numerical goals" and "precise timetables," which seem to be the root cause of the new wave of discrimination and related malpractices, appear to have been created because they looked like the most convenient bureaucratic solution. The officials would not have to make the moral decisions involved in a finding of discrimination or its absence and they would not have to yield to the claims of professional competence made by those they were investigating and judging. All they would have to do would be to check off numbers on a list and think up requirements for others to fulfill. Once adopting this approach, the rule makers proceeded to devise Orders, guidelines and other ordinances while almost completely ignorant of the actual state of affairs in the professional labor market, of the statistical theory, and of the structure of educational institutions which they wanted to regulate. They never tried out a pilot project but rushed headlong into generalizations. They did not seek counsel from those ultimately involved in the programs, yet went forward with threats which touched upon the very financial survival of institutions under pressure. No wonder, then, that the consequences of such preciptious acts were both unpleasant and many and that one should now take decisive action to right the wrong.

Of greatest importance would be the disassociation of institutions of higher education from the Labor Department regulations which, even in their acceptable parts, reflect another domain of applicability and are poorly suited for institutions of higher learning. Also, the demands for numerical goals and timetables should be rescinded in the light of their proven ineffectiveness on the one side, and their inordinate cost and enormous potential for harm on the other.

This would pave the way for the development by appropriate groups of experts under the overall supervision of the Department of Health, Education, and Welfare of a new set of antidiscrimination rules, implementing the pertinent statutes, which would be fair, just, equitable and workable.

The following suggestions might be useful in formulating an approach that places the best of the present congerie of programs into the context of a genuine nondiscrimination plan.

(1) Colleges and universities should be asked to comply with clearcut nondiscrimination directives in the areas of recruitment, hiring, promotion, retirement, salary and adjudication of grievances. These would reflect the spirit as well as the letter of Executive Order 11246 which seeks to cast the net as widely as possible for all qualified applicants for a position and to guarantee that all are treated "without regard" to their race or sex. Such directives clearly would have to preclude the existence of any double standard, either substantive or procedural. Thus there would be no room for such exercises as the Chancellor of the State University of New York's newly stated hiring policy. This policy requires voluminous documentation if a white male is to be hired, including letters of disinterest from women and members of designated minorities invited to consider job offers, and often already holding other jobs. On the other hand, if a member of one of the preferred groups is to be hired, comparatively little paperwork is required. Such a policy discourages the hiring of qualified white males just as surely as grandfather clauses and poll taxes once discouraged voting by blacks. Such differential approaches, if accepted for use against any group can be used against all.

(2) Antidiscrimination directives applicable to educational institutions should be the joint product of educators and government officials aided by statistical and other experts. In the future there should be much greater cooperation between bureaucrats and academics on projects of common concern. An office in HEW, centralizing the development and oversight of affirmative action programs in education, should be staffed by personnel which is substantially more knowledgeable about the nature of universities than was the case in the past. This may bring to an end many of the complaints heard from university administrators and faculty about the unreality of bureaucratic programs.

(3) Educational autonomy should be strongly reaffirmed in the fields of curriculum, staffing and teaching. The attempts by government officials to interfere with academic structures and content out of a desire to facilitate the fulfillment of the programs they oversee, is one of the more alarming side effects of the present melange of programs. Government officials are there to see that discrimination is halted, not to determine teaching qualifications, course requirements or academic standards. As a corollary, one would expect that overall

govermental intervention would be held at a minimum compatible with the actual task at hand.

(4) A limit should be set on the time a bureaucratic agency may take in considering a submitted plan. As pointed out by Dr. Flemming, at present, years can go by without word from the federal government on whether or not a plan has been accepted. This procedural custom has the substantive effect of transforming the judicial function of bureaucrats into a tormenting and harassing one, since one's case is always pending before a judge who at the same time sends his emissaries to make farther demands. If such a time limit were to be passed, the submitted plan should, like a Congressional bill, be considered accepted.

In addition, the point made in previous testimony by Mr. Stith, the lawyer who had worked on pertinent cases for Columbia University, is well taken. The power to deprive a university of funds should not be given to any official graced with a telephone and an intention to do so. A breathing space should be required before any funds are cut off. The regulations should provide for a reasonable and sufficient amount of time for the university to discuss and appeal the administrative decision.

(5) A system of graded sanctions should be adopted to punish breaches of obligations in various degrees, as proposed by Professor Jan Vetter of the Berkeley Law School in a report prepared for the Administrative Conference of the United States, "Affirmative Action in Faculty Employment Under Executive Order 11246."[1] The either/or of cutting off federal funding is an exceptionally clumsy way of meting out punishment. If the NCAA can control its member colleges through graded sanctions, it is hard to see why the United States Government cannot.

(6) The present practice that essentially the same group of officials produces regulations, investigates their application, passes judgment on possible noncompliance, metes out punishment and dictates the remedies should be abolished and the various functions should be vested in mutually independent entities. In particular, the determination of institutional noncompliance and the subsequent imposition of sanctions should be done by forums (commissions, tribunals, boards of inquiry and the like), which would include distinguished and knowledgeable members of the academic community.

(7) The present requirement of affirmative action programs that colleges and universities maintain effective and reliable grievance procedures should be retained. But as Mr. Stith pointed out in earlier testimony, there is no sense in mandating such programs if it is not also mandated that they be used.

Such a system of grievance proceedings throughout academic may do much to deal with the complaints of discrimination that do arise. Of course, it is understood that there should be an appellate system outside the given institution to which unsatisfied grievants may bring their case. Such an appellate system should be the heart of a genuine antidiscrimination program. We agree entirely with President Flemming of Michigan that it would not be hard to establish impartial boards of expert professionals to decide cases of discrimination in institutions not their own. Such boards could be set up in any number of ways. One possibility would be for the professional associations to develop lists of professionals willing to serve, on retainer, on such boards. The plaintiff and the defendant could each choose representatives from them to form an appellate board. The boards could either operate autonomously, under the aegis of federal officials who would make sure that the law was not broken, or as part of the federal enforcement system. In that case, the government could either select its expert for the board or even send its own representative to serve as chairman or chief ombudsman. The funding for this program would be trifling compared to the present expenses of arranging, complying and policing compliance with the unattainable goals and timetables.

The obvious and overwhelming advantage of these boards is that they would be competent and designed to deal with individual cases of discrimination as they occur to individuals wherever and whoever they may be. Whereas now only certain groups (identical with those thought relevant to the Philadelphia construction industry) are scouted for "underutilization" under this plan discrimination against ethnic Catholics, Sephardic Jews, the physically handicapped or anyone else, could be ferreted out and rectified. Administrative judges would not have to avoid discussion of the merits of the case because of professional incompetence or ignorance, though confidentiality should be maintained outside the hearing.

---

[1] The Conference has not acted on or adopted this report as yet.

One could anticipate two major objections to this plan. The first is that the number of cases is so enormous that they cannot be dealt with on an individual basis. The second objection, raised by President Flemming, is that it would require an agreement to allow these appellate hearings to be final and that neither the bureaucracy or the courts should be allowed to grant *de novo* trials.

It is simply not true that such boards would be swamped with cases. The prime piece of evidence for the belief that they would be is the failure of the EEOC to cope with its enormous backlog of cases. However, of those hundreds of thousands of cases, only about sixteen hundred stem from post-secondary education, of which not all were faculty cases. In addition, the EEOC, with its limited number of regional offices, does not, in resolving these cases, have a large enough staff which could come close to replacing, either in knowledge or in number, the many independent experts who would work on all campuses. It should also be noted that the testimony of President Hester of NYU concerning the disposition of cases involving his university before the various boards in New York City and New York State, indicates that all 34 of the charges dealt with up to now turned out to be unjustified or were withdrawn. It is therefore only reasonable to predict that only a relatively small number of cases would remain active and perhaps travel all the way down the appellate road. Thus there is every reason to assume that a cooperative program, uniting government and academic forces, could easily cope with the complaints of discrimination, where the wholesale punitive measures used at present merely create additional cases of discrimination.

The second objection has two parts. Would the agencies and would the courts cooperate? Under this plan, the joint government-academic boards could easily *be* the agency grievance scheme, whether involving HEW or EEOC or some other governmental agencies. But certainly there should be no level of agency appeal above these boards. As far as the courts are concerned, the right to a trial *de novo* presumably cannot be challenged by either the executive or legislative branches and thus a disappointed plaintiff could still go to court under this plan. However, he or she can do so now.[2] It would thus be a very curious argument which saw in the fact that trials *de novo* are available to citizens unsatisfied with internal or agency grievance proceedings, an argument for abolishing any and all such procedures.

It is very unfortunate that to a large extent the present difficulties may have originated from a spirit of implacable mistrust which expresses itself in the belief that no group of expert academics can be trusted to be fair to women and minorities. In truth, however, this objection is without merit. The very fact that the HEW guidelines speak of remedying underutilization and not of correcting discrimination, indicates that the problem all along has been, as Dr. Richard Lester has so ably pointed out, for universities at the graduate level, a question of inadequate supply. The absence of substantial pools of unemployed women and minorities substantiates this. For example, even the discrepancy between the 5.2% unemployed women versus 1.1% unemployed men in physics achieves its true proportions when we reflect that it involves a total discrepancy of exactly 20 jobs, a truly insignificant number when compared to the number of physics departments in this country. Even where it can be presumed that there is a department or a dean that discriminates or would like to, on the basis of race, or sex, or religion, or national origin, it is wholly unrealistic to think that among the range and scope of American academics none can be found who will be fair to a complainant. The recent responses of the professional associations to the problem of pension benefits and the allocation of scholarships, confirm the exact opposite of this cynical belief.

The thoroughgoing suspicion that refuses to cooperate with those who are to be regulated and which seeks to treat them as guilty in principle, cannot possibly lead to nondiscrimination in an area in which so much depends on considerations of professional merit as judged by peers. It is absolutely necessary for the future that regulations be proposed, discussed and adopted in a spirit of openness, mutual respect and cooperation, and not imposed arbitrarily and in ignorance from above.

---

[2] The plaintiffs whose cases were dismissed in the NYU case have not all plunged into litigation. After losing twice, on the merits, not everyone remains unconvinced. It is unlikely that universities would frequently go to court in such circumstances.

TESTIMONY OF PROF. MIRO M. TODOROVICH, ASSOCIATE PROFESSOR OF PHYSICS, BRONX COMMUNITY COLLEGE, CITY UNIVERSITY OF NEW YORK; COORDINATOR, COMMITTEE ON ACADEMIC NONDISCRIMINATION AND INTEGRITY

Mr. TODOROVICH. Mr. Chairman, before I try to disperse my duty just let me comment that it was music to my ears, some of the remarks you made a while ago.

I come from a part of the world where not so long, about 150 years, my grandfather was a slave in a foreign-dominated country. When I mention slavery I mean it in all of the most gruesome thing that one can muster.

I would really be very unhappy if after traveling a journey to these shores my child one day would like to go to get an education and into a profession, perhaps a little better grade at mathematics because I could give him some of that input, and then find the door shut.

Your proposal of making sure that the educational opportunities be widened to the point where everyone can be guaranteed who wants entry into a school of his choice and his capacities, it is really one of the best things that I heard in a long time in this area.

Ladies and gentlemen, I wish to express my appreciation and gratitude for the opportunity and privilege to present before the subcommittee the views of the Committee on Academic Nondiscrimination and Integrity on various aspects of antibias regulations in higher education promulgated by the Federal Government.

While preparing my written presentation I was keenly aware that most of the ground pertinent to the problem has already been covered by the many witnesses who preceded my in this chair.

Still I believe that no one can speak as eloquently as the ones of the plans and the participants themselves. I took therefore the liberty to include into the narrative excerpts from some of the more remarkable documents which cross my desk over a period of months.

For example, a letter from the president of the University of New Mexico. I do no know much about the admissions procedure at the School of Law of New Mexico beyond this morning. As a matter of fact I don't know very much about the Law School of New Mexico.

However I see from this letter that after many visits of compliance officers the president felt compelled to write to the head of the Dallas regional office of Civil Rights of HEW a letter saying in part:

> I am concerned when the Office of Contract Compliance of HEW feels that it must use threats and coercion to force "quotas" rather than to set goals and objectives as specified by Congress . . .
>
> I am concerned about the lost time and effort and the tremendous expense associated with the investigation and review merely because we were not given advance information about the nature of the investigation or the timespan of the study. We were told by members of the review team that the universities "could not be trusted with advance notices" because they would "change their records." This statement is a reflection on all institutions of higher education in this nation and cannot foster the cooperation needed to correct our historic problems of discrimination."

His colleague from the neighboring State of Arizona felt it necessary to write the officials of the office in San Francisco about the inner workings of supervision and writes in part:

> On the basis of these data it is evident that in over half of the departments listed there are not enough women doctorate holders available to justify the listing of these departments as deficient.
>
> In agronomy, for example, over the 9-year period examined only six Ph. D.'s were obtained by women; two were obtained in the same timespan in meteorology; eight in watershed management.
>
> Even doubling this degree output to estimate the number of degrees granted over a 20-year span does not provide a sufficient pool of females to justify the inclusion of these departments on the list.

It is important to point out that President Harvill of Arizona was not opposing an effort to include into the educational process all available qualified women.

What he did was to convey to the apparently ignorant officials his opposition to the demanded goals and timetables be prepared in hundreds of academic departments in disciplines in which there are only small total numbers of qualified women available.

In the same way the fact that there are presently 25 unemployed women physicists as indicated at these hearings the other day does not justify the demand that thousands of physics departments in this country expend an inordinantly large amount of time and energy to level up numerical goals and precise timetables for future hiring.

What we do need is to find for these 25 ladies jobs commensurate with their qualifications in an effective complaint mechanism to which they can turn if anyone is giving them a runaround.

There is a reason to believe that the confusion in understanding the interpretation of the various orders, regulations, and guidelines was not as spontaneous as one is made to believe.

In one of the letters of understanding J. Stanley Pottinger, the former Director of the Office for Civil Rights wrote to Robert Kibbee, chancellor of City University of New York, the following paragraph:

> In addition we wish to make clear that the contents of this letter apply specifically and only to the City University of New York. In no way do these temporary procedures necessarily express or imply procedures or policies for investigation with regard to other Federal contractors and we will appreciate your treating this letter with the confidentiality necessary to preserve this point.

Thus, not only were the university administrators and faculties most of the time in the dark as to what they were exactly expected to do. The uncertainty seems to have been deliberately perpetuated by some top officials of the crucial agency in question.

In his testimony to this committee Mr. Peter Holmes, present Director of the Office for Civil Rights for HEW, stated that:

> The recent recruitment analysis, selection analysis, salary equity analysis, promotion analysis are in our estimation so much more important to correcting discrimination factors in the employment process that we quite candidly do not attempt to make an issue of an institution that is establishing goals and timetables for itself that it must achieve parity at the end of a 5-year period.

However, the impression of gentle reasonableness conveyed by Mr. Holmes' statement has surely eluded Mr. Edward V. Grant, acting president of the University of Connecticut after reading the letter by John G. Bynoe, regional civil rights director of the Boston area in which he rejects the University of Connecticut plan. Mr. Bynoe states for example:

> An acceptable affirmative action plan is required by section 60-2.12 to have goals and timetables. These are provided as a means of measuring progress in the elimination of underutilization. Goals are to be developed separately for minorities and women based on the conclusions of the utilization analysis.

> The goals-setting process should involve department chairpersons and faculty, personnel relations staff and unit managers. Goals, timetables and affirmative action commitments must be designed to correct any identifiable deficiencies.

In other words, Mr. Grant is asked to use goals and timetables as "a means of measuring progress' and "to correct identifiable deficiencies." There is no talk of "good faith effort." You either satisfy the "measure" or risk losing the badly needed funds.

Actual numbers were discussed in an exchange between Miles Schulze, HEW's regional compliance officer in Dallas, and the president of New Mexico State University, Dr. Thomas.

Dr. Thomas wrote:

> In paragraph 3, page 1, you have indicated that we failed to meet the goals set for minorities. Our analysis of Chart I indicates that we did not meet our goals in the official-managers category (three projected, zero hired), technicians (10 projected, nine hired) and sales workers (one projected, zero hired.)
>
> We did exceed our goals in the professional category (five projected, 19 hired), and the office clerical category (40 projected, 55 hired).
>
> Our overall goal for these five categories was also exceeded (59 projected, 83 hired).
>
> In the technician and sales workers category we missed our goal by one individual.
>
> Although there were no minority new hires in the official-managers category, two Spanish-surnamed Americans were promoted into this category but have not been counted as new hires.
>
> In paragraph 1, page 2, you have indicated that we have no Native Americans on the faculty. Assistant Professor Richard J. Lease of the Police Science Department is three-fourths Cherokee, considers himself a Native American and is so shown in all of our reports since he joined the faculty in 1965. The new Director of the Agricultural Extension Service is part Cherokee Indian.

Thus there is not only a demand for an integral fulfillment of the numerical goals within a specified time but compliance extends even to a fraction of a person.

Numbers also figure prominently in a 1973 affirmative action plan of the University of Michigan that provides in all employment categories 777 new positions projected for the coming 3-year period should be filled by 698 additional minority members and 105 nonminority women for a net loss of 26 nonminority men.

No matter how flexibly one interprets these goals the stated targets are a reduction in nonminority employment, minus 26, compared to a colossal increase, 803, in the preferred category.

It is worth noting that these and many other goal-timetable projections of this 1 inch-thick affirmative action document, for which the "cost of compiling the information would"—I am quoting now President Fleming—"I think, astound members of this committee."

Despite the astounding cost the document was prepared. And it states:

> Both limited availability and keen competition for minorities makes it highly improbable that this percentage can be realized. In the current market minorities do not constitute one in five applicants for institutional positions.

Thus it is clear that the yearly goals grossly exceed the proportions of minorities and women on the labor market in programs not only approved by HEW but extracted, as in the case of Michigan, after long and arduous negotiations.

This despite the testimony to this committee that the goals are merely supposed to reflect, in each year's new hires, the existing availability proportions.

Among the far out interpretations of the order No. 4 as applied to universities are those of the Boston OCR officer who wrote to the President of the University of Connecticut:

> The University should undertake a feasibility study to investigate ways of improving transportation between Hartford and Storrs, Connecticut as a way of improving the minority applicant flow.

That they were deadly serious is shown in the following followup letter from the Office of Civil Rights:

> You also cite the local housing, transportation and social problems, which are all external to the university, as reasons for the meager workforce of minorities available for employment . . . Order No. 4 requires an institution to examine external problems and develop programs which will help to correct these problems where they inhibit minority employment.

Does this mean that the university must "develop programs which will help to correct these external problems" of "housing, transportation and social problems?"

Of course it does, as can be seen from another "recommendation" by the OCR official:

> Your response cites a transportation survey that is now 3 years old and relies on its continuing validity as a definitive answer to the request made in this recommendation.
>
> We believe the passage of time coupled with the obligation of an institution complying with affirmative action requirements to do more than ensure employment neutrality with regard to race, color, religion, sex and national origin demands that the university undertake specific efforts which can be documented to meet this problem. This is not evidenced by your response.

After this some faculty wrote to our CANI office to inquire, half jokingly, what steps could be taken for the university to get into the railroad business.

Commitments to goals of the type listed above lead inevitably to consequences of a most deplorable nature. Discriminatory actions of the type most of us thought had been pushed into the disrespected underground of human consciousness emerged suddenly with ugliness and vigor.

In order to fulfill the required goals within a stated period of time and in the words of Columbia's President McGill, to "get the Government off our back" departmental chairmen and other administrators began to write and mail announcements and letters like this:

> Dear Mr. Pittman: The recommendation for your appointment to the Department of Psychology at Prince George's Community College was disapproved by the Board of Trustees on August 15, 1972. The basis for disapproval was primarily that the position presently vacant in that department requires certain qualifications regarding the overall profile of the institution and department as well as educational qualifications of the individual involved.
>
> The disapproval in no way reflects upon your professional preparation or specific background in the area of Clinical Psychology. The decision was based primarily on the needs of the department in accord with its profile and qualifications.

I will spare you the reading of many similar communications.

I would comment on insinuations, made most recently yesterday at these hearings, that such letters are a devilishly convenient way for a chairman to put the blame for refusal on the affirmative action program.

I am stating this categorically that from all the extensi[illegible]formation at the disposal of our committee such an explanation is totally unwarranted and is based on the flimsiest of grounds.

While a scattering of wrongdoing may be expected to happen, like in all cases of possible malpractice, all the available intelligence points unfortunately to the discriminatory character.

Surveys have served to buttress Dr. Borgatta's conclusion that:

> In summary, with whatever limitations this abbreviated research may have it is doubtful that any conclusion can be reached other than that in a large proportion of academic institutions affirmative action has meant giving preference to women and minorities and in the words of Bernice Sandler, violating the very laws and regulations they are seeking to observe.
>
> In corroboration of the findings of this study another report recently appeared with findings that 35 percent of responding chairman from a broader sample of institutions indicated that their departments had formally determined a priority list for the hiring of women and minorities.

This was a report of March 1973.

Mr. Chairman, where do we go from here? The existing programs which have been so ardently tried over the past half of a decade have miserably failed. On this point there is a general agreement between both protagonists and the critics of the existing regulations.

They want more monitoring. They want more stringent rules. They want more bureaucratic power.

When a car model year after year seems to cause more than its share of accidents one begins to look at the design of the car. One tries to produce a better model. The present Governmental regulations are designed supposedly to implement the congressional statutes. And Presidential orders have proven grossly defective and inadequate and accident-prone.

We need a new look and a new design. Of greatest importance would be the dissociation of institutions of higher education from the Labor Department regulations which, even in their acceptable parts, reflect another domain of applicability and are poorly suited for institutions of higher learning.

Also the demands for numerical goals and timetables should be rescinded in the light of their proven ineffectiveness on the one side and their inordinate cost and enormous potential for harm on the other.

This would pave the way for the development by appropriate groups of experts under the overall supervision of the Department of Health, Education, and Welfare of a new set of antidiscrimination rules, implementing the pertinent statutes, which would be fair, just equitable, and workable.

The following suggestions might be useful in formulating an approach that places the best of the present congerie of programs into the context of a genuine nondiscrimination plan.

No. 1. Colleges and universities should be asked to comply with clearcut nondiscrimination directives in the areas of recruitment, hiring, promotion, retirement, salary and adjudication of grievances.

These would reflect the spirit as well as the letter of Executive Order 11246 which seeks to cast the net as widely as possible for all qualified applicants for a position and to guarantee that all are treated without regard to their race or sex.

No. 2. Antidiscrimination directives applicable to educational institutions should be the joint product of educators and Government officials aided by statistical and other experts. In the future there should be much greater cooperation between bureaucrats and academics on projects of common concern.

No. 3. Educational autonomy should be strongly reaffirmed in the fields of curriculum, staffing, and teaching. The attempts by Government officials to interfere with academic structures and content out of a desire to facilitate the fulfillment of the programs they oversee is one of the more alarming side effects of the present melange of programs.

Government officials are there to see that discrimination is halted, not to determine teaching qualifications, course requirements or academic standards.

As a corollary one would expect that overall governmental intervention would be held at a minimum compatible with the actual task at hand.

No. 4. A limit should be set on the time a bureaucractic agency may take in considering a submitted plan. As pointed out by Dr. Flemming, at present, years can go by without word from the Federal Government on whether or not a plan has been accepted.

I have just learned yesterday that many plans which have at this point been even accepted may not be in compliance with the most recent regulations which are currently emanating from the Office of Federal Contract Compliance.

This procedural custom has the substantive effect of transforming the judicial function of bureaucrats into a tormenting and harassing one, since one's case is always pending before a judge who at the same time sends his emissaries to make further demands.

If such a time limit were to be passed the submitted plan should, like a congressional bill, be considered accepted.

No. 5. A system of graded sanctions should be adopted to punish breaches of obligations in various degrees, as proposed by Prof. Jan Vetter of the Berkeley Law School in a report prepared for the Administrative Conference of the United States, "Affirmative Action in Faculty Employment Under Executive Order 11246." The conference has not acted on or adopted this report as yet.

The either/or of cutting off Federal funding is an exceptionally clumsy way of meting out punishment. If the NCAA can control its member colleges through graded sanctions it is hard to see why the U.S. Government cannot.

No. 6. The present practice that essentially the same group of officials produces regulations, investigates their application, passes judgement on possible noncompliance, metes out punishment and dictates the remedies should be abolished and the various functions should be vested in mutually independent entities.

In particular the determination of institutional noncompliance and the subsequent imposition of sanctions should be done by forums, commissions, tribunals, boards of inquiry and the like, which would include distinguished and knowledgeable members of the academic community.

No. 7. The present requirement of affirmative action programs that colleges and universities maintain effective and reliable grievance procedures should be retained. But as Mr. Stith pointed out in earlier testimony, there is no sense in mandating such programs if it is not also mandated that they be used.

Such a system of grievance proceedings throughout academia may do much to deal with the complaints of discrimination that do arise.

Of course it is understood that there should be an appellate system outside the given institution to which unsatisfied grievants may bring their case.

Such an appellate system should be the heart of a genuine antidiscrimination program.

We agree entirely with President Flemming of Michigan that it would not be hard to establish impartial boards of expert professionals to decide cases of discrimination in institutions not their own.

Such boards could be set up in any number of ways. One possibility would be for the professional associations to develop lists of professionals willing to serve, on retainer, on such boards.

The plaintiff and the defendant could each choose representatives from them to form an appellate board. The boards could either operate autonomously, under the aegis of Federal officials who would make sure that the law was not broken, or as part of the federal enforcement system.

In that case the Government could either select its expert for the board or even send its own representative to serve as chairman or chief ombudsman. The funding for this program would be trifling compared to the present expenses of arranging, compiling and policing compliance with the unattainable goals and timetables.

The obvious and overwhelming advantage of these boards is that they would be competent and designed to deal with individual cases of discrimination as they occur to individuals wherever and whoever they may be.

Whereas now only certain groups, identical with those thought relevant to the Philadelphia construction industry, are scouted for underutilization, under this plan discrimination against ethnic Catholics, Sephardic Jews, the physically handicapped or anyone else, could be ferreted out and rectified. Administrative judges would not have to avoid discussions of the merits of the case because of professional incompetence or ignorance, though confidentiality should be maintained outside the hearing.

It is very unfortunate that to a large extent the present difficulties may have originated from a spirit of implacable mistrust which expresses itself in the belief that no group of expert academics can be trusted to be fair to women and minorities.

In truth however this objection is without merit. The very fact that the HEW guidelines speak of remedying underutilization and not of correcting discrimination indicates that the problem all along has been, as Dr. Richard Lester had so ably pointed out, for universities at the graduate level, a question of inadequate supply.

The absence of substantial pools of unemployed women and minorities substantiates this. For example, even the discrepancy between the 5.2 percent unemployed women versus 1.1 percent unemployed men in physics achieves its true proportions when we reflect that it involves a total discrepancy of exactly 20 jobs, a truly insignificant number when compared to the number of physics departments in this country.

Even where it can be presumed that there is a department or a dean that discriminates or would like to on the basis of race or sex or religion or national origin, it is wholly unrealistic to think that among the range and scope of American academics none can be found who will be fair to a complainant.

The recent responses of the professional associations to the problem of pension benefits and the allocation of scholarships confirm the exact opposite of this cynical belief.

The thoroughgoing suspicion that refuses to cooperate with those who are to be regulated and which seeks to treat them as guilty in principle cannot possibly lead to nondiscrimination in an area in which so much depends on considerations of professional merit as judged by peers.

It is absolutely necessary for the future that regulations be proposed, discussed and adopted in a spirit of openness, mutual respect and cooperation and not imposed arbitrarily and in ignorance from above.

Members of my committee would be eager to cooperate in these endeavors if anyone would invite them to be.

Mr. O'Hara. Thank you very much, Professor Todorovich.

Without objection your statement will be entered in full into the record prior to your oral testimony.

One of the things that has disturbed me about your testimony and about Professor Hook's testimony and about Professor Lester's study that I might as fell get off my chest is that in all three there is a hint that, well, maybe the numerical goals and what I would consider quotas under the Office of Contract Compliance of the Department of Labor, maybe they are OK in the industrial setting but not in the academic setting.

My feeling is that they are just as wrong in the construction industry as they are in universities.

Indeed, we had a vote some years ago around this place on the Philadelphia plan. I was one of the minority that voted against providing funds for implementation of the Philadelphia plan because I felt it was wrong there just as I feel it is wrong in universities.

I think you can argue that case. But I think really what you fellows are trying to do, if you don't mind my saying so, is you are trying to demonstrate that you aren't a bunch of sexists and racists and you are trying to appear to be moderates, you know, by saying, "Well, maybe it is OK for the construction trades." If I were you I would be a little careful on that. I don't think it is OK for the construction trades and I hope that you don't, inadvertently or carelessly, lend support to this same kind of thing in other areas or activities.

Mr. Todorovich. Mr. Chairman, let me answer this in two parts.

One, that back in 1970 when the problems seem to have started to crop up and many people like Dr. Hook, Professor Seabury from Berkeley, got aware and projected this into a possible trouble, we had a meeting in New York.

At that time Mr. Moynihan was a representative of the United States at the United Nations. So we met at his office down there and precisely this question was raised.

Here is a basic fundamental problem of justice. It would be totally inappropriate for the academy to take any elitist view that this is not good for them but it can be good for the others.

I must say in the intervening time we have gotten some backlash the other way. Some people say, "serves them right. They started the whole trouble and let us give them a little bit of their medicine. But not for us."

I would like to stress most emphatically that what we said was only in a sense we felt that this is the domain of competency with which we can best present our argument.

Between the time I wrote my presentation and now I already mentioned that a study for the administrative conference of the United States was brought to my attention, which is a very beautiful document, and I will try to see that your committee staff get one copy whenever a better draft comes from California.

These results parallel the studies of myself and Dr. Lestor. I was trying to find the precise pages and couldn't do it. But let me try to paraphrase.

These regulations perhaps better fit the clerical part, the janitorial part, of universities, formally.

But he points out in this document that this does not mean that he in any way condones the regulations. He just points out that what in one case would work with large numbers of more or less identical persons, bricklayers, where you have an easier way of at least statically handling the matter, this is a case where the whole thing completely collapses when you come to departments of the size of 10 persons or more where even these 10 people are distinguished between a medieval historian or an American historian within one department.

Mr. O'Hara. I appreciate that explanation because I don't think that they are, these kinds of guidelines, any easier to apply or any more just in other circumstances.

Let us take the case of the bricklayer. It is true that they have a hiring hall system in the construction unions. A contractor will call up a business agent and will say, "I need five bricklayers beginning on Monday" or whatever it is.

In all or substantially all of these trades they have developed within the trade a methodology thought to be fair for determining who the business agent will send.

In times of full employment it involves whatever five he can find can get to go.

In times of slack employment it usually involves a system whereby the first job goes to the one who has been out of work longest and the second job goes to the one who has been out of work second longest and so forth.

When you interfere with that system by saying, "Well, we are going to give a racial quota and it doesn't matter how long George here has been out of work, he is not going to go because the color of his skin is wrong" or something of that nature, I think that is just every bit as bad as the kind of discrimination about which you complain.

Mr. Todorovich. Mr. Chairman, I can add another parallel if you wish. You are probably very well aware that there are some attempts within the labor field to do away with certain seniority rights under a situation of tight employment.

Mr. O'Hara. Yes.

Mr. Todorovich. Institutions may get into the same tight situation and the question of tenure will be probed from all possible sides.

So we are fully aware that we are in the same boat. Again, I am just emphasizing that in our testimony we tried to stay on our best ground of competence.

Mr. O'HARA. I am glad you said that. I appreciate the testimony you presented to the committee. I appreciate your suggestions and your paper for ways that you think would be effective in remedying cases of discrimination affecting employment.

Mr. TODOROVICH. I only add, Mr. Chairman, that I am fully aware that as people in the academy we don't have a monopoly of wisdom to give a definitive answer on this. But we think that we can from our vantage point produce certain points of view which then can be processed by those who are more skilled in legislative work or whatever so that out of this comes something that is, as I said, fair and just.

Mr. O'HARA. Thank you very much, Professor Todorovich.

Mr. TODOROVICH. Thank you.

Mr. O'HARA. Our final witness today will be Dr. Stanley Dacher, who is vice president of the Queens Borough Jewish Community Council.

Dr. Dacher, we would appreciate hearing your views on this important subject.

TESTIMONY OF STANLEY DACHER, D.D.S., VICE PRESIDENT, QUEENS, N.Y., JEWISH COMMUNITY COUNCIL

Dr. DACHER. Mr. Chairman, let me thank you for your kind invitation to appear before this committee.

My name is Stanley Dacher. I am a practicing dentist. I practice in the city of New York. I am vice president of the Queens Jewish Community Council, which is a coordinating agency for some 65 temples, synagogues, and local chapters of national Jewish organizations based in the Borough of Queens.

We have been presented with many complaints from our constituents concerning the affirmative action programs being administered by HEW under Department of Labor guidelines.

On June 27, 1972, we had a meeting along with seven other Jewish organizations from the city of New York with the New York City congressional delegation at which we addressed some 15 members of the New York City delegation.

We reported to them at that time the complaints that were relayed to us and our feelings concerning them.

I would like to quote from that statement, just one portion of which refers to something you had spoken of earlier today, the use of quota systems, preferential racial hiring, which is affecting large portions of the general population.

"The Jewish minority has a special sensitivity to this problem. It is a sensitivity sadly earned. It is all the more tragic therefore when such ancient victims become victims again."

I think you made very clear reference to that earlier.

Despite publicity since the time of our report to the New York City congressional delegation and despite the creation of new HEW guidelines which were issued on October 1, 1972, and despite the appointment of an ombudsman at HEW to make sure that there was equitable treatment for all and no reverse discrimination, the situation has actually become worse now than it was before.

Later on in my testimony I will quote to you from the very latest guidelines of the Department of Labor for the month of July 1974 which I think should fully settle the question that was asked many times this morning as to the difference between "goals" and "quotas."

The ombudsman, as reported to you by the representative from the Anti-Defamation League yesterday, has used his position to bury rather than rectify any cases of reverse discrimination reported to him.

The use of quotas to satisfy the requirements of compliance review officers has spread to almost all universities in both hiring of professional staff and in the admissions policies of students.

You have heard testimony this week from people who represent the academic community and have been either witness to or victims of the sad state of affairs caused by the enforcement of Federal affirmative action programs.

My appearance here today is as an interested and concerned layman. I am not personally affected by affirmative action programs. I work in my own office. Nobody bothers me with compliance or review.

However I have a 12-year-old son. I worry about the effect this will have on him not too many years from now.

I cannot find the self-righteousness in myself that some find, as the dean of the law school this morning, in making the moral and ethical judgment that it is proper for him in his contribution to social justice to sacrifice the career of a deserving white applicant in favor of a black who may be or may not be poor, who may or may not be educationally deprived, the educationally and economically deprived white boy from Appalachia, or it's equivalent, does not earn the dean's sympathies.

He has made this judgment. I in good conscience cannot.

The Jewish-American minority is particularly affected by affirmative action programs at the universities. We are caught on the horns of a dilemma. On the one hand in those areas in which we have generally not found a friendly reception and from which we are still excluded, there has been no effective Federal affirmative action program toward opening opportunities up for us.

On the other hand where our qualifications have won us positions in the past inequitable enforcement of Federal affirmative action programs are pushing white male applicants, and many of them are Jews, aside in favor of other groups who may or may not be as well qualified.

Add to this the present crunch and difficulties of college graduates in getting jobs in general you can then understand the serious situation that the young people find themselves in.

The Queens Jewish Community Council first became involved in affirmative action as a result of a recruitment leaflet from the State University at Albany which was turned over to us.

The recruitment leaflet was from the chairman of the Department of Judaic Studies at the State University of New York at Albany.

It stated:

Position available and brief description of duties. The department is searching for a biblical scholar who is either female or a member of a minority group, black, American Indian, Spanish-surnamed or Oriental-American. If possible we would like this person to be capable of chairing our department.

This would be comical were it not serious and were it not factual. In fact, I was so skeptical of this leaflet that I had it checked out to make sure that it was indeed authentic. And it is authentic.

I have a leaflet here from the gentleman who wrote the letter. He makes clear that "your understanding of my intentions was absolutely correct. I was seeking all the very best qualified for the position."

This brings up several interesting points. He speaks of "best qualified." We have run into this problem. What does "qualified" mean? How can we determine qualifications?

Well, for an academic position, he speaks of the qualifications for the chairman of the Judaic Studies Department as being "a biblical scholar."

I suppose it is true that a biblical scholar could do the job. But I think we would all agree that a person who is well versed in the Talmud, Jewish law, Jewish history, customs of the Jewish people, problems of the disapora, Zionism and its problems and a mass of other things that go into Jewish studies—I think that we would all agree that this person would certainly be a more qualified person than one who is merely a biblical scholar.

It is apparent that the intentions of the person who initiated this leaflet were to hire a non-Jew. The easiest way he could do this was to make the qualifications fit who he was looking to hire.

A biblical scholar could surely be an Oriental American or a black American or a Spanish-trained American. The question of whether they would be the best qualified for the job and would do the best job for the students in that department is left unanswered.

I present this material along with some other material that I think will be revealing to you. We felt that with the evidence we had there was serious dereliction of duty in the Department of HEW at the highest levels; namely, the Secretary of HEW, Richardson, and at the Office for Civil Rights, the man in charge of affirmative action programs, Pottinger.

On May 18, 1972, Mr. Richardson and Mr. Pottinger held a meeting with representatives of such national Jewish organizations as the American Jewish Committee, the American Jewish Congress, the Anti-Defamation League, the Jewish Labor Committee, Jewish War Veterans and the Agudath Israel.

I have copies of minutes from two people who were at this meeting and both of them tell us the same thing.

No. 1. Mr. Richardson professed that his Department, HEW, had no authority over the admission practices of the universities. He denied that his Department had authority concerning admissions.

This was later clarified by Pottinger who noted that while under the Executive order this was true, HEW did have authority concerning college admissions under the Civil Rights Act of 1964.

In addition Pottinger was quoted as saying that where quotas were voluntarily established by universities because of "excesses of zeal" he felt that it would be inappropriate for him to object.

The other minutes report, Mr. Pottinger stated further that while HEW does not endorse quotas he feels that HEW has no responsibility to object if quotas are used by universities on their own initiative.

The New York City congressional delegation was very upset. They sent a letter to Mr. Richardson and asked Mr. Richardson,

Under affirmative action guidelines are there circumstances in which merit is not the sole criterion related to hiring and employment decisions? Is it ever the policy or practice of HEW to encourage the hiring or promotion of minimally qualified persons when a more qualified person is available?

Then they asked, "Did Mr. Stanley Pottinger in your presence and without dissent from you tell the delegation of leaders of national Jewish organizations that he would not object if universities in executing affirmative action programs displayed an excess of zeal by establishing job quotas?"

Mr. Richardson answered. His answer to the first question, "is it ever the policy or practice of HEW to encourage the hiring of minimally qualified persons over more qualified," is that, he did not answer yes or no.

He answered, "The affirmative action requirements do not obligate a university to hire or promote minority persons or women who are considered less qualified than other candidates."

The question remained unanswered.

As far as what Mr. Pottinger said Mr. Richardson's reply was, "As I recall Mr. Pottinger replied to the question of whether he would condone quotas. He replied that 'such an endeavor might in many cases be awkward.' "

It was pointed out in the letter of the congressional delegation to Mr. Richardson that there seemed to be a disparity between provisions of the Civil Rights Act of 1964, section 703J, which states that "nothing contained in this title shall require preferential treatment to any group because of a previous imbalance."

The Congressional delegation thought this was at variance with revised order No. 4 which sets up affected classes and minorities who have certain rights.

Mr. Richardson replied, again quoting something you referred to, Mr. Chairman, to the case concerning the *Contractors Association of Eastern Pennsylvania* v. *Shultz, Secretary of Labor.* This was the case of the Philadelphia plan. In that case the court held that section 7.03J of the Civil Rights Act of 1964 is a limitation only upon title 7 of the act, not upon any other remedy, State or Federal.

The third circuit held that section 7.03J is inapplicable to the Executive order.

The courts seem to have set up a conflict. On the one hand there is a certain method or approach that Congress has set forth. On the other hand there is a certain method which has emanated out of the Department of Labor. There is a never-never land as to which shall have precedence in court.

This is an area which begs for clarification.

The abuses we complained of were to have been corrected by the appointment of the ombudsman by the Secretary of HEW. I have filed correspondence with him, some of which was presented yesterday by ADL, in which he consistently ignores or refuses to take action when cases of quota selection are shown to him in college admission and hiring practices.

However, since the Secretary of HEW held himself to be unaware of his responsibility concerning college admissions, it is not surprising when we find ourselves the victims of poor guidelines administered by officials of poor judgment.

I would like to turn my attention to the guidelines themselves. I hope to present some interpretation and information which may be new to you and which may be helpful in putting a handle on controlling the abuses we have spoken of.

As we know, the guidelines were issued under the auspices of several Presidential orders. The language of these orders states:

> that it is the policy of the Federal Government of the United States to provide equal opportunity in federal employment for all qualified persons, to prohibit discrimination in employment because of race, color, religion, sex or national origin and to promote the full realization of equal employment opportunity through a positive continuing program in each department.

The Executive order empowers the Secretary of Labor to draw up guidelines, as we all know. Something happened on the way to the Department of Labor because what comes out of the Department of Labor seems to be entirely different from equal opportunity for all qualified persons.

The guidelines are divided up into several sections. Three of the sections are of interest in particular—these are title 41, chapter 60 of the Code of Federal Regulations, part 60–2, those regulations deal with affirmative action programs under the Executive orders. There is quite a lot of material in here which concerns the purpose of affirmative action programs to require utilization analyses, establishment of goals and timetables.

It goes through quite a bit of material here. Here we are told for the first time that there is to be relief for members of an affected class although nowhere in this part is the affected class identified.

From usage we found out who the affected classes were and later on in further guidelines it comes out who the affected classes are. Part 60–2.11 includes those requirements for utilization analysis. This part doesn't speak so much of identifying discrimination and correcting discrimination as it does speak of underutilization of a particular portion of the work force. Whereas the presidential order speaks of equal employment opportunity 60–2.11 speaks of equal utilization of minority groups.

On January 19, 1973, part 60–50 was published. These are guidelines on discrimination because of religion or national origin.

We are told in here that the employment problems of blacks, Spanish-surnamed Americans, Orientals and American Indians are treated under part 60–2. Their problems are treated in this special way.

The purpose of 60–50 is to eliminate discrimination against various religious and ethnic groups, primarily but not exclusively of eastern, middle, and southern European ancestry, such as Jews, Catholics, Italians, Greeks and Slavic groups. The concern about these groups is that they are excluded from executive, middle management or other job levels. These groups are not protected against entry level discrimination.

The guidelines only call for outreach and positive recruitment. No provisions are made for utilization analysis, as is done for preferred minority groups in part 60–2.11.

Part 60–50 also provides for accommodation for religious observance and practice.

492

As far as we know nothing has ever been done to enforce part 60–50.

But it gets more interesting as we go along because now we have the very latest. The latest was issued on July 18, 1974. This is part 60–60 of title 41, Code of Federal Regulations.

This answers a lot of questions because these are the procedures for contract evaluation, how a compliance officer is supposed to review compliance.

Again, we have this divided into two sections. There is one compliance review for those classes that are protected under part 60–2, which occupies five and three-quarters pages.

There is perhaps a quarter of a column for those who are protected under the guidelines for religious and national origin discrimination.

I spoke before that I think we can probably answer what a goal is and what a quota is because I think we are told here.

This goal is defined under the protection for affected classes, not for religious or national minorities.

> A goal must be established for each job group in which underutilization exists and must be designed to completely correct the underutilization. The goal must be stated as a percentage of the total employees in the job group and must be equal to the percentage of minorities or women available for work in the job group in accordance with criteria set forth in the previous section.

It tells us further that "numerical goals based on openings are required but cannot be used in place of percentage goals." These provisions are found under section 60–60.9 part B XII A and B. Please see also subsection XIII which indicates the weak provisions for those who are to be protected against discrimination because of religion or national origin.

I think this pretty well defines for us what a goal is. A goal is a way of getting to a quota, a quota being "exact portions of the work force as are in the population."

That seems to be what it is.

There has been talk about the fact that it is difficult to draw up minimum standards for certain types of jobs.

There is a very sensitive area which is not well treated in the guidelines; that different jobs have different standards.

One of the problems with the guidelines is that instead of being job-related they are related to groups of people who may be applying for any kind of job.

This doesn't seem to be sensible. Certain kinds of jobs need certain guidelines and provisions should be made for that.

The intent here seems to be rather than to achieve equal treatment or opportunity, it seems to be an attempt to create equal achievement for all. I don't know if we are at the point where we have decided that this is the proper remedy that we should achieve, that we should have equal achievement for all in any given field of endeavor.

There are certainly individual differences in ability, interest, et cetera, that would rule that out.

I have spoken up to this point mainly about the problems occurring in the hiring of personnel. If I still have time, I would like to comment for a few moments on the subject of college admissions.

This has presented a very large problem to us. It has become common practice now for many professional schools on their admissions questionnaires to ask the following question:

"Special education opportunities are sometimes available" for special racial or ethnic backgrounds. If your background is listed below and you wish to identify yourself please respond to the item."

Listed are: "Afro-American black," "American Indian," "Caucasian White," "Mexican-Spanish-American" and "Oriental Americans." This is very widespread in many colleges and almost all professional schools. We don't have to guess. We know what the use of the form is for. We were told this morning by the dean of the law school. So no guessing is necessary.

Yale Law School, I have been told, uses two sets of standards on the law school aptitude test. They have one set of standards for white male applicants who must achieve a certain score and minority group applicants who are accepted on another score.

Scholarships are a problem. Very often scholarship money is earmarked depending on not whether a student is deserving but for those who are from a particular racial, ethnic or sex background.

The Education Act of 1972, title I, in the educational opportunity grants, contains some very fine language. The law states those are qualified who are from low-income families and who, but for the lack of such a grant, would be unable to obtain the benefits of a postsecondary education. This is the way equitable law should be written.

In New York City the City University has a program called by the acronym of SEEK. This is search for education, elevation and knowledge. It is partly funded under the aforementioned act.

But the way the program was set up the selection of students was based on geographical areas in which they lived. The geographical areas were limited to those of black ghettos and Spanish-origin Puerto Rican ghettos. The area of Williamsburg where many poor Jews live who are really impoverished was not included. The program of SEEK is almost entirely funded for black and Puerto Rican students.

I think this committee should perhaps investigate into why this has occurred since the grant was not made specifically for that purpose.

City University of New York has a combined medical program with one of the medical schools. Last year 19 students who were selected dropped out of the program and they had to be replaced. The University replaced each of the 19 with a replacement from the same ethnic, racial, or sex background. If one was dropped who was Chinese, a Chinese was selected for that spot. If one was dropped who was Catholic, a Catholic was selected to fill that spot. The University denied that they were imposing a quota in doing this.

Harvard University Dental School in the American Dental Association News of October 22, 1973, placed a story of which they were obviously very proud, that 8 women, who represented 36 percent of the 22 freshmen dental students, were selected for admission.

Something very interesting comes up here when you look at these statistics. Sixty women had applied for enrollment. Eight were selected. Fourteen men were selected. One out of seven women who applied were selected out of 500 men who applied. This means that 1 out of 35 men were selected.

In other words, a woman had a 7-to-1 better chance of being selected for admission. This could only have happened because a quota was being imposed.

The *De Funis* case has been spoken about and we need not go into that.

What we have spoken of today, of course, is only a tip of the iceburg. There are many, many other areas of our society where this goes on.

I beg your indulgence to just digress for a moment to speak to you about another agency of the Government that also sets quotas—I don't what to say about the sensibility of this agency, the Small Business Administration.

In March of 1973 they decided to set up new regulations which were designed to restrict white participation in the aid setaside program. This program was a program designed to help minority businessmen.

Under the new provisions the minority must be 60 percent in the company instead of the current 51 percent and prohibited a nonminority company from investing in more than one minority company.

One of the problems with these plans is that the minority people didn't want them because without their nonminority financial backers and without their say so a lot of companies just couldn't make it.

But in its wisdom the Small Business Administration in a colossal misuse of power decided this would be good for the small minority businessman.

As further evidence of the chaos I have the New York Times of March 20, 1974. There is a classified ad. It says: "Affirmative action is the law" and a big exclamation point. It is apparently from an employment agency which has "250,000 qualified candidates." It will "help you find your candidates if you can't find them yourself."

A whole industry is growing up around affirmative action programs.

At New York University 3 weeks ago there was a program at the college which would explain affirmative action programs to employers.

Now I would like to make some suggestions, as to what we feel would help to find a way out of this morass.

It is very obvious that the Labor Department guidelines are unwise and unequal in treatment of different individuals and certainly they must be called to task and they must be if at all possible compelled to make these guidelines conform to equal treatment for all as they were supposed to.

I think we should write into the law something that would strongly prohibit preference because of race, that nobody should be denied opportunities because of race, religion, color, sex or national origin.

But we find the situation is happening where people are being granted jobs and admission opportunities because of race, color, sex, religion or national origin.

The conflict between the Department of Labor and Congress' will in this matter may not be settled unless there is either a congressional law passed that would specifically say "one may not use sex, religion, to give a job or to withhold a job."

I can see nothing else short of an amendment to the Constitution which would do the same thing, if there is going to be this opposition between the executive body and the legislative on the proper remedies for discrimination in this country.

I want to thank you very much for the opportunity to have spoken to you. I appreciate your indulgence.

[Matters referred to follow:]

[From the New York Times, Sunday, March 18, 1973]

NEW MINORITY-BUSINESS RULES DELAYED

(By Paul Delaney)

WASHINGTON, March 17—The Nixon Administration has backed off somewhat on a set of regulations that minority businessmen protested would destroy one of the Administration's most popular minority captalism programs.

Officials of the Small Business Administration agreed to delay and possibly to modify the proposed regulations, which minority organizations complained would have forced minority companies with substantial white capital out of the program.

The agreement came yesterday during a three-hour meeting between S.B.A. officials, aides to President Nixon, Congressional representatives and black and Spanish-speaking businessmen.

The S.B.A. proposed two weeks ago new regulations designed to restrict white participation in the "8A set-aside" program. Officials of the agency said the regulations were meant to make certain that most of the benefits went to minority businesses.

RECONSIDERATION SET

But minority businessmen protested that many of them would become ineligible to participate in the program because many of their companies depend heavily on white money and white business partners.

The "8A" program refers to section 8A of the Small Business Act. The section sets aside certain noncompetitive Federal contracts specifically for minority companies.

The S.B.A. agreed to reconsider the proposed changes and to delay putting them into effect until after April 10. The regulations could become law any time after March 26, when they are to be published for the second time in the Federal Register.

"We will re-evaluate the regulations and consider the protests of the minorities," said Marshall J. Parker, S.B.A. associate administrator.

PROPOSED CHANGES

"We hope to clear up the whole thing by April 10. We might not settle all their conmplaints, but we are certain we can arrive at some satisfactory agreement," he said.

"We promulgated the new regulations because we wanted to make sure the benefits were going to minorities."

The proposed changes stipulate that to be eligible a company must be "owned and controlled [operated]" by minorities. At present, the wording is "owned or controlled."

The new regulations would also do the following:

Prevent a white company or individual that provided equity capital from becoming a partner in the new minority company.

Provide the minority ownership must be 60 per cent instead of the current 51 per cent.

Stipulate that participating companies could use only minority subcontractors.

Prohibit a nonminority company from investing in more than one minority company participating in the program.

Make minority companies ineligible for contracts after three years of participation in the program.

"Those regulations would force many minority companies out of business because they have a lot of white money invested in them, and the companies need the 8A contracts to survive," commented Theodore A. Adams Jr., executive director of the National Association of Black Manufacturers.

"We want and we need white capital," he continued. "A lot of our companies just couldn't make it without it. The intent of S.B.A. might have been good, but the proposed changes would do much more harm than good."

The meeting yesterday was called after complaints against the proposed regulations began to mount. Besides minority businessmen, those joining in the protests included the predominantly white National Small Business Association; Senator Alan Cranston of California and Alan Bible of Nevada, both Democrats, and Representative Parren J. Mitchell, Democrat of Maryland.

Mr. Mitchell and Carolyn D. Jordan, Senator Cranston's legislative assistant, attended yesterday's meeting. All the Congressmen involved had requested the delay and modifications in the regulations.

"They are a rather weird set of proposals, crudely written and certainly pushed without benefit of minority comment prior to being published in the Federal Register," Miss Jordan said.

"We would like to see them withdraw the entire package and start over again," she said.

The White House was represented at the meeting by Stanley Scott, special assistant to the President.

[From the New York Times, March 20, 1974]

AFFIRMATIVE ACTION IS THE LAW

Use the Affirmative Action Register to reach approximately 250,000 qualified candidates for your professional and managerial openings through a single source.

The Affirmative Action Register has been established to assist business, industry and educational institutions comply with Federal Regulations. (U.S. Executive Order 11246.)

We are specialists in reaching qualified minority and female candidates as well as the usual sources, through our nationwide, systematic and organized program.

Rates: $80.00 per column inch (approx. 50 words).

Send listing to:

Affirmative Action Register

(For Effective Equal Opportunity Recruitment)

10 So. Brentwood Blvd., St. Louis, Mo., 63105. 314/863-1711

Mr. O'Hara. Thank you very much, Dr. Dacher. I appreciate very much your interest in this matter. You were the first one who had asked for an opportunity to testify before this subcommittee on this particular subject.

You have done all this work as a volunteer. You have taken an interest as a citizen in the problems that have arisen in connection with affirmative action and numerical goals and quotas. I think you are to be commended for that.

So many people hang back because they don't want to be identified as racist or sexist, as one of the bad guys. This is exactly how you get identified when you start raising these questions.

So obviously there is a reluctance to get yourself into that situation. But somebody has to do it. I think you are to be commended.

Dr. Dacher. I trust and hope that that reluctance will not fall upon the work of this committee. It is not a popular stance to take.

In the courts the remedies have been settled on the basis of quotas for the most part, that you shall hire so many in one group in proportion to another and so many from another group.

The Federal judges who issue these quota orders are doing it under the 14th amendment. We hold that they are being granted unequal treatment because of race, color, creed, when quotas are set up.

Mr. O'Hara. I recognize that problem. The courts, of course, contend that you have no power to limit the ways in which——

Dr. Dacher. Except by a constitutional amendment to clarify what they are.

Mr. O'Hara. We are dealing with actions of the executive and actions by private organizations. Clearly we can legislate in that area.

Dr. Dacher. I wonder how many times the remedies of title VII of the Civil Rights Act of 1964 are actually used and how many times administrators go to other sections; namely, the Department of Labor guidelines?

Mr. O'HARA. I can't give you a numerical——

Dr. DACHER. It probably isn't used as much as the other remedies.

Mr. O'HARA. Title VII is not used nearly as much because it is much more——

Dr. DACHER. I think it is a serious situation in which the will of Congress is not being used.

Mr. O'HARA. That is right. It is not the only case though. We have an awful lot of them that are just that way.

The subcommittee will now stand in adjournment until the 23d of this month, when we will meet in this room at 9:30, to hear additional witnesses on the subject that we pursued this morning.

[Whereupon, at 12:27 p.m. the subcommittee adjourned, to reconvene at 9:30 a.m., Monday, September 23, 1974.]

CIVIL RIGHTS OBLIGATIONS OF INSTITUTIONS OF POSTSECONDARY EDUCATION

MONDAY, SEPTEMBER 23, 1974

House of Representatives,
Special Subcommittee on Education
of the Committee on Education and Labor,
Washington, D.C.

The subcommittee met at 9:30 a.m., pursuant to recess, in room 2261, Rayburn House Office Building, Hon. James G. O'Hara (chairman of the subcommittee) presiding.

Present: Representatives O'Hara and Dellenback.

Staff members present: Jim Harrison, staff director; Webb Buell, counsel; Elnora Teets, clerk; Yvonne Franklin, minority counsel.

Mr. O'Hara. The subcommittee will come to order.

Today we are continuing our current set of hearings with respect to what an institution of postsecondary education must be and what it must do in order to be eligible, or for it to be considered an eligible institution as far as title 4 programs and other aspects of the Higher Education Act are concerned.

We have been looking particularly into questions of discrimination in employment and admissions on the basis of sex, race, and ethnic groups.

Our first witness this morning on that subject will be Prof. Miguel Rios of the California Polytechnic Institute at Pomona. Professor Rios, if you will take a place at the witness table here in front, the committee would be very happy to hear from you.

STATEMENT OF MIGUEL RIOS, PROFESSOR, CALIFORNIA POLYTECHNIC INSTITUTE AT POMONA

Mr. Rios. I would like to say first of all that I am gratified to have the opportunity to express some opinions and some concerns which I believe are widely shared by the Spanish-surnamed population in California and to convey some personal observations which I hope will illustrate the difficulties that confront the Spanish-surnamed minority with respect to equal opportunities in institutions of higher education.

As you know, about one out of every six people in California is Spanish surnamed. Most of these Spanish surnamed are Chicanos; that is, they are Americans of Mexican descent. The Chicanos, as an ethnic minority, retain an economic status that is considerably below that of the average American in the total population.

This, of course, is equivalent to saying that we are grossly underrepresented, not only in the higher paying skilled jobs but also in the professions requiring postsecondary education and in particular in those requiring advanced degrees.

For example, of the approximately 20,000 physicists with a Ph. D. in the United States, only about 20 to 30, roughly one-tenth of 1 percent, are Chicano. This is to be compared with the total population of at least 10 million, greater than 5 percent, Mexican Americans in the total population.

Either you have to believe we are inherently incapable of the same level of achievement in physics and the other professions or that our society and its component institutions of higher education do not afford the Chicano the opportunity which rightfully belongs to us.

Now, many people would like to believe that these inequities are rapidly being diminished, but unfortunately this is not the case. As a member of the American Physical Society Committee on Minorities in Physics, I recently participated in a review of the statistics on the population of physicists in this country—students, that is, undergraduates, as well as postgraduates. Of the 200 undergraduates in physics at UCLA and of the 140 undergraduates in physics at Berkeley, only two at each institution are in physics. That is roughly 1 percent in each of these institutions.

Now, if our students are not entering the physics profession in universities which presumably serve the Spanish-speaking population, then where are the Chicano physicists going to come from? In fact, from the statistics it was not clear whether these students were, in fact, American citizens; they may have been foreign students.

The overall projection is that our representation in physics is not going to increase significantly in the near future. It may, in fact, decline. The same is true in other disciplines.

Recently I was invited to come over to UCLA to a little conference that was initiated by the faculty at UCLA, and the Dean of Graduate Studies was there, and they clearly indicated that the percentage of Chicano graduate students at UCLA has been decreasing during the past 2 years.

The reasons for the decline are undoubtedly complex but certainly a major contributing factor has to be the fact that equal opportunity for Chicanos is not yet a reality. This is particularly true of the major universities.

Most Chicanos in the teaching professions—about 75 percent—are at 2-year colleges or small 4-year institutions. Three years ago, when I was completing my doctorate in nuclear physics at the University of Maryland, I applied at every University of California campus for a 2-year postdoctoral appointment and I would like to indicate very briefly to you the kind of response that I got.

A letter from Prof. Byron Wright of UCLA:

> Thank you very much for your letter of November 25 in which you express an interest in joining the Nuclear Structure Group at UCLA. At the moment, it appears only one appointment will be made, and a tentative selection has already been made. So, unfortunately, the chance for your appointment here does appear to be small.

And indeed it was small and it continues to be small. I have similar letters from Irvine, San Diego, Berkeley, and every campus at the University of California.

[Letters referred to follow:]

University of California, Los Angeles,
December 15, 1970.

Dr. Miguel Rios, Jr.
College Park, Md.

Dear Dr. Rios: Thank you very much for your letter of November 25 in which you express an interest in joining the nuclear structure group at UCLA. I shall circulate it to the members of the group for consideration.

At the moment it appears that only one postdoctoral appointment will be made and a tentative selection has already been made, so, unfortunately, the chance for your appointment here does appear to be small.

Sincerely yours,

Byron T. Wright,
Professor of Physics.

University of California, Los Angeles,
January 5, 1971.

Dr. Miguel Rios, Jr.
College Park, Md.

Dear Mr. Rios: Your letter of December 18 has been forwarded to Professor Eugene Commins and Kenneth Crowe for consideration in the award of postdoctoral appointments. They will communicate with you if such a position is available. Unfortunately, due to budgetary restrictions, the chances of appointment are very slim.

I appreciate your interest and regret having to respond in such a negative manner.

Sincerely,

George H. Trilling, *Chairman.*

University of California, Irvine
January 4, 1971.

Mr. Miguel Rios, Jr.
College Park, Md.

Dear Mr. Rios: Thank you for your letter and resume of December 18, in which you inquire about the possibility of a faculty position in our department.

I regret having to inform you that it is already clear at this early point in the present academic year that we will have no new faculty positions for the coming academic year for which you might be considered.

I appreciate your interest in Irvine, and am sorry that we cannot take advantage of it.

Sincerely,

Alexei A. Maradudin, *Chairman.*

University of California, San Diego
February 5, 1971.

Mr. Miguel Rios, Jr.
College Park, Md.

Dear Mr. Rios: Thank you for your letter of December 18, 1970. I regret that due to budgetary restrictions, we do not have any positions open at the postdoctoral level for the coming year.

Thank you for your interest in the University of California, San Diego.

Sincerely yours,

George E. Masek,
Professor of Physics.

University of California, Santa Barbara,
December 4, 1970.

Mr. Miguel Rios, Jr.,
College Park, Md.

Dear Mr. Rios: Thank you for your letter of November 25, 1970 in which you expressed an interest in our department.

I am sorry that we do not have a position at this time for a physicist of your research area and experience.

We appreicate your interest in our department. I wish you success in your search for a desirable position.

Very truly yours,

V. JACCARINO, *Chairman.*

UNIVERSITY OF CALIFORNIA, SANTA CRUZ,
December 29, 1970.

Mr. MIGUEL RIOS, Jr.,
College Park, Md.

DEAR MR. RIOS: In response to your recent letter, I regret to tell you that we do not have available any physics positions for next year. Should this situation change, I will be pleased to get in touch with you.

Sincerely,

MICHAEL NAUENBERG,
Chairman, Board of Studies in Physics.

UNIVERSITY OF CALIFORNIA, DAVIS
February 3, 1971.

Mr. MIGUEL RIOS, Jr.
College Park, Md.

DEAR MR. RIOS: Thank you for your letter and your interest in Davis. At the present time there are no faculty positions open and we do not yet know whether we will have a new position available for next year. Your résumé will be retained in our file for consideration when a position does become available.

Sincerely,

W. J. KNOX, *Chairman.*

UNIVERSITY OF CALIFORNIA, RIVERSIDE
January 28, 1971.

Mr. MIGUEL RIOS, Jr.
College Park, Md.

DEAR MR. RIOS: Thank you for inquiry about a faculty position for the 1971–72 academic year in the Physics Department of the University of California at Riverside. I am sorry that we do not have an opening here at this time. However, we will keep your letter on file in case the situation should change.

Sincerely yours,

R. STEPHEN WHITE, *Chairman.*

UNIVERSITY OF CALIFORNIA,
LOS ALAMOS SCIENTIFIC LABORATORY,
Los Alamos, N. Mex. January 29, 1971.

Mr. MIGUEL RIOS, Jr.
College Park, Md.

DEAR MR. RIOS: Your application for employment with this Laboratory has been received and we are pleased to have this opportunity to review your qualifications.

To insure a comprehensive review, copies of your employment application are being forwarded to our technical divisions for appraisal by our professional staff. If your qualifications meet the requirements of any existing openings, you will be advised of our interest.

As Dr. H. T. Motz pointed out to you in his letter of December 29, 1970, the Physics Division does not anticipate any full-time staff positions during this year. Also, the Director of this Laboratory recently established a ceiling of 25 for postdoctoral appointments. The present "on-board" appointments, plus outstanding accepted offers exceed this new ceiling and except for the possibility of early terminations of appointments, it appears that we are temporarily "out-of-business" as far as any additional postdoctoral appointments go.

However, we allow thirty days from the date of this letter for our professional staff to complete their review of your application. If you are not contacted within this thirty day period, you should assume that no position exists which matches your qualifications.

In the event there is no interest expressed in your qualifications within this thirty day period, your application for employment will be retained for a period of one year and reviewed for any appropriate position which may become available.

Your interest in this Laboratory is appreciated.

Yours very truly,

JAMES C. TROUT,
Personnel Representative.

UNIVERSITY OF CALIFORNIA,
LAWRENCE RADIATION LABORATORY,
Berkeley, Calif. January 11, 1971.

Mr. MIGUEL RIOS, Jr.
College Park, Md.

DEAR MR. RIOS: We wish to thank you for the resume which you submitted to the Lawrence Radiation Laboratory.

Unfortunately, at the present time there are no suitable vacancies here which would effectively utilize your education and experience. We will, however, keep your file active in the event that an opening does occur which would make use of your background.

I have taken the liberty of forwarding your resume to the following Laboratories and contacts. They will advise you directly should they have a suitable vacancy.

Sandia Laboratories,
Albuquerque, New Mex., May 4, 1971.

Mr. Miguel Rios, Jr.
College Park, Md.

Dear Mr. Rios: Thank you for submitting the information we requested.

We have reviewed your qualifications against our anticipated personnel requirements and have found that they do not match our needs. Our limited openings make it impossible to offer employment to all the qualified candidates we are given the opportunity to consider.

We appreciate your interest and regret we cannot give you any encouragement.

Very truly yours,

P. M. Alarid,
Recruiting Coordinator, Organization 3251.

In spite of the failure of the University of California system to open the doors to Chicanos and other minorities and to women, the Federal Government recently released a $5.4 million grant to Berkeley although they did not have an acceptable affirmative action plan on paper, let alone in reality.

This action by the Federal Government, in my opinion, was a serious setback to minorities in our efforts to take our rightful place in this society.

The situation is not much better at the 19 California State colleges and universities. This system is different from the University of California system, as you may know. At present, I am assistant professor of physics at California State Polytechnic University in Pomona. Our student enrollment is approximately 10,000, with only 6 percent Spanish-surnamed, about 600 students, possibly 700. Now, this number has been relatively constant, I would say, for the past 2 or 3 years.

This is to be compared with the Mexican-American population at Pomona, for example, which has better than 25 percent Mexican-Americans and better than 25 percent blacks in a total population of over 100,000.

Now, Pomona is not the entire service area for Cal Poly but there are similar percentages in the surrounding cities which belong to what is defined as the Cal Poly service area and, if you include East Los Angeles, where there are over 1 million Mexican-Americans, the percentage of Chicanos could possibly be higher.

Now, of the 600 faculty members, only about 10 or 15—roughly 2 percent—are Mexican-Americans. This abysmal representation is due, in my opinion, to the discriminatory policies and practices of the university.

Now I would like to take a few minutes to summarize those policies and practices if I may. With respect to hiring, for example, Jose Jimenez and Robert Catlin, a black, were initially hired for the 1972–73 academic year as lecturers at the E–3 level in the Department of Urban Planning. They were told that the university was hiring only at the lecturer level. Mr. Frank Ducote, a white, had just been hired at the assistant professor step 4 level.

Their qualifiactions were as follows: Frank Ducote, master of science degree, urban planning, 3 years' experience; Jose Jimenez, master of science degree, urban planning, 7 years' experience; Robert Catlin, master of science degree, urban planning, 11 years' experience.

Not only was the salary for the Chicano and black lower than for the white, but, in addition, their rank was much lower than that of Mr. Ducote's in that service, as a lecturer does not have to be credited toward tenure. In addition, there are academic privileges that accrue to faculty members with rank of assistant professor or higher that do not accrue to lecturers.

Alfredo Diaz, master of science in business administration, Harvard, was hired at the assistant professor step 4 rank for the 1972–73 academic year. His rank and salary were not commensurate with those held by non-Chicano instructors in the school of business administration.

He outlined clearly what the situation was in the school of business administration and he has submitted a summary of his case and an affidavit. I would just like to briefly make one quick comparison here.

He has a list of people here, when they were hired, when they were tenured, and promoted. Before he was hired, he was told, that promotion would be based on merit alone, but he was not told that he could not be promoted to associate professor until he received tenure and he was not told that tenure would require a doctorate degree. The facts were withheld from him and misrepresented to him.

To make a comparison here, here is some data on Mr. James Petersen, a white male faculty member with a master's degree from the University of Arizona. Mr. Petersen was hired in 1969 at a salary of $18,733; Alfredo Diaz, in the same department, master's degree from Harvard, hired in 1972 at a salary of $11,600.

In my case, I was hired at exactly the same time as one of my colleagues, Dr. Robert Bush, and we had both just completed our requirements for the doctor's degree. Now, our institution uses the degree as a very strong criterion, you might say, as to rank and salary that you receive, although the policy is administered rather capriciously, which is basically what the problem is.

But, in principle, I think, their policy would have been that we would have been hired at the same level since we completed our doctorate at exactly the same time and started at the same time. Dr. Bush, however, was hired at the assistant professor step 3 level at a salary of $12,790, while I was hired at the step 2 level at a salary of $11,600. The job announcement for the two positions was the same.

With respect to tenure and promotions, for example, Jose Vadi, assistant professor, step 5, political science department, has been denied tenure and has not been promoted because the university has imposed the requirements that he must have a Ph. D. in order to receive tenure and promotion, although he has completed all requirements for his Ph. D. at the University of Wisconsin and will defend his thesis in the near future. It is my opinion that the requirement is discriminatory because two nonminority members of the department have been tenured and/or promoted prior to completion of their doctorates, They are Bruce Wilson, promoted to associate professor

August 1968, prior to receipt of his Ph. D., and Ronald Peterson, tenured and promoted to associate professor on October 1, 1972, prior to receipt of his Ph. D.

I have already mentioned that Alfredo Diaz was also promised that promotions would be based strictly on merit. He was not told that tenure would be required for promotion to associate professor and that, in fact, a Ph. D. would be required for tenure.

In my case, this past year I was denied tenure for the 1974–75 academic year.

Now, the criticism here is that the university does not take the tenure evaluations, the promotion evaluations, the hiring evaluations, and the retention evaluations seriously. They are done very capriciously and basically depend upon the feelings of the faculty members. The university manual states that the performance evaluations are to be based on teaching performance, professional growth, and service to the college and the community.

Now, I submitted three dossiers, each one relevant to the three criteria stated above, for evaluation of my tenure and, in spite of my achievements, I was never seriously considered for tenure, as evidenced by the following:

1. The reason given for denial of tenure was that, quote, "his classroom presentation has certain weaknesses," unquote. This is to be contrasted with the fact I was voted outstanding physics teacher of the year by the Society of Physics Students for the 1973–74 year.

2. The university manual, appendix 17, specifically states that the department will develop and consult written criteria to be used in tenure evaluations. No such criteria, if they exist, were consulted by the tenured members. It is doubtful they exist. I think there may be a few notes jotted down but nobody paid attention to them.

3. At least three members of the department cast votes in favor of denying tenure without having attended at least one of my lectures to evaluate my teaching abilities. This is the minimum that is done for nonminority instructors. They at least go to the class for 10 or 15 minutes.

4. Prior to the vote on tenure, I was informed by Dr. V. E. Parker, dean of the school of science, and Drs. Keith Brown and Ed Kelley, physics department, that President Kramer would not grant tenure to anyone who had not completed four years of service. The implication was that I could not expect a favorable outcome even though the tenure requirements call for a minimum of 2 years of service and I had completed 3.

5. Dr. Douglas Giancoli, a tenured member who voted in favor of tenure for me, officially expressed doubt that I had been granted a fair tenure evaluation. He wrote a very short memo to all members of the department as follows:

[The memorandum referred to follows:]

CALIFORNIA STATE POLYTECHNIC UNIVERSITY,
Pomona, April 14, 1974.

Memorandum

To: Physics and Earth Sciences Tenured Faculty

From: Douglas Giancoli

Last week I was informed that a meeting of the tenured faculty to discuss tenure for Dr. Rios would be held Tuesday, April 16, at 11a.m., after (or in place of) our regular faculty meeting. On Monday, April 15, I was informed about noon time that the tenured faculty was to meet instead that afternoon (Monday) at 3 p.m., to discuss the matter. Although, I had information of importance to put before that meeting, I had a previous commitment for that hour which could not be changed at such short notice, and thus I was unable to attend. I therefore raise the following questions, to which I hope someone can give me answers:

(1) Who has the power to call a meeting of the tenured faculty?

(2) Is it ethical to call a meeting (or change the time of a meeting) of such importance at very short notice. (N.B., this is not the first time this has happened in our department.)

Finally, in view of these questions, I suggest that perhaps the recommendation not to grant tenure to Dr. Rios was made without sufficient deliberation and input, and should be reconsidered.

Mr. RIOS. That memo from Dr. Giancoli was never answered.

There is, in addition, a great deal of discrimination with respect to job assignments and conditions of work. For example, Manuel Vizcaino, M.A. in linguistics and Spanish, was denied the opportunity to teach a Spanish language class by the department of English and modern languages in the winter quarter of 1974. The class was assigned to a professor who was not qualified to teach the class. This resulted in a large number of students approaching Mr. Vizcaino and complaining about Mr. Rudolf Zrimo's competency to teach Spanish.

I have some comments about my situation in the physics department, in which I have undergone a great deal of harassment, Mr. Chairman. I don't want to dwell on that and I would rather go to discuss other people in the university and simply state that recently a woman in our department, not the first woman but certainly the only woman who was in our department, resigned because of the conditions of employment. I have a letter of resignation which I will submit in which she clearly states that one of the reasons she resigned is because of harassment she was subjected to by Dr. Johannes Tuul, chairman of the department.

[Letter of resignation referred to follows:]

CALIFORNIA STATE POLYTECHNIC UNIVERSITY,
Pomona, July 29, 1974.

Dr. HUGH O. LABOUNTY, Jr.
Vice President for Academic Affairs, California State Polytechnic University, Pomona, Calif.

DEAR DR. LABOUNTY: Thank you for your letter of July 19, 1974 and offer of a full-time instructional position as Lecturer in the Physics and Earth Sciences Department, for the fall 1974 and winter 1975 quarters. I regret to inform you that I cannot accept the position at this time. During the past year, I have *already* been a Lecturer in Physics, starting with an appointment for the fall 1973 quarter, and renewed on a *quarterly basis*. The present position is *still renewable quarterly*, even though the initial period of appointment is for two quarters. I do not find it possible to accept such a position, since it does not allow for any professional growth. I am sure you realize that, apart from the lack of benefits, the temporary nature of the position requires continuous job hunting, which, when coupled with the usual teaching overload, makes it difficult for me to devote the full measure of my time and energies to my work.

In addition, I would also find it difficult to function under the chairmanship of Dr. J. Tuul. I have already found it necessary to file complaints with the School of Science Affirmative Action Committee and with Dean Parker, in connection with discriminatory recruiting and hiring practices, as well as a breach of professional ethics and elementary courtesy. These complaints, as presented in three memos (June 6, 1974 to Mr. Yu Chang, Chairman of the SSAAC, of July 9 and July 12, 1974, to Dean Vincent E. Parker) have not been dealt with, as yet, and have met with little more than administrative pussyfooting.

I hope this explains my inability to accept the position in question. Thank you for your consideration.

Sincerely,

ELIZABETH A. ATHANASSIOU,
Lecturer, Physics and Earth Sciences Department.

P.S.: In case it should be necessary for you to contact me in the near future, please note my new home address: E. Athanassiou, 465-B County Rd., Pomona, California 91766. I had already submitted it to your office, but the change did not take effect as yet, and caused some delay in receipt of your present offer of appointment.

Cal Poly discriminates with respect to job assignments and conditions of work (the discrimination is not restricted just to faculty but it certainly extends to the staff). For example, Genevieve Andazola, a staff employee in the office of financial aids, has also been subject to harassment and oppressive conditions of work. She was not only given more menial jobs than her white counterparts in the office but her supervisor allowed a coworker and an employee not directly connected with the office of financial aids to interject themselves as her supervisors in a manner demeaning to Ms. Andazola. Subsequently attempts were made to force her to seek a position in another office. There is an attached memo from her in which she outlines her situation to the vice president at the university.

[The memorandum referred to follows:]

CALIFORNIA STATE POLYTECHNIC UNIVERSITY,
Pomona, May 15, 1974.

Memorandum to: Dr. James Bell, Vice President, Admin. & Student Affairs
To: Dr. James Bell, Vice President, Admin. & Student Affairs
From: Genevieve Andazola
Subject: Memo of April 22, 1974 to Harry Jacobs

In your memo of April 22, 1974, to Mr. Harry Jacobs, Director of Financial Aids, you state that it is mutually agreed upon that it would be in the best interests of all concerned for me to seek a position in some other office. As I read this memo, I perceive certain implications which I feel should be clarified. Your memo does not explain why I wish to transfer.

In the one year that I have worked in the Financial Aids Office, as a Chicana, I have been terated differently from the rest of the staff members in the office. I have been discriminated against in the following ways:

1. As one of the permanent employees in the office, I have not been given the opportunity to progress. For example, many times have passed when certain information and tasks have been given out and I am one of the last ones to know.
2. In our conversation, I was accused of exploiting my sick leave time. If my absentee record were to be checked prior to the sixth of March, it would show that more than half of the absenteeism was approved vacation-time.
3. I have been supervised by a non-Chicana, fellow worker who was also a Clerical Assistant II-A.
4. Mr. Jacobs has suggested that I seek a new position stating, in my October, 1973 evaluations and again in April, 1974, that my productivity was declining. But, he neglected to point-out that for about two-three months, I have been doing some of the most menial work in the office (typing numbers on cards all day) which required much less expertise than I have.

There are other ways in which I have been treated differently and denied opportunity to demonstrate my abilities which I will not go into at this time.

I want to emphasize that these are the reasons why I am willing to transfer and not because I have been negligent or incapable on the job.

Mr. RIOS. With respect to termination, the university pursues a termination policy which has a disproportionate adverse effect on Chicanos. Manuel Vizcaino, after having been denied tenure on grounds which were not valid predictors of ability, performance, and qualifications, was denied a leave of absence and had to terminate. White faculty members have received a much more favorable policy on leaves of absence.

Benjamin Hernandez, assistant professor of ethnic studies, has been terminated on grounds which are definitely discriminatory. The reasons given were twofold: (1) low enrollment in his classes and (2) unsatisfactory evaluations in one art class. Examination of enrollment statistics in music and art, however, show that enrollment in his classes has been quite acceptable and equivalent, if not better, than enrollment in similar classes taught by his nonminority colleagues.

This is in spite of the fact that he received unequal and disadvantageous treatment with respect to course assignments and scheduling. The university has also failed to insure that criteria used to evaluate his performance in art classes are valid predictors of qualifications.

Mr. Hernandez studied art at the University of Guadalajara, Mexico, and brings a perspective to his music and art classes which has heretofore been absent at Cal Poly. The traditional criteria, therefore, should be justifiably challenged. Consequently, the unsatisfactory evaluation of his art class should not have been taken at face value by the university.

The people I mentioned—Frank Ducote, Robert Catlin, and Jose Jimenez—have all resigned because of these policies and practices. I myself will resign at the end of this quarter.

Now, I respectfully submit that these policies and practices are in noncompliance with Executive Order 11246 and that these policies and practices at Cal Poly are not atypical but, in fact, are endemic not only to the California State colleges and universities but also to the University of California itself.

Now, it is clear to me that the situation would be greatly alleviated if the Federal Government were to insure that the institutions of higher education comply with the Execuive order. Thank you, Mr. Chairman and members of the committee.

[Attachments to Mr. Rios' prepared statement follows:]

AFFIDAVITS

This is to affirm that, on numerous occasions, Dr. Johannes Tuul has made statements depreciating the teaching performance of Dr. Miguel Rios. I was not given any evidence in support of these statements, nor do I have any independent knowledge of my own to substantiate the statements in question.

ELIZABETH A. ATHANASSIOU, Ph. D.
Lecturer in Physics, Department of Physics and Earth Sciences,
California Polytechnic State University, Pomona, Calif.

MAY 12, 1974.

To Whom It May Concern:

The reason why I resigned my position as an Assistant Professor, Business Management Department, California State Polytechnic University, are as follows:

a. Facts concerning the personnel policies and practices of California State Polytechnic University, and the opportunities for advancement available, were misrepresented and concealed from me by a recruiter from the school and by Dr. William E. Fox, Dean of the School of Business Administration.

b. The grade and step which I was granted were not commensurate with my education and experience, and there was no provision for revision.

c. The personnel policies and practices of the university, whether by design or by refault, tend to have a discriminatory effect against Chicanos and other persons with Spanish surnames.

ALFRED M. DIAZ.

CASE OF ASSISTANT PROFESSOR ALFRED M. DIAZ

On February 24, 1972, I was interviewed by Assistant Professor Leonard R. Fuller, from the Business Management Department, School of Business Administration, of California State Polytechnic College (Cal Poly). The interview took place at the Placement Office of the Harvard University Graduate School of Business Administration, in Boston, Massachusetts, where I was completing my Master's Degree in Business Administration.

Professor Fuller misrepresented the personnel policies and procedures of Cal Poly, and the career opportunities available there, in the following ways:

a. By assuring me that opportunities for advancement were not arbitrarily limited and were based solely on merit. Professor Fuller did not mention the fact that a new rule precluded promotion before tenure, and he withheld information concerning an arbitrary budgetary rule which limits the number of faculty members in the grades of associate professor and full professor to 60% of the total faculty, the so-called "60–40 rule."

b. By assuring me that the grade of Assistant Professor, Step 4, which I would probably be offered was much higher than the usual level for Cal Poly Business School faculty members without a doctorate. Fuller withheld the fact that a large percentage of the faculty members in Cal Poly's School of Business, who did not have doctorates, held the ranks of associate professor and full professor. In fact, I was later to learn one full professor had no more than a bachelor's degree.

c. By stating that promotion to Associate Professor was virtually assured after two years, subject to progress in doctoral studies. Fuller failed to mention that a new rule preclude promotion before tenure, and he withheld information concerning the so-called "60–40 rule," which limits the number of faculty members in the top two grades to 60% of the faculty.

d. By assuring me that I would have substantial time off from a normal teaching load in order to pursue doctoral studies. No such time off was granted, and the scheduling of classes was done with no thought or consideration given to persons pursuing doctoral studies.

e. By stating that tuition-free doctoral studies would be available at three nearby universities by special arrangement. No such arrangements existed, and the cost of doctoral studies turned out to be approximately $100 per unit, plus commuting expenses and books.

f. By assuring me of summer employment at a rate equivalent to one third of the normal yearly salary. Therefore, the expected salary for an Assistant Professor Step 4, with summer employment, would add up to $16,000. No mention was made of a rule which limited summer employment to one summer out of every three.

g. Fuller lauded the excellent health benefits provided, which turned out to be $16.00 per month toward hospital insurance, after six months of employment. Fuller failed to mention the fact that no employer contributions were made during the first six months of employment, or the fact that the employer's contribution did not even fully cover a single person.

h. Fuller lauded the retirement benefits provided, while withholding information about mandatory employee contributions.

In late April, 1972, I was notified by telephone, by Dr. William E. Fox, Dean, School of Business Administration, California State Polytechnic College, that I would soon receive a formal job offer signed by Dr. Robert C. Kramer, President, California State Polytechnic College. Dr. Fox misrepresented the personnel policies and procedures of Cal Poly, and the career opportunities available there, in the following ways:

a. By withholding all information concerning the criteria for determining salary and grade offers for faculty positions and within each faculty grade. Fox assured me that I was getting an excellent offer for a person without a doctorate. Fox withheld the fact that a substantial percentage of the associate and full professors had no more than a bachelor's degree.

b. By assuring that eligibility for promotion to the grade of Associate Professor (Vocational) could be based upon completion of course work toward a doctorate in business. Fox withheld information concerning a new rule which required tenure before promotion.

c. By assuring me that while promotion to the grade of Associate Professor (Vocational) would be based on merit, few individuals in the School of Business had been denied such promotions in recent years. Fox withheld information concerning an arbitrary "60–40 rule," which limits the number of faculty members in the top two grades to 60% of the faculty. Several months later I found out that it was an intentional policy to withhold information concerning the "60-40 rule" from prospective business school faculty members.

d. By assuring me that I would have substantial time off in order to pursue doctoral studies. No time off from a normal teaching load was ever granted, and classes were scheduled with no thought or consideration given to creating an atmosphere conducive to doctoral studies.

e. By assuring me that scholarships would be readily available for tuition-free doctoral studies at nearby universities by special arrangement. It turned out that no special arrangements existed, and that the limited number of scholarships available were all based upon severe financial need.

f. By assuring me that Cal Poly had excellent retirement benefits, while withholding information about mandatory employee contributions to the retirement plan.

g. By assuring me that Cal Poly had an excellent health benefits plan, while withholding the fact that employer contributions would not begin until after six months of employment, and withholding the fact that the employer contributions were not even sufficient to cover a single employee.

h. By telling me that summer employment would increase my expected earnings by one third, while withholding information about a rule which limited summer employment to one summer out of every three.

i. By assuring me that partial reimbursement for moving expenses was a virtual certainty. As late as November, 1972, I was assured that funds were available. Then in December, 1972, I was notified that no reimbursement would be forthcoming.

SAMPLE SALARIES IN SCHOOL OF BUSINESS ADMINISTRATION DURING 1972-73 SCHOOL YEAR

Professor Paul, Frank
  Masters, University of San Francisco 1958.
  Tenured.
  Promoted August 29, 1968.
  $20,664.
Professor Schoning, Richard H.
  Masters, University of Pennsylvania 1959.
  Tenured
  Promoted August 30, 1968.
  $20,664.
Associate Professor Petersen, James C.
  Masters, University of Arizona 1965.
  Non-tenured.
  New hire September 1, 1969.
  $18,733.
Professor Worley, G. Dow, Jr.
  Masters, North Texas State 1954.
  Tenured.
  Promoted August 31, 1972.
  $16,992.
Associate Professor Wagner, Gerald E.
  Masters, University of Northern Iowa 1963.
  Tenured.
  Promoted August 30, 1968.
  $16,164.
Associate Professor Johnson, Arthur
  Masters, University of Southern California 1962.
  Tenured.
  Promoted September 1, 1969.
  $15,408.
Associate Professor Williams, D. Wayne
  Masters, University of Southern California 1967.
  Tenured.
  Promoted August 31, 1972.
  $13,308.
Assistant Professor Diaz, Alfred M.
  Masters, Harvard University.
  Nontenured.
  New hire August 31, 1972.
  $11,616.

Mr. O'Hara. Thank you very much, Professor Rios. Professor Rios, tell me, with respect to the specific cases mentioned by you, were complaints regarding discrimination in employment made to agencies of the Government and, if so, to whom and what was the disposition of those complaints?

Mr. Rios. Well, I filed a class action complaint with the Equal Employment Opportunity Commission—I believe it was last June—and we have not heard from the Equal Employment Opportunity Commission and we are rather skeptical about whether we are going to hear from them or not. They have a history of inaction with respect to institutions of higher learning.

We submitted, through the Raza Urban Coalition, a civic organization in Pomona, an outline of the situation to the Office of Civil Rights of Health, Education, and Welfare in San Francisco and we have yet to see what kind of response we will receive from that office.

Mr. O'Hara. Have any complaints been made to State agencies?

Mr. Rios. In the case of the complaint with the EEOC, I think the procedure is that the complaint usually goes first to the Fair Employment Practices Commission unless it is a class action, in which case it does not have to go, and it did not go to the Fair Employment Practices Commission in California.

Mr. O'Hara. Does the California State law cover discrimination in employment at the State colleges and universities?

Mr. Rios. I can't answer that question. The only thing I can say is that I know of no case in which a university has been asked to explain policies and practices or complaints of discrimination to a State agency.

Mr. O'Hara. Well, it seems to me that the specific cases you have brought up are of a sort which would fall under the traditional areas of jurisdiction of the State fair employment practices commission and of the Federal Equal Employment Opportunities Commission, because, unlike some of the other complaints that we have heard, these involve specific cases in which some individuals were treated less well than others when it comes to tenure or to gaining employment or to promotion and the allegation is made that the reason they were treated not as well was because of their ethnicity.

Now, those are classic discrimination in employment cases, you see, and that is why I wanted to say that.

With respect to your own particular case, you said there was something about a mention of the president of the institution had a policy or allegedly had a policy that no faculty members who had not been members of the faculty for at least 4 years would be granted tenures in spite of the law saying 2 years?

Mr. Rios. The situation is as follows: Up until a few years ago, the requirement was 4 years minimum before you would receive tenure, although the university had ways of sidestepping the rule whenever it wanted to bring somebody in. In the fifth year, you were to be notified whether you were going to receive tenure or were given a terminal year, which would be your fifth year.

That rule was changed in the State colleges and universities shortly before I arrived there. The requirement now is: You have to be there a minimum of 2 years and any time subsequent to that you can receive tenure.

Now, the president, or, in fact, both the president and the vice president for academic affairs, arbitrarily decided not to grant tenure to any one who had been there less than 4 years for that year, possibly for budgetary reasons, but without any consideration as to the adverse effects that it might have.

If you take, for example, the fact that we have only 10 to 15 Spanish-surnamed Chicano faculty and we are all at lecturer and assistant professor level and then if you then put a restriction on promotion and tenure, then who is it going to affect adversely as a group? If there are only a few promotions that are granted, what chance do we have, say 10 or 15 of us, in competing with 200?

What I am trying to say is that the decision was quite arbitrary, without due regard to the repercussions, the effects it would have.

Mr. O'Hara. But there are non-Chicano faculty members who have also been denied tenure because they have not been there for 4 years?

Mr. Rios. Well, I think the point is that there are non-Chicano faculty members who have been granted tenure at the end of a year or two.

Mr. O'Hara. But in the last year or two?

Mr. Rios. I would think so. I will try to verify that. Of course, this is difficult, because I asked the university for information, detailed listing on the tenures that were granted, the people that were granted tenures and by year, and, of course, they would not give it to me.

So in this case I cannot say specifically, but I did go around and ask some of the more senior faculty members in the biology department and so on, and they tell me there are one or two people who have been granted tenure at the end of 1 year.

Mr. O'Hara. I am not familiar with the California State law but I would hope that specific complaints could be made to the California Fair Employment Practices Commission as well as to the Federal Equal Employment Opportunity Commission in the form of a class action so that a particular fact or the particular facts of some of these cases—I am quite certain that the California commission has power of subpena and power to inspect records and so forth and so on—so that we can nail down just exactly what the situation is in some of these cases and get a clearer idea and, if there is discrimination, then highlight that discrimination as well as to do something about it.

Mr. Rios. But isn't it the case that both the University of California system and California State colleges are big Federal contractors, especially the University of California system, which receives millions and millions of dollars from the Federal Government? Isn't it also true that the cases I have outlined are directly in noncompliance, for example, with the Executive order, so that they do come under Federal jurisdiction?

Mr. O'Hara. That would depend somewhat on all of the factual circumstances. In short, it requires the contractor to take affirmative action to insure that applicants are employed and are treated during employment without regard to race. Now, that is a factual question.

Mr. Rios. I presented some of the relevant facts in my summary.

Mr. O'Hara. Yes, I agree it is in violation if there has been in fact, discrimination. It is a violation in which the Labor Department's Office of Contract Compliance ought to be interested and in which the

Department of Health, Education, and Welfare and the Office of Civil Rights ought to be interested and in which the Federal Equal Employment Opportunity Commission ought to be interested as well as the California enforcement agencies, whatever they are.

But our testimony here has suggested that, in the Office of Civil Rights Compliance of the Department of Health, Education, and Welfare, there is a backlog of tremendous size. We have been told, for instance, that those institutions that have submitted affirmative action programs, most of them, have never heard from the Office of Civil Rights Compliance, or whoever the agency is, as to whether their affirmative action proposal is acceptable. You know, they just don't answer. And they send in these reports annually, or at intervals, and they never hear back on whether their reports are acceptable. They just have no answers.

Mr. Rios. Doesn't that indicate, then, that some corrective action is required by some agency of the Federal Government?

Mr. O'Hara. Yes, it does, and you are looking at two Members of Congress who have voted consistently to provide more funds for enforcement activities of the Equal Employment Opportunity Commission; but, in fact, they have a greater backlog than the Office of Civil Rights Compliance.

Mr. Rios. I have to emphasize: In the physical science, I think the established sacrosanct policies are very entrenched and I think they are discriminatory, and the fact that the Federal Government released large amounts of funds to Berkeley, I think, shows that the Federal Government was not taking the Executive order very seriously and I think it was a real setback.

That is particularly true with respect to our coming into the physical sciences or all areas of the physical sciences, and it is a matter of great concern to all of us in California.

To be honest with you, we had a very difficult case in the teacher preparation center in which the director of the teacher preparation center was definitely biased against minorities and, in fact, a case was taken all the way up to the assembly. It was taken up on the floor of the assembly because the president refused to take some corrective action. Finally the director resigned, which is the manner in which the university has solved problems. They just wait until the people resign.

But this director refused to make some changes that were necessary with respect to training teachers to go into the schools that serve primarily the Mexican-Americans. So even in that case we had a very difficult time. We couldn't get any action from the State although we had backing of the United Professors of California and other organizations, and, in fact, the United Professors of California led the case because it was of vital concern to them. Even in that case we could not get any action.

So I think what little progress we have made is due to the fact that the Federal Government has taken some action in these matters, but it is not nearly enough.

Mr. O'Hara. I am going to ask you—not this morning because I don't think it would be fair to ask you to react to a complicated proposal offhand—I am going to ask you to look at a proposal that President Robben Fleming of the University of Michigan made to this committee with respect to a manner of handling the discrimination complaints at universities, and I will have the staff give you a copy of that report also, and I would like to get your reaction in writing; and, without objection, I will offer it to be printed in the record following your testimony and questioning here today.

Although there have been complaints about Dr. Fleming's proposal, one of the advantages would be that you would at least get some kind of a forum and hearing and determination quickly and then there would be an appeal right from the adverse decision, but at least there would be something happening within a reasonable length of time. I am going to ask you to take a look at that and see what your reaction to it is.

Before we begin questioning, I am going to have to leave for a few minutes and I will ask Mr. Dellenback to assume the chair.

[Subsequently, Dr. Rios submitted the following:]

CALIFORNIA STATE POLYTECHNIC UNIVERSITY, POMONA,
October 18, 1974.

Mr. WEBSTER BUELL,
Counsel, Committee on Education and Labor, Special Subcommittee on Education, Washington, D.C.

DEAR MR. BUELL: Enclosed is a summary of my opinion on Dr. Robben Fleming's suggestion that a procedure for binding arbitration of civil rights complaints against institutions of higher education be adopted. I have taken the liberty of soliciting the opinion of several Chicano educators and have enclosed a review of Dr. Fleming's suggestion by Dr. J. V. Martinez, Chairman of the Physics Department of St. John Fisher College, Rochester, New York. In general we feel that adoption of such a procedure would be highly regressive.

I hope that these opinions are given due consideration and I appreciate the opportunity to comment on this matter.

Respectfully,

MIGUEL RIOS, Ph. D.,
Assistant Professor, Physics and Earth Sciences Department.

Enclosure.

COMMENTS ON TESTIMONY BEFORE HOUSE COMMITTEE ON EDUCATION AND LABOR, SPECIAL SUBCOMMITTEE ON EDUCATION

It is my opinion that there are some serious flaws in Dr. Fleming's suggestion for binding arbitration of civil rights complaints against institutions of higher education. Dr. Fleming first asserts that the federal government treats colleges and universities as if they were industrial plants, the implication being that different criteria should be applied to institutions of higher education and perhaps that they should even be subject to different laws. If colleges and universities should be subject to regulations different from those applicable to private enterprise, it should be in the direction opposite to that implied by Dr. Fleming. Specifically, federal requirements for non-discrimination and affirmative action should be more stringently and more rigorously enforced with respect to institutions of higher education than with industry. The reasons for this are: (1) the progress of minorities in this country is critically dependent on the educational system and this system will not properly serve the minority community until this group has adequate representation at all levels of education, (2) because academicians are imbued with the belief that "objectivity and truth" is the quintessense of their profession, the attitudes which have excluded minorities from higher education are much more entrenched and perceived as equitable than in private enterprise, rendering changes much more difficult, and (3) the criteria for hiring retention, promotion and tenure of faculty members is much more subjective and much more amenable to petty personal considerations than in industry and at the same time these criteria are infinitely more difficult to challenge in a court of law.

In diirect contradiction to his implication that universities should not be subject to the same regulations as industry, Dr. Fleming suggests that the procedure of binding arbitration, commonly used in industry, be adopted in complaints against institutions of higher education. Not only is this suggestion contradictory to the first part of his comments but it is also illogical. To begin with, the suggestion that the university "provide an impartial system" is unsound. Past history shows that universities have not been impartial and no meaningful changes have come about that would suggest that a university would provide an "impartial tribunal". Secondly, while there is a direct analogy between the university and big-business management, there is no comparison between the big labor unions such as the UAW and a minority staff or faculty member seeking relief from discrimination or harassment. Neither university administrations nor the predominantly white faculties are amenable to complaints of discrimination or to challenges to entrenched practices that are disadvantageous to minorities. Labor unions bargain from a position of power. A minority faculty member is literally at the mercy of the administration and the predominant white faculty. Adoption of binding arbitration as suggested by Dr. Fleming would have an extremely adverse effect on the efforts of minorities to gain fair representation in institutions of higher education.

The enormous number of cases backlogged with federal agencies, however, clearly indicates that some action is required. I agree with Dr. Fleming that one agency should have jurisdiction but it should also have the funding necessary to enforce the law. In this connection I also agree with his statement that universities should be held accountable for their selection of faculty members. But it should go beyond this. It is my opinion that there is a great need to challenge traditional hiring, retention and tenure criteria. My limited experience in academia has taught me that these matters are often decided on very shallow considerations. It could very well be that there is no need for new legislation in this area. The guidelines in Executive Order 11246 offer a good starting point if the authority and resources to enforce the Order and Civil Rights Laws are vested in one agency. Universities will simply not bring about meaningful changes until the consequences for failure to eliminate discrimination and implement affirmative action is loss of federal funds.

REVIEW OF "TESTIMONY BEFORE HOUSE COMMITTEE ON EDUCATION AND LABOR, SPECIAL SUBCOMMITTEE ON EDUCATION" DATED AUGUST 12, 1974 AND AUTHORED BY DR. R. W. FLEMING, PRESIDENT OF THE UNIVERSITY OF MICHIGAN

Dr. Fleming gives the impression that, as far as implementing the law is concerned, institutions of higher education require special treatment. Apparently, the suggestion is that there should be a separate law applicable to universities and colleges. It is true that for the unenlightened on these matters, one would hold that such institutions are the pinnacle of truth and justice, knowledge and understanding. However, there is no evidence to indicate that universities on the whole have even attempted to comply with affirmative action programs. Dr. Fleming cities bureaucracy and related costs as major obstacles and states that the usefulness of a law is tied in to the acceptability of legislative statutes. He refers to the difficulties that are coupled to affirmative action programs. He seems to object to the consideration of institutions of higher education along with industrial plants and factories. He did not note that the law behind affirmative action was applied to industrial concerns first and was delayed in its application to universities. There is no evidence available which indicates that the institutions of higher learning can voluntarily cope with a sociological problem short of using external force. The problem was brought upon the universities by their inaction. As being in the forefront of knowledge, such learned communities should have accepted the challenge to bring about corrective measures. They did not! Presently their track record is worse than non-educational institutions. The people in academia are not sufficiently different that the law of supply and demand, and the laws of economics do not apply to them; yet, they still insist on support from the taxpayer. Presently, affirmative action is a law of the land and must be obeyed irregardless of duty station: although the law can be repealed or ruled unconstitutional. Dr. Fleming suggests that officials concerned with implementing the law request too much material from the university; so much that much of it goes unanalyzed. It is doubtful if this judgment should be within Dr. Fleming's purvue. The universities have brought the problem upon themselves and to a large extent because of ignorance and indifference. On page 2, next to last paragraph, Dr. Fleming seems to support better planned affirmative action programs. There is no disagreement with this. He suggests that cooperative arbitration would produce the required results. It would not do so in the span of time available. Dr. Fleming's suggestions that universtities cooperate in forming legislation for affirmative action is like asking a bear to guard honey. His suggestions are tantamount to having a criminal concur with the jury on the sentence. Dr. Fleming must understand that human nature must be constrained to bring about a meaningful change within the required time. Personnally, I am worried that if minorities cannot participate equitably, they will seek any action such that non-minority segment will not reap benefits either. The lack of positive results from universities are dismal indeed. There is no reason why they should require special consideration. Congress has the power to bring about a positive change and it has the obligation. Dr. Fleming's suggestions are idealistically sound but human nature is far short of being ideal. They must be led and I tend to think that university presidents have the obligations not to shirk from this responsibility in this matter.

Mr. Dellenback [presiding]. Thank you, Mr. Chairman.

Mr. Rios. I am sorry to have missed the first part of your testimony. I spent last night flying back from the west coast myself. I am pleased to have gotten the thrust of what you said, and also gotten from the questions some of the details.

May I ask this about your own situation? Has the basis for tenure in the schools in Cal Poly been reduced to writing? Is it just oral tradition; is it an ephemeral policy? Or, is there some document to which you can go that will spell out what the grounds for granting or refusing tenure are?

Mr. Rios. Basically, the university manual states that evaluations are to be based on teaching performance, professional growth, and service to the colleges and to the community, and it does not go any further than that. Of course, professional growth will vary from department to department, so, in principle, our physics department should have an outline of what constitutes professional activity and therefore that would identify what constitutes professional growth.

In general, it is assumed that one aspect of professional activity in physics is research, for example. So, what I am saying is that as far as the university manual is concerned, it only stipulates these three things and it stipuates the department is to develop additional written criteria and that is to be used in evaluations. What I am saying is no such criteria were used.

Mr. Dellenback. No such criteria have ever been reduced to writing or no such criteria was used?

Mr. Rios. I asked one of the faculty members and he said possibly a couple of years ago a couple of people sat down and wrote some things down and they may be in the files someplace.

Mr. Dellenback. But, it is not generally available to new instructors?

Mr. Rios. I have never seen new written criteria. I asked, as I say, two members and they say they don't recall any written criteria within the department.

Mr. Dellenback. Under the procedure at your school, how large is the committee that votes on tenure?

Mr. Rios. All tenured members—there are at the present time 11 faculty members.

Mr. Dellenback. Who have tenure?

Mr. Rios. No, permanent. Nine of them have tenure.

In addition, there is a very unprofessional manner in which tenure is granted in the sense that we have a joint department with the Department of Earth Science. Our department is the Department of Physics and Earth Science.

The tenured members of the Earth Science also get to vote.

Mr. DELLENBACK. How many are there?

Mr. RIOS. I think at the present time we have six people in the earth science and at least three or four are tenured. So, there is a total of 15 people that probably vote on tenure in our department.

The point is that in most schools—well, I won't say "most schools" because I can't, or I couldn't verify that—but certainly, the sensible way to do it is that earth science faculty would not be casting a vote on the competency of a faculty member in other fields, neither would I want to cast a vote on the competency of an earth scientist.

One could conceivably make some comments as to how clear he is in his classroom presentation.

Mr. DELLENBACK. Anyway, the thrust of our committee is not really to analyze tenure procedures. Nor are we attempting to evaluate competence or incompetence or fairness or lack of fairness. However, I am interested in knowing whether or not, in whatever system they do use, they are discriminating. You are indicating that insofar as a new faculty member coming aboard, you are not given, nor are you able to obtain the grounds and the criteria that will be used to determine tenure.

When it came to the actual voting on this, was it a case of a majority vote or unanimous vote or what kind of a decision was it?

Mr. RIOS. There again, it is not really well defined.

Mr. DELLENBACK. Who told you that you were not going to get tenure?

Mr. RIOS. Well, of course, the official notification comes from the president.

But, one does get to see the vote of the tenured faculty members.

Mr. DELLENBACK. Is it individual by individual?

Mr. RIOS. Well, there is a majority opinion that is written usually. As I indicated, all it said was my classroom presentation had some deficiencies. That is all it said.

Then, anyone who disagrees with the vote can state his opinion. There were three people who disagreed and indicated they felt I should receive tenure. But, then, the department chairman submits his own recommendation and, who knows, it is not clear, but generally, the dean will follow the recommendations of the department chairman, and even if all faculty vote against the individual he may recommend tenure and he may get it.

On the other hand, the majority of the tenured faculty may recommend tenure and the chairman may recommend against tenure and the individual may not get tenure, because, after the recommendations go to the dean, then the dean makes the recommendations to the academic vice-president, and, again, he can change and overrule the decision.

So, the ultimate authority rests with the president.

Mr. DELLENBACK. And he has reduced nothing to writing as to the criteria upon which he will grant tenure or not?

Mr. RIOS. Only the university statements which are in the university manual.

Mr. **DELLENBACK.** You indicated earlier when you joined the faculty, there were two of you who joined?

Mr. **RIOS.** That is correct.

Mr. **DELLENBACK.** Is the other man who came in when you came in still with the faculty?

Mr. **RIOS.** Yes.

Mr. **DELLENBACK.** Were you the only two who did not have tenure at the beginning of this year?

Mr. **RIOS.** That is correct.

Mr. **DELLENBACK.** Was he granted tenure at this time?

Mr. **RIOS.** No.

Mr. **DELLENBACK.** So, insofar as your case is concerned—and I am not arguing but just trying to get this clear in my mind—while it may well be unfair in the sense you don't like the system that is applied, you are not testifying there was discrimination practiced in your situation in a way that somebody else who was on a peer basis with you was granted tenure and you were not granted tenure?

Mr. **RIOS.** No; I am saying there was discrimination.

Mr. **DELLENBACK.** Was it against him?

Mr. **RIOS.** No, against me, because he received a serious tenure evaluation and I did not. The majority, I don't know if it was a majority, but certainly most of the senior faculty in his case recommended tenure.

Mr. **DELLENBACK.** And he was not granted it?

Mr. **RIOS.** Only because of the recommendation of the chairman. I don't know what the situation was. But the gist of what I am trying to say is that these rules and regulations, not only with respect to tenure but also with respect to hiring and retention and so forth, can be applied capriciously. One would like to believe that criteria are objective, but in fact, it is very doubtful that is the case.

Mr. **DELLENBACK.** Are there any other examples that you know of outside of the physics department, where peers who had been there the length of time you were part of the faculty were granted tenure this year?

Mr. **RIOS.** That, I can specifically identify, not at this time. I can't identify any.

Mr. **DELLENBACK.** So, we don't have any cases before us at present, in the language of the law that says, "Here are two cases which are identical, except for the racial situation, and this one was granted tenure and this one was not granted tenure."

We don't have specific information you can give us that would allow us to examine and compare with your situation?

Mr. **RIOS.** Only by word of mouth because, as I say, the university caused this situation.

Mr. **DELLENBACK.** You have knowledge there are people in that position that were given tenure?

Mr. **RIOS.** I have word of mouth by the chairman of the Biology Department., who has been chairman for 20 years, that there have been people in the past 3 years who have come to Cal Poly and at the end of 2 years received tenure.

Mr. **DELLENBACK.** Were there any in the last year?

Mr. **RIOS.** That, I don't know, because I couldn't get information from the university.

Mr. DELLENBACK. Switching from tenure to the matter of salary, you indicated when you came to Cal Poly, two of you joined the faculty at the same time—one was a Chicano and one was a non-Chicano. Did you indicate you were brought aboard at different salaries?

Mr. RIOS. That is correct.

Mr. DELLENBACK. Did you ever discuss that difference in salary with anybody in a position of authority and get any explanation as to why the difference?

Mr. RIOS. Well, first of all, what I did was, I attempted to get a promotion on the basis of merit and at one time, in fact, I have a memo from the dean of the School of Science, recommending to the vice president that I be given a multiple step increase because of my performance, a multiple step increase based on merit, which I did not receive.

Mr. DELLENBACK. Did your new colleague get an increase at that time?

Mr. RIOS. No, this was strictly on the basis of outstanding performance and the dean was willing to recommend it, although everybody in my department was opposed to it, and I did not receive that multiple step increase.

Mr. DELLENBACK. Did you get any increase at that time?

Mr. RIOS. Not at that time, no. The procedure is that you get an automatic increase, step increase, at the end of each year. That is as long as you are within a certain rank.

In other words, there are five steps within the assistant professor's rank. There are no provisions for remedial action if someone was brought in at too low a step or no provisions for taking into account outstanding performance. A promotion is considered a step from assistant professor to associate professor. You cannot get it if you are not at the top step in your rank, although the university has done it in special cases. But normally, you go through the five steps and you cannot be considered for promotion to associate until you reach the fifth step of assistant professor rank. So, had I been brought in at the same level I would have been eligible for consideration for a promotion to associate professor this past year, but there is no way that the administration takes to remedy the situation if there was an inequity.

Mr. DELLENBACK. You understand what this subcommittee is struggling with, and what I am reaching for in trying to get information for our record from you. We are looking at the question of discrimination. We are not looking at the question of "is the system a good system in the sense of should they weigh this more than that, or should they give multiple step increases or not give multiple step increases, or should they have a policy against 2-year or 4-year tenure", and that kind of thing. It might sound like we are investigating these problems, but what I am thrusting for is this: Do we have evidence from you of discrimination in connection with your own particular situation?

As I understand it, there are areas where you apparently feel you have not been treated on a balanced basis as your peer was treated; namely, first, in salary and, secondly, in tenure. From what you say about tenure, we don't have any hard evidence from you there was discrimination on tenure. Your peer was not granted it, and we don't have any examples of anyone on the faculty getting it that came in at the same time you did. Consequently, I move the tenure item back on the basis of evidence.

Now, you talk about salary, and you are talking about two different things in connection with salary. One, the initial salary when you came aboard as a faculty member, and two the amount of increases.

Now, dealing with the first one, you indicated you came aboard at a different salary than another?

Mr. RIOS. That is right.

Mr. DELLENBACK. You were paid something like $1,000 less than he was?

Mr. RIOS. Yes.

Mr. DELLENBACK. Did you ever raise the question with the hiring authorities as to why you were not paid the same initial salary as he was? Did you ask about the differences in qualifications?

Mr. RIOS. I certainly discussed it with the dean and department chairman and have to very frankly state that my department chairman conceded at one point to me in private that indeed I should have been brought in at a step higher.

Mr. DELLENBACK. And the reason you were not was because of race?

Mr. RIOS. Well, of course, he wouldn't say that.

Mr. DELLENBACK. Were there differences in qualifications between you and your non-Chicano peer?

Mr. RIOS. It depends on what you call "qualifications." I would say "no."

Mr. DELLENBACK. Had he had any teaching experience you did not have?

Mr. RIOS. He had teaching experience and I had some teaching experience.

Mr. DELLENBACK. Were they equivalent?

Mr. RIOS. No.

Mr. DELLENBACK. Yours was more or yours was less?

Mr. RIOS. No; his was somewhat more.

Mr. DELLENBACK. He had more teaching experience. How about the degrees?

Mr. RIOS. The degrees were equivalent.

Mr. DELLENBACK. Were you the same insofar as the institutions from which the degrees came?

Mr. RIOS. Well, yes, I wouldn't want to say my institution was any better, although I think it is.

Mr. DELLENBACK. But, if either institution was better, you would say yours is better? Your doctorate was from where?

Mr. RIOS. University of Maryland.

Mr. DELLENBACK. And his?

Mr. RIOS. From Northwestern.

Mr. DELLENBACK. In Illinois?

Mr. RIOS. Yes.

Mr. DELLENBACK. Insofar as the quality of the work done, was there any appreciable difference in the level of the grades that you achieved all the way down through your undergraduate degree, and the level of the grades he received?

Mr. RIOS. I don't know what his academic record is. I am sure it is quite good

Mr. DELLENBACK. Is yours quite good?

Mr. Rios. In general, it was, except I had to work full time as an undergraduate. I was going to school full time whereas he didn't have to.

Mr. Dellenback. Is it possible to examine his record?

Mr. Rios. As an undergraduate, I didn't get financial assistance until I got well into graduate school.

Mr. Dellenback. Which is one of the reasons why it is sometimes unfair to look at the academic record, but I am looking for some indicants of "why" here. His academic record, then, might have been superior?

Mr. Rios. Yes. As you go along you start to recognize I am making big contributions that he cannot make because of my experience. For example, I am an experimentalist and he is not. There were no laboratories at Cal Poly when I got there and I had been the first one to build up a sophisticated advanced nuclear physics laboratory requiring quite a bit of expertise, and a substantial amount of money was invested which I supervised.

Mr. Dellenback. This laboratory has been developed since you have been there?

Mr. Rios. Yes, and that is the expertise I bought since I came in. Working in a laboratory as an experimentalist—and this is the experience I brought to the department. When you first come in you don't notice that perhaps the criteria used didn't take into account the expertise that I brought in, so the point I am trying to make is that the criteria you use, what they call qualifications, are subject to a great deal of debate.

Mr. Dellenback. And I, from prior testimony, think that the members of the subcommittee would agree that sometimes there are inadequate or inexact criteria used in making points of distinction. I am not attempting to try the case, but, for the record, I am attempting to see that we have a spelling out in simple form of the differences. Were there any other areas besides salary and tenure in which you think there was perhaps discrimination practiced?

Mr. Rios. Well, I mentioned the case of promotion and tenure is involved here for Jose Vadi, who is being held back because he has not received a doctorate in hand, but just prior to his reaching that level, two white members had been promoted and granted tenure prior to receipt of their Ph.D.

I gave a date for one of them. In fact, there is a member in the political science department who had been promised tenure and promotion upon receipt of his Ph. D. and when he received the Ph. D. he didn't get the promotion and that fellow is a black member.

So, I complain that the system is poor, but for purposes of this committee, what I am saying is, given the fact that it is a bad system, if it were uniformly applied, then we would not have any basis for complaints of discrimination. That is what I am saying.

Mr. Dellenback. You are indicating that in this promotion matter, not in this situation involving yourself but in the other situation you mentioned, you feel the system was not uniformly applied?

Mr. Rios. That is right, in the other case, it is very clear the case in the department of urban planning, where Jose Jamenez and Robert Catlin were brought in as lecturers and prior to that they hired a white faculty member with less experience at an acadamic rank a step higher. In fact, Robert Catlin filed a complaint and his academic status was changed to that of assistant professor and I think he went to step 4 or whatever. But, there was no back pay to make up for the difference.

Jose Jimenez, when he discovered the inequity, asked that his situation be remedied. One of the difficulties he encountered, as a lecturer, is that you are not reappointed until late in the summer because you don't even have to get a evaluation. So, if you are not reappointed, you can't find another academic position late in the summer because appointments are made early. So, he asked them before the end of the academic year, "Either change my status and clarify my reappointment or I will have to resign." The administration did nothing, so he was forced to resign at the end of the second quarter.

Mr. DELLENBACK. Thank you very much, Dr. Rios. I hope, as the chairman indicated before he left, you will give us the benefit of your comments on Dr. Flemming's suggestions. We will appreciate getting your perspective on those suggestions, and we appreciate your taking the time to appear.

Our next witnesses will be representatives of the American Association of University Professors, Dr. Mary Gray and Carolyn Polowy.

STATEMENTS OF MARY W. GRAY AND CAROLYN POLOWY, AMERICAN ASSOCIATION OF UNIVERSITY PROFESSORS

Ms. POLOWY. I am Carolyn Polowy and this is Dr. Mary Gray.

Mr. DELLENBACK. We are appreciative of your coming. We have statements from each of you, and you can give them to us in any manner that seems most appropriate.

In view of the shortage of time, I will, without objection. order both of your complete statements to be made part of the record.

Ms. POLOWY. Thank you.

[The statements referred to follow:]

PREPARED STATEMENT OF CAROLYN POLOWY, FOR COMMITTEE W, ON THE STATUS OF WOMEN IN THE ACADEMIC PROFESSION, AMERICAN ASSOCIATION OF UNIVERSITY PROFESSORS

Good morning. We are pleased to be here this morning to present testimony on behalf of the American Association of University Professors. My name is Carolyn I. Polowy. I am Associate Counsel and Associate Secretary for the AAUP. I am here today with Dr. Mary Gray who is Chairperson of the Association's Committee W on the Status of Women in the Academic Profession. Dr. Gray, who is a professor of mathematics and statistics at American University, will testify about the myth and reality in the implementation of affirmative action in higher education institutions. I would like to briefly summarize for you the Association's policies and activities which have given support to the implementation of equal opportunity through affirmative action on higher education.

At the outset, it is important to note a few facts about the AAUP. The Association has been in existence since 1915. It is the largest organization of teachers and research scholars from higher education institutions in the country. The AAUP has approximately 1350 chapters at private and public colleges and universities. The Association's members number over 80,000. Approximately three-quarters of the Association's membership is male.

From its inception, the Association has focused its attention on the maintenance of a true spirit of academic freedom throughout higher education. In order to further the development of an atmosphere in which academic freedom would be respected and protected, the Association has developed policies and suggested institutional operating procedures which have become a part of the reference base for higher education. Thus, in 1940 the Association, together with the Association of American Colleges, formulated a *Statement on Academic Freedom and Tenure* (Appendix A). This *Statement* provided the procedural framework through which academic tenure would be awarded while recognizing that the basic purpose of tenure is the protection of freedom in teaching, research and extramural activities.

Another priority of the Association has been the implementation of a shared governance system in higher education institutions. In a college or university, each operational component—the faculty, the administration and the governing board—has a special area of expertise and a particular area of concern. All, however, share in their desire to see that the institution performs its primary functions of educating students and advancing knowledge. Therefore, there has been a general agreement within the educational community that the institution's components should share in the responsibility for accomplishment of the institution's mission. This agreement was expressed in the *Statement on Government of Colleges and Universities* (Appendix B) which was jointly prepared in 1966 by the AAUP, the American Council on Education and the Association of Governing Boards of Universities and Colleges. The *Statement*, *inter alia*, provides that "[f]aculty status and related matters are primarily a faculty responsibility; this area includes appointments, reappointments, decisions not to reappoint, promotions, the granting of tenure, and dismissal." There are two primary reasons for the concept of peer review incorporated into the *Statement*. First, the faculty's judgment on such matters is inter-related with the general educational policy of the institution. Second, scholars in a particular field have the chief competence to judge the work of their colleagues.

Before discussing the inter-relationship of the principles of academic tenure and shared governance with the implementation of affirmative action, let me briefly review some of the Association's activities on behalf of minorities and women in higher education.

The Association has consistently recognized and reminded its constituents that academic freedom cannot exist where fundamental human freedoms are denied. Thus, the Association has investigated and condemned, whenever necessary or possible, discrimination which violates or interferes with the basic rights of students to an education and the rights of teachers to pursue their profession. Several examples of the Association's expressions of concern include its support for the Supreme Court's decision in *Brown vs. Board of Education*, 347 U.S. 483 (1954) and the subsequent implementation of desegregation requirements. The Association continued to lend its support to desegregation of higher education institutions and to the students and faculty affected by the sometimes violent resistance to change. In 1964, at its 50th Annual Meeting, the AAUP deplored the closing of schools by public officials to avoid racial integration. The Association restated its opposition to racial segregation in education:

> [The Association] recognizes that the talents of all its people, regardless of race, constitute a priceless asset of this nation. Hence, it must condemn all attempts to continue racial criteria for educational opportunity, wherever they occur, and it commends the growing number of institutions which have abandoned such discrimination in the selection of both faculty and students.

The Association went on to endorse speedy consideration and passage of Civil Rights legislation then pending before Congress.

While the Association's particular concern for the rights of racial minorities continued throughout the 1960's, by the end of that decade academic women were also asking the Association to give serious consideration to the problems of sex discrimination on college and university campuses. Therefore, in 1970, the Association's Committee W on the Status of Women in the Academic Profession was reactivated after 42 years of dormancy. Many of the concerns of the original Committee W remained valid in 1970. For example, a survey on the status of women in colleges and universities conducted in 1921 and referred to in early Committee W reports, strikes a contemporary chord. The Committee found that although women represented 74 percent of the faculty in women's colleges, only 22 percent of these women were found at the full professor rank, compared with 52 percent of the men. At men's colleges, only two women faculty members were found in a total of nearly 2000 professors. At coeducational institutions in which women constituted 31 percent of the students, women represented only 13 percent of the faculty, though, again like the contemporary reports, this varied markedly by rank, women being 4 percent of full professors but 23 percent of instructors.[1]

In the area of salaries, the early AAUP reports indicate that academic women were ready to unite in support of the principle of equal pay. For example, an early report relates that at one institution the trustees voted maximum salary of $1800 for women and a maximum of $3000 for men at the same rank. When it was reported to the trustees that the women on the faculty were going to file a protest, the trustees promptly published a new salary schedule which made no distinctions on the basis of sex.[2]

I need not tell you that sex-based rank and salary discrimination still exist in many of our institutions of higher education. A survey prepared by the National Education Association in 1972 indicated that the number of women faculty members at the ranks of professor, associate professor, and assistant professor, had actually declined from 1959 to 1972, an era of great expansion for higher education. Moreover, one of two salary studies reported in the Carnegie Commission Report on *Opportunities for Women in Higher Education* (pp. 115–119) concluded that women in academic were being paid on an average of $1040 less than comparable male colleagues and the second study showed a wider disparity.

The efforts of Committee W have concentrated on the elimination or modification of policies and procedures which inhibit the employment of women in the academic professions or which limit their economic or professional status as faculty and research scholars in higher education institutions. The annual reports of Committee W set out more fully the concerns and activities of the Committee since its reactivation in 1970 and I am incorporating those reports as a part of my testimony (Appendix C).

I would like to point out two areas developed by Committee W which have received full Association support. As you may know, many women have been foreclosed from academic employment or faculty status in an institution or department in which their husband is a faculty member. Much discrimination has occurred as a result of so-called antinepotism regulations. In 1971, the Association adopted Committee W's *Statement on Faculty Appointment and Family Relationship* (Appendix D) urging the discontinuance of antinepotism policies and practices, and the rescinding of laws and institutional regulations which perpetuate them.

Recently, the Association has adopted Committee W's recommended *Statement on Leaves of Absence for Child-bearing, Child-rearing and Family Emergencies* (Appendix E). The Statement, applicable to both faculty men and women, recognizes that leaves of absence are necessary "to assist faculty members with parental responsibilities in meeting their obligations both to their professional careers and to their families, and to prevent the loss to the institution and to the academic community of substantial professional skills." Morever, the Statement recommends that in conformity with Title VII Sex Discrimination Guidelines, institutional leaves of absence for pregnancy and pregnancy-related disabilities be treated like other leaves in terms of permitted duration and compensation or benefits received during the leave of absence.

It should, by now, be obvious that the Association has found the goals of affirmative action in higher education to be completely compatible with AAUP policies and activities and consistent with continuing high achievement in higher education institutions. In 1971, when implementation of federal contract compliance requirements under Executive Order 11246 as amended was just beginning, the Association adopted the following statement at its Fifty-Seventh Annual Meeting:

> [We] strongly support all efforts in institutions of higher education to seek, as a minimum, full and uniform compliance with governmental policies and directives which prohibit discrimination on the basis of sex by any agency receiving government funds whether such discrimination is directed toward students, staff, or faculty. [We] further urge that colleges and universities cooperate with local and national efforts in the development and implementation of affirmative action programs directed toward the elimination of discriminatory practices and their consequences.

Based on a resolution of the Fifty-Seventh Annual Meeting calling upon the Association to develop as quickly as possible procedures and policies furthering the elimination of discrimination of higher education institutions, the AAUP Council appointed a special committee on discrimination. In its first Reports presented in the spring of 1972 (Appendix F), the Committee made several recommendations for the implementation of equal opportunity principles in institutional policies and practices, including:

---

[1] See Report of Committee W, 1970–71.

[2] Ibid.

1. Publicizing faculty vacancies as widely as possible. In this regard, the Committee noted that word-of-mouth recruitment had worked a disservice to both candidates and the institution by limiting opportunity for appointment for reasons unrelated to potential merit.
2. Establishing a faculty committee to study institutional practices concerning appointments, salaries, tenure and other features of professional status and to determine if patterns of discrimination existed.
3. Establishing appropriate institutional grievance procedures for the handling of faculty discrimination complaints.

The Committee also directly addressed itself to the issue of utilizing affirmative action to remedy the effects of past discrimination in college and university faculties. First, the Committee expressed a desire that affirmative action be implemented in response to faculty pressure from within the academic community. Moreover, the Committee found such faculty action wholly consistent with the principles and practices of shared governance. The Committee's words express several important concepts:

> Under the *Statement on Government of Colleges and Universities*, matters concerning faculty status are primarily a faculty responsibility. We believe that this responsibility carries with it an obligation to make decisions affecting faculty status on the basis of standards of judgment which have not on their face excluded certain groups of people, standards which have not served to limit opportunity for certain groups of people because of considerations other than academic merit. We wish to stress that the concept of affirmative action calls for rejection of standards and practices which do not allow equal opportunity for all who may be qualified. It calls for genuine and tangible efforts to bring into faculties members of those groups which have previously been denied full equality of opportunity. Under an affirmative action program, a faculty is aksed to reassess its recruiting practices and, if necessary, to attempt to expand the sources from which it has traditionally drawn its new members. Affirmative action may also imply that a faculty consider providing advantage in the selection process for previously excluded groups, as a result of a faculty's desire to look to such additional factors, in evaluating an individual's potential contribution to the institution, as the values which diversity in perspective and experience may infuse into the academic program as a whole. A properly conceived affirmative effort, it must be emphasized, neither requires nor implies the placement of unqualified persons in any position, nor does it require the dilution of valid standards for appointment or promotion to any position. It does, however, make possible a broader interpretation of the criteria which have defined the parameters of academic excellence when this is deemed desirable by those responsible for decisions in this area.

Moreover, throughout its Report the Committee acknowledged that the members of the profession would have to examine and change their own attitudes to conform to equal opportunity standards, if the principles of equal opportunity were to be realized in a shared governance system. Thus, faculty would have to be educated to their responsibilities so that decisions made on tenure, appointments and salary would not be influenced by irrelevant and discriminatory considerations.

In 1973, the Council Commission on Discrimination reiterated in its Annual Report (Appendix G) the belief that "affirmative action in the improvement of professional opportunities for women and minorities must be (and readily can be) devised wholly consistent with the highest aspirations of universities and colleges for excellence and outstanding quality" without becoming, itself, a tool for discrimination. I believe that the Report discusses in detail some of the controversial areas related to the implementation of affirmative action in higher education institutions. I am, therefore, incorporating the entire Report in my testimony. However, I would like to quote a portion of the Committee's Report which summarizes the Association's approach to the implementation of affirmative action:

> The Committee believes that the further improvement of quality in higher education and the elimination of discrimination due to race or sex are not at odds with each other but at one. What is sought in the idea of affirmative action is essentially the revision of standards and practices to assure that

institutions are in fact drawing from the largest marketplace of human resources in staffing their faculties, and a critical review of appointment and advancement criteria to insure that they do not inadvertently foreclose consideration of the best qualified persons by untested presuppositions which operate to exclude women and minorities. Further, faculties are asked to consider carefully whether they are requiring a higher standard and more conclusive evidence of accomplishment of those women and minorities who are considered for appointment and advancement. What is asked for in the development of an affirmative action plan is not a "quota" of women or blacks, but simply a forecast of what a department or college would expect to occur given the nondiscriminatory use of *proper* appointment standards and recruiting practices—with the expectation that where the forecast turns out to be wide of the mark as to what actually happens, the institution will at once make proper inquiry as to why that was so. In essence, it is measures such as these which the Committee believes to be required by the Office for Civil Rights of HEW of universities using federal funds, and we do not see that there is in such requirements anything which the AAUP should find inconsistent with its own goals. Indeed, there may be more reason for concern that affirmative action of this kind which is critical to the abatement of discrimination may fail to be pursued with vigor than that it may be pursued too zealously. At the present moment, the politics of reaction are a greater source for concern than the possibility that affirmative action might lend itself to heavy-handed bureaucratic misapplication.

Finally, we would find it highly unusual if an exemption were carved out of the Executive Order affirmative action requirements for colleges and universities. The Executive Order program finds support in the Fifth and Fourteenth Amendments to the Constitution, as well as in the Congressional mandate for equal employment opportunity embodied in Title VII of the 1964 Civil Rights Act as amended.[3] The federal government may not, through its contracts programs or any other progrm, give aid and support to illegal and prohibited discrimination. We would, therefore, suggest that emphasis be placed on full and fair enforcement of the Orders by both HEW and OFCC.

Respectfully submitted,

CAROLYN I. POLOWY,
Associate Counsel.

APPENDIX A

ACADEMIC FREEDOM AND TENURE—1940 STATEMENT OF PRINCIPLES AND INTERPRETIVE COMMENTS

(Reprinted from AAUP Bulletin Summer, 1974)

In 1940, following a series of joint conferences begun in 1934, representatives of the American Association of University Professors and of the Association of American Colleges agreed upon a restatement of principles set forth in the 1925 Conference Statement on Academic Freedom and Tenure. This restatement is known o the profession as the 1940 Statement of Principles on Academic Freedom and Tenure.

The 1940 Statement is printed below, followed by Interpretive Comments as developed by representatives of the American Association of University Professors and the Association of American Colleges during 1969.

The following organizations officially endorsed the 1940 statement in the years indicated.

Association of American Colleges	1941
American Association of University Professors	1941
American Library Association (adapted for librarians)	1946
Association of American Law Schools	1946
American Political Science Association	1947
American Association of Colleges for Teacher Education [1]	1950
American Association for Higher Education [2]	1950
Eastern Psychological Association	1950

[1] Endorsed by predecessor, American Association of Teachers Colleges, in 1941.
[2] Formerly the Association for Higher Education, National Education Association.

The purpose of this statement is to promote public understanding and support of academic freedom and tenure and agreement upon procedures to assure them in colleges and universities. Institutions of higher education are conducted for the common good and not to further the interest of either the individual teacher [4] or the institution as a whole. The common good depends upon the free search for truth and its free exposition.

Academic freedom is essential to these purposes and applies to both teaching and research. Freedom in research is fundamental to the advancement of truth. Academic freedom in its teaching aspect is fundamental for the protection of the rights of the teacher in teaching and of the student to freedom in learning. It carries with it duties correlative with rights. **[1]** [5]

Tenure is a means to certain ends; specifically: (1) Freedom of teaching and research and of extramural activities and (2) a sufficient degree of economic security to make the profession attractive to men and women of ability. Freedom and economic security, hence, tenure, are indispensable to the success of an institution in fulfilling its obligations to its students and to society.

ACADEMIC FREEDOM

(a) The teacher is entitled to full freedom in research and in the publication of the results, subject to the adequate performance of his other academic duties; but research for pecuniary return should be based upon an understanding with the authorities of the institution.

(b) The teacher is entitled to freedom in the classroom in discussing his subject, but he should be careful not to introduce into his teaching controversial matter which has no relation to his subject. **[2]** Limitations of academic freedom because of religious or other aims of the institution should be clearly stated in writing at the time of the appointment. **[3]**

(c) The college or university teacher is a citizen, a member of a learned profession, and an officer of an educational institution. When he speaks or writes as a citizen, he should be free from institutional censorship or discipline, but his special position in the community imposes special obligations. As a man of learning and an educational officer, he should remember that the public may judge his profession and his institution by his utterances. Hence he should at all times be accurate, should exercise appropriate restraint, should show respect for the opinions of others, and should make every effort to indicate that he is not an institutional spokesman. **[4]**

---

[4] The word "teacher" as used in this document is understood to include the investigator who is attached to an academic institution without teaching duties.

[5] Bold-face numbers in brackets refer to Interpretive Comments which follow.

ACADEMIC TENURE

(a) After the expiration of a probationary period, teachers or investigators should have permanent or continuous tenure, and their service should be terminated only for adequate cause, except in the case of retirement for age, or under extraordinary circumstances because of financial exigencies.

In the interpretation of this principle it is understood that the following represents acceptable academic practice:

(1) The precise terms and conditions of every appointment should be stated in writing and be in the possession of both institution and teacher before the appointment is consummated.

(2) Beginning with appointment to the rank of fulltime instructor or a higher rank, [5] the probationary period should not exceed seven years, including within this period full-time service in all institutions of higher education; but subject to the proviso that when, after a term of probationary service of more than three years in one or more institutions, a teacher is called to another institution it may be agreed in writing that his new appointment is for a probationary period of not more than four years, even though thereby the person's total probationary period in the academic profession is extended beyond the normal maximum of seven years. [6] Notice should be given at least one year prior to the expiration of the probationary period if the teacher is not to be continued in service after the expiration of that period. [7]

(3) During the probationary period a teacher should have the academic freedom that all other members of the faculty have. [8]

(4) Termination for cause of a continuous appointment, or the dismissal for cause of a teacher previous to the expiration of a term appointment, should, if possible, be considered by both a faculty committee and the governing board of the institution. In all cases where the facts are in dispute, the accused teacher should be informed before the hearing in writing of the charges against him and should have the opportunity to be heard in his own defense by all bodies that pass judgment upon his case. He should be permitted to have with him an advisor of his own choosing who may act as counsel. There should be a full stenographic record of the hearing available to the parties concerned. In the hearing of charges of incompetence the testimony should include that of teachers and other scholars, either from his own or from other institutions. Teachers on continuous appointment who are dismissed for reasons not involving moral turpitude should receive their salaries for at least a year from the date of notification of dismissal whether or not they are continued in their duties at the institution. [9]

(5) Termination of a continuous appointment because of financial exigency should be demonstrably bona fide.

1940 INTERPRETATIONS

At the conference of representatives of the American Association of University Professors and of the Association of American Colleges on November 7–8, 1940, the following interpretations of the 1940 *Statement of Principles on Academic Freedom and Tenure were agreed upon:*

1. That its operation should not be retroactive.

2. That all tenure claims of teachers appointed prior to the endorsement should be determined in accordance with the principles set forth in the 1925 Conference Statement on Academic Freedom and Tenure.

3. If the administration of a college or university feels that a teacher has not observed the admonitions of Paragraph (c) of the section on *Academic Freedom* and believes that the extramural utterances of the teacher have been such as to raise grave doubts concerning his fitness for his position, it may proceed to file charges under Paragraph (a)(4) of the section on *Academic Tenure*. In pressing such charges the administration should remember that teachers are citizens and should be accorded the freedom of citizens. In such cases the administration must assume full responsibility and the American Association of University Professors and the Association of American Colleges are free to make an investigation.

1970 INTERPRETIVE COMMENTS

Following extensive discussions on the 1940 Statement of Principles on Academic Freedom and Tenure *with leading educational associations and with individual faculty members and administrators, a Joint Committee of the AAUP* *and the Association of American Colleges met during 1969 to reevaluate this key policy statement. On the basis of the comments received, and the discussions that ensued, the Joint Committee felt the preferable approach was to formulate interpretations of the Statement in terms of the experience gained in implementing and applying the Statement for over thirty years and of adapting it to current needs.*

The Committee submitted to the two Associations for their consideration the following "Interpretive Comments." These interpretations were approved by the Council of the American Association of University Professors in April, 1970, and endorsed by the Fifty-sixth Annual Meeting as Association policy.

In the thirty years since their promulgation, the principles of the 1940 *Statement of Principles on Academic Freedom and Tenure* have undergone a substantial amount of refinement. This has evolved through a variety of processes, including customary acceptance, understandings mutually arrived at between institutions and professors or their representatives, investigations and reports by the American Association of University Professors, and formulations of statements by that Association either alone or in conjunction with the Association of American Colleges. These comments represent the attempt of the two associations, as the original sponsors of the 1940 Statement, to formulate the most important of these refinements. Their incorporation here as Interpretive Comments is based upon the premise that the 1940 Statement is not a static code but a fundamental document designed to set a framework of norms to guide adaptations to changing times and circumstances.

Also, there have been relevant developments in the law itself reflecting a growing insistence by the courts on due process within the academic community which parallels the essential concepts of the 1940 Statement; particularly relevant is the identification by the Supreme Court of academic freedom as a right protected by the First Amendment. As the Supreme Court said in *Keyishian* v. *Board of Regents* 385 U.S. 589 (1967), "Our Nation is deeply committed to safeguarding academic freedom, which is of transcendent value to all of us and not merely to the teachers concerned. That freedom is therefore a special concern of the First Amendment, which does not tolerate laws that cast a pall of orthodoxy over the classroom."

The numbers refer to the designated portion of the 1940 Statement on which interpretive comment is made.

1. The Association of American Colleges and the American Association of University Professors have long recognized that membership in the academic profession carries with it special responsibilities. Both Associations either separately or jointly have consistently affirmed these responsibilities in major policy statements, providing guidance to the professor in his utterances as a citizen, in the exercise of his responsibilities to the institution and students, and in his conduct when resigning from his institution or when undertaking government-sponsored research. Of particular relevance is the *Statement on Professional Ethics*, adopted by the Fifty-second Annual Meeting of the AAUP as Association policy and published in the *AAUP Bulletin* (Autumn, 1966, pp. 290–291).

2. The intent of this statement is not to discourage what is "controversial." Controversy is at the heart of the free academic inquiry which the entire statement is designed to foster. The passage serves to underscore the need for the teacher to avoid persistently intruding material which has no relation to his subject.

3. Most church-related institutions no longer need or desire the departure from the principle of academic freedom implied in the 1940 Statement, and we do not now endorse such a departure.

4. This paragraph is the subject of an Interpretation adopted by the sponsors of the 1940 Statement immediately following its endorsement which reads as follows:

> If the administration of a college or university feels that a teacher has not observed the admonitions of Paragraph (c) of the section on Academic Freedom and believes that the extramural utterances of the teacher have been such as to raise grave doubts concerning his fitness for his position, it may proceed to file charges under Paragraph (a)(4) of the section on Academic Tenure. In pressing such charges the administration should remember that teachers are citizens and should be accorded the freedom of citizens. In such cases the administration must assume full responsibility and the American Association of University Professors and the Association of American Colleges are free to make an investigation.

Paragraph (c) of the 1940 Statement should also be interpreted in keeping with the 1964 "Committee A Statement on Extramural Utterances" (*AAUP Bulletin, Spring*, 1965, p. 29) which states inter alia: "The controlling principle is that a faculty member's expression of opinion as a citizen cannot constitute grounds for dismissal unless it clearly demonstrates the faculty member's unfitness for his position. Extramural utterances rarely bear upon the faculty member's fitness for his position. Moreover, a final decision should take into account the faculty member's entire record as a teacher and scholar."

Paragraph V of the *Statement on Professional Ethics* also deals with the nature of the "special obligations" of the teacher. The paragraph reads as follows:

> As a member of his community, the professor has the rights and obligations of any citizen. He measures the urgency of these obligations in the light of his responsibilities to his subject, to his students, to his profession, and to his institution. When he speaks or acts as a private person he avoids creating the impression that he speaks or acts for his college or university. As a citizen engaged in a profession that depends upon freedom for its health and integrity, the professor has a particular obligation to promote conditions of free inquiry and to further public understanding of academic freedom.

Both the protection of academic freedom and the requirements of academic responsibility apply not only to the full-time probationary as well as to the tenured teacher, but also to all others, such as part-time and teaching assistants, who exercise teaching responsibilities.

5. The concept of "rank of full-time instructor or a higher rank" is intended to include any person who teaches a full-time load regardless of his specific title.[*]

6. In calling for an agreement "in writing" on the amount of credit for a faculty member's prior service at other institutions, the Statement furthers the general policy of full understanding by the professor of the terms and conditions of his appointment. It does not necessarily follow that a professor's tenure rights have been violated because of the absence of a written agreement on this matter. Nonetheless, especially because of the variation in permissible institutional practices, a written understanding concerning these matters at the time of appointment is particularly appropriate and advantageous to both the individual and the institution.

7. The effect of this subparagraph is that a decision on tenure, favorable or unfavorable, must be made at least twelve months prior to the completion of the probationary period. If the decision is negative, the appointment for the following year becomes a terminal one. If the decision is affirmative, the provisions in the 1940 Statement with respect to the termination of services of teachers or investigators after the expiration of a probationary period should apply from the date when the favorable decision is made.

The general principle of notice contained in this paragraph is developed with specificity in the *Standards for Notice of Nonreappointment*, endorsed by the Fiftieth Annual Meeting of the American Association of University Professors (1964). These standards are:

Notice of nonreappointment, or of intention not to recommend reappointment to the governing board, should be given in writing in accordance with the following standards:

> (1) *Not later than March 1 of the first academic year of service*, if the appointment expires at the end of that year; or, if a one-year appointment terminates during an academic year, at least three months in advance of its termination.
>
> (3) At least twelve months before the expiration of an appointment after if the appointment expires at the end of that year; or, if an initial two-year appointment terminates during an academic year, at least six months in advance of its termination.
>
> (3) At least twelve months before the expiration of an appointment after two or more years in the institution.

Other obligations, both of institutions and individuals, are described in the *Statement on Recruitment and Resignation of Faculty Members*, as endorsed by the Association of American Colleges and the American Association of University Professors in 1961.

---

[*] For a discussion of this question, see the "Report of the Special Committee on Academic Personnel Ineligible for Tenure," *AAUP Bulletin*, Autumn, 1966, pp. 280–282.

8. The freedom of probationary teachers is enhanced by the establishment of a regular procedure for the periodic evaluation and assessment of the teacher's academic performance during his probationary status. Provision should be made for regularized procedures for the consideration of complaints by probationary teachers that their academic freedom has been violated. One suggested procedure to serve these purposes is contained in the *Recommended Institutional Regulations on Academic Freedom and Tenure*, prepared by the American Association of University Professors.

9. A further specification of the academic due process to which the teacher is entitled under this paragraph is contained in the *Statement on Procedural Standards in Faculty Dismissal Proceedings*, jointly approved by the American Association of University Professors and the Association of American Colleges in 1958. This interpretive document deals with the issue of suspension, about which the 1940 Statement is silent.

The 1958 Statement provides: "Suspension of the faculty member during the proceedings involving him is justified only if immediate harm to himself or others is threatened by his continuance. Unless legal considerations forbid, any such suspension should be with pay." A suspension which is not followed by either reinstatement or the opportunity for a hearing is in effect a summary dismissal in violation of academic due process.

The concept of "moral turpitude" identifies the exceptional case in which the professor may be denied a year's teaching or pay in whole or in part. The statement applies to that kind of behavior which goes beyond simply warranting discharge and is so utterly blameworthy as to make it inappropriate to require the offering of a year's teaching or pay. The standard is not that the moral sensibilities of persons in the particular community have been affronted. The standard is behavior that would evoke condemnation by the academic community generally.

APPENDIX B

AMERICAN ASSOCIATION OF UNIVERSITY PROFESSORS, AMERICAN COUNCIL ON EDUCATION, AND ASSOCIATION OF GOVERNING BOARDS OF UNIVERSITIES AND COLLEGES—STATEMENT ON GOVERNMENT OF COLLEGES AND UNIVERSITIES

(Reprinted from AAUP Policy Documents and Reports, 1973 Edition)

EDITORIAL NOTE. The Statement which follows is directed to governing board members, administrators, faculty members, students, and other persons in the belief that the colleges and universities of the United States have reached a stage calling for appropriately shared responsibility and cooperative action among the components of the academic institution. The Statement is intended to foster constructive joint thought and action, both within the institutional structure and in protection of its integrity against improper intrusions.

It is not intended that the Statement serve as a blueprint for government on a specific campus or as a manual for the regulation of controversy among the components of an academic institution, although it is to be hoped that the principles asserted will lead to the correction of existing weaknesses and assist in the establishment of sound structure and procedures. The Statement does not attempt to cover relations with those outside agencies which increasingly are controlling the resources and influencing the patterns of education in our institutions of higher learning; e.g., the United States Government, the state legislatures, state commissions, interstate associations or compacts and other interinstitutional arrangements. However it is hoped that the Statement will be helpful to these agencies in their consideration of educational matters.

Students are referred to in this Statement as an institutional component coordinate in importance with trustees, administrators, and faculty. There is, however, no main section on students. The omission has two causes: (1) the changes now occurring in the status of American students have plainly outdistanced the analysis by the educational community, and an attempt to define the situation without thorough study might prove unfair to student interests, and (2) students do not in fact presently have a significant voice in the government of colleges and universities; it would be unseemly to obscure, by superficial equality of length of statement, what may be a serious lag entitled to separate and full confrontation. The concern for student status felt by the organizations issuing this Statement is embodied in a note "On Student Status" intended to stimulate the educational community to turn its attention to an important need.

This Statement, in preparation since 1964, is jointly formulated by the American Association of University Professors, the American Council on Education, and the Association of Governing Boards of Universities and Colleges. On October 12, 1966, the Board of Directors of the ACE took action by which the Council "recognizes the Statement as a significant step forward in the clarification of the respective roles of governing boards, faculties, and administrations," and "commends it to the institutions which are members of the Council." On October 29, 1966, the Council of the AAUP approved the Statement, recommended approval by the Fifty-third Annual Meeting in April, 1967,[1] and recognized that "continuing joint effort is desirable, in view of the areas left open in the jointly formulated Statement, and the dynamic changes occurring in higher education." On November 18, 1966, the Executive Committee of the AGB took action by which that organization also "recognizes the Statement as a significant step forward in the clarification of the respective roles of governing boards, faculties and administrations," and "commends it to the governing boards which are members of the Association."

I. INTRODUCTION

This Statement is a call to mutual understanding regarding the government of colleges and universities. Understanding, based on community of interest, and producing joint effort, is essential for at least three reasons. First, the academic institution, public or private, often has become less autonomous; buildings, research, and student tuition are supported by funds over which the college or university exercises a diminishing control. Legislative and executive governmental authority, at all levels, plays a part in the making of important decisions in academic policy. If these voices and forces are to be successfully heard and integrated, the academic institution must be in a position to meet them with its own generally unified view. Second, regard for the welfare of the institution remains important despite the mobility and interchange of scholars. Third, a college or university in which all the components are aware of the interdependence, of the usefulness of communication among themselves, and of the force of joint action will enjoy increased capacity to solve educational problems.

II. THE ACADEMIC INSTITUTION: JOINT EFFORT

A. Preliminary Considerations

The variety and complexity of the tasks performed by institutions of higher education produce an inescapable interdependence among governing board, administration, faculty, students, and others. The relationship calls for adequate communication among these components, and full opportunity for appropriate joint planning and effort.

Joint effort in an academic institution will take a variety of forms appropriate to the kinds of situations encountered. In some instances, an initial exploration or recommendation will be made by the president with consideration by the faculty at a later stage; in other instances, a first and essentially definitive recommendation will be made by the faculty, subject to the endorsement of the president and the governing board. In still others, a substantive contribution can be made when student leaders are responsibly involved in the process. Although the variety of such approaches may be wide, at least two general conclusions regarding joint effort seem clearly warranted: (1) important areas of action involve at one time or another the initiating capacity and decision-making participation of all the institutional components, and (2) differences in the weight of each voice, from one point to the next, should be determined by reference to the responsibility of each component for the particular matter at hand, as developed hereinafter.

B. Determination of General Educational Policy

The general educational policy, i.e., the objectives of an institution and the nature, range, and pace of its efforts, is shaped by the institutional charter or by law, by tradition and historical development, by the present needs of the community of the institution, and by the professional aspirations and standards of those directly involved in its work. Every board will wish to go beyond its formal trustee obligation to conserve the accomplishment of the past and to engage seriously with the future; every faculty will seek to conduct an operation worthy of scholarly standards of learning; every administrative officer will strive to meet his charge and to attain the goals of the institution. The interests of all are coordinate and related, and unilateral effort can lead to confusion or conflict. Essential to a solution is a reasonably explicit statement on general educational policy. Operating responsibility and authority, and procedures for continuing review, should be clearly defined in official regulations.

---

[1] The Annual Meeting approved the Statement.

When an educational goal has been established, it becomes the responsibility primarily of the faculty to determine appropriate curriculum and procedures of student instruction.

Special considerations may require particular accommodations: (1) a publicly supported institution may be regulated by statutory provisions, and (2) a church-controlled institution may be limited by its charter or bylaws. When such external requirements influence course content and manner of instruction or research, they impair the educational effectiveness of the institution.

Such matters as major changes in the size or composition of the student body and the relative emphasis to be given to the various elements of the educational and research program should involve participation of governing board, administration, and faculty prior to final decision.

C. Internal Operations of the Institution

The framing and execution of long-range plans, one of the most important aspects of institutional responsibility, should be a central and continuing concern in the academic community.

Effective planning demands that the broadest possible exchange of information and opinion should be the rule for communication among the components of a college or university. The channels of communication should be established and maintained by joint endeavor. Distinction should be observed between the institutional system of communication and the system of responsibility for the making of decisions.

A second area calling for joint effort in internal operations is that of decisions regarding existing or prospective physical resources. The board, president, and faculty should all seek agreement on basic decisions regarding buildings and other facilities to be used in the educational work of the institution.

A third area is budgeting. The allocation of resources among competing demands is central in the formal responsibility of the governing board, in the administrative authority of the president, and in the educational function of the faculty. Each component should therefore have a voice in the determination of short- and long-range priorities, and each should receive appropriate analyses of past budgetary experience, reports on current budgets and expenditures, and short- and long-range budgetary projections. The function of each component in budgetary matters should be understood by all; the allocation of authority will determine the flow of information and the scope of participation in decisions.

Joint effort of a most critical kind must be taken when an institution chooses a new president. The selection of a chief administrative officer should follow upon cooperative search by the governing board and the faculty, taking into consideration the opinions of others who are appropriately interested. The president should be equally qualified to serve both as the executive officer of the governing board and as the chief academic officer of the institution and the faculty. His dual role requires that he be able to interpret to board and faculty the educational views and concepts of institutional government of the other. He should have the confidence of the board and the faculty.

The selection of academic deans and other chief academic officers should be the responsibility of the president with the advice of and in consultation with the appropriate faculty.

Determinations of faculty status, normally based on the recommendations of the faculty groups involved, are discussed in Part V of this Statement; but it should here be noted that the building of a strong faculty requires careful joint effort in such actions as staff selection and promotion and the granting of tenure. Joint action should also govern dismissals; the applicable principles and procedures in these matters are well established.[2]

---

[2] See the 1940 *Statement of Principles on Academic Freedom and Tenure* and the 1958 *Statement on Procedural Standards in Faculty Dismissal Proceedings.* These statements have been jointly approved or adopted by the Association of American Colleges and the American Association of University Professors; the 1940 Statement has been endorsed by numerous learned and scientific societies and educational associations.

D. External Relations of the Institution

Anyone—a member of the governing board, the president or other member of the administration, a member of the faculty, or a member of the student body or the alumni—affects the institution when he speaks of it in public. An individual who speaks unofficially should so indicate. An official spokesman for the institution, the board, the administration, the faculty, or the student body should be guided by established policy.

It should be noted that only the board speaks legally for the whole institution, although it may delegate responsibility to an agent.

The right of a board member, an administrative officer, a faculty member, or a student to speak on general educational questions or about the administration and operations of his own institution is a part of his right as a citizen and should not be abridoged by the institution.[3] There exist, of course, legal bounds relating to defamation of character, and there are questions of propriety.

III. THE ACADEMIC INSTITUTION; THE GOVERNING BOARD

The governing board has a special obligation to assure that the history of the college or university shall serve as a prelude and inspiration to the future. The board helps relate the institution to its chief community: e.g., the community college to serve the educational needs of a defined population area or group, the church-controlled college to be cognizant of the announced position of its denomination, and the comprehensive university to discharge the many duties and to accept the appropriate new challenges which are its concern at the several levels of higher education.

The governing board of an institution of higher education in the United States operates, with few exceptions, as the final institutional authority. Private instructions are established by charters; public institutions are established by constitutional or statutory provisions. In private institutions the board is frequently self-perpetuating; in public colleges and universities the present membership of a board may be asked to suggest candidates for appointment. As a whole and individually when the governing board confronts the problem of succession, serious attention should be given to obtaining properly qualified persons. Where public law calls for election of governing board members, means should be found to insure the nomination of fully suited persons, and the electorate should be informed of the relevant criteria for board membership.

Since the membership of the board may embrace both individual and collective competence of recognized weight, its advice or help may be sought through established channels by other components of the academic community. The governing board of an institution of higher education, while maintaining a general overview, entrusts the conduct of administration to the administrative officers, the president and the deans, and the conduct of teaching and research to the faculty. The board should undertake appropriate self-limitation.

One of the governing board's important tasks is to insure the publication of codified statements that define the over-all policies and procedures of the institution under its jurisdiction.

The board plays a central role in relating the likely needs of the future to predictable resources; it has the responsibility for husbanding the endowment; it is responsible for obtaining needed capital and operating funds; and in the broadest sense of the term it should pay attention to personnel policy. In order to fulfill these duties, the board should be aided by, and may insist upon, the development of long-range planning by the administration and faculty.

When ignorance or ill-will threatens the institution or any part of it, the governing board must be available for support. In grave crises it will be expected to serve as a champion. Although the action to be taken by it will usually be on behalf of the president, the faculty, or the student body, the board should make clear that the protection it offers to an individual or a group is, in fact, a fundamental defense of the vested interests of society in the educational institution.[4]

---

[3] With respect to faculty members, the 1940 *Statement of Principles on Academic Freedom and Tenure* reads: "The college or university teacher is a citizen, a member of a learned profession, and an officer of an educational institution. When he speaks or writes as a citizen, he should be free from institutional censorship or discipline, but his special position in the community imposes special obligations. As a man of learning and an educational officer, he should remember that the public may judge his profession and his institution by his utterances. Hence he should at all times be accurate, should exercise appropriate restraint, should show respect for the opinion of others, and should make every effort to indicate that he is not an institutional spokesman."

IV. THE ACADEMIC INSTITUTION: THE PRESIDENT

The president, as the chief executive officer of an institution of higher education, is measured largely by his capacity for institutional leadership. He shares responsibility for the definition and attainment of goals, for administrative action, and for operating the communications system which links the components of the academic community. He represents his institution to its many publics. His leadership role is supported by delegated authority from the board and faculty.

As the chief planning officer of an institution, the president has a special obligation to innovate and initiate. The degree to which a president can envision new horizons for his institution, and can persuade others to see them and to work toward them, will often constitute the chief measure of his administration.

The president must at times, with or without support, infuse new life into a department; relatedly, he may at times be required, working within the concept of tenure, to solve problems of obsolescence. The president will necessarily utilize the judgments of the faculty, but in the interest of academic standards he may also seek outside evaluations by scholars of acknowledged competence.

It is the duty of the president to see to it that the standards and procedures in operational use within the college or university conform to the policy established by the governing board and to the standards of sound academic practice. It is also incumbent on the president to insure that faculty views, including dissenting views, are presented to the board in those areas and on those issues where responsibilities are shared. Similarly the faculty should be informed of the views of the board and the administration on like issues.

The president is largely responsible for the maintenance of existing institutional resources and the creation of new resources; he has ultimate managerial responsibility for a large area of nonacademic activities, he is responsible for public understanding, and by the nature of his office is the chief spokesman of his institution. In these and other areas his work is to plan, to organize, to direct, and to represent. The presidential function should receive the general support of board and faculty.

V. THE ACADEMIC INSTITUTION: THE FACULTY

The faculty has primary responsibility for such fundamental areas as curriculum, subject matter and methods of instruction, research, faculty status, and those aspects of student life which relate to the educational process. On these matters the power of review or final decision lodged in the governing board or delegated by it to the president should be exercised adversely only in exceptional circumstances, and for reasons communicated to the faculty. It is desirable that the faculty should, following such communication, have opportunity for further consideration and further transmittal of its views to the president or board. Budgets, manpower limitations, the time element, and the policies of other groups, bodies and agencies having jurisdiction over the institution may set limits to realization of faculty advice.

The faculty sets the requirements for the degrees offered in course, determines when the requirements have been met, and authorizes the president and board to grant the degrees thus achieved.

Faculty status and related matters are primarily a faculty responsibility; this area includes appointments, reappointments, decisions not to reappoint, promotions, the granting of tenure, and dismissal. The primary responsibility of the faculty for such matters is based upon the fact that its judgment is central to general educational policy. Furthermore, scholars in a particular field or activity have the chief competence for judging the work of their colleagues: in such competence it is implicit that responsibility exists for both adverse and favorable judgments. Likewise there is the more general competence of experienced faculty personnel committees having a broader charge. Determinations in these matters should first be by faculty action through established procedures, reviewed by the chief academic officers with the concurrence of the board. The governing board and president should, on questions of faculty status, as in other matters where the faculty has primary responsibility, concur with the faculty judgment except in rare instances and for compelling reasons which should be stated in detail.

---

[4] The American Association of University Professors, recognizing the growth of autonomous state-wide bodies superordinate to existing Boards of Trustees, regards the objectives and practices recommended in the 1966 *Statement* as constituting equally appropriate guidelines for such bodies. As newer, and more influential components of the academic community, they bear particular responsibility for protecting the autonomy of individual institutions under their jurisdiction and for implementing policies of shared responsibility as outlined in Section II when they displace functions of institutional governing boards. (Adopted by the AAUP Council in May, 1972.)

The faculty should actively participate in the determination of policies and procedures governing salary increases.

The chairman or head of a department, who serves as the chief representative of his department within an institution, should be selected either by departmental election or by appointment following consultation with members of the department and of related departments; appointments should normally be in conformity with department members' judgment. The chairman or department head should not have tenure in his office; his tenure as a faculty member is a matter of separate right. He should serve for a stated term but without prejudice to re-election or to reappointment by procedures which involve appropriate faculty consultation. Board, administration, and faculty should all bear in mind that the department chairman has a special obligation to build a department strong in scholarship and teaching capacity.

Agencies for faculty participation in the government of the college or university should be established at each level where faculty responsibility is present. An agency should exist for the presentation of the views of the whole faculty. The structure and procedures for faculty participation should be designed, approved, and established by joint action of the components of the institution. Faculty representatives should be selected by the faculty according to procedures determined by the faculty.

The agencies may consist of meetings of all faculty members of a department, school, college, division, or university system, or may take the form of faculty-elected executive committees in departments and schools and a faculty-elected senate or council for larger divisions or the institution as a whole.

Among the means of communication among the faculty, administration, and governing board now in use are: (1) circulation of memoranda and reports by board committees, the administration, and faculty committees, (2) joint *ad hoc* committees, (3) standing liaison committees, (4) membership of faculty members on administrative bodies, and (5) membership of faculty members on governing boards. Whatever the channels of communication, they should be clearly understood and observed.

ON STUDENT STATUS

When students in American colleges and universities desire to participate responsibly in the government of the institution they attend, their wish should be recognized as a claim to opportunity both for educational experience and for involvement in the affairs of their college or university. Ways should be found to permit significant student participation within the limits of attainable effectiveness. The obstacles to such participation are large and should not be minimized: inexperience, untested capacity, a transitory status which means that present action does not carry with it subsequent responsibility, and the inescapable fact that the other components of the institution are in a position of judgment over the students. It is important to recognize that student needs are strongly related to educational experience, both formal and informal. Students expect, and have a right to expect, that the educational process will be structured, that they will be stimulated by it to become independent adults, and that they will have effectively transmitted to them the cultural heritage of the larger society. If institutional support is to have its fullest possible meaning it should incorporate the strength, freshness of view, and idealism of the student body.

The respect of students for their college or university can be enhanced if they are given at least these opportunities: (1) to be listened to in the classroom without fear of institutional reprisal for the substance of their views, (2) freedom to discuss questions of institutional policy and operation, (3) the right to academic due process when charged with serious violations of institutional regulations, and (4) the same right to hear speakers of their own choice as is enjoyed by other components of the institution.

Appendix C

Report of Committee W 1973–74

Reprinted from AAUP Bulletin, Summer, 1974

"Five hundred dollars and an air conditioner are what I finaly got," related a women who has been trying for years to get her salary raised the several thousand dollars by which it falls short of those of her male colleagues with the same experience and qualifications. Many similar stories of frustration and meager results persuaded Committee W that the most important focus of its work during the 1973–74 academic year should be on economic issues, resolution of which we believe to be an indispensible precondition for achieving true equality for women in the academic profesion. These issues go beyond inequities in salary, and include abuses relating to fringe benefits and confinement to irregular or low-status faculty positions.

This past year has also been a time for consolidating the AAUP's position on the national level on policy issues of concern to academic women, for helping local chapters put into practice the principles of nondiscrimination and equal treatment for which AAUP stands, and for developing Committee W's program in broader directions on the national, state, and local levels. Committee W believes that the most immediate and effective means for redress of grievances and expansion of opportunities for women lie within the academic institution. While a number of laws against sex discrimination now exist, and court suits may well prove effective in resolving specific cases of discrimination, widespread change can only come when a strong commitment to equal opportunity is fully supported by the academic community itself.

ACTIVITIES OF THE NATIONAL COMMITTEE W IN 1973–74

The Committee gained the assistance of two new members during the past year: Professor Esther B. Chu, of Jersey City State College, who brings to the Committee considerable chapter and conference experience; and Professor Barbara R. Bergmann, of the University of Maryland, whose expertise in economics has been extremely valuable to us.

Committee W has acted in the following areas:

1. *Leaves of Absence for Child-bearing, Child-rearing, and Family Emergencies.*—This satement, prepared by Committee W, was first published in the Summer, 1973, *AAUP Bulletin*, with an invitation for comments and suggestions. It has now been adopted by the Council and endorsed by the Sixtieth Annual Meeting as Association policy. (The text of the statement appears elsewhere in this issue.)

A number of the learned societies have endorsed similar positions in this area. In addition, the Department of Labor's Office of Federal Contract Compliance has proposed a change in its regulations which brings them into accord with the Association position and with Equal Employment Opportunity Commission guidelines on leaves of absence in connection with pregnancy and childbearing. This change would define disabilities caused or contributed to by pregnancy or childbirth for all job-related purposes as temporary disabilities, to be treated as such under any available health or disability policies or sick-leave plans relating to employment. Committee W has written to the Director of the OFCC endorsing the change but taking exception to a proposed provision that such disabilities be "medically verifiable," since this may subject such disabilities to a more rigorous standard than other disabilities.

2. *Tenure and Affirmative Action.*—Committee W believes it important to note the recommendation of the Commission on Academic Tenure that in assessing an institution's tenure profile special attention should be given to achieving the diversity in a faculty which comes from the presence of women and minority group members. The proportion of tenured faculty which comes from these groups is almost always less than their proportion of the entire faculty, and the selection process has traditionally been harsher on them.

Committee W supports the recent statement formulated by Committee A in opposition to tenure quotas. Fixed tenure quotas have a particularly severe impact on the aspirations of academic women, since a substantially larger proportion of women currently do not have tenure than is true of the profession as a whole. We believe that tenure quotas must be vigorously opposed for this reason as well as for those set forth explicitly in Committee A's statement.

As to whether tenure and affirmative action can coexist, we feel not only that both are necessary, but that the two principles reinforce each other when properly applied. Those who have traditionally been discriminated against in terms of eligibility for tenure perhaps have a particular need for the protection of a fair tenure systme. Committee W has adopted the following position on "irregular and off-track appointments."

> Committee W notes with concern that a large number of faculty members, a significant proportion of them women, are serving in full-time, regularly funded positions which may be continued indefinitely from year to year but which provide no expectation of promotion in rank or of tenure after the successful completion of a probationary period. Most of these appointments are at the rank of instructor or at nonregular ranks dseignated as "nontenure bearing" or as "temporary."
>
> Certain college and university positions, although they require special training and skills, are essentially separate from or supportive of the work of the regular teaching and research faculty, and generally these do not carry regular faculty rank and faculty tenure. In addition, special faculty appointments of limited duration are by definition removed from long-range considerations. Committee W's concern is addressed to the practice of misusing these positions which are not designed for regular faculty by appointing people to them who do in fact function as regular and ongoing full-time faculty members.
>
> It is the policy of the American Association of University Professors, as set forth in the 1940 *Statement of Principles on Academic Freedom and Tenure*, and amplified in the Association's *Recommended Institutional Regulations on Academic Freedom and Tenure*, that all full-time faculty appointments (excepting only special appointments of a specified limited duration and reappointments of retired faculty members on special conditions) should be either probationary relating to continuous tenure or with continuous tenure.[1] The report of the Association's Special Committee on Academic Personnel Ineligible for Tenure, approved by Committee A in 1969, states that people who are appointed to full-time teaching positions should be treated as candidates for tenure under the requirements of the 1940 *Statement of Principles*, "no matter what rank or title" may be given them.
>
> Special appointments renewed several times cease to be temporary. When appointments to full-time faculty positions extend beyond the maximum permissible period of probation, the rights of tenure should accrue. People who function as regular and ongoing full-time faculty members, but who have no prospect of tenure, because of the way in which their position is defined, serve with their academic freedom in continued jeopardy. In addition, they are frequently deprived of the compensation and of the right to participate in academic government to which they would otherwise be entitled. The fact that a disproportionate number of these persons are women, who for one reason or another have found themselves obliged to accept these inequitable and often demeaning appointments, places an unwarranted limitation upon the opportunities for advancement of women in the academic profession. Committee W urges that this abuse of sound academic practice be discontinued.

3. *Equal Pay*—The threat of outside action from external agencies on the issue of equal pay has prompted some instiutions to act to remove sex-based salary inequities; other institutions have achieved salary equity through action of enlightened administrations and faculties, in some cases through the collective bargaining process; still others have done little or nothing to recognize and correct inequities, often because they lack a salary structure which lends itself to rational examination. Though almost everyone will now endorse the principle of equal pay for equal work, interpretations of this principle are subject to great variations. Does equal treatment mean that everyone should be paid equally for performing the same duties? Does it permit or require salaries based on merit, on seniority, on need? If merit is to be a component of salary deter-
